	Lieutenant-Colonel A. J. Godley.	Assisted to raise, train, and equip a regiment of Colonial Mounted Infantry before the War; in Command of Western Defences of Mafeking during siege; subsequently Staff Officer to Generals Baden-Powell and Plumer; in command of Brigade Colonial Mounted Infantry, and now training Mounted Infantry at Aldershot.	20021-20196	434
	Major-General J. Talbot Coke	Commanded 10th Infantry Brigade, Natal Field Force.	20197-20273	441
	Major the Marquis of Tullibardine, M.V.O., D.S.O., Royal Horse Guards.	Late Lieutenant-Colonel Commanding "Scottish Horse."	20274-20415	446
FIFTIETH DAY : 24 March 1903	Mr L. S. Amery	Sent out by the "Times" in August 1899; at front in Natal during November 1899, also with Lord Roberts during part of February 1900; returned to England in August 1900 to work on "Times History of the War."	20416-20560	464

LIST OF WITNESSES IN ORDER OF EXAMINATION—*continued.*

Date.	Name.	Designation.	Question.	Page.
FIFTIETH DAY— <i>continued.</i> 24 March 1903	Sir Arthur Conan Doyle	Head Physician in one of the Private Hospitals in South Africa; went through the great epidemic at Bloemfontein.	20561—20629	472
	Major the Lord Lovat, C.B., D.S.O.	Commanding "Lovat's Scouts" in South Africa.	20630—20774	474
	Mr. J. B. Atkins	Sent to South Africa by "Manchester Guardian" newspaper as a War Correspondent in October 1899; witnessed operations in Natal till the relief of Ladysmith; subsequently accompanied Lord Roberts' Force up to Pretoria.	20775—20827	480
FIFTY-FIRST DAY: 25 March 1903	Sir Andrew Noble, Bart., K.C.B.	Chairman of the Armstrong Company	20828—20904	484
	Lieutenant Arthur Trevor Dawson, R.N.	Director and Superintendent of Artillery with Messrs. Vickers, Sons, and Maxim, Limited.	20905—20953	490
	Major-General Sir Edwin Collen, G.C.I.E., C.B.	Military Member in Council, India, in 1899.	20954—21072	495
FIFTY-SECOND DAY and FIFTY-THIRD DAY: 26 March 1903, and 27 March 1903.	The Right Hon. the Marquis of Lansdowne, K.G., P.C., G.C.S.I., G.C.M.G., G.C.I.E.	Formerly Secretary of State for War; now Secretary of State for Foreign Affairs.	21073—21288	501
			21289—21590	521
FIFTY-FOURTH DAY: 1 May 1903	The Right Hon. St. John Brodrick, M.P.	Secretary of State for War	21591—21852	539
FIFTY-FIFTH DAY: 10 June 1903	Major-General R. G. Keke-wich, C.B.	Commanded troops Kimberley	21853—22049	559
	Major O. Armstrong, D.S.O.	Financial Adviser to Lord Kitchener after June 1901.	22050—22200	567

MINUTES OF EVIDENCE

TAKEN BEFORE THE

ROYAL COMMISSION

ON THE

WAR IN SOUTH AFRICA,

AT

ST. STEPHEN'S HOUSE, WESTMINSTER.

TWENTY-EIGHTH DAY.

Wednesday, 4th February 1903.

PRESENT :

The Right Hon. The EARL OF ELGIN AND KINCARDINE, K.G., G.C.S.I. G.C.I.E. (*Chairman*).

The Right Hon. The VISCOUNT ESHER, K.C.B., K.C.V.O.
 The Right Hon. The LORD STRATHCONA AND MOUNT
 ROYAL, G.C.M.G.
 Field-Marshal Sir HENRY WYLIE NORMAN, G.C.B., G.C.M.G.,
 C.I.E.

The Hon. Sir FREDERICK MATTHEW DARLEY, G.C.M.G.
 Admiral Sir JOHN OMMANNEY HOPKINS, G.C.B.
 Sir JOHN EDGE.
 Sir JOHN JACKSON.

BERNARD H. HOLLAND, Esq., *Secretary*.

Sir FREDERICK TREVES, Bart., C.B., K.C.V.O., F.R.C.S., called and examined

*Sir Frederick
 Treves,
 Bart., C.B.,
 K.C.V.O.,
 F.R.C.S.*

4 Feb. 1903.

11966. (*Chairman*) You went to South Africa, I believe, at the time that Sir Redvers Buller went?—Yes, I was with the Ladysmith relief column from the time it started until the relief of Ladysmith.

11967. As consulting surgeon?—As consulting surgeon to the troops.

11968. And you were present with Sir Redvers Buller's army during the operations for the relief of Ladysmith?—Yes, at all of them.

11969. And after the relief of Ladysmith?—I was invalided home.

11970. Did you not go round to the Transvaal at all?—No, never.

11971. As you are aware—and I think you gave evidence before it—there was another Royal Commission (*the Royal Commission appointed to consider and report upon the care and treatment of the Sick and Wounded during the South African campaign*) which inquired into many matters concerning the medical work, and those of course we do not want to go into, but you have been good enough to give us certain heads of the points to which you wish to call our attention, and we are very much obliged to you for doing so. The first point you mention is that the Army Medical Service suffers from over-organisation?—Well, I think, that is perhaps the most striking fault in it. It is very elaborately over-organised. It is almost strangled by the mechanical elements introduced into it. Its administration has been elaborated to such a degree that it is almost unworkable as it stands on paper. I think the success of the work in Natal depended upon the fact that the military-medical organisation was entirely thrown aside.

11972. Would you explain exactly what you mean by its being so organised as to be practically strangled?—By the immense amount of detail to be carried out in obtaining transport and equipment and in moving, the enormous number of forms to be dealt with to obtain what was necessary to be obtained, and, in fact, if in the rapid moving of a column the positive instructions were carried out the hospital would be paralysed—it would be impossible to keep on its work. The length of time taken to obtain the supplies and transport and the like would be such as to paralyse its movement.

11973. But as a matter of fact were all those forms of organisation pressed?—I think I may say with regard to our particular column that they were suppressed, and the General simply said, "You want so many bearers, get them."

11974. They were "suppressed"?—Yes, they were practically done away with.

11975. Of course the organisation that may have been proper for an army at home, or for service at home, would not be applicable in the field?—No, it is not suitable for work in the field; it is no doubt admirable as it stands on paper. It is full of an enormous number of safeguards apparently based upon the impression that the officer put in charge of a hospital is likely to be incapable, and that his incapacity will be minimised by restrictions of all sorts.

11976. You mean principally financial?—No, it is more a question of supplies and the possibility of independent movement.

11977. But in an army on a peace footing at home that might be a suitable form of organisation?—I think so. It is, however, very laborious and puts an enormous

See Q. 13285.

Sir Frederick Treves, Bart., C.B., K.C.V.O., F.R.C.S.
 4 Feb. 1903.
 amount of work upon men. It is an exceedingly extravagant service; it is worked in the most costly possible way. You obtain an officer who is supposed to be a specially qualified man who receives high pay, and charge pay, and then he is put to do work which is practically much better done by an ordinary clerk for a pound or so a week.

11978. That is rather another point?—That is another point. It is a costly administration, there is no doubt about it.

11979. But as regards the organisation of financial matters and otherwise those checks are a part of the system which prevails in a great many other Departments of the Government at home?—Yes, but I think they are excessive in a case of this sort. The Medical Department in the field deals with nothing but emergencies, and no kind of administration can possibly provide for every conceivable emergency that may be met with; it is not elastic enough.

11980. Excuse me, I was drawing the distinction between the service at home and in peace, and the service in the field. I understand that you admit for the service at home and in peace these regulations might work though you think them excessive?—Yes.

11981. But not in the field?—No, they may be good enough at home.

See Q. 3654.

11982. I asked the question because Sir William Wilson, when he was here, was asked with regard to the point, for instance, as to buying anything that was wanted, and he said, "I had no hesitation. At first I think medical officers were a little afraid to buy; you see we are never allowed to spend a penny at home, and we cannot do anything ourselves, but in a short time the medical officers turned out very well, and they purchased freely." That is the point you refer to?—That is one point, and a very important point.

11983. And I suppose what you would urge is that there ought to be some provision made in the service for that freedom being given to medical officers when they do go on service in the field?—Yes, I think it must be decentralised; that is really the essence of the whole business.

11984. In the field?—In the field.

11985. In financial, and in what other respects?—In practically every other respect. I would say this, that if a man is good enough to be put in charge of, say, a large mobile field hospital that man should be regarded as responsible, and should have to a very large extent perfectly free action. As a matter of fact he is not free in any particular. Of course his time of marching, and his route, and so on, must be determined by the General, but the place of pitching the tents, and the question of food, water, and other supplies, and his transport, and his general outfit depend upon conditions over which he practically has no control; he becomes a machine, and there is no credit in working the hospital well.

See Q. 13285.

11986. As to food, for instance, I suppose that is entirely under the Army Service Corps, is it not?—Yes, it is, but still there is the question of controlling supplies better than we could. For instance, after the battle of Spion Kop we had 715 wounded down after dark, and we had to pick out all the slightly-wounded cases next day and send them away, because we could not feed them; the seriously-injured people had to be left, they could not be looked at, and the little injuries to toes, fingers, and hands had to be got together to get them out of the place, because we had no means of feeding another 700 people. The answer to that would be that the officer in charge of the hospital was so hampered by the restrictions of the Service that he had no free hand in the matter.

11987. You do not suppose that if the officer had had a free hand he could have brought up the food?—There was a large food park close by, and there was no difficulty except in the process of getting it. Of course, it means not only food but the means of preparing it, and so on.

11988. (*Viscount Esher.*) He could not exercise any authority in order to get it; is that your point?—That is my point, and the practical outcome of it is this, that we had to spend one day in getting the trifling

cases away, not because they were trifling, but because we could not dispose of them.

11989. (*Chairman.*) But the supplies were well managed, were they not?—Admirably; I could not say too much for the most excellent way in which the supplies were managed—it was splendid.

11990. Would there not be a danger of interfering with that efficiency if you split up the responsibility?—I do not think it is so much a question of responsibility; it is a question of not being able to get things without an amount of form which is almost disastrous.

11991. Could you give us an indication of the way in which he could do it? Do you wish him to requisition the Army Service Corps people for stores?—Yes, in a much more direct way than is at present done.

11992. How is it done at present?—It is a very complicated business; the actual detail of it I am not precisely familiar with, but it is an elaborate form—it is a perpetual struggle. It comes to this, that the man who is put at the head of the field hospital practically can have nothing to do with the sick. You get a first-class surgeon or physician, supposed to be an able man to do this particular work, and he is put in charge of the field hospital, but he has nothing to do with the sick, as his time is spent in looking after accounts and tallies, and arrangements of that sort. We had an exceedingly good officer as the surgeon in charge of the hospital I was in, but he could have little to do with the sick. He was engaged as a superior kind of clerk looking after accounts. If we sent down 150 men with perhaps twelve bearers to each stretcher, and we had 26 miles of ground to cover, all those stretchers had to be accounted for, blankets and everything; and it is a very heavy piece of work.

11993. (*Viscount Esher.*) Do you mean, for instance, that he had to sign a great many documents which could perfectly well have been signed by somebody else?—Certainly; in a civil hospital it would be preposterous to suggest that the senior surgeon of the hospital should be answerable for blankets and all those things; that is all done by the house steward, and this particular branch of the Service will never be better until all that work is put in the hands of proper people, namely, a proper quartermaster. At the great Hospital of Maritzburg at Fort Napier, one of the best medical officers as a medical man never saw a patient; he was entirely engaged in office work.

11994. And you mean that if you had been an Army surgeon, in all probability instead of being able to perform operations, your whole time would have been spent in signing documents?—Entirely—in seeing that everything tallied, and that each stretcher was accounted for. I should never have seen a patient, and it would have been impossible to do so.

11995. It would require a medical superintendent?—It requires an officer exactly equivalent to the house governor or house steward of a civil hospital, and it could be done in a minute by having a first-class quartermaster.

11996. (*Chairman.*) Does that cover what you wish to say about decentralisation?—Yes, and also about the next point, the officer who is put into a responsible position and cannot get that freedom of action which his status in the Service, and his pay, and so on, would lead one to think he ought to have.

11997. And also about the clerical work and the quartermaster?—Yes.

11998. Then as to the Field Hospital itself and its equipment, what have you to say?—Well, that is a serious matter as regards the efficiency of the hospital in the field. The equipment of the Field Hospital, of course, is based upon certain tabulated forms, and it is supposed to be quite complete in itself, and the result is this, that in the many journeys we had to make in Natal up to the Tugela and back again we were dragging with us, I suppose, what amounted to tons of useless material. Every Field Hospital is hampered by a theoretically complete outfit, which has to be dragged to and fro all over the country, and it is an immense burden. We were dragging about things that under no circumstances would have to be used in South Africa for example. The outfit of the Field Hospital is suitable

for any climate in the world, from the Polar regions to the Equator; it is an exceedingly elaborate outfit; it is complete on paper, and that has to be dragged all over the country.

11999. (*Sir John Jackson.*) Would it have been impossible for them, at the suggestion of the surgeon-in-charge, to have left many of these things behind?—He would have to account for them, and the question is, where are they to be left? To leave stores on the line of communications means a guard, and difficulties of that sort.

12000. (*Chairman.*) But they might have been eliminated from the beginning if they were intended for the Polar regions?—Well, there is a stereotyped outfit for a Field Hospital or for a Stationary Hospital, any kind of hospital, and that outfit has to be absolutely complete to the very smallest detail, and that has to be dragged all over the country from one place to another whether it is wanted or not. I suppose I should not be using any exaggeration if I said we could have thrown away quite a half of our outfit and not missed it.

12001. Of course, we must bear in mind that there is no more common accusation against a Government Department than that something is deficient which ought to have been there?—I know.

12002. Therefore they are naturally very chary in leaving out anything which is calculated to be part of the equipment under almost any circumstances?—I should have thought it would have been, from the Government point of view, better if a responsible man, having been put in charge of the Field Hospital, became the person who was absolutely responsible for seeing that the hospital was thoroughly well found for the work it had to undertake, and that he should not have to drag about a theoretically complete equipment.

12003. (*Sir Henry Norman.*) Do you think any senior medical officer ever represented to a commanding officer in the field that it was his desire to leave certain things behind, and was told he must not?—I do not think so; I do not think such an idea would ever enter his mind.

12004. Could you indicate the particular things, or some of them, which you think could have been left behind without any risk?—There was a very large number of boxes of drugs which I do not say were obsolete, but they never could be required and were never opened, but had to be dragged about.

12005. (*Chairman.*) Ought that not to have been considered before the field hospital was sent from this country?—The equipment of every field hospital is exactly the same.

12006. I say, ought it not to have been considered before it left this country?—It would be a very big work certainly.

12007. If they were drugs which could not be used, surely there was no advantage in sending them all the way to South Africa?—That is my contention, but they were sent to South Africa, and more than that they were attached to the field hospital and we had to take them about.

12008. Then does it not come to this (apart from the responsibility of the medical officer in charge of any individual field hospital) that there is a responsibility with the Medical Department in this country not to send on a campaign drugs or other equipment which cannot be used in that particular campaign?—Well, I suppose that is so.

12009. That would eliminate a good part of the difficulty, would it not?—Yes, it would almost entirely eliminate it.

12010. (*Viscount Esher.*) I suppose it is all laid down by regulations what is to be sent and what is not?—Yes.

12011. They have printed regulations?—I do not know that they could very well depart from them; there is a certain outfit that the Government require to be attached to a stationary or field hospital, and that has to be found down to the very last possible safety-pin.

12012. (*Chairman.*) I quite understood that, but I understood your contention to be that that equipment was not suitable for all cases?—That is so.

12013. Then I say, if that is so, surely the proper thing to do would be that on the outbreak of a war the actual equipment to be sent on that war should be revised at home but not in the field, where, as you yourself pointed out, there would be difficulties in leaving the stores?—Yes. The suggestion I would venture to make is the one I have put down next on the list, and it is this: the whole difficulty could be got over by having advanced medical depôts. The advanced medical depôt is a well formulated thing, and it is in charge of a quartermaster, and if with every column there was an advanced medical depôt, and if the mobile field hospitals took from that depôt what supplies they wanted that would meet the difficulty. At present they have no choice in the matter whatever, they must take the whole complete outfit; but if the suggestion I have just made were carried out you could then say to the officer in charge of a hospital of 100 beds: "Take from this advanced medical depôt what things you want, and remember you are responsible for the efficiency of that hospital and if you are lacking in anything it is entirely your own fault."

12014. Then he would have an advanced medical depôt within reach to get the other equipment if he wanted it?—Yes, without dragging it all over the country, because as a matter of fact we went from Frere to Chieveley and from Chieveley to Colenso and back to Frere, from Frere to Spearman's Farm, then to Vaal Krantz and back again to Chieveley, in fact moving all over the country and having to drag every single pound of this the whole way with us. I daresay it may be a little exaggeration, but I should think half of it could have been disposed of or done without.

12015. They must have depôts in connection with a large army like Sir Redvers Buller's?—There was a very large depôt at Durban which was admirably administered, and we had an advanced medical depôt with us, but it was practically no use because we had a complete outfit. It would have been very much better if the depôt had been trebled and we could have been cut down by two-thirds. We had to move, and the depôt had not. When the depôt moved into Ladysmith of course it was of immense service.

12016. About collecting and dressing stations, what is your suggestion?—I would only say this, that I think this war has shown that the system of breaking up the collection of the sick into two stations, collecting and dressing stations, is no longer needed. It is cumbersome, and as a matter of fact it was not carried out.

12017. What does it exactly mean?—It means that the men, who are picked up from the firing line are brought down to the collecting station, which has a certain outfit, and from that collecting station they are taken by an arranged route to the dressing station where certain dressing operations and so on can be carried out. The dressing station is supposed to be out of the line of fire, but with the small bore bullets that means that it is a long way off. From the dressing station they are taken in the ambulances to the Field Hospitals, which will be certainly out of the line of fire. To individualise those two stations was next to impossible.

12018. You had to fall back on the dressing stations at once do you mean?—Yes, and the men who were put in charge of the collecting stations were either doing nothing, or anyhow that little piece of the arrangement was liable to be disorganised. It is not suited for a bullet carrying 2,200 yards as the small bore bullet does.

12019. And I suppose what you have suggested was practically done?—It was practically done, but still if a war took place to-morrow the outfit would include collecting and dressing stations, and men would be told off for those particular offices.

12020. Are Medical Officers told off, too?—Yes, for both.

12021. (*Sir Henry Norman.*) Is that by stereotyped regulation?—Stereotyped regulation.

12022. (*Sir Frederick Darley.*) What is done by the Medical Officer at a collecting station?—At a collecting station he would deal with any extremely pressing thing, the putting on of a first dressing, which is inside the man's tunic, and tabulating the injury by means of a label. That is really essential, because in one or two

Sir Frederick Treves,

instances the label was lost and a man died, and there were no means of finding out who he was as his clothes were all gone. Several men were buried, and nobody could identify them, and, besides, it saves the man from being pulled about twice. The dressing station may be spoken of as something a little more than first aid.

12023. (*Chairman.*) As to Bearer Companies?—The Bearer Company is separate from the Field Hospital; and that is another system which is a little cumbrous. It would be very much better if the Bearer Company were a part of the Field Hospital and could work under the instructions of the officer in charge of the Field Hospital.

12024. I think there was some difficulty in getting Bearer Companies in South Africa?—I am speaking of the Military Bearer Companies; there was difficulty in getting civilian bearers, but the Bearer Companies have a certain equipment of so many horses and so many wagons.

12025. But they had to raise Bearer Companies in South Africa itself because they had not enough?—Not Bearer Companies in the sense in which I am using the term now. I am speaking of it in the military sense, with an equipment of so many horses and carts, but we did, throughout the whole of Natal, organise an enormous Bearer Company, which has nothing to do with the Bearer Company in the military sense.

12026. And it is the Bearer Company in the military sense which you think ought to be attached to the Field Hospital?—Yes, the Bearer Company in the military service is a certain unit, so many men, so many horses or mules, and so many carts, a water cart, and a certain number of Army Service Corps men are attached to the Bearer Company.

12027. What is their duty?—Carrying the sick back from the dressing station to the Field Hospital, and also taking charge of a certain number of sick.

12028. Do they not go into the line and collect for the collecting station?—No, they do not do that.

12029. It is only from the dressing station to the hospital?—That is their primary duty, and a Bearer Company can pose as a little temporary hospital for a time.

12030. That you think ought to be part of the Field Hospital itself?—Yes, because in a big engagement the distribution was enormous. The line at Colenso was a very large line, and if we had crossed the river it would have been very complicated, all these different individual units working under their own commanders who had certain instructions to forward the sick by a certain route.

12031. Who gives orders to the Bearer Companies now?—That will be primarily the Principal Medical Officer who is in charge of the column.

12032. He does now?—He would.

12033. He cannot be present in all parts of the field?—He has a deputy; as a matter of fact, the Principal Medical Officer was present in all engagements in Natal. It would make it very simple if the Bearer Company were associated with the Field Hospital; they have to work together.

12034. And they would be controlled by the Medical Officer in charge of the Field Hospital?—Yes, who will be a man of the rank of a colonel.

12035. Your next point is that a large mobile Field Hospital should move with each column?—That point was simply this: the gravest thing in the treatment of the wounded in war, is the transport; the number of lives lost by unsuitable transport and the number of people crippled by it, is inevitably large. Say that a man is shot through the thigh: if that man could only lie where he was shot he would do very well, but if he has to be lifted into an ambulance and jolted 10 or 12 miles his prospects are very small. There is no doubt whatever that the mortality of a war is very largely increased by inefficient transport. The experiment was tried in Natal of having at the head of the column a large Field Hospital, to which I was attached, and it was an unqualified success. That was the first time it was ever employed.

12036. So that the cases could be treated as near the spot as possible?—They came straight from the very ground into our tents; we were always pitched as far up

as we could get, next to General Buller as a matter of fact; we could be present at an engagement; we knew where the different regiments were, and we often knew at what range the man was shot, and the man was brought into the tent direct. It was of immense service, and practically the whole of the wounded in Natal came through that Field Hospital, and therefore had first-class treatment as soon as it could possibly be got.

12037. When a column is distinctly on the march, would there not be difficulties as to what should be done with the worst cases?—There is no difficulty on a march; if it was on the gallop or trot it would be difficult. If you had a column moving at the rate of an ordinary Infantry column the Field Hospital could keep up with that.

12038. I was thinking more of the bad cases?—They, of course, must be left, and the point is this, that if you have a big Field Hospital such as we had you could keep them. We kept our very bad wounded after Spion Kop. If we had not had that big hospital those men would all have gone down, and I am certain that a good many limbs would have been lost by transporting them at an unfortunate time.

12039. What happened to them?—We kept them, and took them down ultimately. They were not taken down by any military unit; they were taken down by amateur bearer companies that had been organised from refugees from Johannesburg and the like.

12040. I was thinking more of cases like Lord Roberts' march; was it not necessary to send back the bad cases in that instance?—I need not say this, that sending back the bad cases renders the cases a great deal worse. The death-rate in war would be very small if a small tent could be built over every man where he fell; it is the dragging of the man about that kills him.

12041. But, as a matter of practical working, you could not leave a man with a tent over him where he fell?—No.

12042. In the case of a march like Lord Roberts', either to Bloemfontein or afterwards, it was surely a necessity to relieve the mobile field hospital of its bad cases?—That is true enough; but still it would have been better if there had been a large field hospital that was following the column at a reasonable distance.

12043. Larger than they had, as a matter of fact?—Larger than they did have at the beginning, so far as I know.

12044. The transport is a question of the ambulances?—Yes; the question of the ambulances is, of course, open to great improvement. The transport is the weakest thing in the Army Medical Service, it seems to me.

12045. Is that from the nature of the ambulance cart or in what way?—The nature of the ambulance cart. We did have in Natal a very fortunate arrangement in the large number of coolie bearers and the civilian bearer company; but the cases that went by ambulance fared badly.

12046. Have you any suggestions to make about the ambulances?—Yes; it is not a practical thing for a country without roads. The Boers had good ambulances, but an English ambulance is hardly fit to transport the sick; it is impossible for a well man to sit in it almost when it is moving rapidly.

12047. We have had some evidence about it; the authorities stick to their own ambulance, and give reasons for so doing?—If you want a wagon that can be driven at a trot over a series of walls, or practically over churchyards, and that will come out unbroken, the English ambulance will do it, but it is a rough affair. Given a good road, of course, it is all right, and it can carry a large number; but later on I think you will find that the evidence was given in favour of light carts, such as the Indian two-wheeled tonga.

12048. I think we had some evidence in favour of them for certain purposes, but not on the roads. They were the best for the rough ground of which you have been speaking?—Exactly.

12049. But when you get on to the road?—The ambulance is all right then. I have no fault to find with

it then, but I need not say there were no roads—practically there was a track.

12050. Of course, in many places there were no roads, even where they could use wagons?—That is so.

12051. But in those cases the evidence we have had, and which I have before me, was that the other wagons were either very heavy or broke and fell to pieces, while the wagon which was called Mark V. stood the work across country and was a good wagon?—I would rather urge this, that there is no other provision than this—an ambulance that can only go on a road. That is the point. In a war on the Continent the ambulance Mark V. would be admirable, because there there are proper roads; but there is no provision for an ambulance to go over a rough country.

12052. The evidence was that Mark V. stood the work across country?—Yes; the carts stood the work, but the patients did not; the cart is unbreakable, I should think, and would go over anything. It is the weight and rigidity of the cart which is the bad feature of it.

12053. Would you dissent from this question and answer: Q. You have said you would not use either the tongas or the Cape carts if you could get a wagon? A. Not on a roadway, but I would use them for following Cavalry, or for going light across the country. For preference, I would put a man lying down in a four-wheeled vehicle if the roads were good, but I think you want the two kinds of conveyance always; you want the light one to gallop across the country to pick up a man, where you could not take a heavy lumbering wagon with from six to eight mules, which was the general number. You could not take a heavy wagon of that kind across country for a wounded man, but you could send one of these two-wheeled carts, and they would bring him in equally well with a little care. I think every Bearer Company ought to have both kinds of vehicle?—I entirely agree with every word of that, and I wish to say we had nothing but this enormously heavy ambulance, which is not suited for a country without roads, and the tonga does not come into the Army outfit.

12054. No; they were sent from India?—Yes.

12055. Is that all you wish to say about the ambulances?—Yes, and the last point is simply this, that there is no equipment in the Service for following a Cavalry column.

12056. It must be a light cart, of course?—It must be a two-wheeled cart, and the orderlies must be mounted, and there ought to be a saddle provided, so that a sick man could be brought home on a horse. There is I believe such a thing used in India.

12057. Was there no equipment of that kind in South Africa?—No, not with us, and there is nothing in the Army Medical Service; there is no wagon equipment beyond the regulation ambulances. It is most desirable that there should be a recognised medical outfit for a rapidly-moving Cavalry column.

12058. These points which you have mentioned are matters on which you think amendments could be made?—I think so, and especially that last matter, but our Army has no provision of any sort for that particular requirement.

12059. But, generally speaking, you would say the medical work was well done?—Admirably done, and I should also add that Mr. Brodrick's Committee has rectified most of the faults that were apparent to us, and I think now the Service will be really admirable. These are comparatively small matters, of course.

12060. (*Viscount Esher.*) Mr. Brodrick's Committee appointed an Advisory Board, upon which you have served?—Yes.

12061. And are still serving?—I am.

12062. What sort of questions do you go into?—Well, we should go into all such questions as I have been indicating to day; these questions will all have to come up before the Board.

12063. The Board is presided over by the Surgeon-General?—Yes.

12064. Is it optional with him to accept the recom-

mendations of his Advisory Board?—Our communications go to the Secretary of State.

12065. What is your precise procedure; what do you do?—Practically any matter which is a question of opinion comes before the Advisory Board; for instance, the recommendations of all men for promotion come before the Advisory Board; that goes, as you know, before another Board, who may or may not accept this recommendation.

12066. And, then, as to such questions as to whether the equipment is satisfactory, or any of these points you have been referring to to-day, are all those questions which may be raised by any member of the Advisory Board to be discussed?—Yes, they will all come up before the Board in time. At present the work of the Board has been devoted mainly to improving the terms of the Service and obtaining men for it, because it has been so terribly undermanned, and in establishing a Medical Staff College in London, and the like.

12067. That is to say, you have been principally engaged up to the present time in dealing with the quality of the Army Medical Service?—Yes, and the terms of the Service.

12068. That practically comes to the same thing; you want a better class of men?—Yes, and we shall get them.

12069. Then you have not yet begun to deal with all these questions of administration?—No, all those matters will be dealt with by the Advisory Board in due course.

12070. Does it take up a great deal of your time?—A great deal of time with Committee meetings and Sub-committee meetings.

12071. Your services and those of Mr. Fripp and others are all given to the Secretary of State?—Yes. We have just inspected twenty-two military hospitals. Still, it is all coming, and I do not hesitate to say that it will be the finest Service in the world in time. It is too colossal a thing to deal with all at once; we are taking the big things, and these others are matters which will be dealt with in due course.

12072. Do you draw up reports after your meetings?—All our minutes go to the Secretary of State.

12073. I suppose you differ sometimes?—Yes.

12074. Do you express your differences on paper?—There never have been any gross differences.

12075. There has been no serious dispute?—No, never.

12076. Do you find that the Secretary of State carries out your recommendations?—Wonderfully well. I think the Advisory Board can say this, that the Secretary of State has supported them in every conceivable way. Mr. Brodrick has constantly expressed his wish at any sacrifice to get the best Medical Service that can be got.

12077. Whatever may have been the case during the war, at the present time everything is being done which is possible to remedy the defects which experience has shown existed?—That is quite right, and all these little points I have mentioned I am quite certain will be corrected.

12078. (*Sir Henry Norman.*) Have you had any experience of the medical equipment of the Colonial Forces?—No, we had no such contingent with us.

12079. I suppose, as to any Colonial Forces raised in the Cape, their equipment was very much like the British?—So far as I know, it was exactly the same.

12080. Had you any experience of Civil surgeons sent out to supplement the men of the Army Medical Corps?—Yes. The Field Hospital I was attached to was worked mainly by Civil surgeons.

12081. Had you any fault to find with the way in which the Civil surgeons were selected in England?—So far as my own knowledge went, none; the men we had with us were splendid.

12082. And I suppose you had some local surgeons—men who were already in Africa?—No, in this particular hospital they all came out from England.

12083. Were there not Medical Officers residing at Durban and Pietermaritzburg, and so on?—I think

Sir Frederick Treves,
Bart., C.B.,
K.C.V.O.,
F.R.C.S.
Feb. 1903

Sir Frederick Treves, Bart., C.B., K.C.V.O., F.R.C.S. practically none of those joined, and they were men busily engaged in their own work; of course, the refugees from Johannesburg and the like who were turned out joined, but the men in Durban and Maritzburg were busy with their own practices.

4 Feb. 1903. 12084. Some joined you from Johannesburg?—A good many came down to Maritzburg and joined the Military Hospital at Fort Napier.

12085. And you employed in the Medical Department a large number of subordinates who were picked up on the spot, I suppose?—Bearers and, of course, conductors; the conductors were all local men.

12086. Had you any nurses with the force that was with you?—It was the only field hospital that took nurses. I obtained permission from General Buller to take out and up two nurses.

12087. Were those the only nurses with your force at Colenso, and in those operations?—At Colenso, but some others came up later. The idea was that a wounded man should have as good attention on the Veldt as he would have in London, and the War Office for that purpose gave me an exceedingly elaborate outfit; they gave me a couple of wagons, sixteen mules, a horse, a man, a conductor, and six Kaffir boys, so that in any case for any serious operation I could have been there.

12088. But there was not in that force a regular establishment of nurses?—No.

12089. And was your opinion of the nurses satisfactory?—All that I came across were excellent; I could not speak too highly of all the nurses I came across all down the line.

12090. Well instructed?—They were all carefully picked women, and no woman so far as I know was engaged who had had less than three years' training.

12091. With regard to the Bearer Company, which, as you say, is a military unit, being under the officer in charge of the Field Hospital, would not the duty of the Bearer Company very often be very far from the Field Hospital, and would the officer in charge of the Field Hospital, which presumably is in rear of the army, know exactly where to send them?—I think so. I know in one case the Bearer Company saw nothing, and no wounded came near them; they were badly placed, but it was a piece of fortune.

12092. Is there any officer of intelligence in charge of the Bearer Company who would quickly pick up the knowledge of which direction they should go to get wounded?—He would have to act on the Instructions. The man in charge of the Bearer Company would probably be a major.

12093. A good deal would have to be left to his discretion as to where he should go?—A good deal.

12094. I have no doubt you are aware that great efforts have been made for many years, both in India and England, to try to improve the ambulance carts, but I gather from you that these efforts have not, so far, been very successful, and you think they have not found a very efficient cart?—No; so far as we were concerned in Natal we had nothing but the English last-pattern ambulance, Mark V., I think, which is admirably suited for a road in England, but is not suitable for going over a donga and in and out of a spruit, and the like.

12095. But the tonga, you think, is much better suited, or something in the nature of the tonga?—Something in the nature of the tonga.

12096. Can a man lie down in a tonga?—Yes, two men can lie down in a tonga; it is possible to make a tonga for four men to lie down in it.

12097. Did they make any use of dhoolies in Natal?—Yes.

12098. I suppose there is no more comfortable thing, where you can use it, for a wounded man's accommodation than a dhooly, because a man can sleep in it?—There is nothing like it; there is nothing in the world like a hand-carriage for a wounded man, and nothing ever will be invented as good as that.

12099. That is a great advantage they have in India, but it involves an enormous number of men?—Yes, we had twelve men to a stretcher for the long distances; the weather was very hot, the distance was 26 miles, and the country rough.

12100. Then when they put the men down in the Field or Base Hospital they came back again, I suppose?—Yes, they had their own camp and their own officers.

12101. (*Sir Frederick Darley.*) I think I understand, from what you said, that the Bearer Companies were formed from the soldiers?—Entirely.

12102. Had they any training?—Oh, yes, they are all men of the Royal Army Medical Corps.

12103. The Bearer Companies belonged to the Army Medical Corps?—With the addition of a certain contingent of Army Service Corps men; they have their own transport.

12104. Were they trained how to lift a wounded man from the ground?—Well trained.

12105. So that in their hands a wounded man would not suffer any injury in being lifted from the ground?—No, they were well trained men, especially in that kind of work.

12106. I think you spoke of a mobile Field Hospital of a large class, but would not that necessitate moving the wounded with that hospital as the hospital moves?—Well the point is this, that an ordinary field hospital will have a maximum capacity for 100; after an engagement like Spion Kop a Field Hospital could not possibly deal with that number, and they would have to be sent down unless you multiplied field hospitals indefinitely. The hospital I speak of is a large mobile Field Hospital with a big equipment and capable of great expansion; for instance, before the battle of Spion Kop we had a direct instruction to put up 100 tents; that was the only hint that was given to us that there was to be an engagement, and that enabled us to take in 500 wounded men. Now a Field Hospital could hardly do that.

12107. My point is this; if the wounded men are to be moved, would it not be better to move them at once to the rear, where they would remain altogether without further movement?—No, I do not think so. I think we saved a good many lives on that particular occasion by keeping them until they were fit to move.

12108. Now, take the case of Lord Roberts' advance on Bloemfontein, or his advance on Pretoria afterwards, there the mobile Field Hospital would move as he moved?—Yes.

12109. That would necessitate the movement of the wounded, too?—Yes, but on such a long movement this bigger hospital I speak of would be very much nearer the head of the column than the next Base Hospital would be. The longer a man can be kept near where he is shot the better; the transport is bad, and the later that transport can be undertaken the better.

12110. The less he is moved from the time he is first brought to the hospital the better?—Yes, and the later he is moved the better, within reason.

12111. We heard from Dr. Fripp that the Advisory Board visited the military hospitals at Aldershot, Netley, York, Portsmouth, and Gosport. Did you visit those hospitals?—Yes, we visited twenty-two altogether.

12112. He seems to have found a great deal in those hospitals that required amendment, and he said that it would take a considerable sum of money to put those hospitals in the state they ought to be in; what amount do you think ought to be applied to that purpose?—I have really no means of forming an estimate beyond saying this, that there is a very obvious need of an immense outlay in connection with our military hospitals, which are not up to the mark in any way whatever.

12113. He instanced one case at Aldershot where the hospital was a portion on one side of the road and a portion on another?—That is the third station hospital; it is not fit to be a hospital. The military hospitals do not come up to the standard of a workhouse infirmary and they ought to be at least brought up to that level.

12114. That is one of the objects, I suppose, of this

Advisory Board you are sitting upon?—Yes; we will be sending in within a month our report to the Secretary of State on the 22 large military hospitals in this country, that is to say, hospitals of over 100 beds.

12115. We had a gentleman before us here who stated that in Russia they took into the large military hospitals such of the civil population as chose to go, in order that the medical men might really have sufficient practice to enable them to discharge their duties—in fact to teach them; would you approve of that being done here?—No, it would never do in this country, I am certain. We are making elaborate arrangements to keep the Military Medical Officer up to his work by a system of examinations, whereby a man can only get his advancement by professional ability, by establishing a military staff college, to which he will return from time to time to carry out special branches of the work, and by closely associating ourselves with the Civil Hospitals, by having civilian teachers, and endeavouring in every way to induce the military officer to go back to his Civilian Hospital from time to time, and special leave will be given for that purpose.

12116. To study in the hospitals?—Yes, under the supervision of the authorities—the Director-General and the Advisory Board.

12117. But you do not approve of admitting the civil population to the Military Hospitals?—I do not think it would answer. It opens up a series of complicated questions; it practically opens up the question of a State-supported hospital (and we have no such thing in this country) such as they have in Germany and other parts of Europe, and I think the difficulties would be very considerable.

12118. Is there any reason why a Military Hospital, a Base Hospital, during the time of war should not be conducted exactly on the same lines as a large London hospital?—It could be on the same lines if the question of discipline be introduced.

12119. I mean with respect to the work that the medical men have to do?—It should be exactly the same.

12120. Medical men in the large London hospitals have nothing to do with clerical work?—Nothing whatever.

12121. Whereas you say that even the head of one of these Military Hospitals has his whole time taken up with clerical work?—With administrative work. The point that strikes us is the extravagance of it.

12122. The whole of his skill and everything is thrown away?—Entirely.

12123. He is simply doing the work of a quartermaster, a clerk, or a house steward?—The work of a house steward; it is of course a very extravagant way of doing it.

12124. It is employing a skilled man to do unskilled work?—That is exactly the point.

12125. (*Sir John Jackson.*) Do I understand now that the idea is, under the advice of this Board, that army surgeons will get practical work in Civil Hospitals during peace time?—Do you mean that they will have actual charge of patients?

12126. Yes, or surgical work?—I do not think so as regards the actual charge of patients.

12127. It is merely that they will receive instructions through the civil surgeons?—Yes, and watch the practice.

12128. They would not perform operations?—No, that would not be possible.

12129. Your Army surgeon then during peace time gets no practical experience of operating, does he?—We are doing all we can to develop that in this way, that if the Military Hospitals are developed all the military sick will be treated, and none will be sent off to Civil Hospitals as they are now.

12130. Take the surgical cases, they will not have many surgical cases in the Military Hospitals?—Take a case of this sort: supposing a private in a cavalry regiment develops a rupture; if that youth is operated upon he can remain in the Service, and that operation ought to be done by the military surgeon, but he will

often not do it. He says, "I have got no outfit," and the man is sent off to the Civil Hospital, is operated upon, and then comes back to the Service again. Our contention is that if the military surgeon undertakes the surgical work that falls within his legitimate sphere, he will have quite enough to keep his hands well in training.

12131. Still, in the Civil Hospitals you get cases every day of broken limbs, accidents, and so forth, that you would not get in the ordinary way in the Army; where would your Army surgeons get their practical experience?—There really are more accidents than you would imagine in connection with military life. Take the Cavalry Hospital at Canterbury; the men under training are prone to get concussion of the brain, fractured skulls, and fractured limbs, and more than that, such practice as the officers lack would I hope be sufficiently made up by a period of study in a Civil Hospital.

12132. Do you see any particular objection to these Army surgeons having practical surgical experience in the Civil Hospitals for a certain time?—Do you mean to take charge of patients?

12133. Yes, and to perform surgical operations?—I do not think it is possible. I think there would be an immense difficulty in that. You see the hospital has got a certain reputation; the officers are selected with the very greatest care, and it practically comes to this, that when a patient comes in instead of having the operation done by the man who has been specially picked to do it the operation would be done by the first military officer whose turn it was, and I do not think that would be quite keeping faith with the public. I think the public would not like it, and I do not think the hospitals would meet with the support they at present meet with if that were done.

12134. In the civil hospitals at present your junior surgeons merely assist?—They never operate in any but minor cases.

12135. With regard to that reference you made to the complete outfits that were sent out under the present regulations, there were a great many things that were unnecessary for the campaign in South Africa, and I take it that there again under this Advisory Board that sort of thing will not be likely to occur in the future?—I do not think so.

12136. It really comes to be a point for the Surgeon General or the proper official at this end to decide what is necessary before the outfits are sent out?—The difficulty is this, that there is a certain stereotyped outfit for a field hospital, and the general in command requires so many field hospitals for his army corps.

12137. And whatever country it is that particular outfit has to be sent?—Yes.

12138. Would it not be practicable for the Surgeon-General, or some competent man at this end, when the time arrives, to fix what was necessary to be sent out, say to South Africa or wherever it might be?—Yes, but I do not know whether it would be within his power.

12139. Not at present, but I suggest would not that be the right thing to do for the future? Say that we were having a war in South Africa or anywhere else, does it not appear to you that the right plan would be for the head of the Army Medical Department, or a board, to meet and settle what the nature of the outfit should be?—Well, that is one way, but the suggestion I made is this: that with each column there should be an advanced medical dépôt, and the officer responsible for the administration of any individual hospital should get his outfit from there, and the whole test of the efficiency of that hospital would come on his shoulders.

12140. In the event of a war in South Africa, say the chief Army Medical men at this end ought to know quite well the nature of the outfit that would be required for South Africa, should they not?—They would, but there again there is risk of becoming centralised. The officer in charge of the hospital might say "Well, I think I ought to know better what I want, I have to run this hospital, I would sooner get my own outfit than get yours," and I think if the material is landed in South Africa, and the man gets his

*Sir Frederick Treves,
Bart., C.B.,
K.C.V.O.,
F.R.C.S.*

4 Feb. 1903.

Sir Frederick Treves, Bart., C.B., K.C.V.O., F.R.C.S.
4 Feb. 1903.

supply from that base, that would be the more simple plan.

12141. I see, but still I take it that following out your suggestion a great many things might go to the base that would not be required?—That is certainly so.

12142. My suggestion is that the authority at this end should decide what things were necessary to be sent to the base?—I think that would be quite practicable.

12143. And following upon that your suggestion would then come in that the medical officer in charge should make his requisitions as he thought best for the particular case?—That would do very well.

12144. (*Sir John Hopkins*.) Have you had before you at the Advisory Board the question of providing sanitary officers?—Yes, that is now a matter under discussion. I think that is a matter on which many feel very strongly, and it is a most desirable feature.

See Q. 11027 &c.
12145. (*Lord Strathcona and Mount Royal*.) We have it in the evidence here that the supplies furnished for the Medical Department in Africa were of an entirely antiquated character, that they were not in keeping with the requirements of to-day, and with the advance in the science of surgery and medicine: did you find them to be so?—Well, it is true, but I do not know whether I should say entirely antiquated. They were certainly antiquated, and we were carrying about with us instruments which I should have thought would only be found in museums. I should not say the equipment was entirely antiquated.

12146. But at any rate it was not equal to what it might have been, looking to what could be procured and what is usual in civil life to-day?—No. I should say this in defence of the Army, that I have been asked to draw up a sketch of an instrument case, for example, and that means changing not one but many thousands through the length and breadth of this enormous Empire, and the outlay is colossal. As soon as those boxes are put all over the world, in India, and every other part where the British Army extends, there is a change in practice, and they become obsolete and have all to be changed again.

12147. (*Viscount Esher*.) What happens in civil life?—They are changed again.

12148. You mean that the cost there falls on individuals, and it does not apparently amount to so large a sum, but in reality it does although it is spread over a larger area?—Really to put the Army surgical outfit into first-class condition now, I think the sum would be positively staggering, and as soon as that expense had been met there would be the remark, "Oh, well, this kind of thing is obsolete, we must get another one."

See Q. 11051, &c.
12149. (*Lord Strathcona and Mount Royal*.) It has been said that the medicines were sent in a clumsy and bulky form, and not at all like those that are in use to-day, such as tabloids, and other concentrated preparations; many of them were sent in bottles and in liquid form, for instance?—Yes, we took about medicines that were in bottles in the most cumbersome form, and that had been in the bottles for 20 years possibly. It is really a serious complaint; we had to drag this useless chemist's shop all over the country, packed up in the most ludicrous and extravagant way. Tabloids, or any such concentrated preparations as are used now, would have put the whole outfit into a twelfth part of the space.

12150. (*Chairman*.) Did not that arise from just what you have been mentioning, that they had in store the medicines in the old form, and they naturally had to use up those?—Yes.

See Q. 11618.
12151. I cannot refer to the question on the spur of the moment, but I think we had it in evidence from one of the witnesses that that is what took place, and in the latter part of the war, as soon as they had exhausted their stocks, they were supplied with modern forms of medicine?—No doubt. The present outfit is, of course, cumbersome beyond expression.

12152. Even as it stands?—Yes. If you saw a medical

pannier put down there it would take two men to lift it, whereas an equal outfit of modern goods could be lifted by one hand.

12153. (*Lord Strathcona and Mount Royal*.) Would it not have been economy to have thrown away those things which were in stock at the beginning, and to have procured the modern articles?—I think there was a good deal lost. A good many boxes were lost, no doubt.

12154. It has also been said that the surgical instruments were very inferior in many cases to those used in civil life?—That is undoubted.

12155. We have also been told that the system of disinfection in several of the hospitals was very imperfect, and not equal to what it might have been?—That is true, too; sterilisers are not easy things to carry about, and methylated spirits are not easy to carry about. We were very short of fuel.

12156. It has also been mentioned and recommended that the officers of the Army should have an opportunity of practising in the civil hospitals in Great Britain and on the Continent also, where opportunity offered: do you think it is desirable that they should?—It is very desirable, but the difficulties are, as I have just mentioned, almost insuperable. We are building on the Embankment here a large Military Hospital, and associated with that Military Hospital will be a Medical Staff College equipped in the very best possible way that money can equip it, and we hope to keep the medical officer up to his work by passing him through that hospital and through that Military Staff College. The possibility is that we shall be able, or shall be allowed, to keep patients in that hospital longer than the Service would permit; as soon as a man is said to be unfit for service now he leaves it, but it would be very much better in the interests of the education of the medical officer if a certain number of these disqualified soldiers could be kept under care for a few extra months.

12157. (*Viscount Esher*.) Is it settled that the new college is to be built on the land at the back of the Tate Gallery?—It is, I think I may say, absolutely settled; I think permission has been given.

12158. Quite recently?—Yes, in the last week.

12159. But it is now definitely settled?—It is definitely settled.

12160. Where does your Advisory Board meet?—68, Victoria Street.

12161. Is that convenient?—Very convenient.

12162. (*Sir Frederick Darley*.) The young surgeons in the hospitals now are accustomed to use the most modern instruments?—They are.

12163. And they see operations performed by the ablest men in the profession with the most modern instruments?—Yes.

12164. These young surgeons, if they go to a Military Hospital, have some antiquated instruments to use there?—Undoubtedly.

12165. Can they use them?—They have to be used; we had such weapons in South Africa.

12166. Do they not use them at the risk of the patient's life?—I do not know whether it would go as far as that. Men have often to do operations with curious instruments. Every one of us took out our own complete outfit.

12167. Yours, of course, was the most modern?—I took my own out.

12168. Looking at it from the point of view that having to use these antiquated instruments might cost life or limb, do you not think that it would be better that the most recent instruments should be supplied?—Beyond any question of a doubt, if the expense could be met, which I must confess would be enormous; and there are other things almost more pressing, namely, the state of the Military Hospitals in this country. No one could say that there is any Military Hospital in this country which can compare with a large workhouse infirmary, for instance, and that is a fairly low standard of comfort.

12169. Do you not think that is rather discreditable,

to say the least of it?—It is not creditable to the British Army, I must confess.

12170. (*Chairman.*) Although the instruments were antiquated, the work done was all right?—The work was very well done; it was a question of making the best of it, and it was really very well done. The instruments were obsolete; for instance, there was no such thing in the Army as a telephone probe, and to find out a modern bullet with anything else than a telephone is often not practicable. By the time the entire Service is fitted with telephone probes, something better will have come in, probably.

12171. (*Viscount Esher.*) You said just now that it was very difficult to carry a steriliser about in the field; do you know how the Austrian and Russian armies meet that particular difficulty?—No.

12172. Since you have been on the Advisory Board, have you found any evidence to show that here in England the Army Medical people know anything about the Army Medical Corps in Russia and Austria?—Unfortunately they do not, and we are making a special point of this, that before a man can be promoted to a colonel, he must profess a knowledge of the military service of certain countries. We are trying to provide that now. At the actual moment the subject for examination is an account of the military medical system in France, for example, and that will be further developed, I hope, in the course of twelve months, so that it will be possible to say we are prepared to examine the men on the military services in any European or well civilised country.

12173. (*Sir Henry Norman.*) In condemning all the military hospitals in the country, almost, that have been inspected as yet, I suppose it is understood that when those hospitals were constructed they were constructed according to the best knowledge of the day—take Aldershot and Netley, for instance, which were constructed about the time of the Crimean War, do you think they were defective, judged by the standard in force then?—Well, Netley undoubtedly is; it is faulty in construction, beyond a doubt, and some of these hospitals were built in 1783.

12174. And those that were built in more recent times, like 1856 and 1860?—The Herbert Hospital at Woolwich is very good indeed, and so is Hounslow in structure—perfect. A little hospital like Hounslow in structure is perfect.

12175. (*Viscount Esher.*) But you were not speaking about structure?—I was speaking of what might be called the general standard of comfort in the wards and general outfit. The public would scarcely credit that sick men were kept in casemates; at Chatham sick men are actually kept in old gun casemates.

12176. (*Sir Henry Norman.*) That was not built for a hospital, surely?—It was built as a fort, so that there is no hospital worth speaking of there.

12177. Are Netley and the hospitals at Aldershot very defective?—I think I am right in saying that out of 22 hospitals we looked at on what might be called the military standard, eight might be called good.

12178. (*Viscount Esher.*) But on the civil standard?—There is nothing approaching the civil hospital.

12179. (*Sir Henry Norman.*) I suppose if we were to look very closely into workhouse hospitals we should find some rather antiquated?—Yes, but I think if you limit yourself to big cities the poor-law infirmary as at present administered is very good; I do not say the workhouse infirmary of a small town, but the poor-law infirmary in places as large as those we have been inspecting—the corresponding workhouse infirmary; for instance, it is a small matter, but the shirts and the sheets come back from the laundry dry and that is all; they are not touched, there is no question of ironing them or even putting them through a mangle, and they look like things that have been crumpled up in your hands; now, that would not be permitted in a poor-law infirmary.

12180. (*Sir Frederick Darley.*) Doctor Fripp told us there were no means of washing the utensils?—That matter is a long way behind. I had to report upon hospitals in which I myself actually witnessed the washing up of all the plates, dishes, knives and forks in the sink in which the bed-pans were washed out, many of the patients having typhoid fever. It is positively

incredible. That applies to two separate hospitals out of 22; that is a practice at which I happened to be present and witnessed on two occasions. All our inspections were carried out without notice. The matter you speak of, Sir, is therefore comparatively small. As to the temperature of these hospitals, during the cold weather we could not find a ward up to 50 deg., and that is hardly the temperature for a sick man to be living in.

12181. (*Lord Strathcona and Mount Royal.*) I noted one case given of the inferiority of the surgical instruments used in South Africa. It was asked: "Q. I suppose civil consultants brought their instruments with them? A. They did. Q. And there was a very great contrast between the two sets? A. A very great contrast between the two sets. I remember one case on the Modder River of opening the skull, for which one nowadays requires a number of cutting forceps which rapidly divide the bone and enable the operation to be done quickly, accurately, and without shock, but there was nothing there but an old-fashioned amputation bone forceps such as was supplied in old-fashioned amputation cases?"—That is quite true.

12182. That sort of thing came within your knowledge?—Yes.

12183. (*Sir John Edge.*) Unfortunately I was not here while you were giving your evidence. Did you visit Haslar?—No.

12184. You have not visited any of the Naval hospitals?—No, that is outside our province.

12185. And you do not know anything about the supply of medicine and medical stores for those hospitals?—No, I do not.

12186. (*Sir John Jackson.*) Have you seen anything personally of the working of the Army Medical Departments in France or Germany?—No, not in any detail.

12187. Do you consider generally that their arrangements are materially superior to ours?—I think one service is, namely, in America.

12188. I was referring to Germany and France; are the German arrangements better?—I do not think they could be said to be better without qualifying the term in some way. I think perhaps their outfit might be better, but I do not think the system of the service is any better.

12189. What about France?—I should not think France would stand quite so high as Germany.

12190. But you think in the United States the service is better?—Their service is good unquestionably.

12191. (*Viscount Esher.*) In Germany and Russia the Army Medical Services have wider experiences in time of peace than ours?—The system is perfectly different; for instance, in Germany a military medical officer is put with his regiment at Bonn. That regiment stops at Bonn for possibly fifty years, and that man is allowed to practise; and in Russia the best surgeons are military surgeons. In England the military medical officer is not allowed to practise.

12192. In that respect they have an advantage in Germany and Russia?—They have that immense advantage which holds good in India, where the medical officer can practise. There is nothing that keeps a man better in form than the test of civil practise, which, of course, is denied to all the men in our service.

12193. (*Sir John Edge.*) When they are on the Staff in India they are allowed to practise. I think some years ago the army medical officer was allowed to practise, and then I think it was limited to the Staff. My experience is that in India the Army medical officer can attend a consultation?—There are two services in India, as you know, the Indian Medical Service and the other, and I do not quite know what mutual arrangement exists on that point between those two branches of the service.

12194. As a matter of fact, I have had an Army medical officer in consultation myself?—In England he is debarred any practice.

12195. Would you advocate allowing an Army medical officer to practise?—It is not possible, the amount of foreign service is so enormous and his stay in any town so very short.

12196. (*Sir Frederick Darley.*) He is always moving about?—Yes.

Sir Frederick Treves, Bart., C.B., K.C.V.O., F.R.C.S.

4 Feb. 1903.

See Q. 11034-5.

Sir Frederick Treves, Bart., C.B., K.C.V.O., F.R.C.S. 12197. (*Sir John Edge.*) He might be three years in a station in India, for instance?—In India it is a little different, but it would not apply to a place like Canterbury or Chatham.

4 Feb. 1903. 12198. In India is it your opinion that he ought to be allowed to practise? It would be for the benefit of the men and the Service also?—It rather suggests this, that he has not enough to do in the Service if he is allowed to practise. What would be the perfect development, if this country were rich enough, would be to allow the treatment of the women and children in the Army. That is not done, and that enormous advantage is lost to the Army medical officer.

12199. How are they treated?—By the civilian practitioners. Take any women's hospital you like, there are a number of cases requiring operation, and it would be of great service if those operations could be undertaken by the medical officer, but there is no accommodation, and they go to the civil hospital. The women and children attached to the British Army are looked after practically by civilians. The only women's hospitals are lying-in hospitals simply because no civil hospital will take in what is called a lying-in case. I think you would find if the women and children attached to the British Army and recognised as being on the strength were treated by the Army surgeons that view would have the equivalent of the civil practice you refer to, but as a matter of fact the moment a woman has anything the matter with her requiring definite treatment she is sent off to the civil hospital.

12200. I suppose there would be no objection to the officers of the Army Medical Corps having a consultative practice?—I do not think it is possible. I do not think their claim to special knowledge could be such as would

cause the public to consult them except in one matter, and that is in tropical diseases.

12201. (*Viscount Esher.*) If a soldier is going to be operated upon is it now optional for him to be operated upon in the Military Hospital or in the Civil Hospital?—It depends upon what the hospital is; there is a large hospital at Canterbury dealing with a number of cavalymen, and there is no surgical equipment in the place.

12202. Is it optional to the soldier?—No, for instance at Canterbury there is nothing to deal with him, there is no operating theatre, and there are no suitable instruments, and he is therefore sent away. Sometimes he is sent to a Military Hospital and sometimes to a Civil Hospital, but at a place like Canterbury, which is falling into the earth, there is nothing in the place at all except the four walls and the beds. If anything happens there, if a man meets with a bad accident, it is so much the worse for the man, as there is no proper outfit in the hospital. There are hospitals of over 200 beds with no surgical outfit, so that it cannot be said that the military surgeon is encouraged in the Service.

12203. (*Sir Henry Norman.*) Are you certain that the women and children belonging to the regiments in India are not treated by the military surgeons?—I am not speaking of India, I am speaking of this country. We have examined all the women's hospitals in Great Britain, and in every one there is practically only provision for lying-in cases, and of the women and children some are treated as out patients; but all the rest are sent to civil hospitals.

12204. Has that always been the practice?—Always since we could find out.

Lt.-Colonel John Adye, C.B., R.A.

Lieutenant-Colonel JOHN ADYE, C.B., R.A., late Assistant Adjutant-General for Colonial Forces, South Africa, called and examined.

12205. (*Chairman.*) You were Assistant Adjutant-General for the Colonial Forces in South Africa?—Yes, during most of the campaign.

12206. From what date?—I was Staff Officer for the Colonial Forces at Cape Town from November, 1899, to February 1900; I was then appointed to a command in Cape Colony for some months, and I then became Assistant Adjutant-General for the whole of the Colonial Forces at Pretoria, in October, 1900, and continued until the end of the War.

12207. You went out to South Africa in November, 1899?—In October, 1899, at the beginning of the War.

12208. You have been good enough to give us some notes upon the Colonial Forces (*vide Appendix, page 576 post*). In what way would you like to deal with these?—In any way that is convenient. I submitted this Memorandum to the Secretary in case it should be of any use to the Commission, as I saw you were taking evidence about the Colonial Forces.

12209. Do you wish to put in the Memorandum as a whole?—It was not written with the idea of appearing in evidence; it was written rather as a rough memorandum.

12210. Then I can use it as a *précis*?—Yes.

12211. You draw attention in the first place to this being the first occasion on which we have employed Colonial forces on a large scale?—Yes, on a large scale.

12212. And you divide them between over-sea Colonials and South African Colonials?—Yes.

12213. The over-sea being all the other colonies?—The over-sea were all those raised outside South Africa; that was the division generally adopted in South Africa.

12214. We have had a good deal of evidence with regard to the over-sea corps, and the numbers of course we have had; with regard to the South African Corps, you are not able to give us accurate numbers?—I cannot give you accurate numbers, and I doubt if anybody can, because there was considerable irregularity in raising these corps at the start; some officers raised a few men, perhaps 25 scouts, and they did not report it until some time afterwards, and there are a great

number of different categories, some of which I have named here, and there were also others; for instance there were native levies and some bastard corps, half white and half black; again, some corps existed just a few weeks, and then went out and scarcely any record was kept of them. The fact that there was no staff officer right through the war on the Headquarters Staff dealing exclusively with all Colonial forces, rather caused that irregularity. Once I got to Pretoria I tried to get the matter more into shape for the whole of the Colonial forces. Some men also, undoubtedly, enlisted in various corps and obtained their discharge from them, and the war lasted so long that they entered other corps, and very often under different names, so that you may have a man counted several times over, and in that way it is impossible to give an absolutely correct statement. I should say from my own experience that from 50,000 to 60,000 men enlisted in South Africa under all the various categories, right down to the lowest.

12215. You put down the over-sea Colonials as a whole at 30,000?—I have seen two official statements of that since I have been home, and the one fixed it just below 30,000, and the other just over 30,000. The Adjutant-General's Department would have the figures.

12216. You think there were about double that number enlisted in South Africa?—I should say so, under all categories.

12217. There are some of those where the forces had been in existence before the war?—Yes.

12218. And continued after the War?—Yes, the Volunteer forces in Cape Colony and Natal.

12219. What sort of numbers did they consist of before the War?—I could not say exactly before the War, and also they were not all of them called out; some were called out and some were not; some were called out and returned at different times. They fluctuated a great deal.

12220. There were permanent forces in both colonies?—Yes, and their statistics before the War are known; the Intelligence Department would have them.

12221. As regards the irregular forces, you classify them under four heads, I think?—Yes.

12222. Will you give those heads?—There were those raised for general service in South Africa, and I give as examples the Imperial Light Horse and the South African Light Horse; there were a great many others, but I give those as examples. There were also those raised for service in certain colonies in South Africa; they were to serve in Cape Colony or Natal as the case might be, and they were not therefore used in the Transvaal. Then there were those for service in certain districts, which were called, as a rule, district mounted troops; they were chiefly confined to Cape Colony, and were largely raised by the Cape Colony Government, and to some extent paid by them at the end of the war—the last few months. Then, further, there were still more localised troops, the Town Guards, who were enrolled for the defence of a particular town, and who very often were not even embodied because their town was not attacked. Therefore there are a great number of categories, and besides these there were native levies to watch the natives, and one or two other small bodies.

12223. And I suppose the equipment of these different classes was different also?—The equipment of all those in the field I take it was the same.

12224. They were all mounted men?—Mostly mounted men.

12225. The equipment of the Town Guards would be different?—The Town Guards would not have saddlery, and in some cases they did not even have uniform.

12226. But they were all armed with rifles?—They were all armed.

12227. As to the recruiting of these forces, what have you to say?—The recruiting of the South African forces I can speak of; of course I cannot speak of the recruiting of the over-seas, because they were recruited in the distant Colonies. The recruiting was a matter of very great difficulty, because it was carried out as it were in the theatre of war itself, and the communications would be interrupted at times and so on. Also, of course, you had to beware of whom you admitted into these corps; a great many of the inhabitants had Dutch sympathies, and that made a great deal of difficulty.

12228. How did you deal with that difficulty?—Well, as far as possible we employed, specially at the beginning of the war, gentlemen who had Colonial experience, South African experience; for instance, Sir George Farrer, to superintend the raising of the South African Light Horse in Cape Colony.

12229. And see each man?—He, or somebody who had some experience associated with him, saw each man as he came in, made such inquiries as could be made into his antecedents, and either discarded him then and there or passed him. Then these men went out to a training camp outside Cape Town, and they were tested for riding, and if they passed the riding test they were generally admitted, but it was only on probation as a rule for a few days, and if they were not satisfactory, or anything turned up that made it better to get rid of them they were got rid of at once. That was at the beginning of the war when we were raising corps, but once a corps was in the field we had to keep it supplied with recruits to make up the natural wastage of war. Then, about the time I got to Pretoria in October, 1900, a considerable change was made. We saw we should have to go on recruiting; we had had troops in the field for about a year, many of whom had to be allowed to go, and we had to replace them. The system that was instituted was that at all the big places like Cape Town and Durban, Port Elizabeth, Kimberley, and so on, we had a district office and a district recruiter who was in charge of the recruiting in the district round about; and then the regiments which were low and required recruiting and were ordered by headquarters to make up their numbers, sent down an officer and a non-commissioned officer or two to beat up recruits. They issued posters and opened an office perhaps, and they obtained their recruits and brought them before the district local recruiter who passed them into the service. That, I think, is the right system, because you ensure one

system if you have a district officer, and you also encourage the competition in regimental recruiting which was considered necessary, especially by Lord Kitchener, in order to keep the regiments full.

12230. I suppose they were examined medically also?—Yes, of course they were also examined medically.

12231. Did you keep them any length of time under training before they joined?—No, it was impossible to give them any training worth mentioning. Of course towards the end of the war we got some men over again who had been to their work or their farms and then re-enlisted, and they wanted very little. They got very little preliminary training.

12232. That raises the question of the length of service?—Yes, and that I think is a very important point; at the beginning of the war men were enlisted as a rule until their services were no longer required, or words to that effect. It was considered then that the war would not last so long as it did, and no special term was named as a rule; sometimes it was, sometimes three months was named, and sometimes six months, but nearly always there was added "or for as long as my services are required." That was interpreted to mean that if the period named expired before the war ended the man could be kept on if necessary. When the war had lasted a year, in October, 1900, the greater part of the South African Colonial forces were re-constituted; the men were allowed as a rule to go back to their homes; they were encouraged to re-engage for a short period, and from that time onwards we engaged men only for short periods, not longer than six months, and the general period was six months. Then a man, at the expiration of six months, could claim to go even if the war was not over; there was a difference between the reading of the terms in the first year of the war and later.

12233. And did they generally go at the end of the six months?—Most of them would go, but many would come back at the end of a month after they had spent their money.

12234. I think, so far as raising a corps is concerned, you think a year is the shortest period?—I think that I would engage men for not less than a year, provided there was a possibility of the war continuing. I think it is a mistake not to name a period, and to say for as long as their services may be required; it is not fair to the men, and it is unsatisfactory. It is sometimes very hard, of course, to fix a period. We thought that six months would end the war, and afterwards we found that it was not long enough. The short periods, of course, caused the whole of the Colonial forces to be continually in a state of change; every six months the whole of the force was reconstituted.

12235. That is to say, just about the time a man was getting useful he went away?—Yes, and, of course, he had to be sent back to his home, paid up, and given a discharge certificate, and perhaps a month later you had to go through the whole form again.

12236. At any rate, the same sort of regulation ought to apply in all cases?—I should apply it in all cases, because it creates a great deal of discontent otherwise.

12237. Then as to establishment?—In the same way with establishment; I think an establishment should be laid down which would govern all mounted corps, and if necessary dismounted corps could have another. Nearly the whole of the corps were mounted; there were only one or two exceptional corps dismounted among the Colonials, and if you do not lay down an establishment you get into a great deal of trouble, which any military man will understand, especially with regard to pay, and especially where irregular officers are concerned. They frequently think they can make men into sergeants and officers without regard to establishment; perhaps an officer goes sick for a few weeks, and they put another in his place, and then comes the question of pay for the two of them.

12238. But you think the Commanding Officer and Adjutant at any rate ought to be regulars?—I think that it is better if you can get a good regular officer to command. Of course, towards the end of the war we got several very excellent Colonial officers, who had had great experience and were good fighters, and they made

*Lt.-Colonel
John Adye,
C.B., R.A.*

4 Feb. 1903.

*Lt.-Colonel
John Adye,
C.B., R.A.*

4 Feb. 1903.

most excellent commanding officers, but they are hard to get. Naturally, an officer who has had a military training and education, and has reached a certain rank, is better for the command of an irregular regiment, but he has to be very carefully selected. In any case, I would make the Adjutant a regular officer.

12239. As to the appointment and promotion of the officers, how would you deal with that?—I think that the greater number of the officers of the Colonial corps must themselves be Colonials, and as it is impossible, when you are forming corps in this way at a pinch, to know all the officers, you must leave it very much in the hands of the Commanding Officer, who will select his own very possibly from the non-commissioned officers and men under him, but I think it is very necessary that what was done in South Africa should always be done, namely, that he should submit his selections for the final approval of the General Commanding in the field, otherwise, especially with officers who have not had much experience in that way before, they are very apt to select men who are not entirely fitted.

12240. They were sometimes rather lax in forwarding their recommendations?—That, of course, is very apt to occur in war. They were trekking about in South Africa, and perhaps they did not touch the line for a month at a time, and they did not have very much opportunity, and when they had they were very busy, or perhaps they forgot it. Such things did happen, and the result was that officers' names came in perhaps some months after they had been appointed, and then perhaps it would be found that they were in excess of the establishment, that there was no vacancy for them, and so on. A good deal of friction arose through that, but it was almost impossible to avoid it in a campaign such as that in South Africa.

12241. You are speaking chiefly of the South African corps?—Yes, but it also occurred with regard to the promotion and appointment of officers in the over-sea corps after arrival, because, of course, they lost officers in the same way; although they came with their complement full of officers, and sometimes over full, they had vacancies occurring almost every day, and the same thing, therefore, applies to them.

12242. The original appointments were made in the different Colonies?—Yes.

12243. But you had to deal with the promotions and appointments in consequence of casualties?—Yes.

12244. Non-commissioned officers were made by the Commanding Officers without reference?—Yes, their names were not sent in.

12245. As to training, you have already said you could not train them beforehand?—It was not found possible to give them a training of more than perhaps a week or so when you were raising a regiment at the beginning of the war; we gave them a little instruction in riding and shooting at certain places; but as soon as men were armed, equipped, and horsed, they were sent up to the front, where they were very much wanted. Naturally, that would not do with every enemy.

12246. You prefer to have them under proper instructors at the recruiting centre?—Yes, I think if you had a few regular instructors at the recruiting centre it would be a very great thing. We had them at Cape Town in the first two or three months of the war, when we were raising several corps in succession. We borrowed a few non-commissioned officers from Cavalry regiments and so on, and we drilled the men in squadrons, and troops, and got them together, but once regiments took the field it was not possible to give individual recruits much instruction.

12247. Even where you could drill them, you did not give them the same amount of drill as a regular soldier gets?—Of course not.

12248. As to equipment?—I do not think there is very much to say as to equipment. Their equipment was, as a rule, the same as that of the regular forces, but the whole question of accounting for equipment they found exceedingly difficult, and I think some simple form of ledger might be devised if we are going to employ Colonial forces again on a large scale.

12249. And discipline is a difficult matter?—Discipline is, of course, a difficult matter with irregular forces.

You cannot treat them in quite the same way as regular forces; the men have never been together before, and are not accustomed before entering the field to discipline.

12250. The same scale of fines would not apply?—No, and fining was the general punishment inflicted by the Commanding Officers of Colonial corps.

12251. I suppose you are speaking there of minor offences?—Yes, with regard to court-martial offences they were dealt with in the same way as the regular forces.

12252. Did you find the discipline good on the whole?—I think as long as the troops were busy, and in the field, it was good, but once they came into the line, or got into a town, or where there was any drink to be got, naturally the discipline of irregular troops, who had only lately been raised, was not so good as that of regular troops.

12253. As to camp discipline?—That, I think, was wanting to a certain extent, chiefly because they wanted good officers and non-commissioned officers to look to details such as the roster of duties and the performance of ordinary duties in the horse lines, looking after their horses and waggons and so on.

12254. We have had evidence that a good many of these corps were bad horse-masters?—Of course, my experience was largely in an office, but I had a command in the field for about eight months, and I had some Colonial forces under me then, and my experience was the same, that they were often bad horse-masters, and they were all the worse, I think, because there was a sort of natural feeling that a Colonial knew more about horses than anybody else.

12255. They would not take directions?—No, they liked to have their own methods, and I do not think their methods were always good. That, of course, is a matter of opinion, but many of them were of course experienced in horse management.

12256. If the Commanding Officers found a man they did not consider worth keeping they discharged him?—Yes, the Commanding Officers were very fond of discharging their men in the field when they found that they were not of much use; for instance, a regiment would come into a place and they would then discharge three or four men they had found were not much use on the veldt, and those men would either be left in that place on their own account, as it were, or else they would be transported down to the coast by railway. Then, of course, they immediately enlisted again, and there was no check on them; if a Commanding Officer did that you could not keep an eye on these men he got rid of, and many of the men were continually being enlisted and discharged on that account. Instructions were issued that Commanding Officers should not do this, but they objected very much because they said it took such a long time to get instructions from headquarters with approval, and they preferred simply to kick a man out and let him go. Naturally, that is not a very satisfactory way of dealing with the case. It also gave great power to the Commanding Officers, some of whom used it in one way and some in another; some would discharge for an ordinary offence, and others would not. There was a want of system, and also it was not always quite fair to the men.

12257. Was that altered before the end of the war or did it remain the same?—It was a question of considerable difficulty all through the war; I issued circulars about it to all the Colonial Corps in accordance with the instructions of Lord Kitchener and the Adjutant-General, but I am afraid they were always rather disregarded. It is a subject upon which Commanding Officers have a different opinion from Headquarters, and I can quite understand their view; at the same time I think the lesser evil is to report the matter, even if there is a little delay.

12258. (*Sir Frederick Darley.*) Was the man discharged without inquiry?—No, he would have an inquiry by his Commanding Officer.

12259. By him alone?—By him alone; he would be dissatisfied with his conduct, and he would say, "You may go."

12260. There was no regimental inquiry?—No.

12261. (*Sir Henry Norman.*) Did that apply to the over-sea contingents?—No, I am speaking more of South Africans.

12262. (*Chairman.*) As to the pay, there were differences in the rates, were there not?—The pay is a very important question, and a rather difficult one, I think. The rate was essentially the same all through but there were small variations. A private soldier got 5s. a day in every mounted corps with the exception of one corps that served in a very unhealthy district and got higher pay; that was a local corps, and was the only exception that I can remember. The rates, for instance, of the non-commissioned officers' pay varied a little. I think that was due to the corps having been raised in various Colonies; Natal raised corps on her own account at the beginning of the war and so did Cape Colony. Of course the corps that came from over-sea were raised in their respective Colonies, and I do not know that any rate of pay was laid down by the War Office and sent to all the Colonies concerned, at all events if it was done these slight variations occurred.

12263. At a later date the later contingents were all paid by the Imperial Government direct?—That is so.

12264. Then I suppose that was on a uniform system?—I do not think that even then it was laid down from the War Office; it may have been—I may be mistaken—but even some of the later corps came with a few variations in their pay.

12265. What you would recommend on another occasion is that all rates of pay of irregular forces should be uniform?—I think that all irregular forces employed in a common theatre of war should be paid on one scale, no matter whether they come from Australia, Canada, South Africa, or elsewhere.

12266. Inclusive rates with no allowances?—I would have those rates inclusive.

12267-8. (*Sir Henry Norman.*) Do you not think there might be a difficulty if this inclusive rate was lower than the rate they received in their own Colony?—I was talking then of improvised corps, corps raised specially for the war, not of corps that already existed in their own Colony.

12269. They would have to get their own rate?—Yes.

12270. You could not cut them down?—Certainly not.

12271. (*Chairman.*) When you speak of inclusive rates with no allowances you also mean the travelling on duty should be free?—Yes, of course men must travel on duty free, but I would not give them such things as lodging, detention, servants, forage, and ration allowances; I would give them a high rate to include all those things. It would be infinitely simpler and I think it would be more satisfactory to the men. Of course these allowances are chiefly drawn by officers; if an officer goes say to Cape Town to recruit for his corps, he goes to a hotel, and he sends in a claim for lodging allowance, fuel and light allowance, for forage for his horse, for rations, and so on, and it gives a great deal of trouble to adjust.

12272. Not on Service?—Yes, on Service.

12273. But not in the field?—Not in the field, but while the war is going on he goes to Cape Town or Durban, possibly, for his health. I think it would simplify it a great deal if he simply had one rate of pay whatever he might be; a high rate of pay, of course, it would have to be, and he should understand that wherever he is he will not receive other allowances.

12274. That naturally applies to officers on that sort of special duty?—Yes, it sometimes applies also to sergeants on recruiting duty.

12275. When a man is serving in the field with his regiment he would get rations and so on?—Yes, it is only when he is detached that I am speaking of now.

12276. As to the methods of pay, we have heard a good deal about the trouble caused in that way?—Yes, there was a great deal of trouble about the methods of pay, and, theoretically, of course the company and squadron commanders should pay their men themselves

and be present when the men are paid, and see that the men sign the pay sheet and receive what they are entitled to in the way it is done with the Regular forces; but, practically, we found that we could not do that; the officers had no experience in this way, they had no properly-trained pay sergeants, and they were continually moving about in the field, and found it extremely difficult to keep any account, even the simplest. So that as far as the South African Corps were concerned, we appointed regimental paymasters who took all those duties off the shoulders of the company or squadron commanders, and these paymasters lived as a rule at a base or centre; they did not accompany the regiment in the field, and when the regiment touched the line they went up with a certain amount of money and paid the pay then due, saw that the men signed the accounts, and came back and rendered their accounts in the proper way to the Army Pay Department. I think, with irregular forces raised during a war, that is the only way in which you can deal with this matter.

12277. Would there not be a difficulty sometimes, if the corps were split up a good deal, of the regimental paymaster getting at them?—He could generally get at them, and the men do not require much pay in the field or during war; they would not draw their pay perhaps for several months at a time, and they would prefer not to, there is nothing for them to spend it on, and they might lose it or have it stolen. I do not think that would be a difficulty, but if it was you might give him some assistance in the shape of a non-commissioned officer to go up and pay a detachment.

12278. As it was, men who were away from the regiment or left behind sick were not paid?—The individual man who is away from his regiment is always a trouble; it was found a trouble, I know, with Regular regiments, and still more so, of course, with Irregular regiments, but if Commanding Officers or officers of companies and squadrons had given their men last pay certificates in a simple form, simply the name and rank of the man and the rate of his pay and the date up to which he had been last paid on even a slip of paper and signed it, any Army Paymaster of the Army Pay Department would have been able to pay that man up to date on that, but failing that, of course, the men could not draw any pay without further reference.

12279. I suppose they sometimes lost it?—A man might lose it, but he would generally take care to stick to it if he knew his pay would depend upon it. Once you can communicate again with the man's paymaster you can obtain pay for him; many men came to us at Pretoria and said they were in want of pay, and I would make enquiries and get it for them; that was in the case of men who were in hospital or were detached, but if they had had a simple form of last pay certificate they would have only had to go to the nearest Army paymaster to receive what was due to them.

12280. Some of these corps were disbanded during the war?—Yes, because, perhaps, they had died down so low or lost so heavily, or there may have been various circumstances which caused them to be disbanded; some even of the best-known ones were disbanded before the end of the war. Then, again, two or three would perhaps be amalgamated to form a rather larger corps as they had got so weak and low; but as a rule, of course, the end of the war was the time when the bulk were disbanded.

12281. Were they all disbanded at that time?—They were all disbanded at the end of the war with the exception of one corps, which I believe has since been disbanded. Of course, I am speaking of the special corps raised for the war; the Volunteers were not disbanded—they were disembodied.

12282. Had you any difficulties with regard to that matter?—No; it is a matter that requires a little thought and care, and as to which a few regulations should be drawn up beforehand and issued, so that people may know what is to be done; the corps has to be collected, and you have to get in the men from the various detachments and other duties they may be doing, and you have also got to settle about the men in hospital and in prison who are away. Then a date ahead has to be fixed, and it should be notified to the

*Lt.-Colonel
John Adye,
C.B., R.A.*

4 Feb. 1903.

Lt.-Colonel
John Adye,

corps that beyond that date they will not be paid; you may be able to dispense with them before that date, but you will pay them to a certain date, and not further. The staff will have to be retained beyond that, of course, probably the Commanding Officer, Adjutant, Paymaster, and Quartermaster. They have to render their accounts and return their stores and equipment, and they should be given a limited time, otherwise with irregular corps they are very apt to prolong the operation as long as possible.

12283. Did you see the disbandment through?—Yes, it was carried out before I left.

12284. And it was all wound up?—It was all wound up.

12285. Satisfactorily?—I believe so; of course, the accounts have to be passed by the War Office, and that takes some time. I daresay many of them may be still under question now, and there may be outstanding questions of account, but the actual officers and men were disbanded some time before I left.

12286. Did the men leave satisfied?—I think so; we gave them six weeks' or perhaps a month's notice that on a certain date the corps would cease to exist, and that they would receive pay to that date.

12287. You have some observations on the whole subject?—The chief point, I think, with regard to all these hastily-raised special corps that have no existence before a war is that we should have certain lines laid down beforehand, so that we should know what we are going to do and how to do it.

12288. You had nothing?—We had nothing before; we have never employed corps on anything like that scale; perhaps one regiment might be raised, but not anything like the numbers we raised during the war. All the points I have touched upon to-day, and a great number of details concerning each of them should, I think, be embodied in a hand-book or in instructions for officers concerned in raising corps; for instance, we should fix, if possible, the rate of pay; we should certainly fix the establishment; we should also consider the question of terms of service, the question of recruiting expenses, and there are the standards of age and height and so on.

12289. Has anything been done in that direction?—I do not think so.

12290. You have had a great deal to do with it, but you have not been asked for any report on the subject?—When I returned I suggested that I should write a detailed report on the subject, and I believe the military authorities approved, but I think there was some difficulty about how I should be paid while writing it. I was to have been employed, but some hitch occurred, and, although I have got a great amount of material which I could put into the shape of a report, I have not rendered one at present.

12291. Because it has not been required of you?—Yes. I did mention the matter when I came home, and I was told that it should be done, but I have not been employed to do it. I think also a handbook or short instructions for Commanding Officers of Irregular Forces, would be very useful, giving them hints as to accounts and discipline, and as to one or two small elementary returns, how to make them out, and how to correspond with their superiors, how to answer a telegram, and small hints such as seem very elementary but are very useful for a man who has not had experience of that sort before.

12292. And you think there ought to be an Inspector-General in those cases?—I think in South Africa, where we had such a large number of Colonial forces of all sorts under arms, and where we were raising men and discharging men all through the War, it would have been of use if some officer of the nature of an Inspector-General could have been appointed, whose duty it would have been to travel about to inspect the recruiting and discharge depôts and see that they were doing their work properly, that men were not detained there unduly; that men were receiving their pay in the right way; to inquire into complaints, and also to visit regiments as they came in from trek. When they reached the line it would have been a very good thing if some officer from Headquarters, who dealt entirely with Colonials, could have visited them and inquired into

various matters, have seen that their officers were all present, and if some of their squadrons were very weak, could have made arrangements for recruiting them again, and so on.

12293. That was no part of your business?—No; I was tied to my office at Pretoria the whole time, and directed matters from there.

12294. The Imperial Yeomanry had an Inspector-General?—Yes, they had, and the Mounted Infantry had an Inspector-General, and I believe both those officers travelled about. I know the Inspector-General of Mounted Infantry did, and saw some of his units from time to time, but the Colonial forces wanted one still more, in my opinion, because first of all they were larger, and secondly, they were being raised in the country itself and discharged there.

12295. (Sir Henry Norman.) In the Mounted Infantry do you not include a large number of Colonial forces from Australia, and so on?—Yes; but when I said Mounted Infantry I meant the Regular Mounted Infantry; they were dealt with by the Inspector-General.

12296. The Inspector-General did not inspect the Canadian or Australian men?—No.

12297. (Chairman.) Is there any other point you would like to mention?—I do not think so.

12298. (Lord Strathcona and Mount Royal.) While your remarks apply chiefly to the Irregular forces raised in South Africa, you were the Assistant Adjutant-General for the whole of the Colonial Forces?—Yes, from the end of October, 1900.

12299. You would recommend, I think, that the Commanding Officer and the Adjutant should be officers of the Regular Army?—Yes, or officers who have had experience with the Regular forces of the Colonies.

12300. As a matter of fact, the officers of the Colonial Regiments, the over-sea Colonies, were not of the Regular Army?—No; but I think most of them were members of their own regular permanent forces—both the commanding officers and many of the officers.

12301. In many cases they were?—Yes, my remarks applied more to those raised in South Africa.

12302. And you consider that when in command and as adjutants they were entirely satisfactory?—Yes, as a rule.

12303. You speak of the quality of the troops raised in South Africa; would you say that those from the over-sea Colonies were satisfactory both as to physique and intelligence as a whole?—Yes, as a whole, I should say especially so. The forces that were raised in the over-sea Colonies, I understand, were chiefly picked men, and when we called, say, upon New Zealand for 1,000 men, something like 5,000 volunteered, and we were therefore able to pick one man out of five. Of course I am only speaking from hearsay now, because I had nothing to do with that, being in South Africa; but I am certainly of opinion that the Colonial forces that came from over-sea had the appearance and did the work of picked men as a rule.

12304. And their discipline as a whole was quite satisfactory?—Their discipline as a whole was very satisfactory. Of course there were exceptions, as there will be in every Army.

12305. It would be difficult, would it not, to establish one rate of pay for the whole of the Colonies?—I think for the troops that are going to fight in one theatre of war, and that are raised only for that war and not for service in their own Colonies, one rate might be fixed.

12306. But you are aware that in some of the Colonies the pay for soldiers as well as for labourers is much higher than in others?—Yes, but the rates for Irregular forces would always be very high rates, and the rates in particular in South Africa were very high. I think the lowest rate of pay, that of the private, which was 5s., was the same for every corps from every colony.

12307. Did this difference of pay cause great discontent in South Africa?—No, I do not think so; but what did cause trouble was that some corps came from, we will say, Australia, and they were not quite certain exactly what their pay was to be. They understood they were to get so much from the Imperial Government, and they also thought in some instances that they were to get something from their own Colony.

12308. Take, for instance, the troops from Canada, they got the 1s. or 1s. 3d. of the Regular pay from the Imperial Government?—Yes.

12309. But their own Government paid them as much again—indeed more than that?—Yes.

12310. Was that known amongst the troops generally there?—I do not think that it was.

12311. So that there was no discontent from that cause?—No, not in that way.

12312. You said that the commanding officers were apt to discharge men they did not care for, who were not considered very useful?—Yes.

12313. Was that the case also with those from the over-sea Colonies?—No. I was speaking of the locally raised troops in South Africa.

12314. You recommend also that the medical officers for examining the recruits should be of the Regular Service—that refers to South Africa alone?—Yes.

12315. As to uniformity, you say you think it would be well that there should be an Inspector-General or some officer so that there could be a central supervision to ensure some degree of uniformity; was the necessity for this very marked with regard to the Colonials from over-sea?—Would you mind telling me where you are quoting from?

12316. You say here, in the statement which you have submitted to us: "When the troops come from several Colonies they require some central supervision to ensure some degree of uniformity" (*vide Appendix, page 579, post*)?—What I mean is that one Colony will send a thousand men and call it a brigade, and also will appoint to it a brigadier, and give him a large staff; while another Colony, which also sends a thousand men, will call it a regiment, under a colonel, with an adjutant, and I think when the second regiment gets into the field its Colonel is apt to say: "Why should not I be a brigadier, because here is a man next door to me, commanding the same number of troops, who is a brigadier and receives higher pay, and has a larger staff. Why should not I have the same?" There were occasionally questions arising of that sort, and as each Colony had apparently sent its contingent, on an organisation drawn up in the Colony, they naturally differed. Improvised troops, not of the permanent forces of a Colony employed in one theatre of war ought all to be organised on the same principle, and as those in South Africa were all paid by the Imperial Government, the Imperial Government should lay down the organisation and the establishment as well as the rates of pay.

12317. Was it not the case that the contingents from the outside Colonies had their own paymasters?—No, I think not as a rule.

12318. In some cases they had?—In some cases, especially at the end, some of the later contingents.

12319. Had those from Canada, for instance, their own paymasters?—I rather think the Canadians had, but I am not quite certain.

12320. (*Sir John Hopkins.*) In your estimate of 60,000 men employed in the South African corps, may not a certain proportion of those men have been counted twice over?—Yes, it is quite possible, but I have allowed for that in my estimate. I think I have placed it a little high, and perhaps 50,000 would be nearer it, but I am afraid it is impossible at this stage, owing to there having been no regular system from the very start, and not one officer to whom they all reported and sent their returns, to get the exact numbers.

12321. (*Sir Frederick Darley.*) What was your exact duty respecting the over-sea troops?—Every question that was referred to headquarters with regard to the over-sea troops was dealt with by me under Lord Kitchener.

12322. What class of questions would be referred?—Various, for instance—Questions of pay; in some cases they were not certain exactly what their rates of pay were. The Bushmen contingents was one instance. In other cases there would be the question of establishment; they would refer and say, "Why should not I have a paymaster?" "Another corps close to me has two doctors; may I not have two doctors?" Then there were questions of discharge; men would get telegrams from home saying their relations were dead, or that their business was going to the bad, and might they be sent home; and there were questions of discipline also which came up.

12323. With respect to pay, have you heard that there was a good deal of difficulty with respect to one of the New South Wales contingents?—I have heard nothing special. Was that an early contingent?

Lt.-Colonel John Adye, C.B., R.A.

4 Feb. 1903.

12324. There has been a good deal of litigation about it which I believe is now coming to the Privy Council. They said they were engaged at 5s. a day, but the New South Wales Government understood that from that 5s. a day was to be deducted the amount they received from the Imperial Government, I think 1s. 3d., so as to reduce their pay to 3s. 9d. a day. You have not heard anything about that?—There was a question to that effect some time ago with regard to one of the Bushmen contingents I remember, and, speaking quite away from papers and so on, I think it was laid down that they would get 5s. a day, no matter from whom they got it, but that they would certainly get the 5s. Who was to pay it or who was to pay the different proportions of it would be a matter of adjustment between the Imperial and Colonial Governments.

12325. That was the men's idea, but the Colonial Government understood they were to get the advantage of the Imperial pay?—I think it has been laid down by the War Office that they will get 5s. a day, and they certainly seem entitled to 5s.; I am speaking, of course, without the book.

12326. The Colonial Government thought the men were to have deducted from the 5s. a day the 1s. 3d. of Imperial pay. The men want to recover the full 5s., and in the Colonial Courts they have recovered it, but now the Government are coming to the Privy Council; those matters would not come within your cognisance, I suppose?—Yes, they would in the first instance, but the action which you say has taken place has probably taken place since the War was over, and since I left South Africa. I remember a case—I do not know whether it was that particular one or not—occurring, and that was the case I had in my mind when I said they were not always quite certain what their pay was.

12327. You think that this ought to be rectified in the future?—I think it ought to be laid down clearly beforehand, and, in fact, I would have on every man's engagement sheet exactly what pay he is to get. It does not matter who pays him, that is a matter of account between the Governments, but the man ought to know what he is going to get.

12328. You were not with the General of Communications?—For the first three months of the War I was on the staff of the General of the line of communications at Cape Town; I then only dealt with the Cape Colony Irregular Forces and Volunteers.

12329. And not the over-sea?—When Lord Roberts came out I was placed on the Headquarter Staff, and since October, 1900, I dealt with every sort of Colonial—Over-sea, South Africans, Volunteers, Irregulars and all.

12330. For instance, the communications from friends of wounded men or sick men did not come through your Department?—No, they would be referred to the Casualty Department, who answered questions about them. I was the Staff Officer for Colonial forces on Lord Kitchener's staff. There were also officers on the staff of the line of communications who would answer questions of that nature.

12331. I think all the communications we had in New South Wales were from the General of Communications?—Not all, but many of them; in the same way the War Office had a great deal of correspondence with the General of Communications which would not trouble to go to Lord Kitchener.

12332. (*Sir Henry Norman.*) You were mentioning the various and many descriptions of troops that were raised temporarily, and it has come before me, as a Governor of Chelsea Hospital, in connection with pensions, that there were enormous numbers of corps raised locally, such as Railway Pioneers?—Yes.

12333. Mine Guards?—Yes.

12334. And those are all included in the 60,000 you have mentioned, I presume?—Yes.

12335. And, I presume, included in the over-sea contingents are the corps raised in London, like Lord

Lt.-Colonel John Adye, C.B., R.A. Loch's corps, which was recruited here?—Yes, there were one or two corps of that nature.

12336. And they are included, I suppose?—Yes, there were only one or two; it is only a rough estimate.

12337. It has also come to my knowledge, and I think you said something to the same effect, that some corps were composed of men who were enlisted for very brief periods indeed?—Yes.

12338. And they might have had the opportunity of enlisting three or four times over?—Yes, and no doubt many did.

12339. The pay, after all, was fairly uniform amongst all the Colonials, whether they were Over-sea or South African?—Yes.

12340. Five shillings being the general standard?—It started on the basis of 5s. for a trooper.

12341. As to those corps that existed before, for instance, from Queensland, nearly all the men that came at first were men who were, or had been, in the local forces?—Yes.

12342. And their pay was not in all items the same as that of the New South Wales men or the South Australians or New Zealanders?—No.

12343. They took their own rates of pay, and it would have been impossible to have altered that. I think in Queensland the private got 6s.; at all events, there were little difficulties of that kind, especially in the non-commissioned ranks, and it would not have been very easy beforehand to fix a uniform rate?—Not for men from permanent forces, no doubt, because the men in permanent forces naturally claimed to receive what they had originally enlisted for, and you cannot alter their rate.

12344. In the Colonies the permanent force consists of men regularly enlisted who serve in barracks?—Yes.

12345. And there is an equally permanent force for the time they enlist of men who follow their own trades and only come out for drill or camp?—Yes.

12346. And they are accustomed to receive so much every day they are out?—Yes.

12347. The permanent force gets very much less pay, as they are always in barracks?—Yes.

12348. So that there would be a good deal of difficulty in fixing a uniform rate; when you take Canada and New Zealand and so on there would be rather a difficulty?—When you raise forces for a special campaign such as that in South Africa, you have to pay them a very high rate; the rate fixed was 5s. for a trooper, and I do not suppose that in any of the Colonial forces from the outside Colonies a private got more than 5s. a day.

12349. They are paid in different ways, because they owned their own horses and got a special allowance for their horses?—I suppose that 5s. would be the highest rate, and they would not lose by taking the 5s.

12350. I do not think anyone had less than 5s. The ordinary Mounted Infantryman, who mainly went from the Colonies, and who earns his own living, gets on the days when he goes out in Queensland 6s., and when he goes into camp he gets 6s. a day and rations. However that may be, there is a difficulty in fixing a uniform rate when there are so many different Dependencies of the Crown. I do not know what they fix for the men from India?—We had only very few—Lumsden's Horse.

12351. I think they got a higher rate of pay than 5s. probably?—They left the field about the time I went up to Pretoria, so that I could not say what they got as they were never really under me.

12352. Was the equipment of the over-sea corps fairly kept up after they arrived in South Africa? I suppose they got their fresh equipment supplied from the General Ordnance Stores?—Yes, in South Africa.

12353. And their horses were kept up?—Yes.

12354. I see the punishment principally inflicted for breaches of discipline and so on was fines?—I think that was the general punishment for minor offences.

12355. There is perhaps some difficulty in inflicting punishment for small offences on men who are rather

independent?—Yes, you naturally have to have rather a different standard of discipline.

12356. In talking about discharges by Commanding Officers, I suppose a Commanding Officer could not discharge an over-sea Colonial, could he?—Not an over-sea Colonial; I was speaking of the South Africans.

12357. No over-sea corps was disbanded in South Africa; they were sent back to be disbanded, were they not?—They were sent back to be disbanded; but if the Colony had no objection, when a corps returned the men who wished to remain in South Africa were discharged there, if the Government of the Colony concerned agreed.

12358. (*Sir Frederick Darley.*) Was that the case all through?—Yes.

12359. Many of the men complained bitterly of having to return in order to go back to South Africa again?—That was because their Government said they did not wish to have them discharged there.

12360. (*Sir Henry Norman.*) There was no commandant appointed to command generally the over-sea Colonials?—No.

12361. What was General Hutton's position—did he command the Mounted Infantry generally?—I am under the impression that he commanded the Mounted Infantry generally, not specially Colonials; but that was before I went to Pretoria.

12362. So that you do not know?—No.

12363. I think he had some staff relation or connection with the Australians certainly?—It was during the few months I was away in the field, and I could not say.

12364. But there was no inspector appointed, as you suggest there should be?—No.

12365. And you think it very essential that for every over-sea corps, as well as the corps raised in South Africa, there should have been a paymaster?—I think it would have saved trouble and friction, and also a good deal of money.

12366. We have had some evidence to the same effect with regard to the Yeomanry?—I think it is a very important thing that there should be someone who understands accounts and the method of payment in these irregular corps.

12367. You think that the discipline of the over-sea corps was, on the whole, good?—Yes.

12368. Would you say the same of the corps raised in South Africa?—It is a little difficult to compare them, perhaps; the over-sea corps, as I say, were chiefly composed of men who were picked, I understand; moreover, they had a large number of military men as officers, who came from their permanent forces. The South Africans did not have that to any extent; the permanent forces in South Africa were the Volunteers who required their own officers, and the irregular forces raised in large numbers had not, as a rule, officers with any previous military training, unless they were got from the Regular forces.

12369. As to the forces of the over-sea Colonies, I think most of their officers were officers in their own Colonies, who had been so for some time, and had had some experience?—Yes; and also the mere fact that these corps were formed as a body in their own Colony, and then came across the sea as a regiment, and landed in South Africa as a regiment, and very possibly had a month, as the last ones had, to get together in and get their horses into condition, gave them a greater chance than the South Africans at first.

12370. And they were known more or less to their officers?—Yes.

12371. Still, several of the South African corps surely had military officers in command of them?—Yes, most of them.

12372. And others had adjutants?—Most of them had adjutants; but, of course, many of their officers were men who had had no previous military experience.

12373. (*Chairman.*) Is there anything else you would like to add?—I think not.

TWENTY-NINTH DAY.

Thursday, 5th February 1903.

PRESENT :

The Right Hon. The Earl of ELGIN AND KINCARDINE, K.G., G.C.S.I., G.C.I.E. (*Chairman*).

The Right Hon. The Viscount ESHER, K.C.B., K.C.V.O.
The Right Hon. The Lord STRATHCONA AND MOUNT
ROYAL, G.C.M.G.
Field Marshal Sir HENRY WYLIE NORMAN, G.C.B.,
G.C.M.G., C.I.E.

The Hon. Sir FREDERICK MATTHEW DARLEY, G.C.M.G.
Admiral Sir JOHN OMMANNEY HOPKINS, G.C.B.
Sir JOHN EDGE.

BERNARD H. HOLLAND, Esq., *Secretary*.

Colonel A. W. THORNECROFT, C.B., called and examined.

Colonel
A. W.
Thorneycroft
C.B.

12374. (*Chairman*.) You, in October, 1899, were serving as Deputy Assistant Adjutant-General at Pietermaritzburg, I believe?—Yes.

12375. The particular point upon which we wish to have your evidence to-day is with regard to the raising of the regiment that you, I believe, raised at that time. You have been good enough to give us some notes. (*Vide Appendix, page 580, post and App., Vol. page 343*). Shall I take you through them in detail or would you like to make a statement?—I think the points I have touched upon in my notes are nearly all I could think of. I have no further statement to make myself, except what I put down in my summary.

12376. Then I may use this as a *précis*, and ask you questions upon it?—If you please.

12377. Your operation began in consequence of a telegram from Sir George White on the 16th October, 1899?—Yes.

12378. What did he ask you to do at that time?—In the telegram he asked me to raise a corps of 500 mounted riflemen as soon as I possibly could get them together.

12379. Was that the first effort in that direction which had been made in Natal?—The Imperial Light Horse were the first regiment raised of South African Colonials. They were got together by Colonel Wools-Sampson, an officer of very long experience in the Colony, before the outbreak of hostilities, anticipating that they would be wanted. He got a great many men of the best material in South Africa together to form his regiment, and he collected horses, and more or less saw his way to the organisation of the corps. That was the first irregular corps raised for the War. Mine was the second.

12380. Then the Imperial Light Horse were actually raised first?—Yes.

12381. And they were in existence when you began?—They were in existence when I arrived at Pietermaritzburg.

12382. But there was a committee at Pietermaritzburg who kept a register of names?—The Uitlander Committee. Many men came down from Johannesburg, and were anxious to form themselves into a corps and go to the front, and in order to facilitate operations the Uitlander Committee kept a register of these various people, about their ages, and where they had been employed, so that there was some reference as to their character.

12383. And you were able to use that information?—I was able to use that information, and it assisted me very much.

12384. Did you find it reliable?—Quite reliable as regards the men.

12385. How many did you get from them?—I should say about 300.

12386. Then that was the first attempt?—That was the first formation of the corps.

12387. Your first difficulty, I think, arose with regard to pay?—Yes. It has always been the custom to pay Colonials in South Africa 5s. per day. I was out

there in the Zulu and other wars, and I was well aware that the men would not serve for 1s. a day.

12388. But the authorities at home proposed to pay them 1s. a day?—Yes, they tried to get the men to serve at 1s. a day, but it was impossible to get men to serve for 1s., and I so informed Sir George White, who corresponded by cable with the Secretary of State for War, and it was eventually approved that they should receive the usual wage of Colonial troops.

12389. When you say it was wished to pay them 1s. a day, in what form did that come out to you?—I got a telegram from the Chief Staff Officer to Sir George White, in Ladysmith, to say that the rate of pay would be the same as that of the British Mounted Infantry, that would be 1s. 3d. a day.

12390. It was in consequence of Orders from home?—I understand so.

12391. But you did not see the Orders?—I did not see the Orders.

12392. If we want to know about that we must get it from Sir George White?—Yes.

12393. Some of the men that you were negotiating with were very enthusiastic, and said that they did not want any pay?—They offered to come for nothing. They said they would not serve for 1s. a day. Of course, when a Colonial is asked to volunteer to fight he knows from previous experience that if he is disabled or killed he has got no Government pension, and if he is married, as many of them are, he has to keep up his home during the time he is away at the front, and from the expensive nature of living and house-rent in the colonies it is impossible for a trooper to keep his wife and family going even on 5s. a day; so that it would be unreasonable in my opinion to ask him to serve at any less wage. Many of the men who served under me kept their homes going from 18 months to two years, and then were obliged to ask me to let them go home to try and get work to do for a time in order to keep their homes going.

12394. During the time this difficulty was being dealt with you, of course, could not complete your enlistment?—I could not absolutely enlist the men and make them take the Oath, but I did as much as I could. I provisionally enlisted them and went on with the testing of their qualifications as regards riding and shooting, in order to be ready as soon as possible.

12395. And it was on the 27th of October that you got authority to enlist the men?—Yes.

12396. And then you at once set to work to do so?—I had all the forms of attestation and everything ready, and I at once enlisted the men who were available in this camp that I had formed.

12397. Who by that time had reached the number of 400?—Yes.

12398. You divided them into companies and sections, and so on?—Yes.

12399. I believe you let the men have some choice as regards their serving?—It is a very essential thing to allow comrades to serve together. For many of the duties, such as cossack posts or outpost duty, and all that,

Colonel I consider it a very important thing to let comrades
A. W. who will stick together under any circumstances serve
Thornycroft, in the same sub-section.
C.B.

12400. You found that to work well afterwards?—
5 Feb. 1903. Admirably.

12401. Then with regard to the selection of officers, have you anything to say?—That is a most important point in the raising of a colonial corps. Unless very great care is taken on that point, the chances are very much opposed to your getting an efficient unit for fighting.

12402. Will you describe what had been the custom?—There was a corps raised after mine called the Colonial Scouts, where the men were permitted to elect their own officers, and the consequence was that a very indifferent class of man became an officer by the favour of his own comrades when he was not fit to lead them in the field and he could not command the confidence of those men whom it was his duty to lead, and the system broke down, as I knew it would. I would not permit anything of that kind when I raised my corps. I had authority to choose my own officers absolutely, and although I submitted their names to Sir Walter Hely Hutchinson, the Governor, he never interfered with my selection in any way. And I had the power not only to choose them and make them officers of any rank that I thought they were capable and fit for, but I also had the power to dismiss them instantly for any misconduct or inefficiency, or if in any way I thought they were not fitted, or to reduce them to a lower rank. If I thought a man was a good man, but not fitted for captain, but likely to improve, I could make him a subaltern if necessary. In a colonial corps it is absolutely necessary to give the Commanding Officer a perfectly free hand in that matter, in order to enable him to take the field quickly and efficiently.

12403. And had you to exercise this power of punishment, so to speak?—I do not think I absolutely dismissed an officer, but when I found they were not efficient I allowed them to resign their commission, not for any crime or any misconduct in the face of the enemy, but simply because I found they were not suitable for the positions. Out of the large number that I had, over 120 during the campaign, I think on three occasions I allowed an officer to resign his commission as he was not qualified to lead men in the field.

12404. You consider it absolutely necessary that some one should have that authority to appoint officers and dismiss them?—I consider that is a most essential point. If an officer is selected to raise a regiment, the General or other authority who appoints him should have sufficient confidence in him to allow him to have a free hand as regards his officers.

12405. One of your objects I see was to get Regular officers?—I wished to mix them so as to have partly officers of tact and discretion in the Regular Army who had had previous experience, and partly Colonial gentlemen who had had experience of former wars out there, and partly I wished to get some officers of the Indian Staff Corps (now called the Indian Army). With a mixture of the whole I found that, eventually, about the time of the battle of Colenso, or shortly afterwards, I had a very capable body of officers who were able to do anything.

12406. Is there anything else you have to say with regard to the selection of officers?—No. I lay the greatest stress upon that point. The men are all right, but if you place a section of 30 men under the command of an incompetent and incapable man who is pushed on to you by some political or other favour in a colony where such games will be tried, it is not fair to ask those 30 men to go into action under an incompetent man who is responsible for their lives, absolutely, when he is sent away out scouting, and the men resent it very much.

12407. Then as to non-commissioned officers, what have you to say?—It is thought by some officers that it would be a good thing to give one colour sergeant per company, one sergeant, that is to say, from the Regular Army for every 120 men, in order that he

should know the routine and method of keeping a roster of it; but I found I got on quite well without it. In a country like South Africa you will always find, I think, a sufficient number of people who have served in the Army who will be available on the spot with that colonial experience, and one has to use a little latitude in the management of these men.

12408-9. Most of your men were Colonials?—Most of my men were Colonials. I had two or three men who had been serving in the Army whom I made non-commissioned officers, just to keep things straight with regard to keeping a roster and telling off the duties. I managed quite well with only one officer of Regulars, and one non-commissioned officer, whom I made my sergeant-major. I was very fortunate in getting the services of a first-class business man as my quarter-master, through whose hands the whole of the stores and equipment for the regiment had to pass.

12410. And as to the pay, what arrangement did you make?—For the pay I had a Colonial gentleman who had to pay the whole of the men, like they get their pay, I understand, on board ship, or are paid in any large works.

12411. (Sir John Edge.) What was the name of the Quartermaster?—Captain Hendry.

12412. (Chairman.) I see your battalion was completed on the 7th of November?—Yes, with the exception of a few officers. I kept places for a few officers, because I knew several gentlemen who were up in Rhodesia or up in the Zambesi country, and I made every endeavour to get those gentlemen down to me, because I knew they were first-class men.

12413. In an enclosure (*Vide Appendix Vol., page 343*), you have given us the full establishment?—Yes.

12414. Then what was the next step, the drill?—With regard to the drill, when we had got the whole of the thing in order, a great deal of my time was taken up in drawing the equipment and the horses, and generally organising the duties that were to be carried out every day by a certain staff, everybody to go and draw such gear as was necessary for his department, and that was a very heavy thing to get all the transport and the harness, and all the thousand and one things that are necessary to start a regiment of 500 men straight off like that.

12415. How long did that take?—That went on gradually as we could get the things; there was not sufficient equipment there to equip my regiment, and some of it had to be bought locally, which was a great disadvantage. However, the Army Ordnance Corps used every endeavour that was possible under the circumstances in which they were placed to get what they could; but there was no stock of saddles or rifles available for handing out straight away, which would have saved me a very great deal of labour. Saddles had to be bought in the town, and many were of an inferior class; but the only thing to do was to take what could possibly be got, in order to get to the front where we were urgently required.

12416. What was the date when you were ready to go to the front?—I think it was the 14th of November.

12417. You were not complete till the 7th?—I am not quite sure about the date.*

12418. When you spoke of there being so much to do, I thought, perhaps, there was a considerable interval?—No, on the 19th of November I fought the first action with my regiment.

12419. Then it was a question of a week or a fortnight?—Yes, on the 19th of November I fought the first action that my regiment was engaged in at Mooi River.

12420. Then there could not have been much time for detailed drill?—No, there was very little time for detailed drill, but very simple drill was all I attempted to teach the men. The great point I insisted upon was that they must get on and off their horses quickly, and must be able to lead the horses. When three men dismount and the fourth man of the section leads the

* Colonel Thornycroft subsequently sent the following information to the Commission by letter:—Date of enlistment, 27th October; ready to move to the front, 14th November; whole regiment assembled at the front, 18th November; first engagement, 19th November.

Colonel
A. W.
Thorneycroft,
C.B.
5 Feb. 1903.

horses, it wants a little management and control on that man's part with a new lot of horses undergoing new training. Fortunately, the South African Colonial-bred pony is easily trained in that manner.

12421. Had you chiefly South African ponies?—Entirely at the first raising of my regiment, fortunately. I was extremely fortunate in the class of Colonial-bred pony on which the regiment was first mounted.

12422. Afterwards, did you have other horses?—Towards the end of the campaign I had every variety of horse, but I impressed fully upon the men the necessity of looking after their South African ponies, as I knew that the supply, in all likelihood, with a protracted campaign, would not last, and I so warned them that they took the greatest interest and pride in looking after their Colonial South African ponies; so much so, that after two years of campaigning there were a large number of those original ponies which were issued to me at Pietermaritzburg still in the ranks of my regiment.

12423. Then the men were pretty good horse-masters?—They were good horse-masters when they saw the absolute necessity of it. They were careless at first about it. A Colonial is accustomed to have a Kaffir to clean and groom his horse; he has not been accustomed to go and do the work himself. They dislike a lot of stables, but they saw the absolute necessity of it, and, under the supervision of the officers, they loyally carried it out to their great benefit.

12424. Were the officers responsible?—The company officers were responsible to me that the stables duties were properly carried out on all occasions, and the consequence was that it was a great assistance to the regiment that this horse-mastership was carefully looked after.

12425. I suppose a great deal of the efficiency depends upon that?—It depends entirely upon the care of the horse with a mounted corps like mine. A man is quite useless if he is dismounted.

12426. Did you dislike the other classes of horses that you were given?—Of course, the Colonial-bred pony was acclimatised in his own country. He was better to start with, he had not come off board ship and had his heels worn down by the long voyage from South America, North America, or Australia. He was accustomed to the climate and class of forage that he would get, and he was found to be more efficient than other horses that came out and were rapidly sent to the front at the beginning of the campaign, without any rest at all.

12427. Then, of course, they scarcely had a chance?—They had very little chance. The casualties were, of course, very great in the initial stages of the campaign, and those casualties had to be filled up by horses taken rapidly off board ship; and that went on for a considerable time, until a system was adopted of forming dépôts for every column.

12428. And thereby giving the horses a rest?—Thereby, if a horse was a little debilitated or lame you could put him into your mob of horses and drive him along with the Kaffirs, and take out a fit horse to mount the man on, and so you could rest the horse before he became absolutely knocked out altogether. It was an extremely good system, and one that we advocated, and which the Commander-in-Chief was fully aware of, but the difficulty was to get enough horses at the start.

12429. I see in one of your enclosures (*Vide Appendix Vol., page 353*), you attach great importance to the question of shoeing or not shoeing horses on board ship?—Yes. I prefer to have them shod on board ship, because if they are not they wear their heels right down so low that when they come off there is nothing on which to nail a shoe, and I found that of the two evils a long voyage with shoes on was preferable to a long voyage without shoes. I know that others differ with me on this point, but I should certainly keep a horse's shoes on on board ship, to prevent his heels wearing right out.

12430. What were the rifles that your men were armed with?—At first there were no rifles available in the Ordnance Department at Pietermaritzburg for

my regiment, so I made an arrangement with the Natal Volunteer Armoury, and I borrowed some. I got 500 Martini-Enfields from them, Mark III.

12431. Did you use them throughout?—Those were in use till they either got broken or damaged to such an extent as to be of no further use, and were gradually replaced by Lee-Metfords, and, finally, by Lee-Enfields. When I raised two more companies they came up equipped; by that time arms had arrived at Pietermaritzburg, and the two companies that I raised to make six in all in my regiment were armed with the Lee-Metford rifles.

12432. Had you any preference for one over the other?—The Lee-Enfield was the best rifle.

12433. You were asked for a report by the Director-General of Ordnance, and that you have given us (*Vide Appendix Vol., page 345*)?—I have attached that report because it touches on so many points of efficiency, equipment, and clothing, that I thought it might be of some use to the Commission.

12434. And the shooting of the men was tested at the beginning?—The shooting was tested before I allowed the men to join the regiment. A Committee of gentlemen—that was before they were made officers—took them down to the rifle range, and at unknown distances, at a very small target representing the head and shoulders of a man, they tested them to see if they could hit that mark, or go to any appreciable extent near it. If a man did not know how to handle his rifle he was rejected, and if he was a good sort of man I advised him to join the transport corps or some other, where he could make himself useful in the War without having to be a good shot.

12435. Then you had practically good shots from the beginning?—Yes, I should say the shooting was satisfactory, but I consider that it is a tremendously essential point that we should encourage rifle shooting in the Colonies to a very large extent; I say that with my experience of Colonials. Although I consider the results were satisfactory, I should have liked to have had more time and opportunity to practise the men, especially in shooting at short ranges. The Boers were bad shots at short ranges, and our own men were indifferent. But that is the essential point. When you get to a decisive range, say 300 yards, if your men are first-class shots, with good fine sights on their rifles for close shooting, you are at an enormous advantage. I should like to have given more attention to that, but I was obliged to go to the front at once, and I should have liked a little more time to train them in snap shooting at close ranges.

12436. In the course of the War they got more training?—Of course they got a certain amount. I practised them when they halted for a time; I constantly practised them in that way, and the expenditure of ammunition was well worth the result.

12437. Did they improve?—They improved a great deal.

12438. How would they compare with the Boers?—I should say that 50 per cent. of the men that I had were equal to any shots of the Boers I saw.

12439. At the end?—Shortly after the commencement.

12440. What do you think of the Boer shooting?—The Boer shooting has deteriorated since the last war. I was present in the 1881 War, and the shooting of the Boers has deteriorated very much since those days, in my opinion.

12441. Naturally at the beginning of the War the men did not know much about taking cover?—They were accustomed to Kaffir warfare, where they are apt to disregard the fire of the enemy, which is always high; the Kaffir fires over your head as a rule. But when it came to the absolute good shooting of the Boers, on some of the first occasions when I took them into action, the necessity was soon felt of taking cover.

12442. And of entrenching?—And using every bit of cover that could possibly be found.

12443. And they carried entrenching tools, I suppose?—Entrenching tools were carried in a Scotch cart, which is a two-wheeled cart with six mules; entrenching tools were carried in that along with the small-arm ammunition, and that was in the first line of transport, which

Colonel
A. W.
Thornycroft,
C.B.
5 Feb. 1903.

was always close up behind the regiment. They are extremely handy carts, you could take them almost anywhere, and they were most serviceable and efficient. But we had no method of carrying entrenching implements on pack animals. There is a cage in the Service which holds entrenching implements on the side of the pack saddle, but there were none available, and I never got any of those.

12444. I suppose they had constantly to entrench?—The scouting was the chief thing that I had to perform—constant reconnaissance and scouting—and I did not have to entrench very much in that work. The men were thrown out as a screen in front of the forces, and it was very seldom that they had to absolutely make an entrenchment.

12445. For scouting, the South African Colonial had a considerable advantage, I suppose?—A very considerable advantage on account of his knowledge of the country, his knowledge of the language, and because his eye is accustomed to the veldt, and he would notice things that other men who had not been in the country before would not notice; and they had, of course, a great advantage in that way. They were extremely good scouts.

12446. You appear to attach considerable importance to good telescopes?—The very greatest. Good telescopes and good Zeiss glasses should be served out to all troops, and they should be encouraged and taught the use of these glasses in times of peace. It is not the slightest good taking a man straight into war and giving him a telescope the day he moves against the enemy; he does not know how to use it any more than he knows how to use a rifle the first day he has it in his hand. The intelligent use of a telescope, picking up objects at a distance, requires constant practice.

12447. Particularly the telescope?—Yes, particularly the telescope; you could more quickly teach a man to be intelligent with the Zeiss glasses or field glasses.

12448. Do you make any further distinction between a telescope and a Zeiss glass?—With the best Zeiss glass you could see that there was a movement going on at a considerable distance away, and if you put a telescope—what I call a stalking glass that one uses in Scotland, costing about £10—on it you could on many occasions distinguish what it was. The difficulty in the war was to distinguish friend from foe: "Is it one of our own columns moving over there, or is it one of the enemy's"; and I consider it will be far more difficult in future to distinguish friend from foe when the tendency is for all armies to dress in khaki, or something of the same description.

12449. For that purpose the man who can use the telescope is a very valuable man?—Yes. The Boers were very good at it.

12450. Had they telescopes?—Yes, they had telescopes and an enormous number of Zeiss glasses.

12451. Your men also, being accustomed to South Africa, could go by the spoor?—Yes, that was a very important point. I had all sorts of Colonials under me from every Colony at different times of the War. The Canadians and other Colonials were fairly good at that. Men who had been in Canada and Australia were very good trackers, many of them.

12452. And you think that in that way you were able to get really trustworthy intelligence?—Yes, on many occasions the indication of spoor followed up by reconnaissance gave them information which otherwise perhaps the British soldier would not have got from want of knowledge in noticing these things.

12453. And as to the physique of your men, was that good?—Very good indeed—admirable; they were very heavy for the horses—for the ponies in some instances—but that could not be avoided.

12454. They were medically examined at the beginning, I believe?—Yes.

12455. And what about the discipline?—The discipline was very good.

12456. You had not much trouble?—I had no trouble whatever. During the time that the regiment was in the initial stage, before I enlisted them, I had 300 to 400 men living in camp under no military law; they were my friends, living there on my invitation prac-

tically, but there was no drunkenness, although the town was open to them, and there was no insubordination. The only desire of the men was to do everything they were told and get to the front. That was the spirit which prevailed throughout.

12457. And they were an intelligent set of men?—Most intelligent.

12458. That of course helped them to get into their places and learn their duties?—Quite so.

12459. Then at the end of your *précis* you have noted certain points which you think are worthy of consideration in the recruiting, training and equipment of officers and men of a Colonial force. I think you have gone through most of them, have you not?—I think so.

12460. The first point is the selection of officers; that you have already spoken to?—I cannot speak too strongly upon that point.

12461. The second point is the necessity of a regimental paymaster; that you have spoken to?—Yes. It is impossible that a company commander or a squadron commander (whichever you like to call him) in the field, who is constantly out reconnoitring, or on outpost duty or fighting, can have the responsibility of the cash and accounts passing through his hands; and I had advocated this for so many years in the Regular Army as well as in any other corps that I determined I would do it when I had the opportunity. The Paymaster, when money was wanted, got it from the nearest point, either from the nearest bank, or he went down and got it from the district Chief Paymaster. He brought the money up to my camp, and he paid the men, marking on a simple pay-sheet. Thus there was no checking of accounts again; he had not to check the accounts of the company officers; there were his own accounts, kept in a business-like manner by the Paymaster himself, who was paid to do that job, of what he had paid to the men. The only necessity was that there should be some man, some officer or sergeant, present at the payment to say, "This is John Smith or William Jones," and to identify him to see that the right man got that pay. That relieved all the fighting officers of the responsibility of money affairs, which I consider a very great point in the efficiency of a corps.

12462. It is said that when a regiment is split up (which was constantly the case in South Africa) there might be a difficulty in getting the paymaster to pay them all?—I found no such difficulty. The paymaster or the paymaster-sergeant took the money down. I had constant detachments, and I found no difficulty in getting the men paid in that way.

12463. (Sir John Edge.) Was the paymaster a Regular officer?—He was a Colonial, Captain Chipman. He had lived for 20 years in the Transvaal. I allowed the men to bank such money as they did not want in their pockets, and they could draw it from me at any time.

12464. (Chairman.) That means to say that it was left with the paymaster?—It was left in the Standard Bank. It was banked in the Standard Bank, and a ledger account was kept for each man who wished to bank his money. I kept the ledger account—I mean the paymaster did; it was not kept in the bank; it was in one lump sum in the bank.

12465. And you found that to work well?—I found it to work admirably. If I had had a dishonest paymaster, or anything like that, it would have given me a little trouble till I righted the matter and got a man I could trust; but I constantly inspected the accounts myself, and saw that everything worked smoothly.

12466. (Sir John Edge.) Was your paymaster-sergeant a Regular?—No, he was not.

12467. (Sir Frederick Darley.) There were civilians attached to the regiment?—There were civilians who volunteered to serve; and the only difficulty was in getting everybody paid up. As the regiment moved along, the men got wounded and got into hospital, and some died, and so one left a regular trail behind one as one moved up into the Transvaal and down into the Orange River Colony, and the difficulty was to find out where all your men were—those left in this hospital or that, and those who recovered and were moved down to the base. But I sent this paymaster-sergeant on tour once a

Colonel
A. W.
Thornycroft
C.B.

5 Feb. 1903.

month to round up all these people and pay them their cash, and so keep their accounts square in the regiment.

12468. (*Chairman.*) Then the third point in the Summary of your *précis* is the necessity of a thorough training in riding and shooting. I think you have already spoken of that?—Yes.

12469. And a medical examination is the fourth point; you have dealt with that?—Yes.

12470. Equipment and clothing is the fifth point?—To get an efficient corps, supposing war broke out there again to-morrow, there should be a supply of good saddlery, of the best material, and of equipment sufficient for raising two or three Colonial corps. I would say that it is necessary to keep in a colony a considerable store of equipment of the best material and clothing, so that should the necessity arise where the men are there should the equipment be ready for them in an emergency. I suffered because it was not so when I raised my regiment. Although we carried on, we carried on under difficulties, which it would be better to avoid, I think.

12471. This was all treated as an emergency in your case. What you want is that in future there shall be some organisation to do away with the emergency side of it?—I think there should be a store. In Rhodesia at the outbreak of the War there was a large supply, I understand, of saddlery and equipment. It was not so in Natal.

12472. Your sixth point is the rifle; you say the rifle should be a short one?—The long rifle that we had to use is not adaptable for mounted men. A short rifle, of the length of the old carbine, is what is wanted; but it must have the same ranging power, up to 3,000 yards, say 2,500 to 3,000 yards, of the present rifle.

12473. Is that practicable?—Certainly. I fired with one, which has been shown at the War Office, the day before yesterday at the Small Arms factory at Birmingham. I understand that the Government have adopted a new rifle of their own.

12474. And the rifle, you say, should be made in three sizes of stock?—Yes; that is a very important point. If I have to shoot with the same weapon that a man 5 ft. 4 in. shoots with, my eye is so near the back-sight that the sight becomes blurred, and I do not get the same amount of accuracy in shooting. I want the back sight removed further from my eye by lengthening the stock, and a man must be fitted with a rifle the same as with a pair of boots, in my opinion.

12475. You say it should be "encased in wood with few projections, so that it can be easily slung on the back." What does that mean?—The whole of the rifle should be encased in wood. I may want to hold a rifle in a certain position, and another man may want to hold it more forward, and after firing some time in a hot corner the muzzle becomes heated, and the man cannot grip his rifle any further. The whole weapon should be encased in wood from breach to muzzle.

12476. (*Sir Frederick Darley.*) You mean the under-part?—No; I mean all round. That is the new weapon that the Government are going to advocate.

12477. (*Sir John Edge.*) The upper part of the rifle, where the sights are, would not be encased in wood?—Yes, all covered in wood.

12478. (*Sir Frederick Darley.*) Otherwise a man mounting suddenly on his horse cannot hold the weapon?—No, he cannot hold the weapon because the barrel becomes so hot that it would burn his hand; and, besides, sitting at the top of a kopje, or in a place exposed to the intense sun of India or Africa, the barrel becomes heated by the sun to start with, and with a few rounds fired rapidly out of it, it becomes almost impossible to hold it. There is no difficulty about casing the barrel.

12479. (*Sir Henry Norman.*) Is that intended to be introduced into the Army generally?—Certainly.

12480. (*Sir John Edge.*) In India sometimes you cannot hold the rifle in your hands, it gets so hot?—I have experienced that.

12481. (*Sir Frederick Darley.*) Does that increase the weight?—It increases the weight, but not to any appreciable degree. My brother happens to have invented a rifle which he is trying to get the Army to take, and I have taken a great deal of interest in this

matter. We have been firing the rifle he has invented, and, of course, I have seen a great deal about the ins and outs of it. He has produced a rifle which is $7\frac{1}{2}$ inches shorter than the present Government weapon, with the same barrel, by bringing the bolt action down into the stock. The Government are now, I understand, trying a rifle; they have cut 5 inches off the barrel. Instead of cutting 5 inches off the barrel, my brother has the same identical long barrel, but he has brought the bolt action down into the butt; therefore he gets a weapon $7\frac{1}{2}$ inches shorter firing exactly through the same barrel, which gives the long range.

12482. (*Chairman.*) Then you propose to have a bayonet?—I propose to have a bayonet—a longer bayonet than that at present in use. I have tried it myself, and I think it is perfectly feasible for the Mounted Infantryman, with the well-balanced rifle that I have described (and which I could show the Commission, of course), to use it as a short jobbing spear.

12483. He can use it mounted?—I think he could use it mounted and unmounted. And I think you will find that Colonel Rimington, who, I understand, is to give evidence, will advocate that that is a possibility too, and well worthy of a trial.

12484. We have had some evidence about the necessity of an offensive weapon as well as the rifle. You think it should be a bayonet?—A bayonet on the rifle in the hand is a very efficient thing, and I am convinced that if proper attention and sufficient encouragement are given, you can produce such a bayonet as can be fixed on to the end of this short rifle and used as a weapon, which would be longer than a sword and not quite so long as a short hog-spear.

12485. You would not advocate a sword for Mounted Infantry?—I would not advocate swords for Mounted Infantry, I only advocate a longer bayonet than that at present in use.

12486. But you think an offensive weapon of some kind is necessary?—It is an absolute necessity.

12487. You had the bayonet?—We had the bayonet.

12488. And used them?—We used them on several occasions.

12489. What is the length of the present carbine?—I could not say.

12490. This rifle you say ought to be 42 inches long?—About 42 inches.

12491. Is that shorter than the carbine?—It is about the same length, I think. I cannot say straight off. I have never commanded a corps armed with the carbine.

12492. And the rifle that you had was how long?—The rifle is 49 inches, I think.

12493. There is a difference of 7 inches?— $7\frac{1}{2}$.

12494. (*Lord Strathcona and Mount Royal.*) The barrel of the rifle was 49 inches, do you mean, or the length altogether?—The whole length from the butt to the muzzle.

12495. Then about 3 feet, I suppose, would be the barrel?—Yes.

12496. (*Chairman.*) Your seventh point is that an efficient intelligence department is necessary under a specially-selected officer?—That is a thing that of course received very little attention at the commencement, and I could get no funds allotted to me for an intelligence department of my own. I, therefore, formed a small corps of my own, and I paid them myself.

12497. Was it not a part of the organisation from home?—No, it was not in any way.

12498. But it ought to have been?—It was a part of the organisation of the General Army, of course, but as mine was the only mounted corps available and went up first to Mooi River, where the operations began practically for the relief of Ladysmith, I had to organise as best I could with my native Scouts, not to fight in any way but to get information from the Kaffirs in the zone between us and the Boers. I pushed these fellows out at night, and my men who could talk the language went with them. I organised a small body of scouts of my own to do absolutely nothing but gain intelligence for me through the Kaffirs and the farmers.

12499. In these points I understand you were con-

Colonel
A. W.
Thorneycroft,
C.B.
5 Feb. 1903.

sidering what ought to be done in the future ; and in future you think there ought to be as part of the organisation of a regiment a thoroughly efficient intelligence department ?—Regiments are formed into a brigade, and it would be the duty of the brigadier to see that he had an intelligence officer and proper intelligence. But regiments are so often detached for various reconnoitring duties that I should say the efficiency would be enormously increased if a small scouting intelligence department were formed in each regiment.

12500. And with some funds for employing secret agents ?—Quite so.

12501. With regard to your eighth point, horses, mules, and so on, I understand that you have not anything to add specially to the report (*Vide Appendix Vol., page 352*), you have sent in ?—Nothing.

12502. What was your experience of the Medical Establishment, which is your ninth point ?—The Medical Establishment was quite satisfactory. I had civilian medical men who were practitioners in Johannesburg and various places, who joined in their capacity of doctors as other men joined in other capacities. They were most efficient and extremely attentive to the men.

12503. You had one large regimental ambulance, but in your opinion you ought to have a light ambulance for patrols ?—Yes, it was very difficult to bring in men who were wounded on patrol. It needs a good deal of thought and a good deal of trouble taken to produce some light ambulance that could go after a patrol, perhaps of 50 or 60 men, and bring home say two or three of those as wounded men.

12504. And the tenth point is signallers ?—The equipment was very difficult to get at one time ; there was not very much signalling equipment available, but in a country like South Africa or Afghanistan, or countries of that class, where the light is good, and in my opinion in any country where soldiers go to operate, it is a most essential thing to have plenty of equipment of the best material, and trained men to use it. You cannot at a moment train signallers to use the heliograph or the lamp system. You can soon teach a man to use the flag, but it takes them some time to learn to read the heliograph ; and it is an enormous saving in horse-flesh when they can. It is an enormous factor to a commander who places himself on a position of advantage like a hill with patrols moving in different directions if he can see through the telescope the movements of the enemy, and by his heliograph direct the patrols what to do. On many occasions I have successfully captured the enemy by that method.

12505. And that does not exist at present ?—In the Regular cavalry and infantry there is a full equipment.

12506. But if you were to raise irregular corps it does not exist ?—There is no method of obtaining it unless you go and take the men off the Regulars, and thus make them inefficient, so to speak ; you take away their good men and they object to that. In my opinion there should be a corps of signallers in the Army just as there is a telegraph battalion.

12507. Then the eleventh point is maps of the country ?—The maps were very bad.

12508. We have had a good deal of evidence about the maps ?—I can only say what happened to me. The only map I could get of any value at all was the school map off the walls of the schools in the villages that we passed through.

12509. Was that in Natal ?—Yes.

12510. (*Sir Frederick Darley.*) What map was that ?—That was the map generally used in the schools in Natal.

12511. But who was the publisher of it ?—I could not tell you.

12512. (*Chairman.*) It would not be accurate at all, I suppose ?—It was not accurate, to an appreciable degree, and it did not show the military features of the country, but it gave you an idea of the locality of places and the probable distances to have in your mind's eye when you were sending out your patrols, in giving them written orders where to go and what to do.

12513. On what sort of scale was it ?—I think it was about a mile to half an inch, but I cannot remember now.

12514. (*Sir Frederick Darley.*) Are you speaking now of south of the Tugela, or rather south of Ladysmith ?—Yes, south of Ladysmith.

12515. North of Ladysmith there was a military map, was there not ?—Well, the military maps that we got were very inaccurate ; they were very defective at that stage of the war. Afterwards we got maps of the whole country, and as the war went on the maps got better. All the commanders of columns going round the country made every endeavour to correct the maps as they moved about, and they gave their corrections to the Intelligence Department, so that the maps gradually were very much improved. In the first stages of the War, when it was most necessary to have maps, we were very much handicapped by not having them.

12516. (*Chairman.*) Then the last point is the establishment of a regimental mess ?—I put that down for the guidance of anybody who might have to raise a regiment at any time, because I think you can there, under your own eye, form your judgment of the characters of men of very different classes who are brought together to form the officers of a Colonial corps. If you have not got an opportunity of seeing them at dinner, or some such meal that they are able to take together, those who are out on outpost duty or reconnaissance or stables, you do not see sufficient of them to form an accurate judgment of their characters, and sometimes if you have any casualties, if five or six officers are knocked over, and you have to pull out the officers that you think the best, you are at a disadvantage ; but living, as we did, all together in bivouac, or elsewhere, I was able to form a judgment of the capabilities of those under me, and so to pull out those who were, in my opinion, the best men to fill vacancies as they occurred.

12517. Is there any other point that you wish to mention to the Commission ?—No, I do not think so.

12518. (*Sir Henry Norman.*) With regard to the attestation in Enclosure B. (*Vide Appendix Vol., page 343*), in which a man is made to say, "I further undertake to serve under penalty of immediate dismissal for inefficiency or misconduct," do you know whether that form was generally adopted in corps raised in South Africa ?—Yes, I believe it was afterwards. Having established that, and having it printed at Pietermaritzburg, I think it was generally adopted by the other corps which were afterwards formed in Natal.

12519. Something like that must have been adopted in Colonel Rimington's force, because in the memorandum which he has sent to the Commission he alludes to the power of dismissal for anything of the kind ?—Yes. It gives you a tremendous hold over the men. Lengthy courts-martial and that kind of thing are not suitable in the field when you are in command of a Colonial corps. Of course, under the Army Act you can try any man the same as you can a regular soldier, but if you have the power of saying, before the whole of his comrades in the face of the enemy, "Now you are a useless and inefficient man, go away, you are no use," I consider that the most terrible disgrace you could put upon a man, and it was felt to be so throughout the Colonial corps.

12520. In enlisting men, I suppose you had no hard and fast rule as to age ?—No. If a man was physically fit I took him.

12521. Whatever his age ?—Yes.

12522. You were speaking about keeping a stock of saddlery, clothing, equipment, and so forth, so as, in the event of war breaking out, as it did in 1899, to be able readily to equip the troops. But supposing war did not break out for five or six years, would not the saddlery, equipment, and clothing deteriorate very much ?—Yes, I think they possibly would do so, but so will they deteriorate in this country from being kept here. We are obliged to keep in this country a very large amount of equipment for emergency of war for the regular army, and I consider it would be just as valuable to keep it in a place like South Africa, or any one of the Colonies (where the Colonies would come to assist us) as at Woolwich.

12523. But, then, it is always being issued from Woolwich; you are sending out part of it for supplies and replacing part?—War is an expensive thing, and to get efficiency we have to pay; and from my point of view as a soldier (I have nothing to do with the finance), I say that to get efficiency you must be ready.

12524. But there is that difficulty in keeping stores in readiness for a force that does not exist. In keeping it for the British Cavalry, and so on, there is a certain amount always being issued. It is the same with provisions?—Quite so, but it was a very great difficulty to me. You can imagine the difficulties of having a lot of 30s. saddles, which were trade goods for Kaffirs, with a tree that split open, and being expected to keep your corps efficient in the field with no sore backs! It was a very grave difficulty. The difficulty might be surmounted for the future in conjunction with the Volunteer movement in the Colonies. If Volunteer movements are kept up in South Africa or elsewhere there will be a sufficient amount of saddlery and such matters as that.

12525. In reserve?—I would keep, in conjunction with the Volunteer movement, a reserve perhaps of saddlery.

12526. At present, so far as I know, the mounted troops in Australia, and probably in other countries, have their own saddles—they do not get them from the Government at all?—Of course, on the Boer system of commando law, every man turns up with his saddle and rifle, and in ordinary times the man who would volunteer would very likely bring his own horse. But this was an extraordinary occasion; the men were being driven out of the Transvaal without any of their goods and property, and yet they had to be fully equipped.

12527. Those stretcher-bearers that you spoke of are four to each company?—Yes.

12528. Those were not soldiers, were they?—Yes, they were soldiers, but they were unarmed; when they were stretcher-bearers they were not allowed to carry arms.

12529. Did they wear the Geneva Cross?—Yes, they had a large cross on their arm.

12530. Do you think the Boers recognised the Geneva Cross and paid much attention to it?—I think, in the present days of long-range fire, there were many occasions when the ambulances got hit and the bearers got hit. The bearers, going into action to bring out the men, were constantly hit, but then it is impossible, at a range of 1,500 yards, to differentiate between the man who is firing and the man who goes in to pull one out.

12531. But I mean when the Boers came up near them, did they acknowledge the Geneva Cross when they could recognise it, or did they ever molest them?—To my knowledge, I do not think they ever showed any hostility, by any act or otherwise, to any of my own personal ambulance men or stretcher-bearers under my own command.

12532. You had a scale of transport for your corps; was it always complete and able to be kept up?—It was most efficient. There, again, I was fortunate in obtaining a man—Captain Prettejohn—who had had enormous experience in South America, North America, Africa, and everywhere, who, by his knowledge, was able to get hold of the requisite materials to mend his wagons and keep his harness in good condition. My transport mules were always in good condition, and the wagons were always as efficient as it was possible to make them, on account of my having been fortunate enough to select such a capable officer as Captain Prettejohn.

12533. Your transport was entirely attached to your regiment, I think?—Yes, enough to carry two days' supply for man and horse.

12534. And you found great advantage from that?—Well, I was ready to move off anywhere at a moment's notice. Afterwards, when I came to command a mobile column in the field, I had of course to take extra waggons as a supply park; but throughout the campaign I kept the organisation as I started it, to carry two days' supply for man and horse.

12535. You are perhaps aware that with the main

army the regimental transport system was done away with?—It was, I know.

12536. The transport was taken away from the regiment?—Yes, I know it was.

12537. You are in favour of the other system?—Yes, so far as my efficiency went I am in favour of it, because I had a certain number of vehicles, and it was to my benefit and the benefit of my regiment to keep my mules in good condition, efficient in every way; and, as I say, I was ready to go off with two days' supply, and one day's supply on man and horse if necessary; they could live for five days; whereas if I had had to draw wagons and mules from other people I should not have got that degree of efficiency. Having the thing under my own eye, and under my own command, I saw that the mules were efficient and the wagons were efficient. And, naturally, a driver who is constantly with you takes a pride in his team of mules, and you reward him, and then he will say: "Here is an inducement for me to look after my mules and keep them very efficient." So that up to that point I advocate, and should certainly prefer with a regiment of mounted infantry or cavalry to have a sufficient transport for two days' supply belonging to it, and the remainder of course would be drawn from the Supply Park, which it is the duty of the Army Service Corps to bring up under the direction of the General.

12538. I gather from what you have said that you do not consider a sword necessary for mounted infantry, you would have a bayonet?—Yes, I would have a bayonet longer than that at present in use.

12539. I daresay you may have seen in some of the military papers and elsewhere remarks made on an occasion when a number of mounted troops bolted. I think it was when Lord Methuen was wounded, when it was stated, I think, that if those men had had swords perhaps they would have behaved better, because they would have felt confident that they were able to defend themselves?—Swords for Colonial raised corps would be quite useless in my opinion; they are not naturally swordsmen like the natives of India used to be, and it takes a considerable time to teach a man the use of a sword, how to use it intelligently and efficiently from his horse. I am of opinion that you ought to rely almost entirely upon the fire of your rifle, and if you get off quickly and use your rifle intelligently I consider that is the best thing for a mounted infantry man, because he is an infantry man, he fights on foot. But as I think I stated just now I advocate a sufficiently long bayonet to enable him to use it as a short lance. I may say, as regards this new weapon that is going to be introduced into the Army, that whoever makes it, or whatever the form of it is, it is going to be a short weapon, and with a sufficiently long bayonet on it. I think it would give a man considerable confidence, and I think we could train men to use it quickly. Of course it is very difficult now to get home with the bayonet. The Boers would fire as we were advancing till we were as close as I am to you, and then they would put their hands up, and our men, notwithstanding the fact that their comrades had been shot down up to the very last moment, would very seldom use the bayonet. I think if a man holds out with his rifle till the last moment, firing and shooting down the advancing troops, he must pay the penalty, he must fight to a finish; but the British soldier said "No": directly he got up to the Boer and the Boer put up his hands they were friends at once. That would not be so, of course, if you were fighting an European or civilised nation, fighting with the bayonet; it is presumed that they would fight to the finish.

12540. And in case of pursuit do you think that the men would use bayonets?—I think it is a feasible thing to train the men to do it on their horses, and I think you will find that Colonel Rimington will say that he did it on several occasions. But the old rifle with a bayonet on it is not such a handy weapon as the weapon I advocate, a shorter weapon, which is more handy to keep in your hand. I think it would be a feasible thing to train men to use it. I do not say they would be able to stand against regular cavalry advancing.

12541. And would you propose to have the same

Colonel
A. W.
Thorneycroft,
C.B.

5 Feb. 1903.

Colonel
A. W.
Thorneycroft,
C.B.

system with regular cavalry ?—If I was given command of a cavalry regiment and told to equip them I think I should be inclined to make them carry a bayonet.

12542. And no sword ?—No sword—a bayonet and a lance, or short hog spear, such as you use for pig-sticking in India.

12543. That, I understand, is the armament which has been adopted lately with native cavalry in India, doing away with the sword and having a lance ?—A lance and a short rifle.

12544. Is there anywhere a record of all the casualties to your corps that you know of ?—I could compile one.

12545. I think it would be very interesting, it would show what the regiment suffered during the whole course of the war. There have been no detailed casualty lists published at all, so far as I have seen, giving the casualties of particular regiments ?—The casualties in certain engagements were published from time to time in the *Times* newspaper.

12546. There is no record of how many were killed and how many were wounded and how many died of disease in each particular regiment ?—I could compile it for you, but I might have to send to South Africa. I might be able to send it in six weeks.

12547. If you will send it in at any time it will be of interest ?—I shall be very glad to do so.

12548. (*Sir Frederick Darley.*) Have you acted as squadron leader or captain of a company in the Regular forces ?—I served with Mounted Infantry in the Boer War of 1881.

12549. As a squadron leader ?—Yes.

12550. In time of war ?—Yes.

12551. Have you done so in time of peace ? I am asking you this in view of the squadron leader or the Captain of a Company being the paymaster. Have you had any experience of that ?—Yes, I have served in the Scots Fusiliers for 23 years, and during a considerable part of the time I was a captain and commanded a company.

12552. Then during that time you were paymaster of that company ?—Yes, it was my duty to pay the men—either myself personally or by one of my subalterns.

12553. Do you approve of that system ?—I do not.

12554. The books that have to be kept are very cumbersome ?—They are very cumbersome and complicated, and it takes up a great deal of the time of the officers and of the Colour Sergeant who keeps the account; he is the accountant of the company or squadron. The Squadron Sergeant Major or the Colour Sergeant of Infantry, should spend their time in assisting to teach the men the art of war, training them for the purpose for which they are intended.

12555. And above all officers, perhaps, the Captain is the most important with his company ?—He commands the unit which when launched in the present day of long-range fire cannot be controlled in many cases after he has once pushed to the front, and the whole of his energies should be expended, in my opinion, on training his men for the moment when they are brought face to face with the enemy.

12556. It has been said that you might have a paymaster to pay the men and keep the pay books, but that the squadron leader or captain of the company can only deal with stoppages that have to be made from the men. Is there anything in that argument, do you think ?—I do not see that you want to make any appreciable stoppages. There is his clothing account; that ought to be kept, but I would make the Quartermaster keep his clothing account.

12557. But there are a large number of stoppages, or there have been at any rate ?—There have been petty stoppages for hair cutting and library subscriptions and such like.

12558. And for hospital. A man is charged 7d. a day for hospital although he may be there for enteric fever, or something which he could not help ?—Quite so. The only point that you must be careful of is this: It used to be the rule for the Regimental Paymaster to pay out the money to the Captain, but it was a Regimental Paymaster. Instead of letting all this mass of accounts engage the attention of officers who should teach and

train their men, I would let this paymaster do his work and pay the men just as in a large business where the men are paid at a pigeon-hole. If large numbers of men can be controlled in that way or on board ship, where, I understand, the paymaster pays the men, and not the officers of the ship, I would strongly advocate that; and I may say that I found that it worked admirably when I gave it a trial in my regiment. At first the company officers did try to pay their men to some extent, but I stopped it.

12559. (*Sir John Edge.*) Was the standard of education as a rule high in your regiment ?—I should say the standard of education was distinctly high. It depends upon what you take as the standard. Of course a large number of men serving in the ranks of my own regiment were gentlemen of very high education, and a large number who were not of that rank in society were men of great business capacity, who had got good places for themselves in Johannesburg and other centres like that; therefore the intelligence, in my opinion, was of a high order, and it was of great assistance in the general working of the regiment; men fell into their places and brought their brains to bear quickly. And besides that, men who had had long colonial experience, who had travelled all round the interior in prospecting and other expeditions, had learnt to think for themselves, and their individuality was a thing I noticed very much indeed.

12560. That, no doubt, would be of great assistance in the field ?—Of enormous assistance, the individuality of the man who thought for himself, who made his way in the world under very keen competition.

12561. I suppose it would be impossible to get that class of man as a rule by ordinary recruiting in England ?—You could not get that class of man at a wage of 1s. of course—it would be impossible.

12562. Or even at 5s. probably ?—No, very likely not.

12563. How was your regiment for *esprit de corps* ?—I have pointed out in my report (*Vide Appendix, page 582, post*) the tone shown by the officers was eagerly followed by the men, so that the one anxiety of them came to be to get to the front and prove their worth there, not only by their gallantry in the field, but by their good conduct in camp, and in every way to facilitate the easy leading and commanding of the regiment.

12564. Had you any complaint to make against them with regard to their conduct in the face of the enemy ?—None whatever. They were prepared to follow their officers or remain with them or do anything that they were told.

12565. And they did ?—They did.

12566. (*Sir John Hopkins.*) In raising your corps had you any help from a manual or other book of that kind, so far as details went ?—There was a small pamphlet printed in South Africa called "Manual for Field Service of Mounted Infantry," and I based my equipment to some degree upon the wording of that book, but it was not sufficiently well thought out to go absolutely by it.

12567. With all your great experience, if you were to put down all the points requisite in forming a regiment such as yours, would it not be a very valuable assistance to any future officer raising a corps of that kind ?—I should think that anybody who read this summary that I have here would not find the slightest difficulty in raising a corps on the lines that I did. I do not think there is any point here in which you cannot get information about any article which I used throughout the war. I have given the numbers of the things served out, and the method in which they should be carried. I went fully into it, because I thought perhaps it might be of some use in the future formation of corps.

12568. But in process of time may not that disappear. You do not describe it as more than a sketch. I suppose ?—A summary of the evidence which I was asked to touch upon.

12569. Then that will disappear in the ordinary course of events, will it not ?—I should certainly say so.

12570. But if a Manual was at this moment, when all the ideas are fresh in people's minds, got out

say by yourself and Colonel Rimington, and officers of this class, and stamped as a manual, would it not be very useful in any future raising of a corps?—With regard to that point, I would say that it is very hard to lay down a hard and fast rule in the raising of a Colonial corps. Circumstances change; you operate in a different country where perhaps you must adopt different methods of transport; you may want coolie transport in some parts, you may want pack transport in others, or it may be a different class of transport. That is one affair. Of course, I think that a properly constituted manual would be a good thing, but I presume that the War Office will produce such a book from the reports we have made at various times. All the officers commanding regiments in South Africa were asked to report upon the various articles that they had, and this enclosure D (*Vide Appendix, Vol., page 345.*) which I have here, was the report that I submitted to Sir Henry Brackenbury, Director-General of Ordnance, at the time. I should presume that they would produce a manual for field service for Mounted Infantry, at the War Office. Of course it is a necessary thing, but you cannot lay down a hard and fast rule right through, unless you know what country you are going to operate in. I should probably equip people differently for one country from what I should if they were going to another, with regard to clothing and things of that kind.

12571. Take South Africa as the field of operations alone. If any man in future was raising a corps, and could put his hand upon a good manual, the question is, would it be of great assistance to him?—Yes, enormous assistance.

12572. Your valuable experience, and the valuable experience of officers who have raised corps, will by and by be lost, and there will be an end of it, unless something of the sort is on record in the form of a manual?—There is a scale of course for the mobilisation of a corps of Mounted Infantry, and that should always be kept up to date, and should be available.

12573. And if attached to that scale there were some hints and suggestions from the experience of officers like yourself, that would be very valuable?—It would save a great deal of thought and a great deal of risk, so to speak, if an officer has not to make up his mind what is the best thing to be done. You might want, of course, to raise a regiment of Zulus, and you must adopt different methods, of course; but I agree with you that such a manual is a very necessary thing to be kept up to date.

12574. (*Lord Strathcona and Mount Royal.*) I think you mentioned that the physique and intelligence of your corps were excellent?—Yes.

12575. Had you an opportunity of seeing the contingents from the other colonies?—I had them constantly with me. I commanded contingents from Australia and New Zealand, and I worked in the same brigade, Lord Dundonald's brigade, with your own Horse, Strathcona's Horse.

12576. How did they compare with those of South Africa and your own corps in intelligence?—I think they compared extremely well. I think there were men who had lived perhaps a rougher life in some of the Colonial Corps, but I think the intelligence shown was very even. I had an opportunity of judging all of them, and I think in the intelligence and bearing in action, and in all respects, there was very little to choose among the men that came under my notice from the four Colonies, so to speak.

12577. Had you an opportunity of seeing any of those from the Prairies of Canada, the North-West?—Only such as were in Strathcona's Horse.

12578. So that you think they compared very well indeed with those of your own regiment in that respect?—I think very well. Of course in the early stages of the War, the Imperial Light Horse and my regiment, and the regiments that were formed first on the Cape Colony side got the best men, they got the pick of the men in South Africa; and I know that during the latter stages of the War, rather than keep my regiment up to full strength, I would sooner have 300 good men of good character, good men of every description, than keep the regiment up to 500 or 600, taking a worse class of men into my regiment; and I did so. I allowed

my regiment to go down in the number of recruits in order to keep the quality good. In some of the regiments raised latterly in South Africa, the quality of the men, that is to say their general bearing in all respects, was nothing like so good as that of those men who were in the corps that were first raised.

12579. You mentioned, I think, that the horses were rather light for your men?—Well, we were mounted more on ponies, which in my opinion, did their work well; they carried the men with less trouble to themselves than a big horse would.

12580. What would be the size of the horses, 15 h. 2 in.?—No, not so big as that, 14 h. 2 in.

12581. And how did the South African horses compare with those from the Colonies that you saw, say, those from Canada?—The South African Colonial horses in South Africa beat everything that I saw there easily, as regards efficiency in every way, for campaigning purposes straight off. I do not say that the Argentine and Canadian horses, if they had been given sufficient time to rest, and sufficient time to get acclimatised, both to the climate and the food, would not have done well; I think they would, perhaps, provided the best class were brought from that country.

12582. But the Argentines were not equal to the others?—No, the Argentine was the worst class of horse I had.

12583. They were very poor as a whole?—Very poor. In my opinion, and the opinion of officers who know the Argentine, the right class of pony was not brought from the Argentine.

12584. The strength of your regiment was, I think, 500?—At the commencement 500. But I afterwards raised two more companies, and a machine gun section, when it became 750 altogether.

12585. You had two Maxim guns?—Yes.

12586. Did you consider that sufficient; would it not have been better to have had a larger number, with a corps like yours?—I think two machine guns were hardly sufficient. I would say three machine guns would be ample. I advocate the Colt gun myself, personally.

12587. Three guns could be well used?—Three could be well used, because in reconnoitring and pushing your way on, if you have one with the advance guard and one on either flank in case of opposition that may be made to you from a ridge or a kopje, or any point of vantage which the enemy have their scouts on to oppose your advance, my system was to send my machine gun right up to the scouting line amongst the kopjes and ridges where the Boers were, and generally clear them off, and so I got my scouts on and pushed them on more rapidly with less loss under cover of the guns.

12588. And some of the over-sea contingents had three guns?—They had, and a pom-pom.

12589. You think the Maxims were better than the Colts?—I prefer the Colt myself.

12590. And had you any experience of the galloping gun?—The Dundonald carriage, do you mean?

12591. Yes?—I had four of them lent to me by the Colt Gun Company.

12592. Do you consider it serviceable?—The carriages were made of such bad material that they quickly became unserviceable, and gave me a great deal of trouble to keep efficient. But given the best hickory in the construction of the whole carriage, I should say that is the best method of working machine guns.

12593. It could be more conveniently used at once?—Yes, it can be carried round and brought into action very quickly, and taken quickly out of action.

12594. Perhaps they were better fitted for the Transvaal than for Natal?—Exactly. I have given in some of my suggestions here, a method by which you can either use your machine guns on pack transport or on wheeled transport.

12595. I think you have mentioned that the boots served out which were made in the Colonies were not good?—The Colonial made boot of a similar pattern

to that issued in England was very inferior in quality. I had two pairs of boots issued per man, and they could only carry one pair, that is to say they had them on them. Those men that inadvertently went to the front in Colonial made boots were soon without a pair of boots, whereas the British made boots were far superior and lasted much longer.

12596. Was it that the material was inferior or that the workmanship was not so good, or both?—Material and workmanship.

12597. And you consider it of very great importance that the foot gear should be really good?—Yes, all the equipment should be of the best material; it is the most false economy in the world, I think everybody will agree, ever to buy an inferior class of goods at all. The difficulty of supplying men up at the front with another pair of breeches or boots is enormous, whereas if they are given the best leather and the best corduroy to start with they will last them probably years in campaigning, and you will not be hampered with the necessity of serving out additional things to the men.

12598. May I ask again whether you had any opportunity of seeing and comparing the boots of the outside Colonial contingents?—No, I did not; I never did so.

12599. You say (*Vide Appendix Vol., page 350*) that the tents, instead of being white, ought to have been of khaki or dark colour. That is, I suppose, that they would not be seen so well at a distance, for the same reason as the uniform?—Yes.

12600. Were they of linen or of cotton?—Canvas, it is cotton canvas.

12601. As being much lighter?—The ordinary bell tent of the British Army is of cotton canvas, I think.

12602. Formerly the tents were all linen canvas. The cotton is much lighter, is it?—It is the ordinary canvas. I am no expert in the manufacture of the article.

12603. (*Sir Henry Norman.*) We used to call it canvas?—Yes, but I advocate the use of the Willesden canvas, that green or brown canvas. I myself had a tent of that material, which lasted very well indeed.

12604. (*Lord Strathcona and Mount Royal.*) You mentioned that your troops were very expert in the spoor—that is in tracing men; is not that the case also with the natives?—Yes, they are accustomed from childhood to see anything on the ground and notice what has passed, and can tell you what animal it is.

12605. Were they used much for that purpose?—I had natives who went with me, not armed for any purposes of aggression, but for the purpose of intelligence and gathering intelligence from other natives. A native will tell another native when he will not tell a white man very often, and for that purpose I employed natives in my intelligence department.

12606. Of course, the natives of North America, the Indians, are great on that?—Yes. Colonel Steel, who commanded a regiment, was very expert at it.

12607. In speaking of the bayonet which you recommend for the carbine, what length of bayonet would you suggest?—I should put such a bayonet on as would bring the whole weapon from the place you hold it, that is to say the point you hold the weapon with the bayonet on it for using as a lance, at least 3 feet 6 inches from the point of grip to the point of the bayonet.

Brigadier-
General
M. F.
Rimington,
C.B.

Brigadier-General M. F. RIMINGTON, C.B., called and examined.

12608. (*Chairman.*) You first went out, I believe, on secret service before the beginning of the War in 1899?—Yes.

12609. And you were at Bloemfontein?—Yes. Previously to that I was there in 1897, two years before.

12610. And then at the time when war became imminent you left the Free State and applied for permission to raise a corps?—Yes.

12611. Which was given on October 3rd, 1899?—Yes.

12612. You have been good enough to send us some Notes (*vide Appendix, page 583, post*) upon which I will ask you questions. Will you in the first place give us an explanation, please, with regard to the method of raising your corps?—I thought when I was going out to the War it would be a useful thing to get a number of men who could guide in the country, and I pressed for authority to raise them. I also made arrangements as soon as I thought there was any likelihood of war coming to get some of the best men I knew in the Free State to come over the border as soon as war was declared, and I also made arrangements with various people on the borders of the Cape Colony to join—men who would be useful on the border; and at the moment that War was absolutely declared I had these men—they came over, and some rode out 70 or 80 miles or more, left their commandos and joined me. And I employed some of the men on the border some 40 miles away from Naauwpoort at Colesberg Road Bridge and Norval's Pont to let us know when the Boers had crossed our border. One occasion when the Boers crossed the border was communicated to me within five minutes by telephone, and another was telegraphed from Colesberg Bridge. Both messages came into the telegraph office at 12 o'clock at night within a moment of the Boers doing so. One man was captured and the other was not. That was the sort of man I wanted.

12613. You say that you got men from the Free State; were they burghers?—Yes, many of them were.

12614. Dutchmen?—Some were Dutchmen. One of the best I had was a Dutchman.

12615. And the men on the other side of the border, they were also farmers?—They were Englishmen who did not want to join the Boers, good fellows.

12616. They were settled in the country?—Settled in the country and in many cases their mothers were Dutch and their fathers English. One of them agreed to stay with the Boers during the war till it was absolutely necessary for him to come over to us when it got too hot for him. He came over and gave us very good information.

12617. Then the essence of your corps was that you raised it from people settled in the country?—Yes, who knew the country.

12618. Not so much from the Uitlanders?—I got a very large proportion of those too. I got those sent me by the Secretary of the Uitlanders' Committee. Then the trains were packed with people coming out at that time. We used to meet every train and if I saw any person I knew or could trust I told him to come up.

12619. Then at first, and probably for that reason, you carried it on quietly and without attracting more attention than was unavoidable?—Yes, we were rather afraid, you see, of what the Cape Government might think about it.

12620. Were your headquarters at Naauwpoort?—Yes.

12621. Did you personally inspect the men there as they came in?—Yes, I was occupied from about six o'clock in the morning till six at night inspecting them. It only took us about 10 days to recruit them, and we were drilling them every day.

12622. From the nature of the men you took you had to be very clear as to your men, I suppose?—Yes. You cannot be a spy—it is the most difficult thing in the world—not one man in a thousand is able to be a spy without giving himself away. You can always detect a spy—at least I have never heard of anybody who was not detected or suspected at any rate.

12623. To prevent that you required references?—Yes, I took the greatest care about it.

12624. And, as you say, you looked into it yourself—Yes, I was present when every man was recruited.

Brigadier-General
M. F.
Rimington,
C.B.

5 Feb. 1903.

12625. And you think you were successful in keeping out undesirable people?—Yes, I am quite certain of it. In the nature of things, of course, any man that is a spy must be in with both sides. For instance, one man who came to me was very friendly with the Boers, and he was suspected, but he got out all right, and came out afterwards from their side to us. But he was suspected.

12626. What were the qualifications that you looked for in the men?—The principal thing I wanted was men who could get through any part of the country or through some particular part of the country. We had a map for each man, and marked in blue what part he could find his way through at night, and what part he best knew during the day time. If a man can speak Kaffir of course he can always find his way because the Kaffir always knows his way within 50 or 60 miles of his own kraal at any rate, and you have only to go to a kraal and say to a man he must guide you to a certain place and he is bound to go; so that the ability to speak Kaffir guarantees that a man can find his way. Apart from that, many of these men afterwards guided me in night marches very well.

12627. You say you marked it on the maps. Had you maps of that part of the country?—It was just the ordinary old Free State map.

12628. It was not good enough to go by?—The main roads you can always find; there is no difficulty about that.

12629. I only ask the question because we have had a great deal of evidence about maps, or rather the deficiency of maps, and I wanted to know what your experience was in that matter?—I never experienced any difficulty from want of maps. If you can tell a Kaffir where you want to go you can always get there by day or by night. It was through absolute ignorance on the part of English officers that they could not find their way by day or night. I have marched thousands of miles at night, and I never had the slightest difficulty. Get a Kaffir guide and he will take you anywhere within 50 miles.

12630. Could he tell you the military capabilities of the country?—Yes, if you have a good interpreter he can give you a great deal of information. He will tell you where there are things you can get across, and things where you cannot.

12631. Then you think with proper intelligence you can dispense a good deal with maps?—Yes, I think so. I never had any difficulty. I made 40 or 50 night marches during the last part of the War, and I never had any difficulty in finding my way, and getting sufficient knowledge to take wagons with me.

12632. Otherwise you tested your men in shooting and riding, and medically examined them?—Yes.

12633. How many men did you enlist at the outset?—At the outset I got about two hundred. I was limited to two hundred to begin with. I could have got a great many more, but I did not want them.

12634. Did you increase them afterwards?—Yes, the moment we found a man was not quite up to the work we got rid of him, and then we could enlist some others. I had no difficulty about getting men.

12635. You say in the *précis* of your evidence that you only accepted about one in five?—Yes, I think that was the proportion.

12636. And you had a good class of men?—Yes, a great number of my men became officers afterwards. I think at the end of the War there were about 70 of these original men who had got commissions, and a good many did very well indeed.

12637. If there was any evidence of want of pluck or nerve you dismissed the man?—Yes.

12638. Had you to do that often?—No, I think I got rid of about half a dozen or so.

12639. But having the control in the hands of the Commanding officer and the exercise of it in that way is the best means you think of maintaining discipline in a corps of that description?—Yes, I think you want to have a pretty strong hand in the case of these men. A great many of these men I ought to say had been previously engaged in wars out there; some of them had been in every Kaffir war for the last 30 years or so, in the old Boer war, and so on.

12640. There was no restriction of age?—No. I think about the best man I had was 63. He had five horses shot under him during the War.

12641. What about officers?—I got some Regular officers—Captain Rankin and Captain Gale, R.E., were most useful to me.

12642. You think that some Regular officers are an advantage?—I think they are absolutely necessary. You must have people whom the men respect as something above and out of their own class.

12643. And were the other officers men of the same class as the privates?—Yes, and they got on very well indeed. They were dashing fellows to ride at kopjes and that kind of thing, and very good for transport work, and all that sort of thing.

12644. Then, as to horses, what have you to say?—Well it was an experiment on my part to pay the men 5s. a day for their horses, which answered very well.

12645. For their own horses?—Yes, they got very good horses.

12646. So that you had not to provide any horses?—I bought about 150 horses, I think, for the men who had not got horses. Some of the men who came down by train from Johannesburg naturally had not any horses of their own; some of them bought horses; some of them did not take that responsibility.

12647. In order to make it clear what you mean is, that they brought in their horses and you valued them?—Yes. I valued them.

12648. And entered them at that value?—I entered them at that value in a horse-book. If the horse was killed the man got the value of the horse, or he was given another one in place of it, if he liked, of about equal value.

12649. What were the advantages that you foresaw and which accrued from that?—The men took much better care of their horses, and that spread to the other men. If one man sees another man next to him taking great care of his horse he naturally does the same, and puts the same value upon it.

12650. Then again the presence of Regular officers you found to be a great help?—That was a matter of the greatest importance. I think you can trust Regular officers better than you can irregular officers, they have got a higher standard of honour.

12650*. And also they see that discipline is maintained?—Yes, they are very good at that.

12651. And horse management has to be attended to by the officers?—It is most necessary that it should be.

12652. You mention six points in your *précis*. I think perhaps you might give them to us to get them on the notes?—I put that down with a view to the future, so that people should have it impressed upon them.

12652*. Would you just read them?—“(1) Horse management was strictly attended to by the officers,” that is to say, they went to the stables, and so on, and saw that the horses were cared for. “(2) Grazing was always resorted to at every possible chance.” The moment a man gets off his horse he throws the reins over the horse’s head, and the horse stands and grazes, which makes him quiet for dismounted work and so on, and he is also nibbling whenever the man is dismounted. “(3) The men never allowed to sit on their horses at the halt.” That was a great fault with most troops, and wants some legislation. I mean to say that we ought to try and get a rule about that in future, that a man should never sit on his horse at the halt. The ordinary Cavalry soldier does; he gets into a habit of it at the Riding School.

12653. And it is to rest the horse that he should dismount?—Yes, of course. Then “(4) always made to off-saddle at every opportunity, even for five minutes.” Our saddles were light; we had not much on them, and it was no trouble to the man to unlance the girth. We had no breastplate or crupper. The man could just slip the saddle off the horse on to the ground, and it was just by the horse, so that he could slip it on in a moment. In retreat from Sanna’s Post my men were all off-saddled while the Boers were pressing us. When I came back I found these men had off-

Brigadier-
General
M. F.
Rimington,
C.B.

5 Feb. 1903.

saddled their horses, and were watering and feeding them, and the Boers were pretty near, and things were pretty tight. But the habit was a good one.

12654. That was pushing it to extremities?—Yes. I was rather annoyed, because I thought we should not get away. I thought it was playing it rather too fine. Then “(5) the kit carried on the horse reduced to the minimum.” That is absolutely necessary with any mounted operations; you cannot do anything if you have a heavy kit on the horses. We had saddle and waterproof, and whatever we could get away off the horse we did. We just carried a carbine and 100 rounds of ammunition, and, except the carbine, it was the ordinary shooting kit that a man would go out in to shoot buck.

12655. The ordinary Cavalry kit is very heavy, is it not?—At the end of the War we reduced the Cavalry kit to the same thing in my own regiment, and sometimes they did not have that.

12655*. (Sir Henry Norman.) Not even provisions in haversacks?—If a man feeds in the morning before he starts, and gets something when he gets in, and has a biscuit in his pocket, that is all he wants; and the same with a horse. If you have 9 lbs. of oats, and you give him 3 lbs. at night and 3 lbs. before he starts in the morning, you have only to carry 3 lbs. for the mid-day feed.

12656. (Chairman.) What did you estimate your kit to weigh?—The saddle would be about a stone in weight; then there would be the nosebag and 3 or 4 lbs. of oats; say the horse and man's feed would be half a stone—7 lbs. Then there would be the carbine, about 7 lbs., and there would be the cloak or something to put on him. The cloak was not always carried, but as a rule it was when we were travelling; that would be another 7 or 8 lbs.—say another half-stone. I do not think as a rule more than 3½ stone was carried, including everything.

12657. That does not include ammunition, does it?—No. I would allow another half stone for etceteras. If a man had two bandoliers, that would be about 10 lbs. in weight.

12658. That is much less than the ordinary kit?—Yes.

12659. What is that, do you know?—I have known a man put a saddle load of about 6 stone altogether on a horse, including everything.

12660. (Sir Frederick Darley.) What would be about the average weight of your men?—My men were light, as a rule. I had not many big men. I had a good many small men. I think they would average about 10 stone 7 lbs. bodily weight.

12661. Then a horse might be carrying about 14 to 14½ stone?—Yes, about that. I do not think they carried much more than that. A man, if he is a good horseman, would rather do anything than put an extra pound on his horse. He knows it is just as important as it is in racing to get the weight off.

12662. (Chairman.) Then you have one more point?—“(6) They were made to dismount and walk down (never up) all hills.” That is a very necessary thing. It is no good taking the man off the horse when he is going up hill. It is rather an advantage for him to ride up hill, because the saddle gets well shifted back, which is a good thing, and a man does not mind walking down hill; whereas if you put a saddle and a big weight on your horse walking down hill you distress it more than you do going up hill. I have always done that all through my service. I always dismount the men to walk down hill, but never dismount them to walk up hill. A horse does not mind going up hill. Besides that, there is another great point, and that is that if you are scouting you want to be on the horse when you are going up hill, because you do not know what is going to happen when you get to the top of the hill, but when you are at the top of the hill you have seen what is there.

12662*. You think that is a good system, and enabled you to keep your horses in good condition?—Yes; our horses were in a very good state all through. After we had been going a year and a half we saw some Boers one day, and we galloped them down. We were firing at

them at 2,000 yards. I sent a squadron to gallop them down, and they galloped them down in, roughly, six miles—they galloped six miles after them and galloped them all down but one man, and he was afterwards caught; so that the horses were really fit, good gallopers.

12663. And you think that the question of horse-management is one of the first things in a campaign?—Absolutely the first thing—it is 75 per cent. of the campaign so far as I can see.

12664. I see you used rather drastic measures with the men who did not treat their horses well?—Yes, we made their lives a burden to them.

12665. You made them walk?—Yes, it was treated as a crime. I established the same system in my own regiment at the end of the War with very good results.

12666. You say in your *précis*: “Men who give sore backs should not be at once remounted or sent to a base, whether horses are available or not, but should be made to walk for at least 10 or 14 days, and be made to go on picquet on arrival at camp”?—Yes, I did that with my own regiment when I got back to it. After being 18 months with this corps I had to go back to my own regiment, the Inniskilling Dragoons. I started out on General French's eastern trek with them, and I had not quite enough horses. I got all the men marked down who were not good riders and we put them to walk; they had to walk alongside the Scotch Guards and go on picquet every day when they got in. The consequence was that they set their friends to catch the wild horses, and by the end of that trek, which was rather a trying one, I had 90 spare horses. They used to drive the Boer horses in and surround them, and we had one or two successful dashes at the Boers, and we found ourselves with 90 spare horses. I had an excellent veterinary surgeon who would drive a lot of horses in, and the men would go in and catch the horses; often you would see a mare with a foal, and see half a dozen of our men dragging at the mare's tail. Then they would get the horse down, and get on it and ride it straight off. It was a great saving in horses to the Government, I fancy.

12667. I think horses were scarcer than men?—No doubt of it. We could have done without a great many men.

12668. (Lord Strathcona and Mount Royal.) You do not mean that there should be any disregard of the health of the men?—I disregard the men's health completely compared with the horses. A man can speak up for himself, and will no doubt do so and go to the doctor, but the horse cannot say anything.

12669. But cannot you combine both care for the horses and also for the health and condition of the men?—My men were always fit and well. I put the horse first; he is the most necessary thing.

12670. No matter how the man may suffer?—No, I would let him walk for a week, or ten days, or anything.

12671. I do not quite understand what is meant by this statement which appears in your *précis*, “With all mounted troops extreme severity and absolute disregard for the men's health, feelings, or safety, is necessary in this respect”?—Yes, the horse is the first thing, absolutely. You must look after that. You may make your men walk until they are thoroughly tired and can hardly keep their eyes open.

12672. But you can do both, can you not?—When you have once got the men to understand that the horse is the first thing then you can; but I look after the horse first—the man looks after himself.

12673. But the horse would not be of use without the man?—We found that there were plenty of men; we never were short of men, we always were short of horses.

12674. Still the life of the man is to be thought of?—What is the life of a man? A man's life is nothing in war. You do not care whether men are killed or not as long as you attain your object.

12675. Supposing he has to go to hospital?—They will not go there as long as they think they get enteric there, unless they are very bad. I know the Inni-

killings would not go to hospital, they would rather do anything, they were so frightened of enteric.

12676. Yet it is the case that there were very large numbers of sick men in hospital?—I had very few men sick, I was remarkably free from it. But I put the horse first. As long as I have plenty of horses I can manage. I do not mind about the men.

12677. (*Chairman.*) You mean that a man can look after himself?—Certainly.

12678. (*Lord Strathcona and Mount Royal.*) And look properly after his horse at the same time?—I do not think at the same time. He will look a little after himself first, and then after his horse. When he is convinced that you think first of the horse then he comes into line.

12679. But still he takes thoroughly good care of his horse?—Yes; then he knows his own health will be all right.

12680. (*Sir Henry Norman.*) And then you do not have to make him walk?—Yes, it is the screw—putting the screw on.

12681. (*Sir John Edge.*) The training you put him through forces him to look after his horse and forces the other men who see what is happening to look after their horses?—Yes. I think it is better to leave the man behind than the horse.

12682. (*Chairman.*) To go back to your preparations: you provided transport; have you anything to say about the nature of the transport that you provided?—We got very good mule wagons indeed. I could not complain of my mule wagons; they never failed to get up to us at night. They could trot along at any time. They were all small, well-seasoned mules. The Government buyer at the time did not like small mules—I mean the particular Government buyer in the neighbourhood where I was; so I had an opportunity of buying them, and I got very good mules. One of my teams was going at the end of the War. I had them all captured except one at Sanna's Post, and that one went through the War. I saw it just before I left. There were 12 white mules, and they went through the War.

12683. They could do 40 miles a day?—With the greatest ease.

12684. And how were your men armed?—We had the Martini-Enfield carbine, a small, light carbine and a very nice carbine.

12685. And you were satisfied with it?—I would not say I was satisfied. I should like to have had the Mauser carbine with a clip, because I think loading with a clip is so much better than loading with a single loader.

12686. You prefer the carbine to the rifle?—Certainly.

12687. Will you say why?—It is so much lighter, and so much more easily carried on a horse. The rifle is such a clumsy thing, and certainly in England you never could see as far as a rifle can shoot, so I do not see any use in having it so very far shooting. The rifle is sighted up to over 2,000 yards. Not one man in 50 can see anything at 2,000 yards.

12688. And some of the men had pistols or revolvers?—Yes, they just carried those; they were their own.

12689. Had they any other personal weapon?—Some of the men did fix their bayonets on as well; one man killed a couple of Boers with the bayonet.

12690. But they did not fix them throughout?—No. When we galloped at a kopje we loaded the carbine and carried it in the hand.

12691. What do you say about the necessity of a personal weapon?—With any troops worth mounting it is an absolute necessity.

12692. (*Sir Henry Norman.*) A sword?—A sword.

12693. (*Chairman.*) You prefer a sword to a bayonet?—Certainly, as long as you have good riders; I do not think it is worth while with any man who cannot ride.

12694. On a horse at the gallop does not the sword require a good deal of training to know how to use it?—I do not think so for using the point. I think you can teach a man to use the point very easily. You

can teach an ordinary recruit to take tent-pegging with a sword in a very short time any ordinary rider can do it; therefore it must be useful when a man is lying on the ground to be able to stick the point into him, with opposing infantry.

12695. We had one witness who said it was almost impossible to teach the Anglo-Saxon to point—it is his nature to cut?—Yes, it is true that it is very difficult to teach him to point, but I think you can teach him to point if you wish to do so.

12696. (*Sir Frederick Darley.*) He said it was peculiar to Englishmen that they used the edge of the sword.

12697. (*Chairman.*) I do not mean to say that you could not teach them, but his point was that their natural impulse when they came into battle would be to cut?—There are so many Irish you see, who are used to hitting each other—not pointing. Of course, the point is the thing.

12698. That is your opinion, that for Mounted Infantry you would have them armed with the sword in addition?—No, I would not have any Mounted Infantry. I would have them all cavalry.

12699. But can you make an irregular corps into cavalry?—Yes, I think so.

12700. Is it possible to give them sufficient drill?—Well, you can take the best and you can teach them to use the sword at the gallop against the enemy. Gradually the others will come up to that state of perfection that they will be able to do it. The effect of having men galloping at you is that you want either to stay and fight them or you have to get away as quickly as you can. I was on one occasion galloped at by the Boers. I was doing a rear-guard business, and had got all my men away but five. We were just waiting, sitting there. We had got the next position held so that we knew we could get away. These Boers went trekking along as if they were not going to touch us, and suddenly they went left turn and came at us from all sides. I waited until they were within 500 yards. I could not have hit any of them, at least we should have shot the leading one, and the rest would have got in. I saw then what was the effect of people galloping at you. I got out all right (I got my horse shot through the leg, and so did the other five men), back into the next position, and then from there into the next position, but still we knew what it was to have men galloping at us. And after that I always used the same principle in going at them, because I knew what it felt like, and knew what they would feel like.

12701. But the Boers had nothing but their rifles?—No, it does not matter what the men have who are coming at you. It is as if I were standing *here*. I may shoot at a man in front, but I cannot tell what is happening on my flank; I can hear or see the enemy coming, but I cannot shoot all round. Therefore they get in.

12702. But the point I was going to put was this: you proposed to use your irregulars as cavalry, and to use the sword. We had evidence to-day of a corps that was raised, and sent to the front in about a fortnight after its enrolment. Those men could not have been trained to use a sword or to be used as cavalry?—No, but I will give you an instance which will show what I mean. I say in my *précis*, "acting on these lines, I on several occasions directed the 3rd New South Wales Mounted Rifles to charge their enemy mounted with fixed bayonets." They used to fix bayonets and gallop at them in line. These Australians were very good horsemen. One day I let the Royal Artillery Mounted Rifles (at the end of the campaign, when we did not want guns they made them Royal Artillery Mounted Rifles)—I had about 700 of those men—see these Australians do it. I said to one of the officers, "What do you think of that?" and he said, "It looks very well; they look very formidable." About two days afterwards these Royal Artillery Mounted Rifles, who were not men who had been taught to be good riders, fixed bayonets and went and had a fight, which was quite unnecessary, just for the sake of having it, because they liked the idea.

12703. That is a case in which the bayonet was used. The point I was putting was whether the bayonet is not more easily used by men of that kind than a sword?

Brigadier-General
M. F.
Rimington,
C.B.

5 Feb. 1903.

Brigadier-
General
M. F.
Rimington,
C.B.

Feb. 1903.

—No, a sword; but I think a lance or sword on top of a rifle or carbine looks very formidable. You see it up a great height and a great deal of steel coming along. That is a great thing when you are charging; you want something that looks formidable. Let the men in the rear ranks carry a sword ready to do the killing. A lance suddenly coming down like that looks a very formidable thing indeed. A sword on the end of a rifle is a splendid thing. I think the advantage of a sword on the end of a rifle is that you have both weapons, in fact you have three weapons; you have the sword, the pike or lance, and you have the rifle.

12704. You want a sword that can be used as a bayonet?—Yes.

12705. A sword bayonet, in fact?—Yes; they have one in the War Office now. I asked them to send me out 100 to experiment with, and they have been working up one since then.

12706. (*Chairman.*) And in this *précis*, you say: "For mounted troops in the Colonies, I advocate Cavalry drill in squadron columns, etc., a short rifle, or better, a carbine and a sword, whose handle is made like a bayonet handle so as to fix on to the carbine, this being especially useful for defence against a rush at night." That is what you think you want?—Yes.

12707. Then also a little further on you say what you would do with your troops would be "(1) teach all to shoot; (2) take all the best riders in squadrons and teach them the use of a personal weapon, and make them into a troop of swordsmen for shock tactics as Cavalry; (3) gradually work more up to the highest standard of Cavalry and thus leaven the whole lump"?—I would guarantee to take good Australians and make them into very good cavalry in a month if one were allowed to work there in Australia; they are good horsemen.

12708. To stand against European cavalry?—No, I do not say to stand against European cavalry, but very near the mark. I think, perhaps, you might say that. No, I think one would want more than a month to do that, because they must ride very close for it. But you could work them up to a very high standard, I am convinced.

12709. What do you say as to the Yeomanry in this country who are out perhaps a fortnight in the year?—I think if you get men accustomed to horses like Devonshire farmers, you can make them into splendid cavalry. A Devonshire man who rides round about on the moor and has a horse always with him, would make a splendid cavalryman. I do not think you could take a man from behind the counter and make him a cavalry soldier.

12710. It depends upon your material?—Yes, it depends upon the men being able to ride.

12711. Then for scouting, spy-glasses are essential in your opinion?—Yes, very essential. They are very expensive, but they are worth giving to any man who is going to be employed as a scout.

12712. Do you prefer binoculars or a telescope?—I prefer the binocular. I used Ross's No. 12; but I believe the Zeiss No. 8 is the best for this country.

12713. Better than the telescope?—Unless the man is very expert. I used a telescope for nearly a year, and preferred the other at the end. I had my choice and could have chosen what I liked, but I had Ross's No. 12, and for that country I know nothing better.

12714. The telescope would take up the details more accurately?—Yes, but you cannot sweep in the same way. You cannot get so quickly on to a thing, and with cavalry that is everything. You jump off your horse and put a glass up and keep it fixed for a minute, and you must get everything in front of you in that time.

12715. Probably a combination of the two would be best?—Yes, if you could get it; but I have not seen anything better than Ross's No. 12.

12716. If you have a man accustomed to stalking would the telescope not be better for him?—Yes, he will get on to a wounded bird as he goes away. I am very good with the glass. I used for nearly a year one of the signalling telescopes, and I got on very well with it. I could get it up very quickly.

12717. It is very useful to have a certain number of those men in connection with scouts?—Yes, absolutely necessary. And I think you want for positions one or two big glasses, those very large glasses on mounts, so that you can look right into a position and see the colour of the men's facings even at a couple of thousand yards or four thousand yards. I know General Macdonald had one of those big glasses, the very long, big ones, and it was a splendid glass. He had it on a tripod, and I could see a man's tie about three thousand or four thousand yards off and see the colour of it.

12718. (*Sir Henry Norman.*) Did you not say that you preferred on the whole the Zeiss No. 8?—Yes, I think that is the best.

12719. Is that the largest magnifying power?—There are Nos. 8, 10, and 12.

12720. Then the No. 8 has less magnifying power?—Yes, but I was looking at it from the expense point of view; one cost £10 and the other about £8. It used to cost £8 for Zeiss No. 8.

12721. And that is good enough?—I think it is. You cannot expect the Government to pay an extra £4 for a very slight advantage.

12722. (*Sir Frederick Darley.*) What do you say as to the Ross glass?—No. 12 is what I had. It is very good indeed.

12723. Is that as expensive as the Zeiss?—Mine cost £10 or £12 at the Stores, I think; something like that.

12724. (*Sir Henry Norman.*) Ross sells the Zeiss, I think?—Yes; it is the same idea. I believe the City Imperial Volunteers had a very good telescope, one of Ross's, but on the same system of reflecting prisms.

12725. (*Chairman.*) You have described in your *précis* the system which you pursued in scouting. Perhaps you will give us that shortly in your own words?—All scouting parties sent out by me left at night and got into some place, where they could see and not be seen, before dawn. The whole available officers and men turned out practically every day, and certainly five days per week throughout the War, two or three hours before dawn, when we were in touch with the enemy, and scouted up as near to them as possible before dawn, remained in observation till the enemy's picquets were withdrawn, most days engaging the enemy's scouts and exchanging shots. They got up in touch and got into a position and stayed there, and the enemy never could tell what was behind. They just saw the picquets there, or perhaps not even them; but they came scouting up and got a shot at them. Unless they meant to make a serious operation they would not turn you out.

12726. And if they did you would have to retire?—If there were many of them you would shoot away till the last moment and then get back. They seldom attempted to turn us out unless they knew, and if we got in before dawn they never did know. That is the whole system of scouting—to do it at night—to get into a place at night. We worked a great deal at night. Later in the day the bulk of our men were withdrawn as quickly as possible, leaving parties in observation until after dusk. That was the great point, not to come back until after dusk, and then they did not know you were there all the time. One place at Colesberg we held for a fortnight with just cow dung fires kept by the natives. They thought the picquet was there; it was just as good. The natives used to go and pile on a little cow dung, and the Boers saw it all right. They never found us out. We used to come back into the place and sleep and get up again before dawn.

12727. And you got a night's rest?—Yes; it was a very hot place to get into in the day time. If our parties once got into position before dawn, and some remained till after dusk, the Boers did not attempt to get up to their positions, and they could be got into again every day before dawn without loss. Every man was encouraged to take every opportunity of observing the enemy and to collect and report information, especially from native sources, with regard to the enemy. Though for scouting and fighting against Boer Mounted Infantry my guides were all that I could wish for, and though later I found no difficulty in galloping at and storming, carbine in hand, any tem-

porary Boer position with them, I am positively certain that they, being untrained in shock tactics and having no personal weapon, would have had no chance whatever against well-trained, well-mounted, and well-led Regular Cavalry half their number. I say this after being engaged, when in command of these men, on approximately 120 days. Later I commanded the Inniskilling Dragoons, and found that though for individual shooting and scouting they could not compare with those born and accustomed to the veldt, and able to get information from every native, well-mounted, well-trained Regular Cavalry in action were worth double their number of Mounted Infantry (whether Boers or British). I wish particularly to draw attention to this, as since I came back to England I have heard many individuals express opinions which show that they had no conception that such was the case, and it appears to me that there would be a very rude awakening if Mounted Infantry attempted to hold their own against Regular European Cavalry trained say, for instance, on the German system.

12728. That is what I was putting to you before, but you said that you thought you could make your irregular regiments into Cavalry sufficient to hold their own?—I think the whole thing depends upon the riding of the man when he starts. If a man is a good horseman to begin with, it is very easy to make him into a Cavalry soldier. The man who has been trained from his boyhood to ride can in a very short time be taught shock tactics. An Australian can ride from his boyhood.

12729. (*Lord Strathcona and Mount Royal.*) In the actual circumstances that they had to deal with in South Africa, which, on the whole, were the most useful, the Mounted Infantry or the Cavalry, taking them as a whole?—The Cavalry were worth three of the Mounted Infantry, because they did not get through so many horses. A Mounted Infantryman, when put on a horse, did not know what to do with it. As a man once said to me, he did not know whether to feed it on beef or mutton.

12730. There was that extreme ignorance on their part?—There is bound to be. You take a man from Sheffield or the Highlands of Scotland, and when he first sees a horse he does not know what to do with it.

12731. Take those of the Colonies of whom I speak. I see you speak of them very well. Take them as Mounted Infantry, those from the outside Colonies, not South Africa; what do you say of them?—They are good horse managers when they have been taught the necessity of it. Do you mean in respect of horse management or in respect of what, or which would I prefer?

12732. I speak, on the whole, as to the usefulness of Mounted Infantry in South Africa, or Cavalry?—I say that with English Cavalry, or with any Cavalry—and I mean by that a man who uses a personal weapon—he is worth double the amount of Mounted Infantry who cannot use a personal weapon, and who consequently when they are mounted are the same as Horse Artillery limbered up.

12733. Those who have had no training, you mean?—No; Mounted Infantrymen who do not use a personal weapon are only equal to half the number of men who use a personal weapon. That has been my experience in all my service.

12734. (*Chairman.*) Then I suppose we might pass on to the question of equipment, which is the next point. That you purchased locally or drew from the Ordnance Stores?—Yes.

12735. You have some views to give, I think, with regard to the saddle?—I think the general service pattern saddle is not what we want; I think we want something better. I think it is a very bad economy to have anything but the best saddle on a horse.

12736. Could you get a saddle that you thought satisfactory?—The Colonial pattern saddle was a fair saddle; with a good deal of trouble, we could make it suit almost any horse by taking the stuffing out ourselves and adjusting it and putting in wool and hay and so on.

12737. That is a matter that the War Office ought to consider, I suppose?—I think it is a most important matter.

12738. And water-carts you do not approve of?—I found them an encumbrance in South Africa.

12739. How did you keep your men from drinking bad water under those circumstances?—We used to use the horse's nosebag. The man always got his own water in the horse's nosebag, and brought it up so that he could make sure of good water, and when he got near to the place where he knew we were going to encamp, he used to fill the nosebag with water; it carried water very well.

12740. Better than carrying it with you in a water-cart?—Much better; the water cart is always in the way.

12741. Then as to Colonial officers what have you to say?—I had the most excellent Colonial officers under me of all sorts. I had Australians, Canadians, and New Zealanders.

12742. And they are very good with horses?—Yes.

12743. They are not trained in discipline?—No.

12744. And you think a certain amount of training in England with the Regulars would be an advantage?—I found that those who had been trained here in England had a great advantage. I had some who had been.

12745. (*Sir Frederick Darley.*) Some of the New South Wales Lancers?—Yes, Colonel Cox; I found him very good.

12746. (*Lord Strathcona and Mount Royal.*) A good many of them are really trained in England; are not a good many attached to Aldershot?—Yes, and they are most useful. They came in splendidly.

12747. Such is the case at this moment, I think—there are a certain number at Aldershot?—Yes.

12748. (*Chairman.*) As regards non-commissioned officers, what is your opinion?—I think the non-commissioned officers were not people who had been thoroughly grounded in drill. The Colonial non-commissioned officers, I think, were found very useful wherever they were to help them to get their drill.

12749. I suppose you did not require them so much in your corps for scouting purposes?—No; they looked more or less after the interior economy. I did not have Regular non-commissioned officers.

12750. Then as to horse-mastership, that you have spoken of?—Yes; I think that it is a very important thing that we should try and get always men for Cavalry who have been accustomed to horses.

12751. The waste of horses very much arose from neglect of that, I suppose, during the War?—A man who is accustomed to horses will look after his horse. I had one trumpeter who had three horses in the War; he was two years and nine months in it; he had two killed under him, and the third he had at the end of the War. He was a good horse-master, and that is the difference between a man who is used to horses and a man who does not care for horses.

12752. What have you to say as to discipline in the field?—We found it was a mistake to allow the regiment to carry out the field imprisonment.

12753. What did you do then?—We had them all under the assistant Provost Marshal and his subordinates.

12754. Had you much to do in that way?—No; once they knew they were going to have a bad time of it there was not much trouble.

12755. I think you had at the beginning the power of dismissal?—I did not have any trouble with my men; they were all a good class of men; I hardly think we had a court-martial. But I was thinking of men at the end of the war, when I had several columns under me, of trained people like the Australian Royal Artillery, Mounted Rifles, Canadians, Inniskillings, Black Watch, Gunners, and so on, and then we found the necessity of having the field imprisonment carried out by the Provost Marshal under his superintendence.

12756. This is then a more general observation; it does not apply to your corps?—Not to my corps. It was more at the end of the War, when I was commanding a mobile force.

Brigadier-General
M. F.
Rimington,
C.B.

5 Feb. 1903.

Brigadier-
General
M. F.
Rimington,
C.B.

5 Feb. 1903.

12757. Your corps took part in a great many engagements during the War?—Yes, we were engaged all the time, more or less, up to January, 1901.

12758. We often heard of you?—We had a very good time indeed.

12759. Is there any other point you would like to mention in regard either to the corps itself or the manner in which such corps should be raised in the future?—I think the great point is the want of good Imperial officers, who have been adjutants or had something to do with the interior economy of a regiment, who know exactly what to do. The moment you tell irregulars they must do so and so, if you say it with an air of authority they think it is right, and no matter what it is they do it; but if it is one of their own class, they say, "Oh, you don't know any better than I do about this." That is the great point, having an Imperial officer who has authority. Those officers were the greatest possible assistance to me in every respect.

12760. (Lord Strathcona and Mount Royal.) The horses were the native South African horses?—Yes.

12761. You had none of the South American horses?—No, I do not think I had any Argentine horses, or very seldom.

12762. You have seen many of them?—I have seen thousands of them.

12763. They were inferior, were they not, to the South African horses?—Yes, because they had the disadvantage of being in a strange climate, but I have a high opinion of the Argentine horse, a well-bred Argentine horse.

12764. You think well of them?—Yes, I do. One that we took out to the War as a polo pony lasted through the campaign.

12765. They were generally small and lighter?—Yes. I did not like the heavier class of them. I liked the well-bred Argentine. I like one with a little English blood in him; I think he is all right. I have had good Argentine polo ponies.

12766. Had you any Maxim or Colt gun attached to your guides?—No, but I had to my columns; I had eight or nine. I like them. They frighten the people. It is a very unpleasant thing to be under the fire of them.

12767. You consider it a great advantage to have officers of the Regular Army from Great Britain with every corps?—I think it the greatest advantage.

12768. With all the Colonials?—I should say so.

12769. Have you had any experience of officers trained in the military colleges of the Colonies, say in Canada at the Royal Military College; have you seen any of those officers?—Yes, I have met several. I think they are very good indeed. I think theirs is a very good training, but I should regard them more as Regular officers. I have always looked upon them as Regular officers.

12770. From the experience of the English officers, let us say, do you think they are preferable?—I hardly could say that; it is taking a few whom I know, and who have come on and we should be speaking as against a very large mass. Of course, there were some very bright examples amongst them.

12771. They have greater training and experience here. That, of course, is in their favour?—Yes, I do not see why an officer trained in a college in Canada should not be better—he ought to be better, because he has more experience of the veldt life in Canada, I fancy.

12772. For instance, at the present moment the head of the College of Sandhurst was formerly at the Military College of Kingston and was selected in view of his experience and great usefulness there?—I think that is very excellent. I hear very high opinions expressed of him by officers who have been under him.

12773. (Sir Henry Norman.) But he was a Regular officer before?—Yes. I think every officer wants the widest possible experience you can give him. If you can send him out to be knocked about in rough life he gets all the Colonial knowledge.

12774. (Sir John Edge.) I have only one question to

ask you. I see from your *précis* that you have got some excellent shots in Rimington's Scouts. Did they prefer the carbine to the rifle?—My impression is that all but one preferred the carbine. One of my best shots used the rifle, but all the rest used the carbine.

12775. All the good shots?—Yes, the good shots; the men who, when you had a fight, you could count on their shooting two or three Boers used the carbine.

12776. (Sir Frederick Darley.) You say that during the war you had command of a force which embraced the 3rd New South Wales Mounted Rifles, some 800 or 900 in number?—Yes.

12777. And you found they were practically ready-made Cavalry?—Yes, they can ride so well.

12778. You say in your *précis* "these men practically are ready-made Cavalry"?—Yes, I would not say that the Australian was good at horse management at first, because he had been used to many horses. He can ride a horse and can jump off and always get another. Consequently they were wasteful with their horses at first. And another thing was that not having been used to the horse picking up a livelihood on the grass by putting his head down and eating when he can, the Australian is not careful about feeding him.

12779. In point of fact, he is not accustomed to feeding them at all?—Another thing is that he has been used to over-landing cattle, and he sits on his horse because if he got off he would stampede the cattle, so he sits on the horse.

12780. Who was in command of that force?—Colonel Cox.

12781. He had had training at Aldershot?—Yes, he had.

12782. I think there were some 80 or 100 men who came over?—Yes.

12783. Were they attached to your regiment, the Inniskillings?—No. They were attached to some regiment there.

12784. And I think they had had some eight or nine months' experience there?—Yes; they were there for a long time. They went to Salisbury Plain, and so on.

12785. Do you know how long these men had been in South Africa at the time they came under your command?—About a week.

12786. Only about a week?—Yes; they came straight under my command a week or less, I should say, after they arrived.

12787. Were they at that time, do you think, so far as military horsemanship is concerned, practically ready-made Cavalry?—I think they wanted a little bit of practice in charging and troop leading, but I thought they were very good indeed. I remember parading them when they first came, and they appeared to me then to have the proper feeling—a desire to get at the enemy.

12788. Had they their own horses with them?—Yes, they brought their own horses.

12789. What did you think of the horses they brought with them?—The small horses, I thought, were good, but the bigger class of horse I thought could not do on the food that we could give him, and he was naturally unacclimatised and did not do so well.

12790. But the small class of horse you thought good?—The small Australian horse I found a very good horse, if he got any chance at all. The smaller they are the better; and I found right through the campaign that the blood horse is the only horse that is any use at all—as nearly as possible thoroughbred.

12791. You speak of having sent some of these men against the Boers with fixed bayonets. Did the Boers stand up against them?—No, that was what annoyed the Australians so much, they would not wait. I was having rather a tight time of it when it happened the first time.

12792. Were you commanding at Diamond Hill?—I was with Rimington's Guides at Diamond Hill.

12793. Did you see some Australians there? Were they in the charge there?—I could not say; I was not with them.

12794. There the Boers did stand, did they not, for a time?—In the general engagement, do you mean?

12795. Yes.—Yes; it was a very strong position; it took us practically two days to do it all.

12796. Was there not a Cavalry charge?—Yes; but I was not there, I did not see it.

12797. You say that for mounted troops in the Colonies you would advocate Cavalry drill?—Certainly. I believe they would make splendid Cavalry.

12798. Do you know whether General Hutton is of that opinion?—I do not know.

12799. He is a Mounted Infantry man?—Yes, he is. I think he would like them to gallop at the enemy with anything they had in their hands; but I think it is worth while giving them a sword. Some of them have a lance; I think the sword is the best.

12800. (Sir Henry Norman.) What was the highest strength of Rimington's Guides at any time?—I should think about 250.

12801. In two companies?—In two squadrons.

12802. Had you your own transport?—Throughout the time that I commanded Rimington's Guides up to Sanna's Post, I had; and I left some of it there.

12803. You lost it?—Well, it was lost for me. I do not think I lost it. I had nothing to do with it; I was not within two miles of it.

12804. But what was it calculated to carry, what we call your regimental transport?—In a mule wagon we used to put about 3,500 lbs.

12805. Could you go away with that transport with everything complete for two or three days?—Yes.

12806. You had sufficient for that?—Yes.

12807. It was absolutely under your control and not allowed to be taken away for other purposes?—Yes, I had it under my control.

12808. And then after the transport was lost how did you manage; did you get fresh transport?—During the next few weeks I collected a little more, and at the end of the war I never had the slightest difficulty with transport. I captured 38,000 head of cattle, and about 350 wagons, and enough mules to keep me constantly going. I was able to supply other people with transport, and I discovered that an ox wagon, if you managed it properly, could go as far as a mule wagon and as fast; in fact, our ox wagons used to beat our mule wagons, because they were better made and did not break up so easily. The Boer ox wagon that we captured, and the Boer cattle we captured, could do 35 miles in a day, not with a very heavy load, of course.

12809. Did you find drivers for all these carts?—I could always get natives; they would always come, and I could always catch natives, somehow. I had no difficulty about it. I had Cape "boys" at the start, and they were very good indeed.

12810. What is meant by "Imprisonment No. 1" by the Provost Marshal that you refer to in your *précis*?—That is where you tie a man up. The Army Act gives that power plainly. You can tie a man up in a fixed position, and if you make him uncomfortable enough he does not like it, and he does not come again; he does not want any more. The art is to tie him up and make him sufficiently uncomfortable without exceeding the Regulations.

12811. (Sir Frederick Darley.) To let others see that he is uncomfortable?—Yes.

12812. (Sir Henry Norman.) I think some misapprehension may have arisen with regard to the remarks

that have been made about the College in Canada. Of course collegiate instruction and experience, whether at Sandhurst or Kingston, is very good, but is not the best experience regimental? You would not take an officer direct from a College, and consider that he was a sufficiently good officer to use in the way you have done with the Regular troops?—After picking the best I could find, I should like them to have two years from 17 to 19, with a cavalry regiment; then I should like to pick out the best of those who meant to be professional soldiers, and send them for a year to get the very best instruction that I could possibly give them, and to make them work morning, noon, and night, as hard as they possibly could work for a year. That would be the sieve, and at the end of that time you would get some good ones.

12813. Having given them a regimental experience first?—I would give them a regimental experience first. Of course, I should like them to read, write, and cipher to a certain degree, first of all, which they cannot all do now.

12814. However, we have got no such great instruction, I suppose, as they have at West Point, where they are for four years?—It is a pity that we have not. We should get a few Stonewall Jackson's if we had.

12815. There they are kept very tight at work the whole time?—That is the best thing in the world. I was reading Stonewall Jackson the other day, and what they teach them at West Point. That is what we want to do with our cavalry officers, to pick the best and then give them the very best system of education. All those who are not keen, or could not pass out of it are no good to us.

12816. Have you any memorandum which would show the casualties in your regiment during the war?—I am afraid I have not. I tried to get one but I have not got it. I think we got off pretty easily. The men were very good at taking cover, and when we had a dash at any place we got in pretty quickly.

12817. Then you did not lose many men in action, considering the time they were employed?—I do not think we did. I think we were remarkably fortunate.

12818. And you had but little sickness?—Very little indeed. I only remember about four or five men dying of enteric, or anything else, I mean of any disease.

12819. Do you ascribe that in any degree to the trouble you took about the water?—I certainly do in this respect, that when I got to Bloemfontein, and also Brandfort, I always asked to go to the outposts, so as to get as far as possible from where the most men were, where I could get good water. In all places we tried to get out to the outposts. At Thabanchu, a place where a lot of enteric was contracted, we were five or six miles out.

12820. And you think that you only had a very few cases of bad enteric, or of enteric at all?—Very few. I think I could count them on the fingers of one hand.

12821. Where did you get a doctor from?—I got an American, Captain Lindley, from Cape Town. He was an American by birth, and an American subject; and then later I got a civil surgeon.

12822. You had no Army medical doctor with you at all?—No I had first this American, and then this civil surgeon, and that was all.

12823. And were they perfectly efficient?—Very efficient; everything that I could desire.

12824. Had you a veterinary officer?—No, I had no veterinary man.

Brigadier-General
M. F.
Rimington,
C.B.

5 Feb. 1903.

THIRTIETH DAY.

Friday, 6th February 1903.

PRESENT :

The Right Honourable The Earl of ELGIN and KINCARDINE, K.G., G.C.S.I., G.C.I.E. (*Chairman*).The Right Honourable The Viscount ESHER, K.C.B.,
K.C.V.O.The Right Honourable The Lord STRATHCONA and
MOUNT-ROYAL, G.C.M.G.Field-Marshal Sir HENRY WYLIE NORMAN, G.C.B.,
G.C.M.G., C.I.E.The Honourable Sir FREDERICK MATTHEW DARLEY,
G.C.M.G.Admiral Sir JOHN OMMANNEY HOPKINS, G.C.B.
Sir JOHN EDGE.BERNARD H. HOLLAND, Esq., *Secretary*.

Major-General W. R. TRUMAN, called and examined.

Major-
General
W. R.
Truman.12825. (*Chairman*.) You were Inspector-General of Remounts; from what date?—From January, 1899 up to the present time.

12826. We postponed the examination into this Department of the War Office, as we announced at the time, in order that we might have an opportunity of studying the somewhat voluminous evidence which had already been given in connection with the Department. We have done so, and we are of opinion that it would serve no useful purpose, but the contrary, to go through in detail the matters which have been brought out and examined in the course of the various inquiries which have been made. Under those circumstances we shall treat these Minutes of Evidence of the various Committees as practically the examination-in-chief of yourself to-day, and, so far as I am concerned, as having the examination-in-chief in my hands, I shall only have a few general questions to ask you. In the first place, I should just like to ask whether in these Minutes of Evidence of the various Committees we have before us we have the whole of your opinion as to the organisation of the Office before the War?—That is so, speaking broadly.

12827. That it was in your opinion inadequate?—Quite inadequate for a large undertaking such as we had to face at the time of the War, as War broke out suddenly.

12828. And also as to the manner in which it was provided with office accommodation and otherwise, and its being inconveniently situated for the public service?—Certainly.

12829. In the second place these Minutes bring out completely all the steps which you and your Department took for the provision of horses during the War?—That is so, under the order of the Quartermaster-General.

12830. You have nothing you wish to add on either of these two heads?—No, I think there is nothing else.

12831. If there is anything which has either been omitted or on which you wish to offer any explanation, now is your opportunity?—I am not sure whether it was fully explained that before Lord Roberts left South Africa we were ordered to stop purchasing and to recall our purchasing commissions from abroad. Afterwards the demands rose; the first order sent by Lord Roberts was, that we were to reduce the animals by 20 per cent. and a thousand mules per month.

12832. What was the date of that?—That was on the 26th of November, 1900, and then on the 27th of December the same year the demand rose to 7,600 with 2,000 mules, or a total of 9,600 animals per month. That was in the space of one month you may say; after it was reduced by 2,000 it rose 4,000 in the following month.

12833. (*Viscount Esher*.) 2,000 purchased per month?—2,000 horses and mules additional.12834. (*Chairman*.) Purchased?—We had to purchase them; that was a demand from Lord Kitchener. First of all the order came that we were to reduce our purchases, and, in fact, to stop purchasing, and then in

the following month we were ordered to purchase 2,000 extra animals, which raised the number up to 9,600 per month.

12835. I think it would bring it out a little more clearly to my mind if you would tell me how many animals you purchased in October of that year?—I can tell you for November at once.

12836. Was November the normal up to that date?—Yes. On the 26th November, 1900, an order came from the Cape to decrease the numbers; then in the following month, the 27th of December, we got an order to increase the numbers by 2,000.

12837. (*Sir Frederick Darley*.) Was that 2,000 over the normal number of November and the preceding months?—Yes, so that it brought it up to 9,600.12838. (*Chairman*.) You purchased 9,600 in December?—Yes.

12839. You cannot say what you purchased in October in the same way?—I cannot say in October, but in November it was 7,600. The October demands were the same as those for November.

12840. And presumably about the same in October?—It must have been about the same.

12841. How long did that increase go on at 9,600?—Almost to the end of the War, indeed there were more horses purchased than that. We used at one time to ship 15,000 a month.

12842. So that the decrease order did not practically come into effect at all?—No, it never came into effect, but operations were disturbed by the order to close.

12843. And you say you were ordered to stop buying altogether; did you thereupon withdraw any commissions or anything?—Yes, we withdrew the commissions in Italy, Spain, and Canada, and I gave orders for the Commission in the United States to proceed home, but before they left the country we received orders to recommence purchasing.

12844. And as to those in Italy, Spain, and Canada did you replace them?—Not in Italy, but in Spain and Canada.

12845. You had to send them out again?—Yes. If you would like to know the numbers at the end of the War in excess of the numbers demanded I could tell you that—that is, the number of horses purchased in excess of those demanded.

12846. Did you buy in excess of the demands?—We bought a great many more than were demanded in order to provide for contingencies; up to the end of the War there were 25,431.

12847. But they were all sent out?—They were nearly all sent out; we had a few on our hands when peace was declared, owing to the rapid conclusion of hostilities and the ships having been chartered.

12848. Is there any other point?—No, I do not think there is any other point I wish to bring to your notice.

12849. There is one other branch of the subject I want to put a question to you upon. You have told us

6 Feb. 1903.

6 Feb. 1903.

to-day, as you told the other Commission, that you considered the equipment of your office inadequate; has there been any change in that respect?—There has been no change at present. During the War there was a change as our numbers were increased, but now we are being brought back to the number of officers and Staff that we had before the War.

12850. You are in the same position as you were before the War?—In the same position with the exception of one or two clerks, as supernumerary officers, are under notice to leave.

12851. And in the same office?—In the same office.

12852. Have you lodged any representation with regard to the matter since the War?—Oh, yes, we have made a reference regarding the office, but as regards the reorganisation of the Remount Department, that has been taken up by the Quartermaster-General.

12853. You have not been asked to make any suggestions yourself?—No, I have not been consulted in any way.

12854. (*Viscount Esher.*) Did you make any representations before the War that your staff was inadequate?—No; I was only a few months in office, from January to August. I had not an opportunity.

12855. I suppose it had been anticipated before the War broke out that if ever we went to war there would be very considerable demands upon your Department?—Yes; that was the basis on which supplies were to be furnished, settled in Mr. Stanhope's time. He authoritatively represented and considered that 25,000 horses would be sufficient in the event of war, and we were only prepared to meet that estimate.

12856. Your normal purchases in time of peace were about 2,500?—Yes.

12857. I suppose you knew that if we went to war at any time and with any Power there would be a very considerable demand upon your Department for the purchase of horses?—Yes, but my instructions were to assume that 25,000 would be required.

12858. But even to purchase those 25,000 an increase of staff would have become necessary, I take it, would it not?—No, it would not have been necessary at that time to increase the office staff; but I got help from four Colonels through the Adjutant-General.

12859. Then do you not see if your staff is big enough to cope with the purchase of 25,000 horses in time of war, it must be big enough to cope with 2,500 in the time of peace, and therefore at present you do not require any increase of staff?—No, it is not necessary for normal requirements.

12860. You think your staff is big enough now?—Yes, at this moment.

12861. And under the normal conditions of war if only 25,000 horses had been required, you think it would not have been necessary to increase your staff?—Not if we had taken the whole of the registered horses, because we could have taken those very easily.

12862. And your view, and the view generally in the War Department, was that it would not be necessary to go to the Continent to buy horses in time of war?—That is so; it was thought we could get all these horses that were required in the United Kingdom.

12863. And therefore the abnormal character of the South African War had not been anticipated in any way?—I do not think it had, as I was not allowed to buy, although I was ready to do so.

12864. At the present time your only complaint is that you are inadequately housed?—Yes, that is all at present for a normal time of peace.

12865. That is only a temporary matter pending the completion of the new War Office buildings?—Yes, I should think so.

12866. (*Sir Henry Norman.*) Are you aware whether provision has been made for the Remount Department in the new War Office?—I am not aware.

12867. We are informed by competent authority that it has been provided. When you were told that 25,000 animals would probably be required for a war, did that contemplate that there would be no more required, and that there would not be constant wastage

during the War?—I do not think that was taken into consideration; they thought 25,000 the outside number.

12868. To see the war through?—Yes, I think that was the idea.

12869. (*Sir Frederick Darley.*) Do you mean the idea with respect to the South African War?—No.

12870. You mean any war?—Yes; that was the idea of Mr. Stanhope.

12871. (*Sir John Edge.*) It was not your idea?—No, it was not.

12872. It was an idea that had come down to you?—Yes. I forget what year it was; it was when Mr. Stanhope was in office.

12873. (*Lord Strathcona and Mount Royal.*) Before the War what measures were taken for ascertaining the sources from which horses could be procured? Was there a record in the War Office of the different places from which horses could be obtained and the probable number?—No, there was no record kept as regards foreign purchases, because it was considered we would be able to get the horses in the United Kingdom.

12874. All that would be wanted?—Yes.

12875. And you had been in the habit, I think you said, of getting 2,500 or so, all that were required under ordinary circumstances?—Those were all that were ordinarily required.

12876. In short, Mounted Infantry would be of little use in South Africa, and it would not require many horses?—Well, it was not thought we would require the number that had to be purchased,

12877. Had you any knowledge of the number of horses that could be got in one of the nearest Colonies—in Canada, for instance?—Well, there was no record kept, but we knew we could buy a large number of horses, because in General Ravenhill's time he went to Canada and made enquiries, and we had that on record.

12878. There was one officer sent out there, Colonel Dent, but not until the beginning of the summer of 1900?—That is so.

12879. And that, I presume, after representations had been made from Canada with regard to the number of horses that could be got there?—Yes, he was sent out; as the demands increased we were obliged to increase the commissions abroad in the different countries for the purchase of horses. After we had purchased a number in the United States we sent out Colonel Dent to Canada to purchase horses there.

12880. May I ask what is your opinion with regard to the character of the horses from the different places? Take South America, from which a very large number of horses were brought; were they considered good, serviceable horses?—I think they were very good horses. I know that country very well myself, and before the War, in 1897, I went out there and sent nearly 2,000 horses to the Cape. That was when General Goodenough was commanding, and they were principally for Mounted Infantry and a few for Cavalry. He sent home a report to England reporting on those horses, saying that they were remarkably good, and the very horses that were required for the country. That was one reason why I sent so many from Argentina, and I think if the horses I sent during the War had been treated in the same way as the horses I sent in 1897 they would have turned out very well indeed; but they were much abused, I am quite sure.

12881. And as to those procured in Texas and the more southern portions of the United States, what have you to say?—They were very good horses.

12882. Was it known at the War Office that some of the best of the horses got from the northern portion of the United States were really sent there from the North-West of Canada? Had they any knowledge that the United States got a considerable portion of their horses from the North-West of Canada?—It was never reported to me that that was done, but on the face it is most improbable. Colonel Dent was buying in Canada.

Major-General
W. R.
Truman.

6 Feb. 1903.

12883. That is after he went there; but I am speaking of before the War?—There was no record of that.

12884. There was no knowledge of that at all?—No.

12885. (Chairman.) As you have mentioned that you knew South American horses well personally, I would just like to ask you this question: It has several times been said that you could get good horses from Argentina, but that the class of horses sent to South Africa during the War was not the proper class; have you anything to say on that point?—I did not see the horses that were sent during the War, but a great many officers told me they were very good indeed, and they liked them very much. For instance, the 10th Hussars were mounted on them, and they liked their horses very much, and there were other regiments, too, that were mounted on the Argentines, who also reported very well of them.

12886. I think it was only yesterday that we had a witness before us who said he was quite aware you could get very good horses from that country, but that the horses that he saw during the War had more of the cart blood in them, and were rougher horses, and not so good for that reason; have you anything before you in the War Office on that subject?—No, we have not; there were complaints about them, but it generally turned out that it was simply through bad treatment and nothing else, and it was not really any fault of the horses.

12887. Bad treatment. Do you mean from bad horse management?—From bad horse management at the Cape.

12888. And also being sent to the front very speedily after their arrival?—Yes, in many cases they were landed, put into the train, and sent up to the front, taken out of the train, and saddled up, and then they would go on a 20 miles trek without shoes.

12889. I have seen it said also that the price which was given for the horses you got from Argentine was not sufficient to get the really good horses from that country?—Of course if you went to some of the best ranchers there and bought their best horses you would have to pay £50 to £60 apiece, but these were very high-class, principally high-class carriage horses, which were not suitable for us, and we did not require that class.

12890. You think that the price which was paid was sufficient to get the class of horse you wanted?—Quite sufficient; indeed, I only gave £5 apiece for my horses when I was out there.

12891. In 1897?—Yes; and those are the ones that were so well reported upon by General Goodenough.

12892. (Viscount Esher.) Sir Henry Norman asked you a question as to the wastage of horses in time of war. Have you any idea what the wastage of horses in the German army was during the year of the war in 1870?—I could not tell you the percentage exactly, but I have been informed that the Cavalry used up more horses in proportion than we did.

12893. In that year of the war?—Yes.

General Sir CHARLES MANSFIELD CLARKE, BART., G.C.B. recalled and further examined.

(See Questions 2342 to 2594 and 2807 to 2816, Vol. I., for Sir Charles Clarke's previous Evidence.)

General
Sir C. M.
Clarke,
Bart., G.C.B.
See Q. 2357.

12908. (Chairman.) When you were here before you referred us to the evidence you had already given on the remount question, and stated, I think, that that evidence embodied your views on the subject?—Certainly, and I also said that I thought the Commission could have no better evidence generally on the Remount question, as I knew the inquiry to have been very carefully conducted, and the whole of the evidence was given on oath.

12909. That answer referred, I suppose, primarily to the evidence of what was done during the War?—Quite so.

12910. I mean there are two other branches of the subject—the adequacy of the Department before the War, and the arrangements for the conduct of the Department in future, which would not be covered, completely at any rate, by the evidence you have already given?—My evidence embraced it generally. I gave

12894. And yet it had been thought by the authorities here that 25,000 horses in a war would be all that would be required?—That is so.

12895. (Sir Frederick Darley.) As to the purchases you made in Argentina, did you buy through the dealers or direct from the ranches?—Direct from the ranches.

12896. Did you find any inconvenience in pursuing that course?—Not the slightest.

12897. You would only find perhaps four or five horses at this ranch, six or seven at that ranch, and nine or ten at another, and so forth; how did you manage to bring them all together for shipment?—When we bought small quantities I made arrangements with the owners to deliver them in Buenos Ayres.

12898. Had you any place for them to be delivered at where the horses could be fed?—Yes, there was very good accommodation in the docks; there was every possible arrangement made there for receiving horses, there were very good corrals there and suitable arrangements for feeding, watering, and taking care of them in every way.

12899. That was not the course pursued in Australia, I think; they were bought through dealers?—They were principally bought through dealers. When Colonel Thompson went out first he bought direct, but the distances were so great that it handicapped him very much.

12900. The distances the horses he bought were apart from each other?—Yes.

12901. And in order to make arrangements to bring them to the docks they were compelled to buy through dealers?—It was thought better to buy through the dealers.

12902. (Sir Henry Norman.) Is there any considerable normal export trade of horses from Buenos Ayres?—No.

12903. And yet they have arrangements in the docks for receiving horses?—Yes, because they use the corrals for cattle; they are suitable both for horses and cattle.

12904. (Sir Frederick Darley.) Some of these dealers in Australia, I daresay you may have heard, made considerable sums of money?—They did indeed, as there were many competitors in the market outside my department—e.g., the Germans were buying for China at £7 a head over our prices.

12905. They bought the horses at about the price you spoke of, £5 or £6 a head, and sold them *en masse* to the Government at a considerable increase upon that amount?—Yes; but of course they had to run great risks.

12906. They had to run the risk of buying the horses and finding them cast, as many were frequently?—Of course. At one time we had as many as 2,000 horses thrown on a dealer's hands in Hungary which were cast.

12907. (Chairman.) Is there any other point you wish to mention?—No, I think not.

a history of the Remount Department prior to the War, as far as I could from the records at my disposal.

12911. I put it in this way: As regards the history of the Department prior to the War you think the evidence you have already given does cover all that you have to say on that subject?—Yes.

12912. You do not wish to add anything with regard to that?—No.

12913. May I take it then that in your opinion the organisation was imperfect and inadequate?—Imperfect for the purposes of the South African War.

12914. Not further than that?—And not, I think, adequate for the development of the arrangements for the provision of horses in the case of mobilisation for home defence.

12915. That means to say that as it existed before

the War it was not in a state which you could recommend as a permanent arrangement?—No.

12916. That is all that you would wish to add to your former evidence on that branch of the subject?—Yes.

12917. Then with regard to the future, as far as I could read your evidence—I looked through it very carefully—you did not say very much?—I was going to allude to that point in the evidence I am going to give.

12918. Starting then from the evidence which you have already given, as we did in the case of General Truman.—we accept that as part of the case presented to us—what is the first point you wish to draw our attention to to-day?—Perhaps I may as well read what I have prepared—a short note.

12919. Certainly?—In accordance with the desire of the Commission, I beg to hand in a return (*vide Appendix Vol., page 258*) of the number of animals—horses, mules, and donkeys—provided during the War, together with the balance of animals at the close of the campaign. In the number of animals provided are included the horses and mules landed after the cessation of hostilities for the supply of which contracts had been entered into. I also hand in a return (*vide Appendix Vol., page 259*) relating to horses and mules purchased by the Army Remount Department which has been in course of preparation since July last, entering into greater detail, and showing also as far as possible the cost of freight and the percentage of loss during transit by sea. As regards the question of the Commission put to me by the Secretary whether any steps have been taken to reorganise the Remount Department, certain proposals have been worked out and put forward. They have been discussed at the War Office Council, and are at present awaiting the orders of the Secretary of State. Annual reports as to supply available in foreign countries have been arranged for through the various Embassies and Consular Agencies.

12920. You say that propositions for the amendment, if I may call it so, or reorganisation of the Department are actually in progress and ought soon to be sanctioned?—Very shortly, I should say.

12921. But you prefer not to state them in detail now?—I think it would be as well if I did not enter into the details now.

12922. May I take it that they recognise what you yourself have said, that as they existed before the War they were not adequate to the requirements of the British Army?—The proposals put forward recognise the necessity of the provision of horses not only during peace time but also during war time and in the case of mobilisation for home defence.

12923. Such an expansion of the Department in the event of war as would meet a case like that of the war we have just gone through?—Yes.

12924. Those proposals I suppose have been worked out in the War Office in the usual way coming up from your Department, which is the Department concerned?—Yes.

12925. And through the War Office Council to the Secretary of State?—Yes.

12926. With regard to these Returns which you have just given us, of course they are a mass of figures in the meantime to us; are there any comments on them you could usefully make?—I only wish to emphasise this point: the general Return embraces, as is shown therein, horses in possession of units before the War began. It embraces the number of horses and mules procured from every source whether in possession of units or whether purchased afterwards. The other Return applies solely to animals which were purchased by the Army Remount Department for the War.

12927. The second Return does not include the Yeomanry purchases?—No; and I may say with a Return like that it is not to be considered as absolutely accurate; it is as near the figures as it is possible to go. It has been prepared by the aid of the Remount Department, of the Admiralty, and of the Finance Branch in the War Office, but, generally speaking, I think it may be taken as accurate.

12928. There is one thing that occurs to me, looking at it at first sight. You take the totals supplied and the balance expended during the campaign; out of 518,794 horses supplied 347,007 horses were expended?—Yes.

12929. That is a very large proportion, is it not?—A very large proportion, but on that point I should like to call the attention of the Commission to the three examples given on page 312 of the proceedings of the Court of Inquiry on the Administration of the Army Remount Department; to show how extraordinary the losses were. These are three very good examples.

12930. It says here: "The chief cause of loss was exhaustion, the result of hard and continuous work on short rations." Is that an observation that is applicable throughout the campaign, do you think?—I should think generally it is accurate, because one knows the difficulty that existed in getting the food up to the various units. It certainly was accurate as regards part of it.

12931. What you have just said refers to the last words—"short rations"?—Yes.

12932. "Hard and continuous work" is also true?—I have no doubt they had very hard and very continuous work.

12933. Was it not also hard and continuous work commenced before the horses were in condition?—No doubt.

12934. I have seen it stated that that was really the determining cause for the great mortality among the horses?—I can give an example of the necessity for acclimatization from my own experience. In the year 1879 I took two well-bred Walers from Ceylon to South Africa. I landed in March and left the country in November, by which time the horses were becoming fit to take out for a walk. I was in South Africa in the years 1880, 1881 and 1882 and had in my stable during that time seven or eight horses purchased locally; I lost none of them. I can give no stronger proof of the necessity of acclimatization.

12935. And I suppose that if those horses were brought from Ceylon the trial to the horses was not so severe as bringing the horses from Europe?—No.

12936. A horse brought from Europe, I see in the evidence, has to change his coat?—Yes; I think nothing shows more strongly how the climatic change affects the horse than the higher percentage of losses in the horses which were sent to South Africa from the United Kingdom and from Canada; the percentage of loss in all those cases is much higher than from anywhere else. You will see that brought out in that second Return, (*Appendix Vol., page 260*), the climatic change is so very much greater.

12937. And that being the case, any putting them to work immediately must necessarily have caused an abnormal loss?—Absolutely, but I am afraid the putting them to work was unavoidable.

12938. I was coming to that. I was going to say that it does not imply any reflection upon the officers in South Africa?—No.

12939. So long as their arrangements there were, as we may suppose they were, calculated to allow as much time as they could reasonably give for military reasons?—It was a matter of absolute necessity. I have heard it said since all this discussion on the Remounts has taken place—in fact, I have seen it on paper that we ought to have kept up our supply in advance of the demand; and I need only say as to that, that I do not think any human being foresaw or had any idea what the demand would be, and on the very day that I came into office in the middle of September, 1899, an order had been given for a certain number of mules in excess of those for which authority had been granted, and that contract was ordered to be cancelled.

12940. How do you mean that it was ordered to be cancelled?—An order had been given for the purchase of a certain number of mules.

12941. Who had given the order?—The order had been given by the Remount Department.

12942. And who cancelled it?—It was cancelled by order of the Secretary of State.

12943. (*Viscount Esher.*) That was immediately be-

General
Sir C. M.
Clarke,
Bart., G.C.B.
6 Feb. 1903.

General Sir C. M. Clarke,
art. G.C.B.
6 Feb 1903. fore the war broke out?—On the 15th or 16th of September.

12944. (*Chairman.*) Was that during the interval of which we have heard a good deal during the course of the evidence, before any sanction was given for provisional expenditure?—Yes, prior to the date on which general sanction was given.

12945. I think that was the 22nd of September?—The 28th, I think.

12946. So that if that order was cancelled on the 16th it was cancelled only a few days before the sanction for the general expenditure was given?—Twelve days.

12947. Was it renewed when the sanction was given?—Then we gave orders for what was wanted.

12948. (*Sir Henry Norman.*) That shows you think how little anybody anticipated the enormous demand which speedily arose?—And it emphasizes what I mentioned in my previous evidence: how absolutely we were bound by the orders not to purchase until authority was given.

12949. But had the Remount Department power to order that particular purchase to which you allude; who gave them the power?—I cannot remember under what circumstances the order was given.

12950. But they must have had some authority?—Doubtless.

12951. (*Chairman.*) It comes to this: that the great number of horses used arose out of the exceptional circumstances of the war?—Owing to the climatic changes, the use before acclimatization, and, in some cases, short rations.

12952. But you would not attribute it, generally speaking at any rate, or perhaps you would go further than that, to any sending out of inferior horses?—No, I think, taking them all round. In the case of the Argentines, General Truman was correct in what he said about certain corps having been perfectly satisfied with them; on the other hand I have heard reports saying that nothing was too bad for them. In the matter of the horse it is very difficult to get any two people to agree, in fact there is a report in the office now on the general quality and characteristics and utility of the horses of the various countries, and the reports are most curiously contradictory.

12953. We have a paper—I think it is a published paper—of reports (*Vide Appendix Vol., page 432*) sent in by General Lyttelton on the horses, and that is very diverse in its terms?—I think possibly that is the paper I am alluding to. (*The document was shown to the witness.*) That is one of them. I was very glad to see one thing in the Report; we were very much taken to task at one time about the Russian horses, but with the exception that they are slow, I think the opinion is generally in favour of them.

12954. I suppose it is notorious that opinions of a horse are very apt to differ?—Very.

12955. Let us take one case, the case of which a great deal has been said, the Hungarian horses; have you anything to say with regard to that?—The Army Remount Department practically purchased comparatively few Hungarian horses; they purchased a good many small horses and cobs, but comparatively few horses; there were some at the commencement of the War, and Count Szápáry's shipment towards the end. The original reports on the Hungarian horses were, generally speaking, unfavourable, and were not calculated to make me wish to purchase more. We called for a special Report on the last shipment that was made, that of Count Szápáry, and the general tenour of that report was not favourable to them. Special orders have been sent out that they should be carefully watched and a report rendered at the end of a year from their importation as to their utility, their powers of endurance, and I think that report when it comes in will settle so far as we are concerned in this country the question of the utility of the Hungarian horses for war purposes.

12956. You are speaking of the horse as opposed to the cob?—Yes.

12957. Most of the shipments were cobs?—Yes, or horses as small as we could get.

12958. But after Sir Montague Gerard was sent out to Austria-Hungary to report on the state of matters there this contract with Count Szápáry was made as a special contract; was that not so?—It was made during the time Sir Montague Gerard was in Austria-Hungary.

12959. Apart from the general contract you had had with Mr. Hauser?—Quite apart; Hauser was then obtaining his horses, I believe, entirely from Russian sources.

12960. Not from Hungary at all?—No.

12961. He had obtained Hungarians?—He had got some originally, but at that time he was getting them entirely from Russia.

12962. They were chiefly cobs?—Yes; towards the end they would not have anything in South Africa but a small horse or cob.

12963. I think in your previous evidence before the Court of Inquiry on the Administration of the Army Remount Department, at question 4734, you use this expression: "For the last month or two I have had to go very closely into purchasing operations, and I can only say that I have never experienced a more difficult task than to weigh and decide upon which is the best of the numerous offers of animals made, every officer vaunting his wares to be superior to those of any other, and not hesitating to hint that no one else is to be depended upon." You had numbers of offerers?—Yes, that represents my opinion accurately; I cannot add anything to it or subtract from it.

12964. You had numbers of offers from Hungary, from people who wished to sell horses to you?—Yes.

12965. I think the result of Sir Montague Gerard's Report was to show that there was a great difficulty in getting into direct contact with landowners, or people interested in the breeding of horses in Hungary, because the trade was so exclusively in the hands of the Jews?—I believe the trade in horses in Austria, Hungary, Russia, and Poland from all I have heard to be absolutely in the hands of the Jews. Sir Montague Gerard in his Report suggests that we might have done better by getting into more direct touch with the breeders, in fact with the gentlemen; but there was no possibility of finding the organisation necessary for that. It would have required a very large number of officers and veterinary officers acquainted with the language, and it would have been simply impossible to get them. I think, on the whole, that the means adopted to procure animals were the only practicable ones.

12966. This contract with Count Szápáry was an attempt?—It was an attempt, and I do not think altogether a very satisfactory one; the price was high, the value of the horses remains to be proved; and it took a long time to arrange, and with any great demand for horses, contracts on the same lines I am afraid would not have given satisfactory results.

12967. At any rate, if it had proved a successful experiment, any other offerers who came to you at the War Office during the War would have had a favourable hearing, provided the War had gone on and you had required the horses, but the War ceased?—Certainly. I remember quite well an offer was made to provide Hungarian horses by two gentlemen on behalf of Messrs. Hofmann, forwarding and shipping agents, Buda-Pesth. They were well-recommended, and I see no reason why they should not have supplied us with a good class of horse, but at the time the offer was made we were negotiating with a Count Ivan Szápáry for the supply of Hungarian horses, and until it was decided whether that gentleman's contract was, or was not to be accepted, it was impossible to enter into negotiations with anyone else. The shipment of Count Szápáry's horses was made two days after the cessation of hostilities, by which time the necessity for the provision of further horses from anyone else had ceased.

12968. Have you any objection to mentioning the names of the two gentlemen who recommended Messrs. Hofmann?—The letter advocating the employment of Messrs. Hofmann was written by a Mr. Slade, who I never saw, but a Mr. Ponsonby called on me on behalf of Mr. Slade frequently, advocating the purchase of horses from Messrs. Hofmann. I told him that nothing could be done until the Count Szápáry contract had been

settled. On one occasion Mr. Ponsonby brought a gentleman named Stockinger, who I believe to have been the Austrian Consul-General in England. This gentleman also strongly advocated the purchase of horses from Messrs. Hofmann. I gave him the same reply that I had given to Mr. Ponsonby.

12969. I suppose we may take it that one of the reasons for the selection of Count Ivan Szápáry's contract was that he had a considerable backing among landowners and others in Hungary?—He was said to have.

12970. That was reported to you by Sir Montague Gerard?—Yes.

12971. (*Sir John Edge.*) Do you know if the Messrs. Hofmann were large horse dealers, or what connection they had with horse dealing?—I have said that they were shipping and forwarding agents.

12972. You do not know whether they were horse dealers?—I do not think they were; they were simply reputable men of business.

12973. (*Chairman.*) You said that it was impossible to get into contact with the landowners and others because it would require a large organisation to do so?—It would require a very large organisation of men absolutely acquainted with the language to do so, and I do not think myself it is a thing that any foreign country would permit. I look upon it as impracticable.

12974. And so far as it could have been practicable at all the organisation of the Remount Department at the time of the outbreak of the war was not calculated to carry out an operation of that kind?—Absolutely out of the question.

12975. You mentioned just now, I think, in your reference to the future organisation of the Department that there would be reports from the different Embassies?—That has been arranged for.

12976. That recognises that it was an unfortunate thing that hitherto the Military Attachés at the various Embassies were not brought into contact with the Remount Department?—In my evidence before the Court of Inquiry (page 153), I gave evidence to the effect that I thought the information might have been procured not by the Remount Department, but by the Intelligence Department at the instance of the Remount Department, before the War. The Remount Department by itself had not the staff to enable them to do it, and also the Intelligence Department were the proper people to collect the information, because they are in direct touch with the Military Attachés, and with the different Embassies.

12977. I have no criticism on that point; the proper machinery ought to have been employed but you admit that the information ought to be available for the Remount Department?—Certainly.

12978. Therefore, at the beginning of the War the agents of the Remount Department sent out were simply purchasing agents who went with practically no previous information of the markets in the countries they went to?—In my evidence, at page 3, Question 1, before the Court of Inquiry, I said, "Authority was given about the middle of 1899" (I think it was actually in June) "for purchasing remount parties to proceed to" different countries; and so they had ample time to acquire the information before any authority was given to purchase.

12979. They had to pick up during those three months or so any information they could?—Yes, and speaking generally, I know from what I have been told by the Inspector-General of Remounts, that he had a very considerable amount of information as to horses generally, in different countries, but he could not show it in black and white.

12980. In your previous evidence before the Court of Inquiry, at Question 4692, you say: "I think they could perfectly easily have acquired information during peace time as to the capabilities of foreign countries to furnish horses by asking the Intelligence Department to get it for them." That implies that they had not done so?—No, they had not.

12981. But your future arrangements are going to provide that they shall do so?—Yes.

12982. (*Viscount Esher.*) Why the Intelligence De-

partment?—Because it is in close touch with all the Embassies, and it is the Department which procures information on every point connected with foreign countries.

12983. They are not experts?—They are not experts.

12984. (*Lord Strathcona and Mount Royal.*) There are now commercial agents, I think, connected with the different Embassies for getting information?—Yes, and Consuls, and people of that kind.

12985. (*Chairman.*) General Truman told us what the maximum demand upon the Remount Department was supposed to be; I think you have put it in your evidence quite clearly?—I think it is horses for two Army Corps and line of communication troops.

12986. It is question No. 5334 before the Court of Inquiry: "Sufficient to supply two Army Corps with a cavalry division and line of communication troops"?—Yes.

12987. With the experience we now have, do you consider that a sufficient maximum for ordinary purposes?—The maximum must, of course, depend upon the number of troops it is contemplated to send abroad at any time. That was based upon a Minute of the then Secretary of State, and in that Minute it was only contemplated that that number of troops would be required to be sent abroad.

12988. I suppose this scheme for future arrangements which you have mentioned, will take into account what the proper maximum ought to be for the future, as well as any provision for expansion for abnormal requirements?—Quite so.

12989. (*Sir Henry Norman.*) And for keeping up supply?—Yes.

12990. (*Chairman.*) Is there any other point on this question you would wish to speak to?—No. There is one point in connection with the return of horses and mules purchased by the Army Remount Department that I should like to bring specially to the notice of the Commission, and that is in connection with the percentage of loss of horses purchased in Argentina. Of course the climatic change there was very slight, and the voyage was shorter, but I think it speaks well for the carriage of those horses by Messrs. Houlder Brothers, which has been animadverted upon at different times. Houlder Brothers, as the Commission knows, were employed by the Inspector-General of Remounts under circumstances which are fully disclosed in my evidence before the Court of Inquiry, and I think it only right to mention that that percentage of loss is very creditable to the firm which carried those horses.

12991. They compare very strikingly with the previous shipments from the Home ports?—Of course, you have to take into consideration that there was no great climatic change, and the voyage was shorter.

12992. (*Sir John Edge.*) It did not amount to 1 per cent.?—That is so.

12993. (*Sir Frederick Darley.*) Their ships are specially fitted out for the carriage of animals?—Yes.

12994. They also bring home live cattle from the Argentine?—The export of cattle from Argentina has been closed for the last three years, and the restriction has just been removed a day or two ago.

12995. (*Sir John Hopkins.*) Do you happen to know the percentage of wastage which is allowed for now over a campaign? You take it into consideration, of course, in the Remount Department that there is a certain wastage?—Yes.

12996. Do you know what that percentage of wastage is?—If my memory serves me right we started with the assumption that there would be 5 per cent. wastage per month.

12997. That is 60 per cent.?—Yes; we hope there will never be another war of this abnormal nature where everybody almost wanted to ride upon a horse.

12998. But on the other hand there was a percentage of 80 in the Crimea, where there was not much riding?—There was none, or next to none, and very few horses.

12999. (*Sir Frederick Darley.*) These Returns do not show the horses brought out by the units?—Yes, in the smaller Return (*Appendix Vol., page 253*)

General
Sir C. M.
Clarke,
Bart., G.C.B.

6 Feb. 1903.

General
Sir C. M.
Clarke,
Bart. G.C.B.
6 Feb. 1903.

you will find "Colonial contingents," "With units," and "Remounts" separately.

13000. (*Viscount Esher*.) After all the endless controversies about the Remount Department, I suppose you have formed some idea in your own mind on the two main questions—one as to the general quality of the horses, and the other as to their cost. What is your final judgment as to the quality of the horses purchased for South Africa?—I think on the whole the quality was fair.

13001. That is your final opinion?—That is my final opinion. I think that the quality was as good as the pressure admitted of; there is no question that if you have time and there is no pressure, you will pick up a better animal for five and twenty pounds than you would for the same amount of money if you are in a hurry. I merely quote five and twenty pounds as an arbitrary figure.

13002. You think considering all the immense difficulties with which the Remount Department were brought face to face, on the whole they did as well as any reasonable man could expect of them?—I do most certainly, and I think that a very great deal of recrimination has been thrown upon that unfortunate Department unfairly.

13003. Then you come to the other point which is the cost of the horses. If you take that Return of yours (*vide Appendix Vol., page 258*), looking at it roughly, the Remount Department spent about fourteen millions on horses, donkeys, and mules?—I think roughly it runs out to £23 a head or thereabouts.

13004. That includes mules and donkeys?—Yes I wish to say that so far as I know I did not know we had purchased donkeys until we got in the returns from South Africa; they were purchased locally.

13005. How does that average of £23 per head strike you when you consider that it includes mules and donkeys—does it not strike you as being rather high?—I think not, because it includes as you will see in the marginal note, all expenses in connection with the purchase and the various purchasing commissions, and the food up to the date of shipment; it is not the absolute price of the animal.

13006. That, I understand, and if it were for horses it would not strike one as being excessive, but when you include mules and donkeys it struck me as being rather high. You think not?—The mules are dearer than a great number of the horses supplied. They are much dearer than the Argentine horses, for instance.

Colonel A. G. Lucas, C.B., M.V.O., recalled and further examined.

(See Questions 6451-6672, Vol. I., for Colonel Lucas's previous Evidence.)

13016. (*Chairman*.) You will remember that in the previous examination I mentioned that we had postponed the consideration of the Remount question in order to examine the papers, and I may say to you, as I have said this morning to the Department, that having examined the papers we do not wish to resume the inquiry into details which has been made by Sir Charles Welby's Committee on Horse Purchase in Austro-Hungary and by the Court of Inquiry on the Administration of the Army Remount Department, but we shall take the evidence which was given before those Committees as evidence which we shall deal with as practically the evidence in chief on the subject before us. Therefore all that we should wish to get is any expression of opinion with regard to any omissions, if there are any such, from the voluminous evidence already before us in these Reports, or any representations which you wish to make with regard to the future. You have given us a *précis* of the subjects, but it seems to me that even in those there are some which might be dealt with very shortly if at all; for instance, as to the details of horses I fancy that has been already stated?—I think practically all the details of the evidence that I could give is in those Blue Books, and I think if I were to leave this small note, which refers to any paragraphs in my reports dealing with the Remounts, it would save a great deal of trouble certainly to the Commission, and it would not be necessary for me to enlarge upon that at all.

13017. What are the notes with regard to?—It is

13007. Mules coming from what countries?—Most of the mules were bought in the United States of America.

13008. Do you know what was the average price for the mules. You seem to have paid about 80 dollars for a mule—that is about £15?—I think they ran rather more than that on the average.

13009. Of course £1, when you are dealing with an average like this for such an enormous number of animals, represents a very large sum?—Yes.

13010. A couple of pounds means a million and a quarter of money, but still you think that notwithstanding that the average of £23 does not strike you as being particularly high?—No, I do not think it is. In 1881 I bought about 4,000 horses in South Africa, and I had to pay a round price of £25 per head in the country.

13011. What sized horses?—A medium sized horse—a fair sized horse; it was a horse and not a cob.

13012. I take it you would admit that if the whole thing had to be done over again, knowing now the stamp of horses required in South Africa, some considerable saving might be effected? What I mean is that, during the early stages of the War before it was determined that you wanted a horse from 14 to 14½ hands, large prices were given for a different stamp of horse, and money was I suppose wasted?—At the earlier stages of the War the ordinary horses to meet the understood requirements for cavalry, artillery, and what not, were sent out; then what evidently happened was this; in the case of a big horse, the bigger the beast the more he requires to eat; the food was not always available for him to eat, and the natural consequence was that they asked for a smaller horse.

13013. But my point is that in the earlier stages of the War you undoubtedly did buy a stamp of horse for which you gave a higher price than you did in the later stages of the War?—Yes, except in the case of the Argentine's, which were all small more or less.

13014. As to your plans for the future, have they been laid before the Secretary of State yet?—I said in my evidence they were before the Secretary of State now.

13015. And if we have any questions on that point we can put them to him?—Yes.

(After a short adjournment.)

really drawing attention to the paragraphs in my reports that deal with the question of Remounts, and therefore if I were to go through that again it would be time wasted, I think.

13018. If you hand that in it will be of the greatest assistance to us?—I will hand that in (*handing in the same*.) There is only one thing I would like to emphasise with regard to that, and that is the suggestion which I made that the services of the adjutants of the Imperial Yeomanry might possibly be utilised by the Remount Department in the registration of horses in their county districts. It seems to me that from the very nature of the Yeomanry, connected as they are with horses, it would be a very good way of ascertaining the supply of horses and probably for registration, the details of such a scheme of course to be worked out by the Remount Department. I only wish to bring that forward as it has been recommended to the War Office and has received no consideration, but I think still it is worthy of consideration.

13019. That is with regard to the future?—Entirely; I am only speaking of the future. With regard to the past I would simply hand in this letter (*vide Appendix Vol., page 262*), which is a letter I wrote on February 24th, 1902, when the last force of Yeomanry was raised, suggesting that perhaps through the Yeomanry Agencies horses might be supplied for that force. The letter was sent in, but up to date, only one acknowledgment of the letter has been

Colonel
A. G. Lucas
C.B., M.V.O.

See Q. 6479.

received, so I suppose it did not meet with approval. You will find attached to that the answers of all the Yeomanry Centres as to whether they thought they could supply the horses or not. (*Vide Appendix Vol., page 263*). I thought it advisable to ascertain that information from them, and I think it might be interesting, and there is no doubt there was a large number of suitable horses in the country at that time which I think could have been obtained through proper methods.

13020. For what purpose do you mean—for the equipment of the force sent out?—As remounts for South Africa, either for the Imperial Yeomanry force or for general purposes. I think that the Yeomanry centres might have been made available for the purchase of horses throughout the country, so decentralising the purchasing.

13021. Is there any other point that came under your observation in your position with the Yeomanry that you wish to draw attention to?—I do not think so. If you will remember you stated before that you did not wish to go into the inquiries that have been made, and I would just state, with regard to those inquiries, as I did with regard to the Public Accounts Committee, that certain statements were made, but I was never called as a witness on behalf of the Yeomanry, and of course there was no opportunity whatever of contradicting or putting right those statements that were made. I do not agree that the whole blame of purchasing, for instance in Hungary, should be put upon the Imperial Yeomanry as it has been. We paid more but we got a better class of horse than the Imperial authorities; and they lowered the price, there is no doubt. The only opinion I should like to state personally on that question is that I consider it was a mistake to lower the price so much. The horses would have been better if the price had been kept up naturally, and I think they were not paying sufficient. I think if they had paid a little more they would have got a large number of a good class of horses in this country in hard condition, and one horse in hard condition would certainly have lasted out two or three of those that were purchased from foreign countries off the grass. Hundreds of horses were being sold in this country all during the last three years to go into cabs and hard work that certainly would have been perfectly suitable for remount purposes.

13022. (*Sir Henry Norman.*) Were you purchasing in Hungary independently of the Remount Department?—Yes, we were the first to purchase in Hungary. I may say that when we first had the idea of buying in Hungary it was owing to General Truman stating that we were competing with him in Ireland, Australia, and America where we wanted to go, and then we suggested Hungary, and we were the first to purchase horses in Hungary.

13023. Who was your agent for the purchase?—Colonel Maclean was our agent in Hungary whom we sent out.

13024. (*Sir Frederick Darley.*) That was to inspect?—Yes.

13025. But who was your agent for purchasing?—You mean whom we purchased through?

13026. Yes; Hauser?—Hauser; he was the man the Government afterwards employed.

13027. (*Chairman.*) Was it not Lewison?—Lewison was employed first; there was some arrangement between Lewison and Colonel St. Quintin originally.

13028. (*Sir Henry Norman.*) Whom did he purchase from—the landowners?—No, from dealers. It is quite impossible to purchase through the landowners, especially if you have to do it in a hurry without a very large organisation.

13029. (*Chairman.*) The whole story of the purchase was gone into before Sir Charles Welby's Committee?—Yes, it was all gone into. You do not wish to touch at all on the Studdert case, for instance? There is nothing in that that I think it necessary to refer to.

13030. That is a case that has been in the Law Courts?—Yes, it has been in the Law Courts, and therefore I do not know if there are any details or any questions which you would like to ask with regard to that.

13031. In the public interest you do not represent to us that it is necessary to go into that matter again?—That is so. *Colonel A. G. Lucas, C.B., M.V.O.*

13032. (*Sir Henry Norman.*) As to the proposal that Adjutants of Yeomanry should be used to help in the registration of horses and so on, do you think that would enlarge the number of horses that could be registered? Are there horses that they could assist in getting registered that are not registered now, or what would be the object of it?—I think it would be a very simple machinery to adopt. You see at the present moment there is a Yeomanry regiment in very nearly every county in England, and in the Yeomanry itself a large proportion of the men are drawn from the agricultural classes, men who attend fairs all the year round, and therefore are in touch with the markets generally, and the Adjutant of a Yeomanry regiment has a great deal of time on his hands through certain months of the year, so that I think his services might be very well and advantageously utilised in the registration of the horses. A Return could be sent in either every twelve or six months which is a detail for the Remount authorities to decide, but by that means you would decentralise the registration, and the Adjutant of his District would be responsible for knowing the number of suitable horses that would be available in case of emergency.

13033. And that is not done now?—No. I proposed it, and as I say it has never been accepted. I think it might be done; it is a scheme I put forward for consideration. It is my own scheme purely and one I have had in my mind for many years, as being connected with the Yeomanry.

13034. Are not horses now more or less registered all over the country?—Only in certain classes I think.

13035. Do you mean that in certain counties there are no horses registered?—No, I do not say that; I do not know exactly what the present method is. There are a certain number of horses registered, more particularly in hunting stables and large establishments, but my idea would go beyond that; all the farmers' horses and all the horses in a particular neighbourhood would be noted as being suitable, and supposing there was a large number of horses wanted at any time the Commanding Officer of a Yeomanry regiment could send in a Return, "So many horses are obtainable in my county at a certain date," and I think it would be useful.

13036. (*Sir Frederick Darley.*) In point of fact, the Adjutant through his men would practically know every horse in the county?—Yes, if it was properly organised they would know every horse in the county that was useful at all.

13037. (*Chairman.*) Your object is decentralisation—Yes, and making use of an organisation that could be utilised to great advantage and at very little cost.

13038. We were informed this morning that a scheme for the reorganisation of the Remount Department was under the consideration of the War Office at the present moment, and until that scheme is published it would be perhaps premature to say that your suggestions have been overlooked?—That is so; I only put it out as a suggestion, and whether it is feasible or not is for the authorities to decide and not for me.

13039. There is nothing else you wish to add?—I do not think there is anything else.

13040. (*Sir Frederick Darley.*) Did I understand you to say that you would send horses out now to South Africa?—No, it was in February, 1902.

13041. But you would not send any horses to South Africa for the supply of men there now?—No, it was only for the supply of the men that we were raising at the time; 3,879 horses were purchased by the Yeomanry Commanding Officers in 1900, and those horses were some of the very best we sent out undoubtedly, and those were purchased on this system of decentralisation, being purchased in the various counties by the Commanding Officers, and they did very well indeed. I think if we had done it in the other forces it would have been an advantage.

13042. For the future South Africa could provide every horse required?—I do not give an opinion on that; it is outside my knowledge altogether.

Colonel T. DEANE, C.B., recalled and further examined.

(See Questions 6673 to 6709, Vol. I., for Colonel Deane's evidence.)

Colonel
T. Deane,
C.B.

6 Feb. 1903.

13043. (Chairman.) I think you told us when you were here before that you had no direct connection with the remount affairs of the Imperial Yeomanry?—None.

13044. But, as we know, you had a great deal to do with remount questions; if there is any point you would like to mention we should be glad to hear it?—I do not want to repeat anything Colonel Lucas has said, or to waste time. The only things I can say are with reference to what I observed in the administration of the Remount Department at home and in South Africa, in comparison with our system in India, and there are one or two points that occur to me which might perhaps be of use if I were to refer to them.

13045. If you please?—I think that one thing is notable, and that is that the Remount Department in England appear to have no mobilisation Manuals as we have in India. We have to prepare mobilisation manuals, or field service manuals, as they are called, which are of great value to refer to in the event of operations occurring. We have to draw up tables showing the requirements of all the units in the Service from a regiment to an Army Corps, or anything further showing the requirements in the horses of a particular force that might take the field, how many would be required to place the field army on war strength, what measures should then be taken to supply the depletion whereby the other units of the Service make good that strength, and then, lastly, casualties. Reference to those tables when war begins is, of course, of very great value. I understand there is nothing of the sort in England. Another thing that occurs to me as being likely to be useful in future is the preparation of tables showing where you can best get horses. I take, for example, the manuals prepared in India. There is a record where horses could best be secured in South Africa, the exact localities, how many could be secured, from whom, of what class, at what price, and in what time. I think that had those tables been referred to at the commencement of the war they would have been of great value.

13046. You had them in India?—Well, I had them here in these Manuals.

13047. As part of the Indian system?—They are part of the Indian system; they are on record there. That shows at once what could be obtained.

13048. You mentioned South Africa; was that as an illustration, or was it the only place?—As an illustration. That is a matter of administration in the Director's Office of the Remount Department in India.

13049. Did you only refer to South Africa, or did you have the same information for Australia?—We had the same information for almost every locality—for Australia, for Persia, for Arabia, and in some cases for North and South America; for Spain, for Italy in regard to mules for Cyprus, and other places. It is the duty of the Director to collate and prepare those tables. The information as a rule is obtained through the Intelligence branch of the Military Department in India, but if it is not on record there, reference is made direct to the Governments concerned. We have always found that the Governments concerned were only too ready to supply us with every information.

13050. When you say the Governments, do you mean the Governments of the Colonies?—Yes.

13051. But not the foreign Governments?—And foreign Governments, too—all. For these manuals we obtain every information we can collate likely to be valuable in connection with the supply of a large number of horses. Of course, in India we do not want to purchase at such distant localities as North and South America; nevertheless, we have them on record. Then those tables are referred to, and you know exactly where to get your horses. I did at one time obtain shipments from South Africa of both mules and horses. I sent officers there for the purpose, but what happened was very much the same as what happened throughout the purchases in the late war—the officers concerned had to put themselves in communication with the large contractors, and the horses were practically supplied through the contractors. As soon as the contractors learned the terms they found they were favourable, and subsequently they shipped, at their own risk and on their own arrangements, horses to India, which were purchased either by the public or by the Government, as turned out. There is certainly one thing that is brought to notice very much in recent reports,

and that is the futility of dealing with small dealers or horse owners anywhere; the right system is that of dealing with the large contractors. If that system had been adopted to a greater extent in England during the last war I have no doubt horses would have been obtained very much cheaper. I observe in one of the reports that Lord Downe reports most favourably on the system adopted in India of supplying horses through the large contractors in the Colonies. That system is one of advertising how many horses are annually required, giving advances to reliable shippers on the spot, and then taking the horses as they are landed in India if they are suitable. I think if that arrangement had been adopted throughout, the Remount Department might have saved itself a very great deal of trouble.

13052. Would that have been applicable to the case of an emergency like the recent war?—Quite so, in every direction; I think it could have been adopted in North and South America; it was adopted in Australia, and I think it could have been adopted everywhere. The mere sending of inexperienced officers about to find horses is a great mistake. The way to do is to deal with the great contractors, first going to the Consular or Diplomatic authorities, or the Governments concerned, and asking for the names of those who are reliable, and then trusting and dealing with them, and getting the horses landed in large numbers under the advance system at the port of disembarkation where they are required.

13053. With the power of rejection at that port?—With the power of rejection at that port; that is the Indian system, and it has been found an admirable one. It has been found the cheapest in the end, and to answer excellently. I have only to refer you to the reports which were called for by Lord Downe and others, showing that it is a good one.

13054. (Sir Frederick Darley.) But might not the rejection take place before the shipment if you have experienced officers to inspect the horses?—I would have officers at the port of embarkation too; I think that is a good thing to have, but merely to explain requirements and generally to see that the horses shipped are as near what is required as possible.

13055. Why not reject the horses there?—If you reject horses there you do not give the great contractors the latitude they would otherwise have; take the case of transport, it has been reported that the horses from Australia, from the Colonies, are shipped at half the Government rates, and that is the fact, because the large contractors have ways of doing it. I know from my experience in India that they did so. I know also from having imported very large numbers of horses to India that the system of sending an officer to pass horses in the country where they are produced is really unnecessary, provided that the contractor is a reliable one. We never did so in India, and we were admirably supplied with horses.

13056. But that was what was done in Australia?—It was; one of my late Remount agents, Colonel Hunt, was sent there, but I think it was quite unnecessary.

13057. Colonel Hunt, Colonel Horsfall, and Major Thompson passed all the horses?—Yes. I know the men they bought them from; their names are all in the Remount manuals in India, and had those contractors been informed of the requirements of the Government I am quite sure they would have shipped to South Africa horses that would have suited the purpose.

13058. I have heard of one instance where Colonel Hunt rejected some 200 horses out of one mob?—Very possibly.

13059. If those had been shipped to South Africa they would have been rejected there?—That would have been at the contractor's loss.

13060. The contractor would make you pay for that in some way?—No; the system I advocate is only taking the horses fit on arrival at the port of disembarkation.

13061. (Chairman.) And throwing the risk on the contractor?—Yes.

13062. Would you not have in time of war the risk that you might not get the horses that you wanted at the time? It is all very well in time of peace?—I think the horses that experienced contractors supplied must have been very bad indeed if they would not have been made use of in South Africa.

13063. (*Sir Henry Norman.*) Has not one thing to be considered—in favour of your argument in fact—that there is a very large private demand in India for horses, and therefore many of those rejected which are not quite up to the cavalry standard are taken up by private people?—That is quite so.

13064. A large number of those horses which go from Australia to India are always sold to private individuals?—That is quite so; but, speaking of 10 years' experience as Director of the Army Remount Department in India, I should say that there were very few horses such as reached the Indian market and passed into the hands of the public there that would not have been gladly accepted during the past war. I am speaking now as having inspected for 10 years the importations in Madras, Calcutta, and Bombay, and it being my duty to find fault with them as much as possible.

13065. (*Sir Frederick Darley.*) I suspect strongly that Colonel Hunt rejected as many horses as he bought in Australia?—Very likely.

13066. He rejected 50 per cent. of those offered?—It is on record in one of the reports (*Vide Appendix Vol., page 441*), which are before you that of the horses imported from Australia 50 per cent. in South Africa were unfit for any purpose whatever, and that the majority of them would not be fit for work for nine months. I saw a great many of those horses at Durban, and I was asked for an opinion upon them. I inquired the price that had been paid, and the answer was that it was not known, and I said it was impossible for me to give an opinion on the horses until I knew what had been paid for them. You can get horses for £2 each in Australia. Lord Roberts telegraphed from South Africa that what he recommended was Australian horses; no doubt he had in view the excellent horses for which we pay £50 apiece in India, and which we acclimatise for a whole year. Those horses in the official reports have been very favourably reported upon—that is to say, Australian horses that came from India. The horses that were sent from the Colonies direct were invariably reported upon as bad, and I must confess that if my opinion was asked I should say they were very bad indeed.

13067. (*Sir Henry Norman.*) You mean until they were acclimatised?—They were not acclimatised; they went straight from grass to trek.

13068. And those reports were made when they had not been acclimatised?—Quite so.

13069. (*Sir Frederick Darley.*) The reports are very various about them, and some of them are very bad indeed, no doubt. One report says that the Australian horses would be almost on a par with the English horses if properly acclimatised, and the next report is "Very bad stamp, cast almost immediately"; while another says, "This is a splendid cavalry horse if picked not too big and leggy. . . . Ponies are most suitable for mounted infantry" (*Vide Appendix Vol., page 441*)?—The opinions are so diverse that it is almost impossible to arrive at a correct conclusion, but there is one thing to be said, and that is that it is the Director's duty, or the Inspector-General's duty, to collate the opinions he receives from those who are in the field and to be guided by them, and by them entirely, without any outside interference. The great difficulty is that everyone thinks he knows more about a horse than his neighbour. Most Englishmen, and Irishmen too, think so, and therefore if the responsible authority is not entirely trusted it is very hard for him to carry out his duty. If I might venture to make a remark, I should say that the Director, or Inspector-General as he is called in England, of the Remount Department did not receive sufficient authority—that is to say, his authority did not extend at all to South Africa, and to a very great extent he had little to do with the arrangements in South Africa. I have quoted the instance of my having been asked for an opinion and being told that the officer there, who was Colonel Stevenson, I think, did not know what had been paid for the horses. It was surely the Director's duty to know exactly what price had been paid for all the horses purchased everywhere. Then I think he might have been more in communication with the officers in chief command, and with his own Remount officers in South Africa; he was apparently not so at all. That I think was rather a mistake, if you will excuse my pointing out what occurs to me as being a mistake. I also think there was a great want of a central controlling remount authority in South Africa. There was a very able, energetic officer with the rank of Assistant Adjutant-

General, Colonel Birkbeck, who has supplied valuable reports, but he had not that weight or authority which, considering the importance of the subject, was required.

13070. (*Chairman.*) Where was he stationed?—He was mostly at Johannesburg or Pretoria. When I first arrived in South Africa I asked who was the Inspector-General of Remounts in the country, and I was informed that there was none. That was the first thing that appeared to me to be very strange in comparison with the way that matters are conducted in the East.

13071. Would you not have wanted a central authority at one of the ports of landing?—There were four ports—Cape Town, Port Elizabeth, East London, and Durban. The first thing, I think, that would have occurred to a Director or Inspector-General, if he had been out there, would have been that a very large reserve was necessary at those four seaports. Of course, it is easy to be wise after the event, but I think that mobilisation tables would show, if they had been consulted with regard to the casualties as they then proceeded, that at least 100,000 horses would have been required between these four places—that is, during the first six months of the war. That was the only method by which you could send fit horses to the front—that is, giving them a little rest and acclimatisation. As they went to the front they had received none; they practically went from grass on to the trek, and the consequence was that the majority of them died before they did much work. The right system is that of having large depôts at your seaports. Then, again, I think the advance depôts is another question that might be referred to; the advance depôts, of course, are those in advance from the base where horses are issued. There were two sorts of depôts advanced from the base, and one was called the issuing depôt and the other the resuscitating depôt. They might have all been called resuscitating depôts, because the horses that reached the advance depôts were in such very poor condition as to be mostly unfit for work for any length of time. Then, again, a point which struck me, if I may refer to it, was that the English war tables show that the arrangement of remount affairs in the field is in charge of the Director of Transport, who has also control of the veterinary service. As a matter of fact, he was in charge of neither one nor the other, and very rightly, because it was impossible for him to control both in addition to the vast transport service. The control should have been placed in the hands of the Inspector or Director of the Remount Department, and I think that he should not have been under the rank of Major-General.

13072. Who was in control?—The control at the first period of the war was given to Major Birkbeck, who was subsequently promoted to the rank of Lieutenant-Colonel.

13073. As an Assistant Adjutant-General?—As an Assistant Adjutant-General. That was one of the points, I think, on which an improvement might have been made. Another point I venture to refer to as having struck me as very strange was the method by which horses were sent to the front. The horses were put in trucks almost anyhow, and they were taken out for food and water at various halting places. In India we keep horses on board the trains sometimes for a week or eight days perfectly easily, because the trucks are so made that the horses can be fed and watered on board of them. There was no such system out there, and the consequence was that the horses had to be taken out at various landing stages on the way, which, of course, involved a very great deal of time, trouble and risk. I see that Colonel Girozard has since adopted the Indian system of placing two bars in the middle of a truck, with a place in the centre for forage, water, and attendance, which is a very simple and inexpensive one, but that is one of the matters in connection with which a director with authority and weight in the country, would probably have been able to carry out what was required.

13074. Probably a good many of those things nobody would have foreseen before the war; as you say, it is easier to be wise after the event?—Well, I think, with all deference, anyone who had gained experience, certainly an Indian administrative experience, would have known those points as the a, b, c, of the work. Perhaps you will think that is rather strong language, but it occurs to me to be so.

13075. What I meant was, that nobody foresaw the magnitude of the operations we were going to undertake in South Africa; that was the case as it was put

Colonel
T. Deane,
C.B.

Colonel
T. Deane,
C.B.

6 Feb. 1903.

before us?—I think, probably, not during the first six months, but I think that towards the end of six months it was apparent what large requirements would have to be met.

13076. But you were arguing, as I understood it, that in the first year of the war you wanted these large reserves and reserve depôts, and so on?—I think in the first six months it might have been foreseen.

13077. But not from the very first?—The great thing, I think is to have these printed field service tables and manuals, with all these instructions drawn up in peace time. I referred, for instance, to the case of their having been on record in our tables in India for South Africa. I have ascertained that there are no such manuals in England. I venture to think that is a defect. I also think it is a great defect not having very clear and plain instructions laid down about purchasing operations. Great complaints have been made about the inexperience of purchasing officers; but the fact of the matter is that there were no printed instructions for purchasing officers, and those are of very great value. If they are carefully and well drawn out officers should very seldom make mistakes. It is much better to have a man of business capacity, who will attend to instructions in the purchase of horses, than what is generally supposed to be a good eye for a horse.

13078. Have you instructions for purchasing officers also?—In the greatest detail, always drawn up, so that a new officer who is handed the printed instructions gets a book in which everything is laid down which he has to do—depôt instructions, advance depôt instructions, issuing depôts, and so on. As to the advance depôts, for example, for horses that go to the front, there are descriptive rolls in connection with them, showing how long they have been bought, how long they have been in the country, and what price has been paid, but none of those were issued in South Africa, so that the officer in the advance depôt did not know where the horses had come from, how long they had been in the country, or what had been paid for them, or anything of that sort. All these little matters are drawn up in printed tables and manuals for field service requirements in India, and I think they are of very great advantage in time of peace, and more so in time of war.

13079. You see no reason in the conditions of service in the home departments why the same thing should not be done?—Certainly not. I think it is here more necessary still. Of course, one of the drawbacks of the home service is that the remount establishment is a very, very small one, much smaller than it is in India, and in the next place they have absolutely no reserve of horses except those registered. In India a reserve is held of the current year's supply, and 1,000 horses in reserve fit to go to immediate work. There is nothing of the sort in England. The Indian system is a very small one, about 2,000 horses to call upon, but still it is better than nothing. A Commission some time ago drew up tables in England, and showed that the requirements of two Army Corps would be 25,000 horses, of which 9,600 would be required for casualties during the first six months of the campaign. Well, to get 25,000 horses at once, including 9,600 for casualties takes a good deal of work, and if the whole system is not got out well in peace you are very likely to break down in time of war. The same Commission recommended that in England there should be a reserve of 2,000 horses. I understand that Lord Stanley's Committee has proposed a remount scheme involving a cost of £200,000, which is a very small amount indeed for this country, considering its requirements, and I hear that £7,000 is likely to be provided, which, of course, will be of very little use.

13080. £7,000 out of £200,000?—Yes. I venture to think that on the Indian system some reserve of horses is necessary in this country. If you want remount officers of training and experience, as recommended, you cannot procure them unless you have some reserve, where they are to be trained, and 2,000 horses is really very little. There is another thing I venture to refer to, because it has been mentioned in the report of the Court of Inquiry on the administration of the Army Remount Department, and that is the necessity of giving the Director or Inspector-General a staff of adequate strength for his organisation. If I had been asked to undertake the arrangements during the past war I should have been very sorry to have attempted them without five or six staff officers of very good business capacity, and I think that would have been very little. I observe in one of the reports that up to May, 1900, the Director had one

officer, and one small room or two small rooms to conduct his business in. That business involved the expenditure of over thirteen millions of money. Lord Roberts telegraphed immediately on arrival in South Africa that he could do nothing in that country without a mobile army; mobility depended upon horses, and therefore the Director or Inspector-General of the Remount Department under the Quartermaster-General was mainly responsible for the successful operations of the war, in my humble opinion.

13081. I understand your evidence to come to this, that these defects which you have spoken of led up in the actual operations of the war to the horses being sent to the front in a condition in which they were not fit for service?—Quite so.

13082. And, therefore, that the loss, which was abnormal, resulted from that cause?—Quite so. The estimates of the losses during the Crimean campaign were 80 per cent., while the losses during the past war were 120 per cent. Of course, no tables that have been made out in the manuals I refer to would have covered, or anything like covered, such an enormous loss as that, but still they would have been useful to refer to from month to month, so that their provision might be increased for casualties.

13083. That is exactly what I meant—that your tables would not have provided for such a loss?—No, but they would have been useful as a guide to go on with from month to month.

13084. We had a table (*vide Appendix Vol., page 258*) given us to-day which showed that out of 518,794 horses that were provided the expenditure during the campaign was 347,007?—Yes.

13085. That is entirely abnormal, and outside all your tables?—Entirely abnormal; the percentages worked out in the Indian table are worked out on a series of past campaigns in European countries, but there is nothing approaching that, I quite admit. Still, it is of use to have tables and instructions on record for all these points, and they should be printed and collated in peace time.

13086. You put it down chiefly to the cause of the horses having been worked when they ought to have been waiting to be acclimatised?—Quite so.

13087. Have you gone through all the various points you wished to draw our attention to?—I will not trouble the Commission any longer. I think I have given the main points, although there are a great many others that occur to me. I have, like Colonel Lucas, prepared a brief paper, and if you permit me to hand that in it may save a little time, and if it is thought worthy of being placed on record it may be made use of. (*The paper was handed in. Vide Appendix, page 586, post.*)

13088. (Lord Strathcona and Mount Royal.) Do I understand you to say that the large contractor in India takes all risk of transport, and undertakes to deliver suitable horses in a sound condition for a certain price at the port of debarkation?—Yes.

13089. There is no loss and no risk to the Government before they are delivered over to them there?—Quite so.

13090. So that going and picking up horses from one and another, these conditions would be impossible; a promise to deliver them in the same way could not be made except through the large contractors?—Not except through the large contractors, and you would naturally only give such contracts to men who were known to be absolutely reliable.

13091. And it is on that account that you consider it is always an advantage to have a large contractor?—Always in preference to the small dealers or owners.

13092. No matter what the loss may be on the sea voyage or in any other way, none of it falls on the Government?—That is so. Of course you must be careful in the selection of the men, but that as a rule should be left to the Governments or Consuls, or diplomatic authorities concerned, who are able to advise you as to the reliability of the individual you engage, and that system, coupled with that of giving advances to a reliable contractor, saves an enormous amount of time and trouble.

13093. And money?—And money.

13094. You consider it is a great economy?—I have proved it absolutely to be the case; I only speak of what I know to be the case myself from my own knowledge. I know that as far as Australia goes or as

South Africa goes now, if you wanted horses for India there are certain names printed in the remount manuals that one could go to with absolute certainty of obtaining the horses without sending an officer near the place, under careful organisation.

13095. And you consider that such contractors could have been found for the horses during the South African war?—I am sure of it.

13096. Equally as in India?—I consider so in every direction, under a proper system, but that system ought to be thought out and organised in peace time.

13097. All preparations require to be made in time of peace?—Quite so.

13098. (*Sir John Hopkins.*) I should like to ask you if you have any estimate in your own mind of what a war would cost you in horse-flesh in India, that is to say, the percentage: if you were providing for it, what would you allow, roughly? Take any one campaign, under your manual, would you say it would be necessary to form a reserve of 50 per cent. for casualties for the year?—I think, on our Indian calculations, which, as I have explained, would not have been at all applicable to the past war, which was altogether abnormal for one Army Corps, at the price we pay for horses in India, the cost, according to our estimate, would have been about £250,000, to bring that Army Corps up to war strength, and supply 15 per cent. casualties.

13099. That is, as far the number of horses goes?—Yes.

13100. I am trying to look at the percentage of horses you would allow for, under the manual drawn up for India, to meet contingencies in war time?—That is only at the rate of 15 per cent., which has no comparison with the losses in the late war; nevertheless, it is based on a series of campaigns in European countries, and for a short period. Nowadays campaigns last a very short time. It depends on the duration of the campaign, and, of course, how casualties go; with modern rifle fire, and so on, probably it is quite a different matter nowadays; still it is something to guide you.

13101. (*Sir Frederick Darley.*) Do you not think that when you have the privilege of rejecting what horses you see fit to reject, the contractor must charge you more for the horses generally in order to recompense himself? Supposing, even the very best contractor you can name sends 500 horses to India, and you reject 200, the rejected horses may not bring the price that they cost the contractor to land there, and must he not indemnify himself for the price he charges you?—In India a very high initial price is paid, very much more than has been paid throughout the past operations—£50, while the average has not been anything like that for the South African War. The contractor who imports horses to India, if he does not sell his full number, which he never does, or anything like, sells them, as *Sir Henry Norman* mentioned, in the public market, or he sells them to officers of native cavalry, and he, as a rule, gets about £25 a head for those horses, roughly speaking.

13102. He could not have done that in South Africa?—The horses he would sell in that way in India for £25 a head, and which I have seen in vast numbers in India, would have been an admirable class for local corps, and mounted infantry in South Africa in comparison with what I saw there.

13103. I confess I do not understand it quite, but if you have really a first-class Imperial officer selecting your horses for you, I cannot help thinking that the contractor will sell you the horses cheaper, knowing that none of his horses will be rejected when landed?—If they are passed in the Colony?

13104. Yes?—Of course I can only give you my experience. I can only tell you what I have ascertained in 10 years' work; in theory what you say is absolutely correct, but in practice it fails. In practice the very best system is that of throwing the responsibility upon the contractor; it is his loss.

13105. I can quite see that, but I cannot help thinking he makes you pay for them?—He cannot, because he does not get anything more than the Government terms lay down. If he likes to import 500 horses, and

499 of those are unfit, the 499 are rejected; that is his business.

13106. (*Chairman.*) I suppose he would take into consideration in making the contract what the price was, and what his risks were?—The prices are annually advertised in the colony; they are published by the Government of India, and sent over the year before the purchases are made, so that every one may know.

13107. But you have to consider at what rate you can get the horses?—Experience has shown us that; we know that by experience.

13108. I rather agree with *Sir Frederick* that the contractor will take all that into account, and will not offer to send horses at a loss?—Our supply has been far in excess of the demand; and I think it would have been so in the past war under a well organised system. It requires some organisation.

13109. (*Sir Henry Norman.*) You are not quite certain, I suppose, that the system which has answered so well in India in time of peace, or even when there have been small wars in India, as there so often are, would answer in a great war like this, where we had to get 370,000 horses in a limited space of time? There would not have been contractors to supply those horses?—That is my point; I venture to think there would, and that is the point I want to make.

13110. You think they could have got contractors for the whole of the horses wanted for South Africa from the beginning of the war to the end?—Under the contract system?

13111. Yes?—I think so.

13112. You could not have got them from Australia alone; where would you have got them?—I am talking of the localities from which horses were provided during the past campaign.

13113. Do you think you would have got reliable contractors in all these countries, South America, Italy, and so on?—I do. Take Hungary; it has been shown that it was futile to attempt to deal in that direction except through *Mr. Hauser*, as the whole trade was in his hands. He was practically dealt with entirely, and if under given arrangements he had been told what was required he would have supplied the horses. Take Chicago; in Chicago there are eight millions of horses, and that source was not tapped at all—it was absolutely left untapped. I have no doubt, and I have ascertained, that had the requirements of the Remount Department been sent there, and published in a form that we do in India, telling the great contractors what was required, and what their liabilities would be, and so on (I would, of course, have a remount officer on the spot to advise and help them), they would have procured the horses.

13114. Are you quite sure that is a reliable estimate of yours, that there are eight million horses in Chicago?—It is in a report which is before you.

13115. I should like to know where that came from; it seems an extraordinary thing that there should be about six or seven horses to every person?—I think you will find it in *Major-General Stewart's* report as well as I remember, but at any rate it is in one of those reports.

13116. I should like to know where he got his statistics?—I can enter it in my statement if you wish it, without troubling you now to look it up.*

13117. Of course, if that is correct it would not have been difficult for them to sell a million horses if they got a satisfactory price. You spoke about these depôts at the ports of debarkation of the horses, but of course you are aware there was such a want of horses that the great thing was to get them to the front, although they were pretty well killed before they got there?—Certainly.

13118. Everyone wanted to keep them as long as possible after they landed before they were used, but certainly in the first few months they had to get them up anyhow?—Yes, but I think with foresight after a few months' experience, say two or three months' experience, it might have been fairly known that rest was absolutely necessary for horses, and that therefore the reserve at the base should be increased to the largest possible extent to enable a constant flow of horses to be sent up.

13119. I do not think they ever had such a number of

Colonel
T. Deane,

6 Feb. 1903.

* Note by the Secretary to the Royal Commission:—"On page 7 of the Report by Officers appointed by the Commander-in-Chief to inquire into the working of the Remount Department abroad (1902), it is stated that "Chicago is the great mart in one States for high-class horses. It will be seen from the statistics furnished with *Mr. Bruett's* evidence (Q. 381) that in the Middle Western States, which include Illinois, Indiana, Iowa, Wisconsin, Michigan, Minnesota there are 8,000,000 horses, and that these districts have never been tapped by Remount Officers."

Colonel
T. Deane,

6 Feb. 1903.

horses that they could have afforded to leave them for a month or six weeks?—It came to the same thing at the end, because the horses lasted only from 10 days to three weeks, and then they had to wait until fresh horses were sent up again.

13120. But evidently the Commander-in-Chief thought it essential in order to carry out important operations, even if there was a great sacrifice of horseflesh?—Yes.

13121. (*Lord Strathcona and Mount Royal.*) Could we come down to this point—could you say approximately from your experience at what price you believe horses suitable for South Africa would have been delivered by those large contractors, say, at Cape Town or one of the other ports? You know the description of horse that would have been required?—If you will permit me to explain, that is complicated somewhat in this respect, that we import, say, from Australia horses entirely for the British mounted branches, and for the horses for the British mounted branches we invariably pay £50 a head.

13122. In India?—Landed in India. In the South African campaign, of course, there were a great many local corps, such as Mounted Infantry, Yeomanry, and various other local corps, which did not require horses up to the same standard as you would require for the horses of the Field Artillery and British Cavalry.

13123. You know the character of horses that would be suitable for the war there: take such horses, and give an approximate estimate of the price?—I think you would have found that the contractors would have been willing to import horses of every class at an all round average price of £45.

13124. £45 delivered at the port of debarkation in Africa?—Yes, but less than that was paid; for the horses imported from Australia they only paid £35 each.

13125. Your opinion is that the whole number of horses required for the war could have been delivered for about that price—not more than £45?—Yes, those from across sea, cost, insurance, freight.

THIRTY-FIRST DAY.

Tuesday, 10th February 1903.

PRESENT :

The Right Honourable the Earl of ELGIN and KINCARDINE, K.G., G.C.S.I., G.C.I.E. (*Chairman*).

The Right Honourable The Viscount ESHER, K.C.B., K.C.V.O.

The Right Honourable The Lord STRATHCONA and MOUNT-ROYAL, G.C.M.G.

The Right Honourable Sir GEORGE DASHWOOD TAUBMAN-GOLDIE, K.C.M.G.

Field-Marshal Sir HENRY WYLIE NORMAN, G.C.B., G.C.M.G., C.I.E.

The Honourable Sir FREDERICK MATTHEW DARLEY G.C.M.G.

Admiral Sir JOHN OMMANNEY HOPKINS, G.C.B.

Sir JOHN EDGE.

Sir JOHN JACKSON

BERNARD H. HOLLAND, Esq., *Secretary*.

V.C. Field Marshal The Right Hon. Earl ROBERTS, K.G., K.P., G.C.B., O.M., G.C.S.I., G.C.I.E., recalled and further examined.

(*See pages 429-468, Vol. I., for Lord Roberts's previous Evidence.*)

13126. (*Chairman.*) I think when we last had the pleasure of meeting you on the 5th of December you carried your account of the military operations up to Bloemfontein and you promised to give us the remainder up to Pretoria to-day. Have you now got that paper?—

10 Feb. 1903. I have.

13127. Would you kindly favour us with it?—I hope it is not too long. I ended last December by saying that on the 3rd of May I left Bloemfontein by train for Karee Siding. The following tables show the approximate strength of the forces at my disposal for the advance towards Pretoria.

N.B.—2nd Cavalry Brigade with Royal Artillery and Details detached with Major-General Ian Hamilton's force.

Lieutenant-Colonel Tucker's Division had been for some weeks acting on the defensive on the low hills near Karee Siding, and on the 3rd May it protected my right flank while I advanced with the 11th (Pole-Carew's) Division on Brandfort. The little town was occupied soon after noon on the 3rd May, the Boers offering only a feeble resistance on account of their right being turned by Hutton's mounted troops from Brakpan. The enemy could hardly, I think, have expected us quite so soon, for the railway and telegraph lines were almost intact. I halted on the 4th May in order to give Lieutenant-General French time to overtake the main column. He

was hurrying after it from the Thabanchu direction, and was obliged to halt for a day or two at Bloemfontein en route to refit. It was necessary also to wait until Major-General Ian Hamilton had carried out his part of the operations, the plan of which I explained in the following letter to Lieutenant-General Sir Leslie Rundle, whom I was leaving in command of the troops in the eastern portion of the Orange Free State:—"To Lieutenant-General Sir H. M. L. Rundle, etc., Thabanchu. Strictly confidential. Brandfort, 4th May, 1900. My dear Rundle,—Before I move further I think it is desirable to place you in possession of my general intentions for

our advance north. It seems clear, from what has happened in the past, that if the enemy get an opportunity they will again at once invade the south-eastern portion of the Orange Free State. By doing so they would, strategically speaking, have the best chance of injuring us, and, should they succeed in getting a footing there, our lines of communication would be materially threatened. It would cause great consternation in Cape Colony, and it would be necessary for me to send back troops from the front, which would materially interfere with my plan of campaign. Under these circumstances I look to you to take such measures as you may consider necessary to prevent any large body of the enemy being able once more to invest Wepener or to move towards Smithfield through the Dewetsdorp—Wepener gap. As soon as it can be arranged, Chermiside, with the headquarters of the 3rd Division, will proceed to Bloemfontein, and he will have under his special charge the line of railway from Bethulie and Norval's Pont up to this point. It will be your duty to exercise a vigilant control to the east of the railway, and prevent the enemy from gaining a footing there. My belief is that, as we move north, the Boers will find it necessary to withdraw the whole of their troops now in front of Thabanchu, and also the small bodies now roving about the country south of Dewetsdorp. As soon as you are satisfied that they have withdrawn in the manner I anticipate, you should move such a portion of your force as you think necessary to Ladybrand. With Thabanchu and Ladybrand occupied in sufficient strength, with Dewetsdorp, Wepener, and Smithfield properly garrisoned, with the people disarmed and their horses taken from them—a measure which is now being thoroughly carried out—the Boers will be quite unable to move down south, and even if they do get there they will find no armed and mounted burghers to assist them. I regret to hear that Ian Hamilton has taken one of your field batteries, but if it can be possibly arranged the battery shall be returned to you either before we reach Kroonstad or immediately afterwards. We are now working north on two lines. Ian Hamilton on the east is moving direct to Winburg. He has with him the following force: Broadwood's Brigade of Cavalry 2nd Brigade of Mounted Infantry, 19th Brigade of the 9th Division, and the 21st Brigade. Following him, and sufficiently near to support him if necessary, is Colville with the Highland Brigade. I have with me the 1st Brigade of Mounted Infantry and the 7th (Tucker's) and 11th (Pole-Carew's) Divisions, and hope later on to be joined by French and his Cavalry. Tomorrow we shall reach the Vet River, and on Sunday Smaldeel Junction, at the same time that Ian Hamilton reaches Winburg. Both forces will then move north towards Kroonstad. I hope no time will be lost in getting there, but I fear that our progress will necessarily be slow, for the railway must be repaired as we move along in order to replenish our supplies. Please keep me fully informed of what goes on. You have a most important task to perform, and I am sure I can rely upon you to carry out with energy and ability the responsible duty I have assigned to you. Please acknowledge the receipt of this letter.—Believe me, etc., (signed) Roberts, F.M." Before leaving Bloemfontein I had sent for Lieutenant-General Sir Archibald Hunter and Colonel Mahon and given them personal instructions as to the measures I wished to be adopted for the relief of Mafeking. The 10th Division (Hunter's) and the Imperial Light Horse reached Kimberley from Natal before the middle of April, and, in conjunction with a Brigade (A. Paget's) of Lord Methuen's Division, had been very busy attracting the enemy's attention until Colonel Mahon had crossed the Vaal and made a good start towards Mafeking. Colonel Mahon's flying column consisted of 1,100 men in all, 900 mounted, including the Imperial Light Horse, four Horse Artillery guns with 100 men, and 100 picked Infantry to guard the 52 mule carts which carried the kits, rations for 16, and forage for 12 days, also medicines and medical comforts for the Mafeking garrison. Food and other stores for Colonel Baden-Powell's force were to be sent on by railway as soon as the line could be repaired. I had ordered the flying column to start not later than the 4th May, and to make forced marches for the first three or four days, so as to get clear away from the enemy; and, while I was halting at Brandfort, Lieutenant-General Hunter telegraphed from Windsorten Village that one of his battalions had crossed the Vaal, and that Mahon's little column had got fairly off. The same day Major-General Ian Hamilton engaged and drove back the enemy's rearguard at Welkom, about 15 miles south of Winburg. On this occasion the junction of the Boer forces was frustrated by a well-executed

movement of the Household Cavalry, the 12th Lancers, and Kitchener's Horse, under the command of Lieutenant-Colonel the Earl of Airlie. The enemy fled after the encounter, leaving their dead and wounded on the field. On the 5th May I left Brandfort and marched with the main body to within 3 miles of the Vet River, the northern bank of which was held in considerable force by the enemy. For three hours the action was chiefly confined to Artillery on both sides, our naval and field guns making excellent practice, but just before dark the Mounted Infantry under Major-General Hutton executed a turning movement, and in a very dashing manner, under a heavy shell and musketry fire, crossed the river 6 miles west of the railway bridge, which, like all the bridges over the rivers along our line of advance, had been previously destroyed by the enemy. In this affair the Canadian, New South Wales, and New Zealand Mounted Infantry, and the Queensland Mounted Rifles, vied with each other in their efforts to close with the enemy. Major-General Ian Hamilton continued his advance, and on the same day that we were engaged on the Vet he captured Winburg, after an engagement at Bobiansburg, in which the 2nd Battalion Black Watch, under Lieutenant-Colonel Carthew-Yorston, greatly distinguished themselves. On this 5th May, too, Major-General Barton's Brigade of 10th Division was heavily engaged 2 miles north of Ruidam, not far from the Vaal, north of Kimberley, where he was engaged to keep the enemy's attention while Mahon was pushing on towards Mafeking. On the 6th May we crossed the Vet River and encamped at Smaldeel Junction, the enemy retreating before us towards the Sand River and Kroonstad. The drifts in the river bed were so bad that considerable delay occurred in getting the baggage and supply convoys through them, necessitating the main body halting at Smaldeel for two days. The Mounted Infantry, however, pushed on to Welgelegen, and Major-General Ian Hamilton's force to about 10 miles north of Winburg, its place there being taken by the Highland Brigade. Irrespective of the difficulty in crossing the Vet, I was obliged to halt at Smaldeel in consequence of the railway having been considerably damaged. All the culverts had been blown up, and every two hundred yards charges of Rackarack had been laid under the rails. These might have cost loss of life, but they were fortunately discovered by a West Australian mounted infantryman, and were all removed. I was joined on the 8th May by Lieut.-General French, with the 1st (Porter's), 3rd (Gordon's), and 4th (Dickson's) Brigades of Cavalry, and the following day the whole force marched to Welgelegen, the 1st and 4th Brigades, and the Mounted Infantry moving on to the south bank of the Sand, opposite Dupree's laager. That evening a squadron of the Scots Greys succeeded in crossing the river near Vermeulen's Kraal, and holding the drift at that point. The 7th Division bivouacked near Merriesfontein, and Major-General Ian Hamilton marched to Bloemplaats, and pushed on the 1st Battalion Derbyshire Regiment to Junction Drift. During that afternoon I rode to meet Major-General Ian Hamilton at a point between Smaldeel and Winburg, and arranged with him plans for the onward move. Lieut.-General Hunter and Major-General A. Paget had been gradually working up the Mafeking railway line, and on the 7th May they crossed the Vaal, and occupied Fourteen Streams, the enemy retiring precipitately, abandoning their clothes and ammunition as the 6th and half the 5th Brigades of Infantry advanced towards them. Finding that Sir Archibald Hunter was meeting with very little opposition, and recognising the advantage it would be to my force for the enemy at Kroonstad to find themselves threatened from the west, I telegraphed to him to send Major-General A. Paget's Brigade back to Lord Methuen at Boshof, and to Lord Methuen to send his Yeomanry to Hoopstad. On the 9th May I marched to the south bank of the Sand. The following morning the enemy could be seen holding the north bank of the Sand in considerable strength. At daybreak Lieut.-General French crossed the river with Porter's and Dickson's Cavalry Brigades, and Hutton's Mounted Infantry, and made a wide movement past the diamond mine at Dirksburg; and at the same time I directed Ross's and Henry's Mounted Infantry Battalions to seize the drift near the railway bridge. This they succeeded in doing by 7 a.m., and were followed across the river by the 3rd (Gordon's) Cavalry Brigade, "J" Battery R.H.A., and the 11th (Pole-Carew's) Division. The 7th (Tucker's) Division crossed by the Junction Drift. Major-General Ian Hamilton pushed forward the 2nd (Broadwood's) Cavalry Brigade across the same drift, and followed himself with the 21st (Bruce-Hamil-

ron's) and the 19th (Smith-Dorrien's) Brigades. The enemy on my right flank, as well as in front of Lieut-General French, offered a stubborn resistance, but by 11.30 a.m. they were driven from the positions that they had taken up, and withdrew towards Kroonstad, blowing up the railway bridges and culverts as they fell back. The following telegram from President Kruger was found in the office near the Sand River:— "Where is President Steyn? Delarey must delay the British as long as possible. All ammunition and supplies are to be collected at Kroonstad. The Witwatersrand Commando has been called out." President Steyn, I heard, had been travelling about the country urging the Boers to continue the war, and assuring them that they could depend upon European intervention. On the evening of the 10th my headquarters, with the 11th (Pole-Carew's) Division, halted at Riet Spruit, eight miles north of the Sand. The 7th (Tucker's) Division bivouacked at Deelfontein Nord, and Major-General Ian Hamilton's column halted about four miles east of that place. During the afternoon Lieut-General French, with the 1st (Porter's) and 4th (Dickson's) Cavalry Brigades, and Hutton's Brigade of Mounted Infantry, reached a point four miles west of Ventersburg Road Station. That evening I received a message from Colonel Mahon, from Taungs, dated 7th May, informing me that in the telegraph office at that place he learned that the enemy intended making a stand at Pudimore, about half way between Warrenton and Vryburg, but as I had warned Colonel Mahon to travel well to the east of the railway, I felt tolerably sure that he would not meet with opposition until he reached Mafeking. From time to time I heard from Lieut-General Rundle that the Boers were trying to get behind him, but with Winburg held, and the reinforcements, in the shape of newly arrived Yeomanry and Mounted Infantry, which were being hurried up to Bloemfontein as fast as they could be equipped with horses, etc., Lieut-General Kelly-Kenny (who was in command of the southern part of the Orange Free State) had been able to strengthen the line leading through the waterworks and Thabanchu, towards Ladybrand, sufficiently to enable Lieut-General Rundle to prevent the enemy breaking through it. Sir Alfred Milner was constantly communicating to me at this time his fears that the Boers might be able to collect in sufficient strength to invade Cape Colony for the second time, and although I could not help feeling that there was a chance of this occurring, I was pretty sure that the rapid advance I was making, with Pretoria for my goal, would delay any attempt, at that time, on the part of the enemy to recross the Orange River. I was supported in this belief by the very accurate information which almost daily reached me from Sir George Lagden, the Resident Commissioner in Basutoland, who reported as follows:—"That your rapid advance northwards has staggered and paralysed the Boers in these parts," and adding that they were lessening their hold in Natal, and in the eastern frontier of the Orange Free State, and were hurrying up northwards, in order by all means in their power to arrest our onward movement. This information determined me not to make any alteration in my plans, but to push on to Kroonstad and towards the Transvaal as fast as the great difficulty in getting supplies up from the rear would permit. Accordingly on the 11th May, I despatched the following telegram while on the march from Reitspruit:—"To General Rundle, Thabanchu,—My hope is that our advance to Kroonstad will relieve the pressure on your force, but should the enemy succeed in turning your right flank, follow them up without delay with Brabant's Division and one of your Brigades.* The enemy must not be allowed to invest Wepener again, or to get as far as Smithfield, the garrison of which is only one battalion of infantry, two guns, and a few mounted men. I do not think you need have any anxiety about weakening your force to the extent I have named, as it seems scarcely possible De Wet can be reinforced, seeing how we are occupying the Boers' attention in this part of the country. Acknowledge receipt." That same day, 11th May, my headquarters, with the 11th (Pole-Carew's) Division, marched some 20 miles to Geneva Siding, 14 miles short of Kroonstad, and within eight miles of Boschrand, where the Boers were holding a strong position covering the town. The 3rd (Gordon's) Cavalry Brigade advanced within touch of the enemy, supported on the left by Hutton's Brigade of Mounted Infantry, which formed a connecting link with Lieut-General French's column, which I had ordered to make a wide flanking movement west of Kroonstad by the Valsch River Drift, and endeavour to destroy the railway and telegraph

north of that place. The 7th (Tucker's) Division halted a short distance south-east of Geneva Siding, with Major-General Ian Hamilton's column a few miles off on their right flank. During the night of the 11th the enemy vacated their entrenchments at the Boschrand, and retreated so rapidly through Kroonstad, that when the little party, consisting of Major Hunter Weston, R.E., Major Burnham (the Canadian scout), two officers and 60 men of the 1st Cavalry Brigade, reached the line a few miles north of Kroonstad, they found that the Boers had already escaped, and blown up one of the main bridges. This was the same Major Hunter-Weston who blew up the railway north of Bloemfontein on the 12th March. The main army reached the outskirts of Kroonstad about noon on the 12th May. I sent an officer into the town to summon the Landrost, and an hour or two later I entered the town, which President Steyn, Generals L. Botha, and Delarey had left only a short time before. Before leaving Kroonstad President Steyn issued a proclamation making Lindley the temporary seat of the Orange Free State Government. He had had considerable difficulty in keeping his followers in the field, and it was reported that the Orange Free Staters were beginning to distrust the Transvaalers, accusing them of having made use of them, and then deserting them. Early on the 13th May I received the news that Colonel Mahon's column had reached Vryburg on the 10th May without meeting with any opposition; and that up to the 4th May all was well at Mafeking, and also with Colonel Plumer's little force, which had been doing such excellent work for many months in the neighbourhood of that place. It was necessary to halt for some days at Kroonstad. We were then 870 miles from our base at Cape Town. For several miles in our immediate rear the railway needed extensive repairs, and a large amount of supplies had to be collected. Moreover, remounts were urgently required, as our horses had sadly diminished in number, owing to the long marches and the scanty amount of forage that was procurable. Besides these urgent reasons, it was, I felt, running too great a risk to move further forward while the officials of the Orange Free State were within 45 miles of my main line of advance, and of the railway, on the retention of which the existence of my force at this time depended. It was essential that President Steyn should be driven from Lindley. This operation I entrusted to Major-General Ian Hamilton, which entailed his column making a considerable detour. The instructions I issued to that officer were as follows:—"Kroonstad, 14th May, 1903.—You will proceed to-morrow morning to Lindley, where Mr. Steyn has established his seat of Government. Endeavour to seize any members of the Government who may be at Lindley, and get hold of all official documents. You should seize the post and telegraph offices and the telegraph line to Bethlehem. Ascertain from English residents who have been the most pro-Boer, also least anti-English, amongst the Dutch inhabitants of Lindley. Bring away the former as prisoners, and encourage the latter to work in our interests. After taking the advice of the leading British inhabitants, you should appoint the man whom they consider best fitted to carry on the duties of Landrost. Remain a day or two in Lindley, unless you receive orders from me to the contrary, and then push on to Heilbron, where President Steyn is residing at present. I fear it will be scarcely possible for you to capture President Steyn, as he is living at the terminus of the railway, but I will endeavour to arrange to have the line cut somewhere near its junction with the main line a day or two after you leave Lindley. Should you hear on your arrival at Heilbron that President Steyn has escaped, it might be worth while to send a party in pursuit of him, if there is any reasonable hope of capturing him. Act at Heilbron as you have been instructed to act at Lindley, and cut the telegraph line which connects Heilbron with the Transvaal. Between Lindley and Heilbron you will probably be out of telegraphic communication with me, but on your arrival at the latter place you will once more rejoin the telegraphic system. It is possible that you may meet with resistance either at or near Lindley, as recent reports tend to show that some of the enemy, who have lately been near Thabanchu, have fallen back in the direction of that town. With regard to burghers, you should allow all who surrender their arms and ponies to return to their homes, unless there is some good reason to the contrary. Disarm all except the British in Lindley and Heilbron, and on your line of march, and encourage the people generally to surrender their arms and behave peacefully, assuring them that we have no wish to injure them, and that as long as they

* Brabant's was a Colonial Division raised after my arrival at Cape Town.

remain in their farms no harm will come to them. You must take decisive measures to stop plundering on the line of march, and on the arrival of your force at any town. Nothing puts the people more against us than finding themselves injured by our passage through their country. Only such cattle, sheep, and forage as are required for the food of the troops should be requisitioned, and these should be paid for, or if money is not available, receipts should be given for them. Every endeavour should be made to save your horses and transport animals, by making the men dismount and lead their horses whenever possible. Keep me constantly informed of your movements, and send without delay a list of any casualties which may occur.—(Signed) ROBERTS." On the 15th May Major-General Ian Hamilton collected his troops on the east side of Kroonstad, and commenced his march early on the following morning. I could only spare him a very limited amount of supplies, scarcely enough for eight days, trusting to his being able to replenish at Lindley and Heilbron, both of which places I was anxious to hold while I advanced across the Vaal, if troops for this purpose came up in time. Major-General Ian Hamilton made an 18 miles march the first day with his infantry, while his mounted troops, under Brigadier Broadwood, reached Kaalfontein, 10 miles further on. They had scarcely settled down for a much needed rest, when hearing that a Boer force was retreating in front of the 8th (Rundle's) Division upon Lindley, Major-General Ian Hamilton ordered Brigadier-General Broadwood to push on and get possession of the town before the Boers could arrive there. The cavalry were just in time, and occupied Lindley after a slight skirmish. The main portion of the column did not arrive until the 18th, the spruets were so numerous and difficult, and even then the supply-carts were some distance behind. Two days' supplies for the column were found in Lindley, and an important person offered to surrender—Piet De Wet (brother of Christian De Wet, who has given us a considerable amount of trouble from the day we entered the Orange Free State), but as his conditions were to be allowed to return to his farm, I was obliged to refuse, for, under the terms of my Proclamation of the 15th March, 1900, no burgher who had commanded a Boer force could be allowed to go free. I thought they were too important to let them be free about the country. Major-General Ian Hamilton's column left Lindley on the 20th. The rear guard was heavily attacked, but with the assistance of the 19th (Smith Dorrien's) Brigade, which came direct with the convoy from Kaalfontein, the enemy were routed, and the Rhenoster River was crossed safely during the night. Heilbron was reached on the 22nd; President Steyn and the rest of the Orange Free State officials were forced to leave that place and to find a temporary asylum at Vrede, and on the 24th, in accordance with instructions I had sent to Major-General Ian Hamilton, his column reached the main line of the railway near the Grootvlei station, a few miles in advance of my head-quarters. While at Kroonstad I had been greatly troubled at the sickness which had overtaken the troops. All available houses, the church, and the two or three small hotels had been made use of for the accommodation of the large number of enteric cases. Little could be obtained in the town in the shape of medical comforts, and the few medical officers with me were at their wits' end to know what to do. Very disquieting reports, too, came from Bloemfontein about the sick, and the evening before I started from Kroonstad I sent the following telegrams to the principal medical officer:—"To Surgeon-General Wilson, Bloemfontein. Kroonstad, 21st May, 1900, No. C. 1746.—I am concerned to see the high death rate at Bloemfontein, and think it is probably due to the insanitary condition of that place. I understand that Colonel Exham is sanitary officer, whose duties are so onerous and continuous that it is quite impossible any Principal Medical Officer could carry them out efficiently when he has a very large number of sick to look after, as is the case at Bloemfontein. You should appoint an active, intelligent, medical officer who will make it his business to look after the sanitary condition of the place, by riding about and thoroughly investigating the whole place every day. This should be his sole duty. Warn the Imperial Yeomanry Field Hospital to be ready to start for Army Headquarters in a few days; necessary mule transport will be provided. Acknowledge receipt.—(Signed) ROBERTS." The second telegram was as follows:—"To Surgeon-General Wilson, Bloemfontein.—Kroonstad, 21st May, 1900. No. C. 1751.—Hospital arrangements here are most unsatisfactory, and I trust you will come here and superintend them. You need not wait until the

railway is open, and you should bring with you as many surgeons and medical subordinates as possible. Some hundred mattresses are urgently needed. These you must order from Cape Town or wherever they can be procured, and have them sent up in charge of some responsible person who can see that they are not left on the road. The requirements for Kroonstad should have been foreseen, and spare surgeons should have been on the spot; they could have travelled in carts from railroad, as many sick and wounded men have to do. There is ample accommodation for 20 or 30 nurses, and these should be despatched on Wednesday next, by which time the railway trains will reach this. As soon as Kroonstad has been put in order, you should arrange for hospital accommodation being provided in the Transvaal, where medical men, subordinates, nurses, and all necessary appliances will be required very shortly. Acknowledge receipt.—(Signed) ROBERTS." On the eve of leaving Kroonstad I was cheered by the receipt of the following telegram from Major-General Baden-Powell, dated Mafeking, 17th May, 1900:—"Happy to inform you Mafeking successfully relieved to-day. Northern (Plumer's) and Southern (Mahon's) columns joined hands on the 15th. They attacked the enemy yesterday, and after a smart engagement entirely defeated them with loss. British casualties, three killed, 22 wounded. Relieving force marched into Mafeking this morning at 9. Relief and defence forces combined moved out and attacked enemy's head laager, shelled them out, and nearly captured Snyman. Took one gun, flag, and large amount of ammunition. Enemy appear to be retreating in all directions, except one commando lying low possibly to cover retreat of the remainder." It was an immense relief to me to be assured that Mafeking was safe, and it afforded me great pleasure to despatch the following telegrams:—(1) "To Major-General Baden-Powell, Mafeking.—Kroonstad, 21st May, 1900.—Please accept yourself and convey to all ranks under your command my warmest congratulations on the magnificent defence you have made for 200 days, finishing off as it did with the grand success obtained on the 12th May. You have indeed nobly upheld the honour of the British flag, and the whole Empire is proud of you. I rejoice that the Queen has been pleased to give you the well-earned rank of Major-General. Tell all the inhabitants of Mafeking how much their courage and fortitude are admired, and how greatly the devotion and heroism of the women during a long and terrible period of trial are appreciated." (2) "To Colonel Plumer, Mafeking.—I send you my best congratulations on the relief of Mafeking. That the garrison was able to hold out so long was due, I feel, in a great measure to the material support afforded by you and your very small force. I beg you will assure all ranks serving under you how highly I appreciated their good work, and the gallantry displayed by them during the many months they were in an isolated position." (3) "To Colonel Mahon, Mafeking.—You have performed your difficult task with marked ability, and I heartily congratulate you, and all with you on the success which has attended your efforts to relieve Mafeking." On the 20th May I prepared to renew my onward march towards Pretoria, and issued the following orders:—(1) "To Brigadier-General Gordon, Commanding 3rd Cavalry Brigade.—Kroonstad, 20th May, 1900.—You will start to-morrow with the Brigade under your command. You will prospect the country between Honing Spruit Station and Boschpoort, so as to clear the road for the convoy, which will not start until Tuesday (22nd). You should prospect further to the north and east. See that the country is clear towards Vaal Krantz, and communicate with head-quarters, which will be at Honing Spruit on Tuesday evening, so as to ascertain whether you should join the main body on Wednesday at Rooodeval." (2) "To Lieutenant-General French, Commanding Cavalry Division, Jordan Siding.—Kroonstad, 20th May, 1900.—You will move from your camp at Jordan Siding to-day. On Monday and Tuesday you will proceed without distressing your horses and prospect the country west of the Rhenoster River along the Klerksdorp Road and towards Bothaville. Halt whenever convenient, but on Tuesday night you should be north of the Rhenoster River, ready to move early on Wednesday to a position across the railway somewhere near Prospect, where the Heilbron-Vredefort Road crosses the railway. My present information leads me to believe that the enemy are holding the northern bank of the Rhenoster River, but you must endeavour to find out and communicate to me their exact position. Should they retire from it towards the Transvaal, you can then cross the Vaal as we arranged, so as to meet my force on the 26th and 27th not far

from Vereeniging, ; but make sure of the whereabouts of the enemy's main force first of all, as I understand they will make a determined stand between this and the Vaal River, and this may give us a chance of capturing their guns if you are across the railway and on their line of retreat in time, and able to blow up a culvert further north than Prospect. I doubt whether General Ian Hamilton's force will be able to take part in any operations we may have near the Rhenoster River, as it is scarcely possible he can be at Heilbron before the 23rd. I have, however, kept him informed of our proposed plan. Gordon's Brigade will start to-morrow, and clear the country north of the Kroonstad-Heilbron Road,

acting for a portion of the distance as escort to a convoy of supplies destined for General Hamilton's force. You will be accompanied by Major-General Hutton's Brigade of Mounted Infantry, whilst Henry's and Ross's corps of Mounted Infantry will be in front of my main column. Lieutenant-General Lord Methuen is to leave Hoopstad to-day, and reports that he expects to be at Bothaville on the 24th on his way to Reitzburg. You may be able to communicate with him during your advance northwards. Keep me informed of your movements, and of any information you are able to give of the enemy's position. Acknowledge receipt.—(Signed) ROBERTS."

Before continuing my narrative of the further advance towards Pretoria it seems necessary to give a short account of the movements of the several forces under General Sir Redvers Buller in Natal, and Lieutenant-General Lord Methuen in the western part of the Orange Free State. On the day before my departure from Bloemfontein I had telegraphed to General Buller as follows, in order that his movements might, as far as possible, correspond with mine:—"To General Buller, Ladysmith.—Bloemfontein, 2nd May, 1900.—Cipher.—A force under command of General Ian Hamilton successfully cleared large numbers of the enemy out of Houtnek, 10 miles north of Thabanchu, yesterday. This force will soon advance on Winburg, and another, which I accompany, will move simultaneously along the line of railway. You should occupy the enemy's attention on the Biggarsberg, and as their numbers decrease, which they assuredly will, move your troops towards the Transvaal, repairing the railway as you advance. Please let me know what you can hope to do in this respect.—(Signed) ROBERTS." On the 3rd May, and before my telegram of the 2nd idem had apparently been received, General Buller sent me the following message from Ladysmith:—"To Lord Roberts, Brandfort, 3rd May, 1900.—The situation in Natal is as follows: The enemy during the last seven weeks have prepared all passes in the Biggarsberg for defence, with many gun emplacements and double lines of entrenchments. These are now held by about 6,000 men, with first rate lateral communications, and there are about 1,000 more within reach in Zululand and Vryheid. I do not think I should be justified in trying to force either the Cundycleugh, Newcastle, or Dundee roads. The weak point of the defence is that portion of the Berg between Dundee and Helpmakaar. To attack that, a force from Elandslaagte will have to make a flank march of 25 miles, exposed to attack by Waschbank Valley, and then to force the pass where I shall probably find from 2,000 to 3,000 men in a strong position, possibly more. To do this, I think it ought to be of a strength of two divisions. To close the Newcastle and Dundee roads requires six battalions. It is nine miles of front offering advantages to the attack, and one weak division is not more than enough to cover Ladysmith and make front to the passes and the Cundycleugh roads. I have also to guard Zululand and Stonefield on the road to Estcourt and Greytown. I am short, therefore, by two brigades of the force I think I ought to have. If you can send me two brigades, or even one, I think I ought to make a certainty of it with expedition; without them I shall try, but may be too weak, though, personally, I do not think the risk very great. If you are right in thinking that your advance will assuredly decrease the number opposing me, I shall be quite safe; but I rather, myself, incline to think that it will at first have the opposite effect, as there will be many Orange Free Staters who will shy from your advance, but will be quite ready to come into the Biggarsberg, while I doubt any of these Transvaalers leaving this until you threaten their own country. Troubles from lung sickness and scarcity of grass have forced me, in pursuance of instructions, to scatter my transport, but I can start in four days." On the 11th May I telegraphed as follows to General Buller, Ladysmith:—"Ventersburg Road Station.—Unless my information is very incorrect the Drakensberg Passes must be very lightly held, and there cannot be any large force opposed to you on the Biggarsberg. I think you might, without any undue risk, push on towards the Transvaal, and thus afford me material assistance." On the 13th May, and before the receipt of my telegram of the 11th, General Buller informed me that, in accordance with instructions to keep the enemy occupied on the Biggarsberg, he had concentrated some of his troops at Sunday's River Drift, on the Helpmakaar road; on the 12th he had occupied Waschbank and Indooda Mountain. On the 14th May he reported he hoped to reach Dundee the next day, and, "if all goes well," to reach Newcastle on the 19th. On the 15th May I congratulated General Buller on the success of his operations in the direction of Dundee, and suggested, if the position in Laing's Nek proved to be strongly entrenched, it might be advisable for him to make his way through the passes west of Newcastle, and march on Vrede, a move which I said "would greatly assist me." I added that I hoped to be at Vereeniging on the 30th May, and if he "could possibly manage to be on the Vaal River at the point where the Vrede-Standerton road crosses it on the same day, I think the simultaneous entry of the two columns into Transvaal territory would have

a great effect. By moving on Standerton you would turn the Laing's Nek position, and cut the railway from Natal, and might possibly capture some of the enemy's guns and rolling stock." On the 16th May General Buller reported having occupied Dundee the previous day, that the Transvaalers had evacuated the Drakensberg, and were in much reduced numbers. Later the same day General Buller reported that he doubted being able to raise enough wagons to supply a force marching from Newcastle by Botha's Pass to Standerton, a distance of nearly 100 miles; that he was inclined to think it would be easier and quicker to force Laing's Nek, as it could be done without much difficulty, but that he would prefer to reserve his opinion until he had seen the place. On the 17th May I informed General Buller that Sir A. Hunter had occupied Christiana without opposition, and I believed that the enemy were concentrating on the Vaal River to oppose my advance. I said it was unlikely, therefore, that he would meet with much opposition in the Free State, and that one division would be quite able to take care of itself as far as Vrede. I added that threatening Standerton from Vrede, would, I thought, cause the enemy to leave Laing's Nek, and that they would certainly do so when we reached Johannesburg, "which we ought to do early in June." On the 18th May General Buller reported that his cavalry had occupied Newcastle the preceding day, and that the enemy, who appeared to be thoroughly demoralised, intended, it was said, to stand at Laing's Nek, and that he thought it would be best for him to force Laing's Nek. The following day General Buller telegraphed that Lieutenant-General Clery had moved to the Ingogo, and Lord Dundonald to Laing's Nek, and that the Nek was held in strength. On the 20th General Buller reported that the railway was so much injured that he doubted if he could get supplies up in time to be at Standerton on the 30th. On the 22nd General Buller reported that the enemy were in great strength on Laing's Nek, and that he proposed to attack as soon as the railway was sufficiently repaired to secure his supplies being brought up. He said it would be of the greatest assistance to him if I could tell what portion of our force was in the Orange Free State east of the railway, where they were, and on what objective they were moving. And he asked if it was true that we had occupied Bethlehem. I replied to this telegram on the following day in these words:—"As, from your report, Laing's Nek is held in considerable force, I think it would be better to defer attacking it until the effect is known of our appearance on the Vaal River, and, I hope, a few days later, at Johannesburg. Laing's Nek is a position which, if well defended, could not be taken without great loss, a loss which is not worth incurring, as your occupation of it would not now materially assist in our advance, and a few days in the repair of the railway will not signify. Besides the 7th and 11th Divisions with Army Head-quarters marching along the railway, the following troops are to the east of the line: Ian Hamilton's force at Heilbron, the Highland Brigade and 9th Division Headquarters moving to Lindley. 8th Division hold Bresler's Flat, Tremmel, Clocolan, and Ladybrand. Bethlehem is not occupied, but Senekal probably will be shortly. Mr. Steyn is at Frankfort; and as the only Free State opposition to us now is in the extreme north-east corner of the State a move of one of your Divisions to Vrede, as I suggested in my telegram of the 14th May, would be most advantageous. This opposition may collapse shortly, but, should it not, it would be better for you to move towards Vrede than to Laing's Nek in the event of the enemy not evacuating that position." On the same day, 23rd May, and before receiving my telegram, General Buller wired to me as follows:—"The following is, as far as I can make out, the position here: Laing's Nek is held by the Wakkerstroom, Pretoria, and Johannesburg Commandos, under Erasmus; Gansvlei by the Carolina and Lydenburg Commandos under Lucas Meyer, and a commando composed of troops from Van Reenan's Pass and Tintwa, is leading south of Botha's Pass. The Orange Free State President is said to be in Harrismith, through which town the commando from Ladybrand has just passed; these two last items are not confirmed. Noll's Nek is occupied. May I again ask you what forces you have in the east of the Orange Free State, and where they are; if my information is correct it is desirable that I should know. I hope to get rail-head to Glencoe junction to-night. I have, whichever way I turn, a difficult pass to force, and I cannot promise to be on the Vaal River by the 30th as you wish, but I shall try my best." To my telegram of the 23rd May, General Buller replied as

follows:—"Newcastle, 24th May,—I must try and do what you wish, but I doubt being able to do it. Please see my No. 258 telegram of 23rd May. Since sending it I have located the Utrecht, Piet Retief, and Vryheid commandos between Utrecht and Wakkerstroom, and according to some English-speaking deserters who surrendered yesterday, I have forces of 10,000 men round me. From Dundee to here I have the enemy on both sides, and close to my communications. If I send a Division to Vrede I do not see how I am to cover its communications, and it will be *en l'air*. I think I ought to let your force get nearer to mine before I try such a risky expedition. I will, as soon as the railway reaches Ingagne and frees my transport, try and force the Drakensberg. Once in the Orange Free State I could say better what I can do. As far as I can learn the whole of the forces lately at Ladybrand and Wepener have evaded your forces, and have passed through Bethlehem and Harrismith. Until I can locate them more accurately it would be, I think, an undue risk to detach part of my small force to Vrede, seeing how both my flanks in Natal are hampered. Almost all the commandos in the eastern Transvaal, together with those of the Orange Free State who have not surrendered, or fled north, seem to be now in front of or on my flank. I do not think I am strong enough to deal with such a force except with great caution. Up to this your advance so far from relieving pressure on me, as you anticipated, seems to have increased it." On the 26th May, General Buller telegraphed to me as follows:—"The railway was through to Ingagne last night, and should be in Newcastle Tuesday. It has been a wonderfully good piece of work, and troops and all concerned deserve the greatest credit. My force concentrates here to-morrow, but I think at present I am too weak for the job allotted me. Your advance has, as I anticipated, increased my difficulties, not weakened them. Laing's Nek is very strongly held, and is almost quite unassailable." (The cipher word is either "almost" or "quite"—it means both, so I have put both in here.) "I had hoped to turn it by Botha's Pass, but that now is strongly held. Deserters and others say 5,000 mixed Free Staters have come here from Ladybrand and Kroonstad; you will know if this can be true, but certainly there is a considerable force on the Drakensberg, and the passes all offer great advantages to the defence. I had just cleared Nkutu, and restored the magistracy, and to-day I have had to send 1,600 men from Dundee to try and cut off a commando said to be advancing from Vryheid to Nkutu. I have 100 miles of communications threatened on both flanks at short distances, and only six Brigades and a few Volunteers there to defend them, and also a force of 10,000 of the enemy in very strongly prepared positions in front of me. My view is that if you could send a Division to the top of Muller's Pass I could supply it and reinforce it. I could then turn the other passes and Laing's Nek, and once out of these defiles I could send two Divisions, possibly three, anywhere. If I can get past Laing's Nek, ought I not to strike at once at Ermelo and Belfast or Middelburg? I know the sacrifice, and believe, starting with a strength of three Divisions, the operation is feasible." On the same day, 26th May, I replied to General Buller's telegram of the 24th May, in these words:—"It is quite unnecessary that you should run any undue risk with your force, either in Laing's Nek or Drakensberg direction. My advance troops are now across the Vaal, and the main body will be on the north side to-morrow. I am arranging to occupy all the principal places in the north-east of the Orange Free State as far as Vrede with the 8th Division, Highland Brigade, and part of the 1st Division, the headquarters of which will be at Kroonstad on the 28th. Hunter reached Vryburg on the 24th." On the 27th May, General Buller telegraphed to me as follows:—"In addition to the enemy holding Laing's Nek, I believe there are on my right flank about 1,500 men of the local commandos. To my left, on the Drakensberg, the number is uncertain, but about 4,000 are within easy reach of Botha's Pass. I think it best in these circumstances to clear my right flank, and am, therefore, moving a column to Utrecht." On the 30th May, I received the following telegram from General Buller:—"All here are delighted with your successful advance. The enemy having formed a laager at Dornberg passed my right rear annoying me. On the 27th May I directed a force, under Hildyard, by Wools Drift or Utrecht, and another under Lyttelton by Inchanga Drift on Dornberg. These movements have caused the enemy at Dornberg to retire north. Hildyard is at Utrecht. The town has surrendered, and negotiations for further surrenders are in progress. Result as yet doubtful.

Lyttelton is now moving towards Vryheid. Clery is bombarding Laing's Nek. I consider I have about 10,000 to 12,000 enemy round me, but they are much disheartened, and were they not in such strong positions I doubt if they would show any fight. Railway opened to Newcastle on 28th." To the above I replied in the following words:—"30th May,—Very glad to hear of your successful progress. When you get possession of Laing's Nek you could not do better than push on to Ermelo and Belfast, as proposed in your telegram of 26th May." On 31st May, General Buller replied to my telegram of 30th May as follows:—"I shall start as you wish as soon as I get through. I am in rather a tight place at present though. When may I expect the Division asked for in my cipher of the 26th May to reach the top of the Biggarsberg? My information now is that neither Van Reenan's Pass nor Tintwa is occupied in any strength, and I am commencing repairing the Harrismith railway. If a Division or Brigade reaches Harrismith I expect to be able to rail supplies it may require as far as Brakwal to meet its wagons." And on the 2nd June, General Buller telegraphed to me from Newcastle:—"On the 30th May I sent to the Commandant on Laing's Nek, and told him that Lord Roberts had crossed the Vaal, and that further fighting was useless. This evidently produced a meeting, between our out-posts to-day, of Assistant Commandant Christian Botha and myself. He asked me what terms of peace you would offer, and I undertook to make no advance for three days while he was communicating with his Government. Can you let me know your terms of peace for individual and separate commandos? I told him that my terms were that his men should surrender all guns, and return to their farms, and if they did that they would take their rifles with them, subject to the understanding that Lord Roberts will later probably order their disarmament. I thought this would not be wrong, as they can at this moment run away if they wish, and take both guns and rifles with them. I said that to talk about independence was nonsense; if hereafter they behaved themselves they might become an independent colony—that was the only chance they had. I think they are inclined to give in, and that I have in front of me about half the Transvaal forces now in the field. If you think it worth while, please let me know if I may mention any terms of peace to them. I think that even if assisted from the Orange Free State, it will cost me about 500 men killed and wounded to get out of Natal." On the 3rd June I replied to the above as follows:—"My terms with the Transvaal Government are unconditional surrender. With regard to troops, those who deliver up their arms and riding animals are allowed to go to their homes on signing pledge that they will not fight again during present war. The exceptions to this rule are those who have commanded portions of the Republican forces, or have taken an active part in the policy which brought about the war, or who have been guilty of, or have been parties to, wanton destruction of property, or guilty of acts contrary to the usages of civilised warfare. Principal officers should remain with you on parole until you receive instructions regarding their disposal." On the same day, 3rd June, I telegraphed the following information to General Buller re disposal of my force:—"It will be some days before Harrismith can be occupied, but Rundle and Brabant will move their forces from Ficksburg as soon as they feel able to do so. We are holding Heilbron, Lindley, Senekal, and Ficksburg. We left Johannesburg to-day, and hope to reach Pretoria on the 5th." The following day, 4th June, General Buller telegraphed as follows:—"I shall be in a position on the 6th June to force Laing's Nek by a turning movement. Position, of course, is a strong one, and whichever of the four passes I try I shall expect to find nearly 4,000, with guns, in front of me. On the other hand not more than half, if so many, of these men will wish to fight. The 8th Division are moving but slowly, and I can gain no intelligence of the movements of the Highland Brigade. Do the instructions contained in your messages of May 23rd and 26th still hold good, or shall I go on? I do not think it would be a very difficult undertaking, but, of course, there is always uncertainty about an attempt on a mountain pass." To the above telegram from General Buller I replied on the 5th June:—"It would, of course, be most satisfactory if you could get possession of Laing's Nek, but scarcely seems necessary to do so now at the cost of many valuable lives, for we are in possession of Pretoria. You might commence the turning movement, and judge for yourself whether it would be worth while to continue it, according to the opposition you may meet with."

On the 8th June I received the following message from General Buller:—"On the 6th Talbot Coke, with 10th Brigade and South African Light Horse, seized Van Wyk's hill. The enemy made some resistance, and a good deal of sniping, casualties about four killed, 10 wounded. During the 6th and 7th we got two 4·7 and two 12-pounder naval guns on to Van Wyk, and two 5-inch guns on to the south-western spur of Tinkwells under cover of their fire. General Hildyard to-day assaulted all the spurs of the berg between Botha's Pass and Inkwelsane; the attack, which was well planned by General Hildyard, and carried out with immense dash by the troops, for whom no mountains were too steep, out-flanked the enemy, who were forced to retire from their very strong positions. I do not think we had any casualties, and I hope I have obtained a position from which I can render Laing's Nek untenable."

Lord Methuen remained in command of the Kimberley district from the date of my leaving Modder River camp until the 9th March, when he moved to Boshof, of which he took possession, left a suitable garrison there, and returned to Kimberley on the 13th idem. Later in the month Lord Methuen was at Barkly West assisting in the pacification of the Griqualand, Campbell, and Douglas districts. But on the 28th I found it necessary to recall him to Kimberley in view of his again going to Boshof, as news had reached me that a column, chiefly composed of foreigners, under a French officer, Count Villebois de Mareuil, would probably attack Boshof on their way to destroy the railway between Kimberley and the Orange River. Lord Methuen's troops reached Boshof on the 4th April, and on the 5th successfully attacked the commando, killing Count Villebois de Mareuil, and either killing or capturing all with him. From that time until the 14th May Lord Methuen remained at Boshof, and assisted materially in the success of Colonel Mahon's advance to Mafeking by supplying his little column with transport, and by detaching Major-General Arthur Paget's Brigade to assist in occupying the enemy's attention on the Vaal, near the point it had been arranged for Colonel Mahon to cross that river. On the 14th Lord Methuen left Boshof for Hoopstad, where he arrived on the 17th May, and where on the 19th idem he was rejoined by Major-General Arthur Paget's Brigade. As I was not sure on first arriving at Kroonstad whether I should be able to leave a sufficiently strong garrison to hold it, I arranged to bring Lord Methuen's column there from Hoopstad, but later on, thinking we had sufficient for the defence of Kroonstad, I decided to make use of Lord Methuen's Division to help us during the passage of the Vaal, and on the 18th May I sent him the following telegram from Kroonstad:—"Very glad to hear that you have occupied Hoopstad. Instead of coming here, the garrison for which I have arranged, march on Reitzburg and Parijs; if you start on Sunday, the 20th, you should reach the former place on the 26th or 27th, and the latter on the 28th or 29th, about the date on which I expect to pass the Vaal. Let me know if your supply arrangements will permit of your doing this." Later in the day I again telegraphed to Lord Methuen:—"Try and keep me informed of your movements, first via Hoopstad, and later by orderlies to the railway line, up which we shall advance. Look out for my cavalry. Acknowledge receipt." And on the 23rd May once more I telegraphed to Lord Methuen from the south bank of the Rhenoster River:—"I hope you will receive this at Bothaville, and that you will be able to march from there to Reitzburg in three days, where you should arrive on Sunday. If you find the passage of the Vaal at Elandslaagte fairly easy you might cross there, and proceed to Venterskroon, and then work up the right bank to Lindeque. Should you not find this plan feasible, then keep by the southern road through Parijs, towards Vereeniging. On Saturday or Sunday, 26th or 27th, at the latest, I hope to be on the Vaal River, opposite Vereeniging. The cavalry will be between me and Parijs, so that your movement from Reitzburg, either north towards Venterskroon, or north-west towards Parijs, will be advantageous. Wire to me from Bothaville what you think you will be able to do. Acknowledge receipt." The following day I countermanded this order, and directed Lord Methuen to march direct to Kroonstad. My reasons for this change were that Major-General Ian Hamilton had carried out the work entrusted to him in the Lindley-Heilbron direction more rapidly than I had hoped for, and was already on the railway ahead of the main body. I could, therefore, feel certain that his column would be able to afford the support to the cavalry divi-

sion which it would assuredly require, for, according to the information I had received, the Transvaalers had collected in great strength for the protection of Johannesburg, on the route by which Lieutenant-General French was proceeding, and which lay through a part of the country very difficult for cavalry to operate in without the assistance of infantry and heavy guns. Of Lord Methuen's Division I could not be so sure. I had not even heard of its arrival at Bothaville, and I did not know what opposition it might meet with between that place and the Vaal. I had to act without loss of time, for the cavalry and mounted infantry had already crossed the Vaal, and I could not risk letting them go further without proper support. Under these circumstances it appeared to me better that Lord Methuen should conform to his original orders, and go to Kroonstad. Moreover, I was getting anxious about that place, and my long line of communication, on the security of which the whole of the troops en route to Pretoria were dependent for their supplies. Although Major-General Ian Hamilton had succeeded in driving President Steyn further to the east, this part of the Boer army had not been severely punished, and I knew that a large force under Christian De Wet—the commandant who had given us so much trouble from the day we had crossed the Orange Free State boundary—was hovering about Lindley and Heilbron, neither of which places I had been able as yet to occupy. I knew, too, that the Free Staters had announced their determination not to cross the Vaal, and that in all probability a large number of them would be available to harass me in the rear. I left Kroonstad on the 22nd May, halted that night at Honing Spruit, and marched the next day to the south bank of the Rhenoster River, and on the 24th to Vredfort Road Station. From there I issued the following orders to Major-General Ian Hamilton:—"You should march to-morrow, the 25th, from Arcadia, near Crommelenburg Spruit, to Boschbank, on the south bank of the Vaal River, which, if unoccupied, you should cross with a portion of your force immediately on arrival. On Sunday morning, the 26th May, you should advance 10 miles in a northerly direction, and then five miles in a north-easterly direction, which should place you eight miles due west of Meyerton Railway Station. This you should occupy early on Sunday morning, by which time we shall be engaging the Boer army believed to be at Vereeniging. A report has been received this afternoon from General Hutton that his mounted infantry and French's cavalry are advancing up the Vaal from Parijs. These officers have been informed of the movements you have been directed to make, and have been ordered to assist you, if necessary, in crossing the Vaal. You should show them these orders when you meet them, but you are not to make any change in them without directions from me."

On the 24th May, the day I reached Vredfort Station, the force under my immediate command was disposed of as follows:—The 11th (Pole-Carew's) Division at Vredfort Road Station; the 7th (Tucker's) Division bivouacked near Prospect on the west of the railway, four miles in rear; and the 3rd (Gordon's) Brigade of Cavalry four miles east of the station. Major-General Ian Hamilton's column was at Eerstegenik, seven miles north of the headquarters, and the mounted troops, under Generals French and Hutton, were moving in a north-westerly direction, the 1st (Porter's) and the 4th (Dickson's) Cavalry Brigades crossing the Vaal at Parijs and Versailles respectively. On this day, the Queen's Birthday, I signed and read out the following Proclamation, formally annexing the Orange Free State to Her Majesty's dominions:—"Proclamation. . . Whereas certain territories in South Africa, heretofore known as the Orange Free State, have been conquered by Her Majesty's forces, and it has seemed expedient to Her Majesty that the said territories should be annexed to, and should henceforth form part of Her Majesty's dominions, and that I should provisionally, and until Her Majesty's pleasure is more fully known, be appointed administrator of the said territories, with power to take all such measures and to make and enforce such laws as I may deem necessary for the peace, order, and good government of the said territories: Now, therefore, I, Frederick Sleigh, Baron Roberts of Kandahar, K.P., G.C.B., G.C.S.I., G.C.I.E., V.C., Field-Marshal and Commanding in Chief the British Forces in South Africa, by Her Majesty's command, in virtue of the power and authority conferred upon me in that behalf by Her Majesty's Royal Commission, dated 21st May, 1900, and in accordance with Her Majesty's instructions thereby and otherwise signified to me, do proclaim and make known that, from and

after the publication hereof, the territories known as the Orange Free State are annexed to and form part of Her Majesty's dominions, and that, provisionally, and until Her Majesty's pleasure is fully declared, the said territories will be administered by me with such powers as aforesaid. Her Majesty is pleased to direct that the new territories shall henceforth be known as the Orange River Colony. God save the Queen.—Given under my hand and seal at the headquarters of the Army in South Africa, Camp south of the Vaal River, in the said territories, this 24th day of May, in the year of our Lord 1900.—(Signed) ROBERTS, Field-Marshal, Commanding in Chief Her Majesty's Forces in South Africa." On the 25th I marched with the 11th Division to Grootvlei, the 7th Division halting at Wittlepoort, the 4th and 8th Battalions of Mounted Infantry proceeding to Steepan, 10 miles north of Grootvlei, and the 3rd Cavalry Brigade to Welterseden to guard our right flank. Generals French and Hutton moved up the Vaal to a drift near Lindaque. On the 26th May I marched with the 7th and 11th Divisions to Taaiibosch Spruit, while Colonel Henry's Mounted Infantry reached the Vaal at Viljoen's Drift, and, after occupying the coal mines and railway station on the south bank, crossed the river and held the drift and bridge, one span of the latter having been blown up by the Boers. The 3rd Cavalry Brigade continued to guard my right, and Major-General Ian Hamilton's column at Wonderwater Drift my left flank. Generals French and Hutton advanced across the Rietz Spruit, encountering but slight opposition. While at Taaiibosch Spruit I heard from Lord Methuen that he had received the order to proceed to Kroonstad, and that he hoped to be there on the 28th May, and I issued the following instructions to Lieutenant-General French and Major-General Ian Hamilton: (1) To Lieutenant-General French: "We cross the Vaal to-day and halt near Vereeniging. To-morrow we march to near Klip River Station, and Tuesday, 29th, to Elandsfontein Station. I wish you to be early to-morrow (Monday) in the neighbourhood of Reitfontein (48) (see Jeppe's map, No. 5), in order to co-operate with this force, which, it is reported, will be opposed on the march to Klip River Station to-morrow. Major-General Ian Hamilton has been ordered to be early to-morrow (Monday) in the neighbourhood of Syferfontein (191) and Doorkuil (202) (Jeppe's map), in order to co-operate with this force. He has been informed of the orders sent to you.—(Signed) ROBERTS, F.M." (2) To Major-General Ian Hamilton: "We cross the Vaal to-day, and halt at Vereeniging; to-morrow we march to near Klip River Station; and on Tuesday, 29th, to Elandsfontein Station. I wish you to be early to-morrow (Monday) in the neighbourhood of Syferfontein (191), and Doorkuil (202) (see Jeppe's map, No. 5), in order to co-operate with this force, which, it is reported, will be opposed on the march from Vereeniging to Klip River Station. French is receiving orders to be in the neighbourhood of Rietfontein (48) (Jeppe's map) early on Monday (to-morrow), and he has been informed of these instructions. Communicate with me during the day at Vereeniging.—(Signed) ROBERTS." On the 27th May I crossed the Vaal with the 7th and 11th Divisions and 3rd Cavalry, and bivouacked at Vereeniging. Generals French and Hutton moved to Reitfontein, and General Ian Hamilton to Reitkuil. On the 28th May my headquarters, with the 11th Division, made a 20 miles march to Klip River Station. The Boers had prepared several positions, where they intended to oppose us, but they were abandoned one after the other as we neared them. So hard were the Boers pressed by our advance troops that they had only just time to get their five guns into, and start off, the train as some of the West Australian Mounted Infantry dashed into the station. The 7th Division halted at Witkop, a little way south of Klip Drift, the 3rd Brigade of Cavalry on the east, and Colonel Henry's Mounted Infantry on the west of Klip Drift. The troops under Generals French and Hutton advanced to the western point of the Klip-riversberg range of hills, 15 miles south-west of Johannesburg, and those under Major-General Ian Hamilton to Syferfontein, a little further to the south-west. The sound of guns firing was heard during the day from the direction of General French's advance, to whom the following telegram was sent by the Chief of the Staff: "It is understood that there are important waterworks at Zubekom (9) north-west of Reitfontein (48). You should secure these, and prevent their being destroyed. The main column marches along the road to Elandsfontein Junction to-morrow, and will secure Germiston also. The Chief wishes you not to enter the town of

Johannesburg, but to push round to the north of it, via Florida, to the neighbourhood of Driefontein (461), and from there to communicate with us by the south of the town to Germiston. You should cut all telegraph wires from Johannesburg, north, west, and east, so as to prevent communication temporarily. We shall endeavour to establish a signal station at Syferfontein (191) to-night, and on the Klipriversberg to-morrow. Report fully your movements." In the early morning Major-General Ian Hamilton rode over from his camp at Syferfontein to consult with me about the onward movements of his column. On the 29th May I continued my march to Johannesburg, and arrived opposite the Germiston Railway Junction at 3.30 p.m. The 11th Division, with the 7th Division on its left, moved along the railway and occupied Germiston, after some slight resistance. Colonel Henry, whose mounted infantry preceded the main body, met with opposition at Natal Spruit Junction early in the day, and later on at Boksburg. Forcing the enemy back, he moved round by his left to the north of Germiston, supported on the right by General Gordon's Cavalry Brigade. General Ian Hamilton, who was advancing to a point about 12 miles west of Johannesburg, found General French's force, about 2 p.m., blocked by a considerable force of the enemy near Doornkop. The Boers had with them two heavy guns and several field guns and pom-poms, and were holding a strong position on a long ridge running east and west. After the Generals had had a consultation, it was arranged between them that the 2nd (Broadwood's) Brigade should join the Cavalry Division *pro tem.*, and that Major-General Ian Hamilton, with the rest of his column, should take up the position on which General French had been unable to advance, and attack forthwith, while the latter should co-operate by moving off further to the west, and endeavouring to turn the enemy's right flank. General Ian Hamilton engaged with the enemy at once. The right attack was led by the 1st Battalion Gordon Highlanders, who captured the eastern end of the ridge, and, wheeling round, worked along it until after dark. The City Imperial Volunteers led with great gallantry on the left flank, but the chief share of the action and casualties fell to the Gordon Highlanders, who had one officer killed and nine officers wounded. The enemy who had fought obstinately, retired during the night. The casualties in General Hamilton's column were two officers and 24 men killed, and nine officers and 106 men wounded. General French's losses were slight—two men killed, and two officers and 19 men wounded. The next morning, the 30th, I halted at Germiston, the force being distributed as follows:—The 11th (Pole-Carew's) Division, with the heavy guns, near my headquarters; the 7th (Tucker's) Division, 3rd (Gordon's) Cavalry Brigade, and Colonel Henry's Mounted Infantry on the heights to the north of Johannesburg; Major-General Ian Hamilton's column at Florida, 12 miles west of the town; the troops under Generals French and Hutton, a few miles north-east of Florida. In answer to the flag of truce which I sent to Johannesburg in the morning, Dr. Krause, who had been temporarily placed by President Kruger in charge of the town, came to see me. He agreed to surrender the town, but entreated me to defer entering it for 24 hours, as there were many armed burghers still inside. I agreed to Dr. Krause's request, on his giving me his word that no damage would be done to the mines, as I was anxious to avoid the possibility of anything like fighting in the streets; moreover, small bodies of the enemy were still holding the hills overlooking Johannesburg, from which it was necessary to drive them before we entered the town. Dr. Krause informed me that we had not been expected to reach Johannesburg so rapidly, and that President Kruger and the officials of the Transvaal Government only got away just in time before we broke up the railway, which we did to prevent the rolling stock being carried off. Commandant General Botha told me when in London a few months ago, that he did not leave with the rest, and slept the night of the 29th May in Germiston, within a few hundred yards of where I was sleeping, and that he was only able to escape the next morning by joining one of our mounted patrols, and passing himself off as a colonist in our employ! (That is a difficulty we always had. The Boers could come and go in our camp without our knowing who they were, as we had many people of the country in our employ. Botha actually joined one of our patrols and rode with him to the top of the hill, when he galloped off and joined his own people again.) Fortunately for us, we were able to secure a fair number of engines and trucks, as we were much in need of them to bring our supplies over the 1,000 miles.

we were distant from Cape Town; and equally fortunate for us that the Netherlands Railway Company had sufficient influence to prevent their line from being seriously injured, and thus made it possible for a few wagons, sent on from the break at the Vaal, with much-needed supplies, to reach Johannesburg on the 30th May. Early on the 31st May I received the formal surrender of Johannesburg, and, accompanied by Dr. Krause, I entered the town at noon with the 9th and 11th Divisions. There was no disturbance of any kind, and on reaching the Government offices Dr. Krause introduced me to the heads of the several Municipal Departments, all of whom acceded to my request that they would continue to carry on their respective duties until other arrangements could be made. The streets were very empty, but a good crowd of people had assembled in the main square while the British flag was being hoisted. The Essex Regiment (the leading battalion of the 11th Division) presented arms at the order "Royal Salute," and three cheers were then given for the Queen. At the end of the ceremony the 7th and 11th Divisions marched past with the Naval Brigade, Heavy Artillery, and the Brigade Divisions Royal Field Artillery. I established my headquarters at Orange Grove, three miles north of Johannesburg on the Pretoria Road, the 11th Division bivouacking four miles further north, and the 14th (Maxwell's) Brigade of the 7th Division a short distance to the west. The 15th (Wavell's) Brigade was detailed to garrison the town, and I appointed Lieutenant-Colonel Colin Mackenzie, Seaforth Highlanders, to be the Military Governor. On the 1st and 2nd June my headquarters remained at Orange Grove, while Major-General Ian Hamilton's column moved from Florida to Bramfontein, four miles west of Orange Grove, and the 1st, 3rd, and 4th Cavalry Brigades, with Hutton's Mounted Infantry, were distributed 10 miles to the north of the same place. During these two days disquieting news continued to reach me regarding the activity and numbers of the enemy who had opposed us in the Orange River Colony, and who were closing in behind us, threatening the single line of railway leading to Cape Colony, upon which I was dependent for provisioning the Army. This information was the more disconcerting as, owing to our rapid advance and the extensive damage done to the railway, we had practically been living from hand to mouth, and at times had not even one day's rations to the good. The food question had been a terrible anxiety to me throughout, an anxiety which increased in intensity the further we moved from our base, and the more frequently the railway was destroyed in our rear. For the whole force we had little more than one day's supplies when we sighted Johannesburg, while some portions of it had not even that. In a report from General Ian Hamilton, which reached me late on the 29th May, he said: "No biscuit or groceries left, and the men have nothing for breakfast." Enough food, however, was found for his column in Florida to last until the supplies which had come by railway could be distributed. It was therefore suggested to me that it might be prudent to halt at Johannesburg until the Orange River Colony should be thoroughly subdued, and the railway from Natal opened. But, while fully recognising the danger attending a further advance, I considered the advantages of following up without delay the successes we had achieved, and not giving the enemy time to recover from their several defeats, or to remove the British prisoners from Pretoria, quite justified the risk being run. Accordingly I advanced on the 3rd June with the 11th (Pole-Carew's) Division and the headquarters and Maxwell's Brigade of the 7th Division to Leeuwkop, a distance of 12 miles. Colonel Henry, with his corps of Mounted Infantry, moving to a point four miles to the north; Brigadier-General Gordon, with the 3rd Cavalry Brigade, six miles to the east; Lieutenant-General Ian Hamilton with his column to Diepsloot, 15 miles south of Pretoria, and the troops under Generals French and Hutton to Rooikrans, 13 miles south-west of Pretoria. On the 4th June I marched with Henry's Mounted Infantry, four companies of Imperial Yeomanry, 11th (Pole-Carew's) Division, Major-General Maxwell's Brigade, and the Naval and siege guns to Six Mile Spruit, both banks of which were occupied by the enemy. The Boers were quickly dislodged from the south bank by the Mounted Infantry and the Imperial Yeomanry, and pursued for nearly a mile, when our troops came under artillery fire. The heavy guns were at once pushed to the front, supported by Major-General Stephenson's Brigade of the 11th Division, and the enemy's fire was soon silenced. The Boers then moved to the south

along a series of ridges parallel to our main line of advance, with the object of turning our left flank, but in this they were checked by the Mounted Infantry and Imperial Yeomanry, supported by Major-General Maxwell's Brigade. As, however, the Boers continued to press on our left flank, and thus threatened our rear, I ordered General Ian Hamilton, who was moving eight miles to our left, to incline to his right, and close the gap between the two columns. As soon as his troops came up and Lieutenant-Colonel De Lisle's Mounted Infantry pushed well round the enemy's right flank they fell back on Pretoria. It was now dusk, and the troops had to bivouac in the positions which they were occupying—the Guards Brigade near the most southern of the forts defending Pretoria and within four miles of the town, Stephenson's next to the Guards, on the west, and Ian Hamilton's Column still further to the west, French, with the 1st and 4th Cavalry Brigades and Hutton's Mounted Infantry, towards the north of the town, Broadwood's Cavalry between French and Hamilton, and Gordon's Cavalry to the east, near the Irene railway station. Shortly before dusk Lieutenant-Colonel De Lisle, whose Mounted Infantry had followed up the enemy to within 2,000 yards of Pretoria, sent an officer under a flag of truce to demand in my name the surrender of the town. The reply to this summons was brought to me at 10.30 p.m. by Mr. Sandberg, Secretary to Commandant-General Louis Botha, who was accompanied by an officer of the Boer Army and by Lieutenant-Colonel De Lisle. The letter ran as follows:—"From Acting Commandant-General to His Excellency Lord Roberts, Field Marshal of the British Troops in South Africa, 4th June, 1900.—I have received your verbal message sent under your flag of truce. I am prepared to meet you to-morrow, personally, or through my deputy, to consult about the surrender of the town or the removal of the women and children from the town, but on this understanding, that should I or my deputy go to see you you guarantee our free return to within our lines. I herewith send you a deputy to arrange the place of meeting. Awaiting your Excellency's reply, with the greatest respect.—Your obedient servant (signed), LOUIS BOTHA, Acting Commandant-General." My verbal reply to Mr. Sandberg was as follows:—"If during the night I receive a letter from Commandant-General Louis Botha, in which he guarantees the unconditional surrender of the town of Pretoria on the 5th June, I will not move my force beyond the point now held by Lieutenant-Colonel De Lisle's troops until I have met Commandant-General Louis Botha at that point at 9 a.m., and discuss the terms of the unconditional surrender of the town of Pretoria with him. Should no message reach me from Commandant-General Louis Botha, offering to surrender Pretoria unconditionally, my troops will move on the town, as already ordered, at daylight to-morrow, the 5th June. Commandant-General Louis Botha is guaranteed a free return within his own lines after the interview." At the time named I received the following reply from Commandant-General Louis Botha:—"With reference to your verbal demand, this serves to state that I have resolved not to defend the town any further, and I trust you will protect the women and children and private properties. This is, of course, because I understand from your message that you will not give us reasonable time to remove the women and children, such as was granted by us at the time to the officer commanding at Ladysmith.—(Signed) LOUIS BOTHA, Acting Commandant-General." It is true that Commandant-General Joubert permitted the women and children to be moved to a camp a few miles from Ladysmith—a measure which, I believe, he greatly regretted, and which the Boer Army generally deeply resented, but the conditions of Ladysmith and Pretoria were, to my mind, very different. It was absolutely essential for us to drive the main body of the Transvaalers to some distance from the line of railway, which connected us with our base at Cape Town. We had a very limited amount of supplies in hand, and safe transport was daily becoming more uncertain, and it seemed to me evident that, if the Boers had any fears for their women and children, they would not have waited to remove them until we were at the very gates of their city. Moreover, there were no Boer prisoners in Ladysmith, whereas some 4,000 British officers and men had been captives in Pretoria for many months; some of them I heard had been hurried off by rail towards Komati Poort shortly before I had summoned the town to surrender, and I felt sure that Commandant-

General Botha's demand for time was only an excuse to enable the remainder of the prisoners to be taken away, or, possibly, in the hope that some fresh commandos might come to his assistance. I therefore ordered the 11th (Pole-Carew's) Division, with Colonel Henry's Mounted Infantry, to move within a mile of the town, and at 9 a.m. I proceeded to the railway station. The Boer Army had left during the night, and I was met at the station by the chief civil officials, who expressed their willingness to make the place over to me. It was settled that the public entry should take place at 2 p.m. At that hour the Third Battalion Grenadier Guards lined the principal square. The Union Jack was hoisted on the Raadzaal, and three cheers were given for the Queen. The 11th (Pole-Carew's) Division and General Ian Hamilton's Division then marched past. That afternoon I established my headquarters in the British Residency. The 14th Brigade was detailed to garrison Pretoria, and Major-General J. Maxwell was appointed Military Governor. The prisoners found in Pretoria numbered 158 officers and 3,029 men, about 900 others having been taken away the day before our arrival. It may be here mentioned that the forts surrounding the town were undefended, and that their armament had been dismounted and carried off. The place was quiet, and the population orderly, and, though most of the gold in the banks and all public treasure had been taken away, no damage had been done to private property.

For a day or two after our arrival at Pretoria, there was a very general opinion that the Boers had become disorganised, and that it was unlikely they would be able to oppose us in a body again. There was certainly some reason for this opinion, for on the 7th June I received visits from a Mr. Crawford, Mr. Abe Bailey, and some other gentlemen interested in the war coming to a conclusion who told me that Commandant-General Botha was anxious to meet me in order to discuss terms of surrender. Mr. Crawford was of Scotch descent, but had been for some years a burgher of the Transvaal. He and Mr. Bailey were both on friendly terms with the Botha family, and they informed me that Mrs. Botha wished to see me, but before doing so she would be glad if I would give her permission to visit her husband in his camp about fifteen miles off. I readily consented, and the next day, the 8th June, Mrs. Botha called on me. She told me she had seen her husband, who was most anxious to arrange a meeting with me with a view to surrendering. I agreed to meet the Commandant-General at any place he might select, and to give him a safe conduct back to his own camp when the interview was over. Mrs. Botha begged me to write a letter to that effect. I thereupon sat down and wrote the following letter:—"To Commandant-General Botha.—Pretoria, 8th June, 1900.—Field-Marshal Lord Roberts presents his compliments to Commandant-General Botha, and begs to inform him that he has had the great pleasure of receiving a visit from Mrs. Botha, from whom he learns that the Commandant-General would like to have an interview with Lord Roberts. It would give Lord Roberts great pleasure to meet the Commandant-General, and he would propose to do so at Mr. Mark's house 'Swartz Kopjes,' at 11 a.m. to-morrow, if that would be quite convenient to Commandant-General Botha. It is quite unnecessary for Lord Roberts to promise that, when the interview is over, Commandant-General Botha will be allowed to return to his own camp. Field-Marshal Lord Roberts will direct the outposts to-morrow to be withdrawn to the west of Mr. Mark's house, which he thinks will make the interview more agreeable to the Commandant-General." This letter I gave to Mrs. Botha to read, and asked her whether it was in all respects what was required, or whether she had any further suggestions to make. She replied that it was exactly what was required. She then proposed that she should write a few lines to be enclosed in my letter. Mrs. Botha wrote a short letter; I placed it in my envelope, which I sealed before her, and I at once despatched it by an officer, Captain Waterfield, of my Staff, with a flag of truce, to Commandant-General Botha's camp. Early on the morning of the 9th June, Captain Waterfield returned with the following reply from Commandant-General Botha:—"June 8th, 1900.—Your Excellency.—From your unsigned letter, dated this day, delivered to me by your messenger, it appears as if I had expressed a wish to have a personal interview with your Excellency. This, however, is wrong, as I, on my side, was brought under the impression by Mr. de Souza" (one of the Boer officials), "as well as by others, that Your Excellency wished to have an interview with me to make

certain proposals to me. The nature of these propositions were so entirely unknown to me personally, as also to the go-between who brought them, that I could not believe that they came from your Excellency, and I expressed the feeling to these people that if you wished to see me on any subject your Excellency could personally propose an interview. I do not see any reason for departing from this position. I have the honour to be, your Excellency's obedient servant—(Signed) LOUIS BOTHA, Acting Commandant-General of the Z.A.R." (For further correspondence with Commandant-General Botha on this subject see the Appendix at the end of this day's evidence, page 71.) This change in Commandant-General Botha's attitude was, I believe, brought about by two things. The Boers, no doubt depressed by our rapid advance, and by the Free Staters refusing to cross the Vaal, had become temporarily disorganised, but they had never suffered serious loss since the capture of General Cronje's force, owing to their determination not to wait until we came to close quarters with them, and they quickly discovered that trying marches, hard work, and the numerous posts required to guard the long line of communication, had considerably reduced the strength of my force. There is little doubt also that the many successful attempts to damage the railway in the Orange River Colony, and the capture of the Yeomanry at Lindley on the 29th May, and the 4th Battalion Derbyshire Militia on the 7th June—events which were very greatly exaggerated in the reports made to the Boer headquarters—gave them fresh hope. Whatever the causes may have been, Commandant-General Botha's force took up a strong position along the range of hills north and south of Pienaars Poort, from which they threatened Pretoria, and created a feeling of unrest throughout the neighbouring country.

Before finishing the account of "The military operations up to the occupation of Pretoria," it seems necessary to give some idea of what had happened in the southern and eastern parts of the Orange River Colony, where the troops under the command of Lieut-Generals Kelly-Kenny, Sir Henry Colville, and Sir Leslie Rundle had been employed, and the measures taken to prevent rail and telegraphic communication being so frequently interrupted. The force left with General Kelly-Kenny, at Bloemfontein, consisted of the 6th Division, a Brigade Division of Field Artillery, two 12-pounder naval guns, and a few details; numbering in all, about 8,000 men. During the month of May some companies of the Imperial Yeomanry arrived at Bloemfontein, but they were nearly all passed on to the front, and General Kelly-Kenny was throughout badly off in the matter of mounted troops. The garrison was employed in keeping order round Bloemfontein, escorting convoys towards Thabanchu, and guarding the railway to the north and south of the town. I was anxious about the Bloemfontein district when I started, but, fortunately, no troubles occurred until the first week in June, when General Kelly-Kenny found it necessary to proceed himself to the Sand River and Kroonstad, in order to look after the safety of the railway. His prompt action on that occasion helped materially to pacify that part of the country. Towards the end of May I began to get anxious as to the whereabouts of Lieutenant-General Sir Henry Colville's troops, and the 13th Battalion Imperial Yeomanry. Sir Henry Colville had remained in occupation of Winburg from the 6th to the 17th May, on which date, under orders sent him by the Chief of the Staff, Major-General Hector Macdonald left for Ventersburg with the 2nd Battalion Black Watch, 1st Battalion Argyll and Sutherland Highlanders, and a section of No. 7 Company Royal Engineers. Ventersburg was occupied the next day without opposition. On this day, the 18th May, the advance portion of the troops ordered to relieve Sir Henry Colville's force reached Winburg, and the following telegram was received by that officer:—"From the Chief of Staff at Kroonstad. Now that the 12th Brigade has commenced to arrive, the remainder of the 9th Division will march to Ventersburg at once. Your command will move on Lindley until further orders, which will be sent you. You should arrange for supplies for this march from Winburg. The 5th Battery Royal Field Artillery has been ordered to be railed to Winburg to accompany you, and you should await its arrival before marching. The Field Hospital, Highland Brigade details and the detachment (62 of all ranks) Eastern Province Horse, have been ordered to march from here to Ventersburg, starting to-morrow morning; these should arrive on the 20th at Ventersburg. The 13th Battalion

of Yeomanry, from Bloemfontein, has been ordered to join you at Ventersburg, and you will receive further information as to the date of its arrival there." On the 20th May, the Chief of the Staff sent two more telegrams to Sir Henry Colville:—(1) "Only two companies of the 13th Battalion Yeomanry, and possibly one mounted company of Lovat's Scouts will be able to join you at Ventersburg by the 23rd, but the other two Yeomanry Companies will follow as soon as possible." (2) "From Ventersburg the Highland Brigade will march to Lindley and thence to Heilbron. Regarding supplies, the Director of Supplies will communicate with you on the subject. Take as much as you can from Winburg. Brigade will be concentrated at Ventersburg, 23rd, reach Lindley 26th, and Heilbron 29th." Arrangements were accordingly made by Sir Henry Colville with the Director of Supplies by which six days' supplies for his whole force were taken on from Ventersburg. This was only just sufficient for the six days' march from that place to Heilbron, but transport was not available for any more. On the 21st May, the 5th Battery Royal Field Artillery arrived at Winburg; and on the 22nd, Sir Henry Colville having handed over Winburg to the 12th Brigade, started for Ventersburg. The troops which accompanied him from Winburg were:—2nd Seaforth Highlanders, 1st Highland Light Infantry, 5th Battery Royal Field Artillery, Naval Brigade—two 4.7 guns—and 7th Company Royal Engineers. Sir Henry Colville reached Ventersburg on the 23rd. The Yeomanry had not arrived, and during the day Captain Whigham, A.D.C. to General Macdonald, who had ridden out from Kroonstad, took a message from Headquarters, to the effect that there was no chance of their being in time to accompany the column from Ventersburg. Before leaving Ventersburg, on the 24th May, a telegram was sent to the Chief of the Staff, informing him that the Yeomanry had not arrived, and that General Colville intended to proceed without them. Ventersburg was then evacuated. The column bivouacked for the night at a place called Blaaubank, about a third of the distance from Ventersburg to Lindley. Shortly after Sir Henry Colville left Ventersburg, the Chief of the Staff, being then unaware that he had started, sent him the following telegram:—"Vrededorf Siding, 24th May, 1900. No. 18, Yeomanry are so late they cannot catch you at Ventersburg. You must march without them. They will join you later, via Kroonstad." This telegram was not received by Sir Henry Colville until after he had been some time at Heilbron. On the 25th the column marched to Spitzkop, where Sir Henry Colville was informed by a native that there were no British in Lindley, and that the town was occupied by the Boers. Lindley was reached late the following evening after an engagement at Blaaubank. The column crossed the north of the Valsch River, and skirting Lindley bivouacked for the night on the Heilbron road, about a mile from, and clear of the outskirts of the town. There was firing during the night, and, again, when the column moved off at 6.30 the following morning. The rear-guard was harassed during the whole of the 18 miles march, until the bivouac on the northern side of the drift over the Rhenoster River was reached. As the troops were preparing to continue their march the next morning (28th May), two men belonging to the 13th Battalion, Imperial Yeomanry, arrived with the following note:—"Colonel Spragge to General Colville. Found no one at Lindley but Boers. Have 500 men and only one day's food. Have stopped three miles back on the Kroonstad Road. I want help to get out without great loss.—(Signed) B. SPRAGGE, Lieutenant-Colonel, 27th May, 1900." Sir Henry Colville was told by the two men that Colonel Spragge was in command of the Yeomanry which should have joined his column at Ventersburg, but not being in time to meet him there, the companies had been sent from Kroonstad to join him at Lindley, where they arrived at 3 p.m. on the previous day (i.e., the afternoon of the day on which Sir Henry Colville's force left Lindley). After considering the contents of the note, and hearing what the men had to say, Lieutenant-General Sir Henry Colville decided to continue his march to Heilbron, and he accordingly sent the following reply to Lieutenant-Colonel Spragge:—"Your message received 7 a.m. I am 18 miles from Lindley and 22 from Heilbron. The enemy are between me and you, and I cannot send back supplies. If you cannot join me by road to Heilbron, you must retire to Kroonstad, living on the country, and, if necessary, abandon your wagons." This message was sent off in triplicate, a copy by each of the two Yeomen who undertook to try to return to Colonel Spragge by different roads, whilst a third copy

was entrusted to a native belonging to the Intelligence Department. Not one of the three reached Colonel Spragge, and, consequently, the reply was never received by him. After despatching the note, Sir Henry Colville continued his march towards Heilbron. After having marched about four miles on the morning of the 28th May, Sir Henry Colville's force was attacked by a number of Boers, under Commandants C. De Wet, Steenkamp, and Olivier. Being unable to proceed further, General Colville occupied "the cup-like formation of hills round Roodepoort," and in the evening, thinking it was desirable I should know that he might not be able to reach Heilbron on the 29th (the date named), he despatched the following telegram to the Chief of the Staff:—"Roodepoort, 18 miles south of Heilbron, 28th May, 5 p.m. Have fought on last four days, and to-day have only marched four miles, owing to the enemy contesting every position to my front, and seriously harassing my rear and right flank. He has two guns which out-range my Field Battery. I have only 35 mounted men left, two days' food, and about 150 rounds per man, small-arms ammunition. Enemy are still in force round me, and I fear my progress will be very slow. Had report from Colonel Spragge, Imperial Yeomanry, this morning that he entered Lindley yesterday, coming under heavy fire, and retired about five miles. As, owing to enemy between us, he could not join me here, I sent him orders to do so at Heilbron, if possible, by westerly route, or, failing that, to retire on Kroonstad. If I fail to reach Heilbron to-morrow morning it will be because I am stopped by superior force, and shall require assistance. Have had about 60 casualties in the four days, and ambulances have long been full. Colonel Hughes-Hallett and Lieutenants Doig and Radcliffe, Seaforths, slightly wounded; Lieutenant Bertram, Eastern Province Horse, prisoner.—(Signed) G.O.C., 9th Division." This message was taken to Railhead during the night by Sergeant Bettington, of the Cape Mounted Rifles, and telegraphed from there by Major Haking at 11.28 a.m. on the 29th May to the Chief of the Staff, Major Haking adding:—"I have telegraphed a copy of this to Lord Methuen, who, I hear, is at Kroonstad to-day." When morning broke on the 29th, General Colville found that the enemy had withdrawn from his immediate neighbourhood. He moved off at 5.45 a.m., and, by giving the Boers a wide berth, reached Heilbron about dusk. By noon the next day telegraphic communication with Railhead had been established, and the following telegram was sent to the Chief of the Staff, Army Headquarters:—"From General Officer commanding 9th Division, Heilbron, 12.15 p.m., 30th May.—Arrived here yesterday. Have two days' supplies only. Please arrange for convoy of rations, forage, and ammunition, both small arm and field gun, as early as possible. Enemy in neighbourhood. Yeomanry have not joined. Believe they returned to Kroonstad from Lindley." To this message the Chief of the Staff replied as follows:—"Germiston, 30th May, 1900.—Convoy of rations, forage, and ammunition, both small arm and field gun, is ready for you at Railhead. Please communicate with Railhead regarding its despatch to you. The only available escort at Railhead is Lovat's Scouts, unless your Yeomanry have got there. You should, therefore, arrange to meet the convoy, and give it sufficient escort to your neighbourhood." In my letter of the 4th May to Sir Leslie Rundle, I briefly stated the duty assigned to the troops under his command. They consisted of the 8th Division, 24 field artillery guns, 960 Imperial Yeomanry, which, with divisional troops, brought the total up to 8,700 men, and in addition the Colonial Division, numbering 2,640 mounted men and nine field artillery guns, under the command of Brigadier-General Brabant. Throughout the whole of May General Rundle's troops were constantly on the move, making long and harassing marches and being engaged almost daily with the enemy on the Thabanchu-Ladybrand road. By the 18th May the Boers had been gradually driven northwards, and General Rundle's force was chiefly distributed along the line—Winburg, Brestler's Flats, Trommel, Clocolan. A week later the headquarters of the 8th Division moved forward to Kopjes Kraal and the Priory, while the Colonial Division extended eastwards as far as Ficksburg. On the 25th General Rundle's headquarters, with the 16th Brigade, occupied Senekal, and the Colonial Division moved to Hammonia and Klip River Nek. Just before noon on the 28th May General Rundle received a letter, dated

10 Feb. 1903.

27th May, by a native runner, from Lieutenant-Colonel Spragge, Imperial Yeomanry, reporting that he had arrived at Lindley with 500 men, that he had only one day's food, and was in a position from which it was difficult to extricate himself without help. General Rundle considered that as Lieutenant-Colonel Spragge had only one day's food on the 27th May, it was not possible for him to render effectual assistance from Senekal—a distance of 40 miles—and he decided to move at once on the Bethlehem road, hoping to relieve the pressure on Lindley by engaging the Boers in that direction. At 2 p.m. the Headquarters 8th Division, 2nd and 76th Batteries Royal Field Artillery, six companies Imperial Yeomanry, 16th (Brigadier-General Campbell's) Brigade, 2nd Battalion West Kent, and Driscoll's Scouts moved to Sand Spruit, and early the following morning General Rundle came into contact with the enemy at Biddulphsburg. The Imperial Yeomanry moved round to the north of Biddulphsburg, and the Artillery opened fire on the farm, which was attacked shortly afterwards by the 2nd Battalion Grenadier Guards. Early in the fight the long veldt grass was set on fire, whether accidentally by our troops or purposely by the enemy was not known; the flames spread rapidly, and as it was through their fire the Grenadiers had to advance, several of their wounded were badly burned. Our casualties were 39 killed and 117 wounded. The report of the dangerous position of Lieutenant-Colonel Spragge's Imperial Yeomanry reached me at Germiston on the 30th May, and I at once telegraphed to the officer commanding at Kroonstad:—"Clear the line. Send special messenger after Lord Methuen, and tell him that Lieutenant-Colonel Spragge reported to Senekal on the 27th inst. that he was in a difficult place three miles on the Kroonstad side of Lindley, with only one day's food, from which it was difficult to get away without help. Methuen should relieve Highland Brigade in first instance, and then see what can be done for Spragge's Yeomanry. Acknowledge receipt.—(Signed) ROBERTS." Lord Methuen replied to me as follows from Kroonstad:—"30th May.—Yours of to-day. Leave with Yeomanry and battery for Lindley now. Douglas follows to-morrow morning. Paget ordered to join me there." After going a short distance, Lord Methuen received a message from Lieutenant-Colonel Spragge, dated 29th May, reporting that he was heavily pressed by the enemy and was short of food and ammunition, but hoped that he would be able to hold out until the 2nd June. Lord Methuen at once pushed on with his mounted troops, and reached Lindley at 10 o'clock the following morning, having covered 44 miles in 25 hours. Unfortunately, he was too late, as Lieutenant-Colonel Spragge had found it necessary to surrender two days before. Methuen, on nearing Lindley, attacked the Boer force, about 3,000 strong, and after a running fight, which lasted five hours, completely defeated them, and occupied the town. On receiving this report, I directed Lord Methuen to leave one of his Infantry brigades (Paget's) in Lindley, and to march with the other (Douglas's) to Heilbron with supplies for Sir Henry Colville's force.

Anxious as I was not to leave the Boer forces undisturbed so close to Pretoria, I did not consider it advisable to proceed against them until steps had been taken to place the railway between Kroonstad and the Vaal in a comparatively safe condition. The whole of this part of the line was threatened, and, in places, had been seriously damaged by the enemy. The possibility of such mishaps had been clearly seen by me when I determined to advance on Pretoria, for I knew I was not sufficiently strong in numbers to make the railway line absolutely secure and at the same time have a force at my disposal powerful enough to cope with the main army of the Transvaal, supported by forts and guns of position. Now, however, that I was in possession of the capital, and the majority of the prisoners had been recovered, I was able to take immediate steps to strengthen the posts along the railway. The liberated prisoners were armed and equipped and despatched to Vereeniging and stations south of the Vaal, and I sent Lord Kitchener to see to their disposal and communicate with Lord Methuen, who was conducting operations between the railway, Heilbron, Lindley, and Kroonstad. In a few days Lord Kitchener reported that Lord Methuen had attacked and defeated the commando under Christian de Wet at the Rhenoster River, that the Imperial Yeomanry Field Hospital, which had fallen into the hands of the Boers when the Derbyshire Militia surrendered, a few days

before, had been recovered, together with the officers and men who had been wounded on that occasion, and that rail and telegraph communications had been restored.

I will now bring my narrative to a conclusion by giving an account of the battle of Diamond Hill, where the Boer army had retired, and from which it was necessary to dislodge them, on account of the threatening position they occupied with regard to Pretoria. On the 11th June the attack on the Pienaar's Poort position was commenced. The troops available consisted of about 20,000 men with 74 guns, and were thus disposed:—The 11th (Pole-Carew's) Division with the Naval and siege guns at Christenen Hall, opposite Pienaar's Poort; Lieutenant-General Ian Hamilton's column, about six miles further south, at Zwaal Poort, the front being covered by Lieutenant-Colonel De Lisle's Mounted Infantry, the exposed right flank by the 2nd (Broadwood's) Cavalry Brigade and Legge's Mounted Infantry, and the rear, which was threatened by the commando from Heidelberg, by the 3rd (Gordon's) Cavalry Brigade, and Bainbridge's Mounted Infantry. Colonel Henry's Mounted Infantry closed the gap in the hills at Frank Poort to the north of the Eerstefabrieken Railway Station, and General French, with the 1st (Porter's) and the 4th (Dickson's) Cavalry Brigades, three batteries of Horse Artillery, and General Hutton's Mounted Infantry, was on the extreme left. The division was very weak, numbering not more than 1,800; some of the regiments indeed were skeletons, scarcely stronger than a squadron. The distance from General French's left to General Ian Hamilton's right was about 25 miles. The main Boer position at Pienaar's Poort was so strong naturally that to have assaulted it by direct attack would have involved a serious loss of life. I therefore determined to develop flanking operations, but the long distances to be traversed, and the defensive advantages which the nature of the ground afforded the Boers, greatly impeded our advance. I soon, however, became aware that the Boer leaders meant to follow our example and try to outflank us, with the result that the strength of their centre was considerably diminished, whilst the wings of their army were so strong, that Generals French and Hutton, on my left, and Brigadier-Generals Broadwood and Gordon on my right, informed me by signal that they were only just able to hold their own. Broadwood was, indeed, at one time hardly pressed, being under a heavy artillery fire from his front and left, whilst he was simultaneously attacked on his right rear by a commando from Heidelberg. The enemy came on with great boldness, and, being intimately acquainted with the ground, were able to advance unseen so close to "Q" Battery, Royal Horse Artillery, that it was with some difficulty they were kept off; while at the same time another party made a separate attack on Broadwood's right flank. To drive off this second body and help the guns, Broadwood ordered the 12th Lancers and Household Cavalry to charge. Both charges were successful, inasmuch as they relieved the immediate pressure on the guns and Broadwood's right flank, and caused the enemy to revert to artillery and long range rifle fire; but these results were obtained at the cost of some 20 casualties, amongst them being the gallant Lieutenant-Colonel the Earl of Airlie, who fell at the head of his regiment, the 12th Lancers. Meanwhile, Lieutenant-General Ian Hamilton's infantry were pressing on as fast as they could to the assistance of the cavalry, and as each battalion came up it deployed for attack, and very soon became hotly engaged. From my own position I could clearly see (though Ian Hamilton could not) a large number of Boers galloping away in great confusion from a low ridge some $\frac{3}{4}$ -mile in front of his infantry, and about $\frac{1}{2}$ -mile short of Diamond Hill, near Rhenosterfontein. Diamond Hill appeared to me to be the key of the formidable position taken up by the Boers on this flank, and I saw there was every probability of our troops capturing the subsidiary ridge, and thereby gaining certain facilities for a further advance on the morrow against Diamond Hill itself. I, therefore, determined to press the attack home at this point next day, and ordering all the troops along our 25 miles of battle front to bivouac on the ground they held, I made arrangements to reinforce General Ian Hamilton by the Guards' Brigade under Major-General Inigo Jones, and two naval 12-prs. under Captain Bearcroft, R.N. I returned to Pretoria in the evening, and as soon as the reports of the day's proceedings reached me I telegraphed at 3 a.m. on the 12th June these orders

to Lieutenant-General Pole-Carew:—"You must support Ian Hamilton's fresh attack this morning. Hold on to your centre in strength and with your 5-inch guns, and extend your line to your right with some of the troops you had unemployed in your rear yesterday, and you will probably find a good position for your naval guns somewhere about the kopje from which Ian Hamilton was heliographing. You might with advantage bring a certain portion of Henry's Mounted Infantry to strengthen your position about Mark's Farm, but he must have sufficient to hold the ridge of hills on your left, and thus prevent the enemy from getting round your left flank. Communicate this to Ian Hamilton, and, if possible, to French also.—(Signed) ROBERTS." I was on the ground again early on the 12th June, and the movements as arranged the evening before were at once commenced. General Pole-Carew despatched the Guards' Brigade to support General Ian Hamilton's attack, and placed his two naval guns in position from which they could cover the advance, and from which they succeeded in silencing two Boer guns, which, firing at a distance of 7,000 yards, our Field Artillery had been unable to cope with. General Ian Hamilton told off the 3rd (Gordon's) Cavalry Brigade with one Infantry Battalion to guard his right rear, and the 2nd (Broadwood's) Cavalry Brigade to occupy the enemy on his right, whilst he attacked Diamond Hill, under cover of his artillery fire, with the 1st Battalions of the Sussex and Derbyshire Regiments, and City Imperial Volunteer Battalion, belonging to Major-General Bruce Hamilton's Brigade. The progress was slow at first, but about two o'clock Brigadier-General Ridley, who was commanding the Mounted Infantry with General Hamilton's column, rode over to discuss the situation with his chief. The order he received was to prolong to the right and to press the enemy's left with the whole of the Mounted Infantry. Lieutenant-Colonel De Lisle, who was covering the advance, accordingly moved forward rapidly, and after occupying Rhenosterfontein Farm, pushed towards a spur from which it was necessary to turn out the enemy before the infantry could attack the main position. This point was carried with great gallantry by the 6th Mounted Infantry and the New South Wales Mounted Rifles, with files extended to 30 yards. Thus, assisted by the Mounted Infantry, General Ian Hamilton's infantry moved up the slope of the hill under artillery fire from both flanks, as well as heavy rifle fire from the west. The steadiness with which the long lines of the 21st Brigade and the Battalion of the Coldstream Guards, the leading Battalions of Major-General Inigo Jones's Brigade, moved forward, neither faltering nor hurrying, although dust from bullets, and smoke from bursting shells hung thick about them, satisfied me that nothing could withstand their assault, and about four p.m. I had the satisfaction of seeing that the leading files had reached the crest. Up to this time the casualties had not been severe, but directly the troops appeared on the crest, a very heavy fire was opened upon them by the enemy, who were well-sheltered by rocks at a distance of 900 yards, and General Bruce Hamilton, recognising that artillery support was needed before a further move forward could be made, ordered up the 82nd Field Battery to advance up the hill. It was a somewhat unique position for a Field Battery to be brought into the firing line upon the top of a hill well within a mile of the enemy's main position. It had, however, the desired effect, for very soon after the guns came into action the Boer fire lessened. The fact that our guns and Infantry had effected a lodgment on the main position from which, next morning, they must certainly pierce the left centre, coupled with the success of Lieutenant-Colonel De Lisle, who had actually penetrated the Boer left and threatened their line of retreat, caused Commandant-General Botha to retire. I returned to Pretoria again that evening. There was considerable unrest in the town, which was very lightly held, and as I was unaware of the Commandant-General's intention to retire, I was preparing to continue the battle the next day, the 13th June, but at 2 a.m. I received the following message:—"From General Pole-Carew to Lord Roberts, 12th June, 1900, 10 p.m. Have just returned from ridge, south of Donkerhoek, where hot rifle and gun fire continued till dark. General Hamilton reports that he has to-day taken and occupied, with assistance of Guards Brigade, 82nd Field Battery, and 12-pounder Naval guns, main ridge Kleinfontein. But position on north of Donkerhoek still occupied by enemy, and after very heavy gun and rifle fire having failed to dislodge them, came to conclusion attack would be too costly.

General Hamilton believes casualties are moderate, considering fighting has lasted all day, and firing has been continuous and heavy. I have settled with General Hamilton that Guards Brigade and my 5-inch guns shall hold south ridge of Donkerhoek to-morrow, while he works down the captured ridge towards Rhenosterfontein, until he gets favourable ground to break through and try to let the Cavalry through. The Boer position on north of Donkerhoek is higher than ours, and, therefore, commands it to a certain extent, and the Hoek is itself almost impossible to attack in front. I have sent up my 5-inch and 12-pounder Naval guns to rake Boer position from south, whilst Hamilton attempts turning movements, and I propose to advance 18th Brigade simultaneously with Hamilton's movement, covered by Naval 4.7 guns. Do you think this movement would leave road to Pretoria too open? I hardly think it would signify if enemy is still blocked at Tiger Poort." In reply, I telegraphed to Lieutenant-General Pole-Carew as follows:—"Your report received. You must hold on with the Guards Brigade and guns to the position you now occupy at Donkerhoek" (that is the Boer name of Diamond Hill), "and you might strengthen them by calling up the Field Battery which remained unemployed during yesterday behind the hill on which we were standing. Do not attempt any forward movement until Ian Hamilton has worked his way in the direction of Elands River Station. If he can get there we ought to effectually prevent the enemy getting away their guns. You do not say anything about the present position of Broadwood or Gordon, so I cannot give any instructions as to their movements, but be sure to keep a sharp look out to your right rear. I am sending a battalion and a battery to Kameeldrift (521) to reinforce French, in case he may require assistance. Send an officer at 9.20 a.m. to where the 4.7-inch guns now are, to show me where I can see what is going on, which I could not do from the position I was on yesterday. Under no circumstances should you move forward the 18th Brigade. They could not assist in driving the enemy off their present position, and would only be brought under fire from it unnecessarily. It is not impossible that Henry might be of some assistance by working round north of the railway towards Edendale (458), but do not let him get seriously engaged, as we cannot support him." On the 13th June I started off at daybreak for the scene of the previous day's fight, and on my arrival I heard that the Boers had evacuated Diamond Hill, and were being pursued by Lieutenant-General Ian Hamilton's mounted troops. I rode all over the ground, and was surprised to find how little we had suffered, considering the strength of the enemy's positions. In their desire to outflank us they had dangerously weakened their centre, and this enabled it to be pierced with comparative ease. Soon after my return to Pretoria that night, I received the two following messages:—"From General Ian Hamilton to Lord Roberts (through General Pole-Carew), Elands River Station, 2.30 p.m., 13th June, 1900. All well here. De Lisle is pursuing rearguard of Boers some seven or eight miles east. He has been firing his pom-poms, and Boers have been firing their 6-inch gun at him. Broadwood is working on his right-rear with his brigade, and one corps mounted infantry, and Gordon is probably with him, but still further back. A force of some 500 Boers was moving parallel to De Lisle, or slightly in advance of him, some five miles north of the railway. From where he was De Lisle could not see these men." "From General Ian Hamilton to General Pole-Carew for Lord Roberts: Your message ordering retirement on Silvertown. De Lisle and Broadwood are in contact with large force of enemy seven miles east of this, along railway. It is 3.20 p.m., I cannot therefore retire to-day, but will do so to-morrow, unless, of course, mounted troops are unable to disengage, which I do not anticipate. P.S.—I understand I am to retire even if I see prospect of scoring some success. Kindly acknowledge receipt to Elands River Station where I now am." To the foregoing I sent the following reply through General Pole-Carew, who was then at Struben's Farm:—"Pretoria, 11 p.m., 13th June, 1900. Please forward the following message to General Ian Hamilton: Your messages of 2.30 p.m. and 3.20 p.m. to-day, just received. You need not retire to-morrow, but do not go beyond your present position and disengage your troops, as I do not think it possible they can do much damage to the enemy, and if they get seriously engaged, to support them would put a great strain on us. I want you and them to work elsewhere, work which is only delayed for want of mounted troops, which will become fewer and fewer

every mile the enemy is followed. I am very pleased that De Lisle has been able to keep so long in touch with the enemy, but, with the railway at their disposal, it seems scarcely possible any great advantage can be gained by following them up further." I added the following direction for General Pole-Carew's own guidance: "You will see the orders I have sent to Hamilton. As long as he is at Elands River Station the Guards Brigade must hold on to their present position. I trust they will not be called upon to go further forward, as I am very averse to operations being carried on so far from Pretoria. If you think it desirable you might concentrate the 18th Brigade near Mark's Farm, with Henry's corps on the right ridges to the east and north. Keep Botha's men until to-morrow when I will send you my reply. We will send you supplies to Eerstefabrieken Station. I am afraid that going on to Bronkerspruit would be quite useless, as the wily Boer could hold us up there with a small rearguard, whilst he got all his guns and valuables away. Moreover, as I have told Ian Hamilton, we must foster our resources for work elsewhere. Let me know if the railway between Eerstefabrieken and Elands River is in any way damaged, as I am anxious to send out Ian Hamilton's supplies by rail.—(Signed) ROBERTS."

DIAMOND HILL.—LIST OF CASUALTIES.

Missing and Prisoners - -	1	3
Total - - - -	25	137

(After a short adjournment.)

13128. (Chairman.) (To the Witness.) I am sure the Commission is extremely obliged to you for the trouble you have taken in drawing up the narrative of the operations up to Pretoria which you have now concluded. There is one point on which I think we should like just to be a little clearer, and that is with regard to the proceedings at Paardeberg. In the first place, may I ask, who was in the actual command during the day of the first fighting before you arrived?—That was the 18th February?

13129. Yes?—The senior officer was General French, but he was not near enough to take any command of the infantry, and General Kelly-Kenny was in command.

13130. I asked the question, because you say in your evidence that you instructed Lord Kitchener to be present, in order to keep up communication with yourself?—Yes. When I was moving up over the Riet towards Jacobsdal I sent General French to relieve Kimberley, and supported him by the 6th Division under General Kelly-Kenny, with orders to go as far as the Modder River. It was impossible for me at that particular time to know what General Cronje would do when he found his communication with Bloemfontein threatened. My own belief was, and it turned out to be correct, that he would make for Bloemfontein, and would probably move along the Modder River, but I could not be quite sure, and I wanted some person who would be a means of communication between me, General Kelly-Kenny, and General French, and I sent Lord Kitchener, telling him to join General Kelly-Kenny, and keep me informed of any news he might hear of General French, or any movements General Kelly-Kenny might decide to make.

13131. I suppose it is not the proper duty of the Staff Officer to take command, unless he happens to be the senior officer present?—Certainly not. I never intended Lord Kitchener to take command. He went to the 6th Division as my representative.

13132. (Sir Henry Norman.) And he did not take command?—No, he did not.

13133. (Chairman.) You mentioned in your narrative that there was serious fighting on the 18th?—Yes; we lost something like 800 or 900 men.

13134. I think after your arrival on the 19th you were at first of opinion that it would be necessary to attack

again the next day, principally because of the increase of the enemy in strength, and that it might have a bad effect in the Orange Free State if you were checked?—Yes. When I arrived the next day I examined the position, and I saw it was a very difficult one to attack, on account of the amount of open ground round it. I was afraid, however, that it might be necessary to attack, as I heard that the Boers were hurrying up in all directions to relieve General Cronje, and I was afraid that, unless we settled with him first, we might have to deal with him and the relieving forces at the same time. The next day, however, I went round the positions more carefully, and I came to the conclusion that it was better to beat off any reinforcements who might arrive rather than attack Cronje himself, because he was in a position where we should have suffered very severely.

13135. And, as a matter of fact, on the next day, the 20th I think, you did beat off certain parties of the Boers?—Yes, we did.

13136. And again on the 23rd?—The 23rd was the chief day; we beat off more that day than on any other.

13137. On the 23rd you beat off large reinforcements which were advancing to the Boers, and that confirmed you in your opinion that you had better not attack Cronje's position?—Yes. I did not attempt to attack the position until we had crept up pretty close to it, and on the morning of the 27th February the Canadians had got within 80 yards of it.

13138-39. And it was the pushing forward of the trenches in that way, and the dashing advance made by the Canadians, which eventually brought Cronje to send in his surrender?—Yes, he suffered, of course, terribly from our bombarding all those days, and the conditions from the dead animals being inside the camp must have been something terrible.

(Chairman.) I thought I would like to ask those two questions, in order to supplement, if I may say so, the narrative on that point, and to make it clear how the events followed each other.

13140. (Sir Frederick Darley.) Did General Kelly-Kenny actually direct the attack of the 18th?—I do not know who gave the orders, for I was not on the spot, but General Kelly-Kenny was in command.

13141. (Chairman.) But, at any rate, from the view you took of it on your first arrival that was not an unreasonable thing for the officers who were there on the 18th to do?—Not at all.

13142. Of course, we have got to consider in what way we are to use the information which you have been so good as to give us in these two papers, because it is not our business to write a history and, as we have told you I think before, we do not wish to pass any judgment as a Commission on questions of strategy or tactics, or to go back upon decisions on the conduct of individual officers; but I suppose that the somewhat indefinite reference to "military operations" in our terms of reference means that we are to try and apply any incident which occurred during the course of those operations to defects which they show to exist in the Army, and especially in the training of the men and officers. The first general question I should like to ask in that connection is, whether in preparing this narrative you had that view of the situation before you?—You mean to say, whether I had confidence in the troops under my command?

13143. No, but whether in writing this narrative which you have been so good as to set before us, you have drawn sufficient attention to any incident therein which illustrates defects in the Army, or in the training of the men and officers?—No, in that narrative I have given a series of facts, as well as the orders which I gave to, and the information which I received from, the subordinate commanders. I have not drawn any deductions from it in any way.

13144. Of course, you can easily see that in your position as Commander-in-Chief in South Africa, and now in England, you are the witness before all others to whom, if we are to get evidence of that kind, we ought to look for guidance. May I refer you to some of your previous evidence? For instance, you spoke of the training of the men and officers in evidence which is particularly in Questions 10442 onwards, and you there spoke of the training of the men and officers in general terms. Do you think there is any necessity to emphasise the suggestions you there made with reference to the incidents you have given us in your narrative? May I give you one particular instance, perhaps, as

bringing it to a point. In both cases, in Question 10442 of the soldier, and in Question 10447 of the officer, you mentioned as the cause of failure a disinclination to accept responsibility?—Yes, on the part of the officers.

13145. Yes, and you mentioned it also with regard to the men?—What I intended to convey was the necessity for training the men to act as individuals and not as machines, to make them to be more dependent on themselves, and to think more for themselves.

13146. Could that be illustrated from your narrative of the events?—I think it could, for I more than once alluded to the great anxiety I felt in regard to my communications being held in many places by partially trained troops, such as the Militia and hastily raised Yeomanry. It is very difficult to say whether an enemy, such as the Boers, who were more like tribesmen on the frontier of India and in Afghanistan, are more troublesome to an ill-trained force than would be an organised army. In many ways I think that the Boers, acting as they did on their own individuality and from their knowledge of the country, were more difficult to deal with than ordinary troops would be; but, whether this was the case or not, the result was that our ill-trained troops often led me into great difficulties—the capture of the Derbyshire Yeomanry at Rhenoster River, the capture of the Irish Yeomanry at Lindley, and in many other cases where there were smaller detachments, both of Militia and Yeomanry, they showed what a danger it was to depend upon troops who were not thoroughly disciplined and properly trained.

13147. You trace the disasters at Rhenoster River and Lindley to the fact of the troops being untrained?—In great measure.

13148. I think you referred to the disaster at Lindley in Question 10,632, when you said: "These small parties sometimes were attacked by a large body of the enemy, and if one gave way it endangered the position of the others. I know, when I read the account of what occurred at Lindley, that was quite my impression. There the commanding kopje, which was held by a small party, was overwhelmed by the enemy, and the moment they got possession of that they really commanded all the other places"—Yes.

13149. Do I understand that you think that would not have occurred if the Yeomanry had been fully disciplined troops?—I do not think it would have been nearly so probable. Disciplined troops have much more confidence in each other, and, I think, that is the reason why the Yeomanry probably had to give in so quickly.

13150. Without any reflection on the courage and intention of the men, that is a danger which arises from the Government falling back upon untrained troops?—Yes, I think it is a great danger.

13151. And that was a matter which did attract your attention and caused you great anxiety, because of the great length of your communications, on which you were dependent upon untrained troops?—Yes. I took with me mainly trained troops, and had to trust the guarding of my communications to more or less untrained ones, and this naturally added to my anxiety.

13152. Do you think any of the interruptions which occurred in your communications arose from the same cause?—I think so in some cases.

13153. There were interruptions of the railway communications?—At one time during the early part of June, in fact the whole of the month of June, there were interruptions almost daily.

13154. Did those generally arise where the railway was guarded by those untrained troops?—I think so.

13155. So that the deduction you draw from that is, that in the organisation of the Army for the future we must bear that fact in mind?—I do not think we could venture to put an army into the field of the size we had in South Africa, unless we had more trained troops. It increases very considerably the responsibility and anxiety of a commander to require him to make use of partially trained Militia, and hastily raised Yeomanry.

13156. You have spoken to the character of the Army; what would have happened, supposing your enemy had been a European Power with trained troops?—That is somewhat difficult to judge. I found in Afghanistan that tribesmen were much more difficult to deal with than the Afghan Army.

13157. Yes, but that was scarcely a trained Army?—They were trained in a way and with a certain organisation,

and I think in South Africa our troubles were almost more after the Boer Army broke up and became disorganised than when they were organised. At the same time I think it would be running a very great risk indeed to depend upon insufficiently or hastily trained troops against an organised power.

13158. Would that apply also with regard to home defence?—Yes, to a great extent; but not so much as in a war in a foreign land, for we should be fighting on ground with which we are familiar, and that is a great advantage.

13159. Of course, in home defence you would not have the long lines of communications?—No, and we should have a knowledge of our own country.

13160. (Sir George Taubman-Goldie.) What would you put as the shortest time in which an infantry soldier could be really trained under severe discipline?—It depends; in a Conscript Army, like the German Army, two years are considered enough; we think it requires three years with the ordinary class of our recruits.

13161. And in France it is one year?—I think those are Volunteers.

13162. In France they have one year for those who are able to pass a certain examination?—Yes, for educated people; that makes all the difference. If we had conscription or educated recruits to deal with one year's training would probably suffice.

13163. (Chairman.) In Question 10,447, in which you speak of the officers you also speak about the staff, and you say: "Officers were often called upon to take up duties of which they had no previous knowledge; and while it was remarkable in the great majority of cases how quickly they became efficient, the mistakes that were made by the staff had most serious consequences. Many instances of indifferent staff-work might be quoted"; that, I suppose, could be done from the narrative you have given us?—I allude to the difficulty I sometimes experienced in getting accurate information with regard to positions, the value of ground, and how troops could best be disposed. It was in such matters that I did not always get sufficient assistance from the staff.

13164. But that there were shortcomings is undoubted?—Undoubted.

13165. But you think that having pointed out that, and also that the entire staff should be thoroughly trained, and that a definite system of carrying out staff duties should be laid down, you do not think it necessary to go into details of personal shortcomings?—No, it would be very inconvenient to do so.

13166. I wish just to bring out exactly the position in which you and we respectively stand on the matter; that is your opinion—that it is better not to go beyond that statement?—I think so.

13167. You mentioned to-day a deficiency in the medical arrangements at Kroonstad?—Yes.

13168. Was that a deficiency which you think ought to have been foreseen and provided for?—I telegraphed to the Principal Medical Officer that I thought he ought to have anticipated our requirements, and sent up medical officers quicker than he did. We were very hard-pressed at Kroonstad to look after the number of men seized with enteric fever. We had great difficulty about beds and mattresses, and had to ransack every little place in the little town for them, and we filled the church, the hotels, and all available houses with the sick. That made me send the two telegrams to General Wilson that I quoted in my narrative.

13169. But that was an event which arose out of the circumstances of the war?—Quite so.

13170. And not a defect of the organisation of the Service?—No, it came on unexpectedly and very severely.

13171. You also mentioned in the same telegram I think, that you desired the appointment of a special officer, practically a sanitary officer, at Bloemfontein?—Yes.

13172. The question has been raised in other evidence, I think, whether that ought not to be the general rule?—I think it is necessary.

13173. That there should be a separate sanitary officer?—Yes, I am not sure whether I mentioned it in the first part of my narrative, that I found hospital tents pitched on what was one of the chief sources of the water supply at Bloemfontein; any experienced sanitary officer would at once have seen that that was a wrong thing to do.

Field
Marshal
The Right
Hon. Earl
Roberts,

V.C., K.G.,
K.P., G.C.B.,
O.M., G.C.S.I.,
G.C.I.E.

10 Feb. 1903.

13174. And you would attach a separate sanitary officer to what—every Division?—That would depend on the size of the force, but there ought to be a certain number of sanitary officers and one principal man, who would undertake the work of a Division.

13175. I do not know whether in the course of your evidence you said anything special of the Post Office and Telegraph Services?—I do not know that I did, but they were most efficiently performed; it was really wonderful the way the telegraph kept up with us, and the rapidity with which repairs were made. I allude to the field telegraph, or you mean the main line telegraph?

13176. I mean both?—The main line telegraph was extraordinarily well done, and the way repairs were made, lines renewed, and new lines started was quite admirable throughout. I think the postal arrangements after the first few weeks were as good as they possibly could be considering the enormous difficulties that had to be contended with, owing to the way regiments were necessarily moved from place to place. Just at first and before the Middlesex Volunteers came out in large numbers and some Postal officers, the Post Office at Cape Town was overwhelmed, and things looked very unsatisfactory, but the moment these reinforcements arrived it worked very well indeed. I think the field telegraph was worked very well indeed, also; in fact, I may say extremely well. On every occasion the front of battle was very considerable, varying from 12 to 18 and up to 25 miles, over which I had communication, sometimes by visual signalling, occasionally by heliograph, but in most instances by field telegraph. The work was very well done by the Engineers.

13177. Did the field cable follow up the principal divisions?—Yes; and very well done it was by the Engineers.

13178. (Sir George Taubman-Goldie.) Who had charge of the main line telegraph—the Engineers, too?—The Engineers had charge of the main line telegraph. Lieut.-Col. R. Hippisley was put in charge, assisted by Major Hawkins, Captains Godfrey Faussett, J. Fowler, and C. de W. Crookshank, but it was all done by the Engineers.

13179. (Chairman.) I noticed in your narrative you continually spoke of receiving telegrams from the different generals in different parts of the country. Was that done to any large extent by field telegraphs?—No; that was chiefly by the main lines, and how they were kept up was wonderful work, too.

13180. The field telegraph comes in chiefly in the question of an engagement?—Yes; and also when Generals French and Ian Hamilton were protecting my flanks I communicated with them very often by field telegraph.

13181. There is one other service I should like to mention—the Army Service Corps?—I think I have said throughout that the Army Service Corps did admirably as regards the Supply Department. I mentioned before that the transport department had to be reorganised, but as regards the matter of supply the Army Service Corps throughout did admirably.

13182. You mentioned to-day several cases where the supplies got very near their limit, but you do not attach any condemnation to the Army Service Corps on that account?—No; they are not to blame in any way for that. The supplies were available, as far as they could bring them up. It was the interruption of the railway that prevented the supplies coming.

13183. There is one other question, and that is that you have quoted several telegrams from Sir Redvers Buller about operations from the side of Natal; you said you could not quote at the time what force he had with him?—No; I could send it to you.

13184. But it was a considerable force?—Yes, he had a very considerable force. I judged he had quite enough force to guard Natal and to move forward.

13185. Two Divisions, I think you said?—Yes; he had Warren's Division, which was the Fifth, I think, and the First. He must have had two Divisions. I do not quite know how many men he had altogether.

13186. There was a considerable delay after the relief of Ladysmith in his taking any forward step; was that necessary in consequence of the condition of the troops in Ladysmith?—I understood from him that the troops wanted some weeks' rest—not only the animals, but the men.

13187. On the map, it looks as if a movement from Ladysmith into the Free State might have helped your advance considerably?—Yes. I rather pressed General Buller to send a Division into Vrede; that was to the east of the Orange Free State, and was where Steyn took his Government to. I think it would have been the wisest thing to do, but the General preferred to remain by the railway, and the reason that he gave for it was that he could not find sufficient waggons to carry the necessary supplies and things for a hundred miles' march. That appeared to me to justify the opinion I have expressed as to the necessity for improving our transport arrangements.

13188. Did that advance on Vrede imply his advance, which he afterwards carried out, to Newcastle, or could it have been made further south, by Van Reenen's Pass?—At first it might have been, but I did not care so much about General Buller moving towards Harrismith, because I was not able to help him with General Rundle's force. Rundle had not been able to extend sufficiently north or east to help him. Later on, especially when General Buller impressed on me that Laing's Nek was so very strongly held, I thought that he had better avoid it by going through Botha's Pass, by Vrede, and then from Vrede to Standerton.

13189. Those were the telegrams you have quoted us to-day?—Yes.

13190. You did not press him to advance on Harrismith earlier?—No, I did not, because I did not think I could help him in any way, nor did I think it would have helped me very much at that time.

13191. (Viscount Esher.) In Question 10447, from which the Chairman has quoted, you say: "Staff officers cannot be improvised," and then you go on to say: "I am decidedly of opinion that we cannot have a first-rate Army unless we have a first-rate Staff, well educated." What is your scheme for training Staff officers?—A properly organised Staff College, Staff rides, and manœuvres.

13192. What is the practice in India with regard to the training of Staff officers? Does it differ from that in this country?—No, not materially. Manœuvres are more frequently held in India than in this country, and officers get more practical work in the field, owing to the many expeditions which take place.

13193. Am I right in supposing that you sometimes take a young officer and make him a Quartermaster-General's Assistant—or you did formerly, at any rate—and then that is a Staff appointment, and he continues to hold it?—That used to be so in the old days, when they were appointed to a department and remained in it. But that was knocked on the head when the amalgamation took place, as far back as 1860, and from that time the Staff has been the same as in this country, appointments being held for five years.

13194. Which do you think the better system of the two?—I think the present system better than the other. It gives many more officers the chance of being educated for the Staff.

13195. That is true, of course, but, on the other hand, are the officers that are so educated as well fitted for Staff officers as they were under the old system?—Perhaps not, but under the old system only a limited number of officers received Staff training. Now amongst the juniors you can pick lieutenants, captains, and majors who have had Staff training, and when they become lieutenant-colonels, either regimentally or by brevet, they are always available for Staff employ.

13196. When you speak here of many instances of indifferent Staff work, are you alluding to the superior officers or to the junior officers? What had you in your mind?—I had in my mind that the Staff officers of England were not as a rule so much trained for war as for peace. Too much of their time is spent in ordinary routine and office work in preference to prospecting the country and acquiring knowledge of ground such as can be gained from manœuvres, Staff rides, etc., which are not sufficiently practised. I was often struck with the inability of some Staff officers to read maps well, to explain quickly and intelligently all about the contours and the elevations.

13197. Under the old Indian system, would you not have found that a young man who had been in the Quartermaster-General's Department would probably have been perfectly efficient in reading maps?—No doubt he would, as in my own case. I joined the

Quartermaster-General's Department as quite a young officer, and happened to be promoted in it until I became the head of it. Nevertheless, I do not think it is a good plan. I think that an officer, as a young man, should go back to his regiment, because it gives the regiment the benefit of his experience, and another officer obtains Staff experience. I do not think you want consecutive Staff duties to make a good Staff officer, provided that he is an intelligent fellow and understands what he has got to do.

13198. Would you be in favour of passing a larger number of officers than pass at present through the Staff College?—I have inquired about such a proposal, and found a few more could be provided for there with the present organisation—that is to say, as regards professors and accommodation; but, on the other hand, we would not have appointments to give these officers when they came out.

13199. No, but would you not be training them for the Staff?—Yes; it is an excellent training.

13200. Would you not be able to pass a larger number through the Staff College if you shortened the course?—I am told that two years are not too much.

13201. What do you think yourself? You must have much greater experience than anybody else?—I have been at the Staff College very often to see the officers, and think that all who go there improve immensely by being there.

13202. You are quite familiar with what they teach at the Staff College?—Yes.

13203. Would it not strike you that they would get enough information, which is theoretical information, as opposed to practical training, if they had one year instead of two?—The practice now is to give the theoretical training the first year, and the practical the next. They have Staff rides, go to manœuvres at home when there are any, and to manœuvres abroad, and visit battlefields in the second year.

13204. Is it not rather a waste keeping them at the Staff College for such a purpose as that, when you are cramped for room?—You would train more if they had a one year's course, but I could not say really whether that would be sufficient.

13205. Are the high military authorities agreed upon the question of what they call specialising in the War Office; that is, training officers for special purposes instead of fitting them generally for any work that may turn up during their military career? I mean, for instance, training some officers specially as signalling officers, and others as Staff officers?—I think it is left a good deal to the officer's own fancy. An officer, if an enthusiast in signalling, goes through the course, and if an enthusiast in musketry through that course. If, for instance, I am asked about an officer as an instructor in musketry, I inquire whether he is an enthusiast in the matter, and I think, in that way, every care is taken to put the right man in the right place.

13206. You mentioned your Proclamations. Were those Proclamations referred, before you issued them, to the Home Government? There were two Proclamations which you issued?—Yes; the first one that I issued was before I entered the Orange Free State, and I referred that to Sir Alfred Milner, and I think Sir Alfred Milner referred it home.

13207. Did you get any approval from Sir Alfred Milner or from the Home Government before it was issued, or did you issue it entirely on your own initiative?—I got approval of all the important Proclamations before they were issued, especially the two which dealt with the annexation of the Orange Free State and the Transvaal.

13208. Were the Proclamations drafted by you?—The first one was, and there were some modifications made in it, I think by Sir Alfred Milner. I think the other two I got straight from Sir Alfred Milner.

13209. Speaking generally of the military lessons deducible from the war of which the Chairman spoke, have they been put into the form of any document by you for submission to the Secretary of State, or to the Defence Committee of the Cabinet?—No, all I have done with regard to the lessons from the war is to see that the Drill-books—the Infantry Drill-book, the Cavalry and the Artillery Drill-books—are all modified from the experience gained in the war.

13210. Have you been asked by the Defence Committee of the Cabinet to state in writing your views as

to what may be called the military lessons deducible from the war?—No.

13211. Have you ever had any instructions at all from the Defence Committee of the Cabinet since you have been Commander-in-Chief?—No.

13212. Take the question of Imperial Defence. Have you seen any correspondence since you have been Commander-in-Chief between the Admiralty and the War Office upon that question?—Yes, on some few points I have.

13213. Has any such correspondence been submitted to you for your opinion?—Yes; more questions that have emanated from the Military Intelligence Department than from the Admiralty, but some have also been submitted to me that have come from the Admiralty as well.

13214. Communications upon that question do take place between the two Departments?—Yes; there are frequent communications between the Intelligence Department of the Admiralty and the Intelligence Department of the Army.

13215. Are you aware whether that correspondence or those communications are ever submitted to the Defence Committee of the Cabinet?—I know they are going to be.

13216. But you do not know whether they have been or not?—No. We meet to-morrow.

13217. The amount spent on the Army amounts now to something like £30,000,000?—Yes.

13218. Do you think there is any probability of an increase?—Judging from what I hear, no. Do you mean whether we shall ask for more, or whether we shall get more?

13219. Whether you shall ask for more?—We are not likely to get more, from what I hear.

13220. Have you been asked to consider the possibility of effecting any considerable reduction?—No, I have not.

13221. I suppose it has occurred to you that that is likely to become some day, perhaps very soon, a very important question?—Yes; but what strikes me is, that it is very desirable before any question of either increase or decrease is raised, the nation should pretty well determine what the Army has got to do.

13222. Whose function do you think it is to define what the Army has got to do?—I suppose the Cabinet.

13223. This celebrated Defence Committee, of which we hear so much?—Yes, I hope that will be done; we meet to-morrow for that purpose. We met to talk matters over, and to-morrow we meet to discuss distinct questions.

13224. Are you going to be present?—Yes.

13225. That has not always been the case; you have not always been present at the meetings of the Defence Committee?—No, but at this reorganised one I must be.

13226. There has been a reorganisation lately?—Yes, I understand, in future, I am always to be present, and also representatives of the Admiralty. I think Mr. Balfour promised to announce this arrangement.

13227. Then I suppose we may take it that they will make it their business to determine the point which you have just put—that is, the actual needs of the country from the military and naval point of view?—That to my mind is quite the most important thing to settle—what is the possible demand that can be made upon the Army.

13228. And you think that all questions as to economy or change of system must wait until some decision has been taken upon that preliminary point?—It seems to me to be essential to decide what the Army is likely to be called upon to do before any settlement can be arrived at as to whether a larger or a smaller Army is required.

13229. You made some very valuable suggestions about decentralisation within the War Office itself. I think you recollect your suggestion was that your office should be divided into a military branch and a spending branch and a financial branch?—Yes. What question is it?

13230. It is Question 10737. If that were done that would mean that, besides the Secretary of State, you would have three great heads of the War Office—the head of the military branch, the head of the spending branch, and the head of the finance branch?—Yes.

10 Feb. 1903.

13231. Do you think that it might not effect further decentralisation if you were to divide what you call the military branch in two by separating the actual control of the discipline and the *personnel* of the Army from what you might call the brain of the Army, or what has been called the brain of the Army, which means the Intelligence branch? I only wanted to ask you whether you thought there would be any great objection to it?—There is a minor division in that way—the Adjutant-General.

13232. Do you think there would be any objection to making it a major division; that is to say, instead of having four great heads of these branches, if you added another, and had a fifth? I will tell you why I ask that question: Would you see any objection to those great officers being formed into a Board on the lines of the Navy Board, to meet under the presidency of the Secretary of State?—That is very like what we call our War Office Council, I think. Any question of that sort would be considered by the Adjutant-General, the Quartermaster-General, and the Director-General of Military Intelligence.

13233. But you would not pretend that the War Office Council carries the weight of the Board of Admiralty?—Of course not. In the War Office itself the Secretary of State and the Commander-in-Chief more nearly correspond with the Board of Admiralty.

13234. Under this system you have sketched here, when you once begin to decentralise within the War Office, do you not think it might be possible to constitute a Board somewhat on the lines of the Admiralty Board?—Such an arrangement does not commend itself to me. In my opinion the most suitable organisation of the War Office would be a spending department under one officer and a financial department under another, both working directly under the Secretary of State, and the rest under the Commander-in-Chief.

13235. Your idea is that the officer at the head of the spending department should be independent of the Commander-in-Chief?—Yes.

13236. And that he should be responsible solely to the Secretary of State?—Quite. Practically speaking it is so now, that is to say the officers, like the Quartermaster-General, as he is called now—whom I call the Director-General of Supplies—and the Director-General of Ordnance, who are the two great spending departments, are only under the Commander-in-Chief's supervision, and not under his control as the Adjutant-General and the Director-General of Military Intelligence are.

13237. Still, a great many questions with which they deal are submitted to you?—Certain questions, such as the armament of a fort, for instance; the Director-General has to make the guns, and he consults me about that; the Quartermaster-General would consult about the ranges, or the barracks, or the movement of troops and so on.

13238. When you made this suggestion the idea of a Board was not in your mind?—Not at all. I do not think I favour the idea of a Board.

13239. (*Sir Henry Norman.*) You were speaking about the untrained troops, the Militia, Yeomanry, and so on, but after all was not the greatest evil that the officers were untrained?—Far.

13240. But there was no system by which the officer could be trained?—I consider that the greatest difficulty we have—the officers.

13241. I think you said, as to the officers of militia, that something was being done to increase their opportunities of training, and the Yeomanry also?—What we hope to do is to attach them for certain periods every year to the Regular units, and make more use of them in camps.

13242. Are they coming forward at all for that purpose? Is there much to induce them to come forward?—They get their pay while they are out. It is a most important point, because if we have well-trained officers we can very soon organise the men. It is the officers that are essential, and then the non-commissioned officers; the men are a minor matter, comparatively speaking, as regards training.

13243. You have told us, and others have spoken with great praise of the success of the system by which drafts were brought from Volunteer regiments into the corresponding line battalions?—Yes.

13244. With their officers, and they very soon became

excellent soldiers, and a good portion of the regiment?—Yes.

13245. That seems to have been one of the greatest successes of the war?—It was a great success.

13246. And that could always be done?—Yes, they soon fitted into the system of the regular battalions, and did excellent work.

13247. Generally speaking, as a result of your very great experience from the war, have you any particular suggestions to make with regard to any branch of the Service, as to an improvement in organisation for war or for preparation for war?—I will take the cavalry first; what I think is that in all future wars we should require a far larger number of mounted men than we have ever had hitherto, and that the cavalry must be prepared to fight on foot much more than they have ever done before. I am impressing the importance of this on all cavalry officers, and pointing out that, although it is very desirable that cavalry should be expert with their swords and trained for shock tactics, my belief is that in future wars shock tactics will be few and far between, and that cavalry will have to fight far more frequently on foot than they have ever thought of doing before. We are now arming the cavalry with a rifle, the same as the infantry. It has been shortened by five inches, and reduced by one pound in weight, without losing any of its power. We are also, I hope, going to do away with the lance for service. It is a most inconvenient weapon when men are dismounted, and it is much in the way when they are scouting. Some of the older cavalry soldiers have difficulty in making up their minds that there may not be many opportunities in the future for charging the enemy, but from my own experience and what I have been able to read up, and understand from wars, certainly since Napoleon's time, there has very seldom been much done by shock tactics, and now that we have got long ranging rifles it is more than ever necessary that the cavalry should be taught to act dismounted. The cavalry must also be taught to scout, despatch-riding, and to look after their horses. As regards the infantry our aim must be to encourage individuality amongst the men, and to make the company and section commanders understand that they must depend more upon themselves than has hitherto been necessary, because the moment a battalion now gets into action the companies are greatly spread out, and the commander loses all control over them. I mentioned in my narrative that in the attack on Diamond Hill the men advanced at thirty paces interval. When you think of what that means with a front of one hundred men, one company alone, it is impossible that even the company commander can do very much, and we are now trying to get them to instruct their subalterns, sergeants, and corporals to look after their men. I think that is the chief thing in the matter of infantry training, and to teach the men to shoot better. As regards artillery, I do not know that we can improve them very much except train them to separate and conceal their guns, and to give them better weapons, both of which we are now rapidly doing.

13248. At certain stages of the war, towards the end of the war, there was a very curious thing, that the horse artillery was taken away to help the mounted infantry?—I think that was simply because we had not enough mounted infantry.

13249. I suppose they had too many artillery?—When the war became of a guerilla nature the artillery was not so useful; the Boers were in very small numbers themselves, and we had a large force of artillery and not enough mounted men.

13250. The greatest change you think is necessary in the cavalry?—I am sure of it, and we should also have more mounted infantry, the rôle of which is quite different to that of cavalry. Although, as I have said, cavalry must be taught to fight as infantry, they also must be trained to ride longer distances, and take better care of their horses, and occasionally use shock tactics. On the other hand, mounted infantry is really an infantry soldier who is put on anything—a bicycle, cart, or a pony, in order that he may travel more quickly than it is possible for him to travel on foot. A battlefield is now of such an extent that other means than men's legs are required to get parties conveyed to any distant point where their services may be needed.

13251. But you would not keep them permanently as mounted infantry?—No; if that is done they become a sort of bad cavalry; they must be kept simply as

infantry, call them mounted if you like; but it does not matter what the machine is on which they may be mounted. I am sure for our wars in future we must have a very large number of mounted troops available, the best trained cavalry, and infantry soldiers on ponies, or any other suitable means of conveyance. Bicycles are not so convenient, because they cannot be taken off the road, and a number of men on bicycles are not easily managed. Ponies or mules are the best.

13252. Have you any suggestion to make with reference to the better organisation or the better training of the Colonial troops? I assume that in all wars where Colonial troops are employed they should be mounted, as that is their great forte?—Yes.

13253. You saw them, and they did good service on many occasions. Do you think they could be organised better in their own countries? Recollect always that they are self-governing Colonies, and that they may dispense with them altogether if they please. Do you think those who came could have been better trained, considering the circumstances of their life?—I have no doubt they would have done better if they had been better trained, but, as a rule, they did very well. They are very intelligent, and they had what I want our men to have, more individuality. I noticed particularly they would find their way about the country far better than the British cavalryman could. As a rule, messages sent from one place to another were entrusted to Colonials. Their mode of life, which is different from that of most of our men, helped, no doubt, to this end. If they could be trained better they would be still more valuable, for they are most excellent material. Their officers also need to be better trained.

13254. You think the officers were not well trained?—Not well trained.

13255. Some remarks were made about the medical service, and one witness said he thought the Army Medical Department suffered and was greatly hampered by its over organisation, and as the organisation got knocked on the head in service a good deal it got better; did you observe that at all?—I did not notice it. I confess, as far as I saw the Army Medical Department, they did very well. They were overtaken by the extraordinary number of men who got sick in a few days, both at Bloemfontein and Kroonstad, but those I had with me worked splendidly.

13256. It was stated that there was a great deal too much clerical work, and that officers who should have been employed in medical or surgical work had a great deal of their time taken up by administrative work?—It was not brought to my notice, and when I went to the hospital I never saw it.

13257. You never saw them absent?—No, they probably knew I was coming, but I never found them away.

13258. And you think, on the whole, they did their work very well?—I think so.

13259. There was evidence given that the medicines were rather behind date, and that the instruments were of a rather antiquated description, and so forth?—I confess I never took any of the medicines, and I did not want any of the instruments, so that I do not know myself, but I never heard any complaint of them.

13260. There is a good deal being done for the improvement of the Medical Department at the present time?—You mean in the last two years?

13261. With the Advisory Board, and so on?—A great deal, I think.

13262. And they are being more instructed, being given additional opportunities to study and so on?—Yes, before promotion they are to be examined, and a Medical College is being started for them.

13263. And you are satisfied that that will effect a considerable improvement?—I think so.

13264. (Sir Frederick Darley.) The present organisation of the Army is based upon Mr. Stanhope's five propositions, is it not? It has been stated here that the public have never been made aware of those propositions, or on what basis it is that the Army is at present organised?—I cannot tell you why they should not know it.

13265. It has been stated here by a very high officer, Sir Coleridge Grove, that the scheme propounded by Mr. Stanhope has never been placed before Parliament, and that the money they have been voting has been in effect voted in the dark?—I do not know really what Mr. Stanhope's propositions are.

13266. Mr. Stanhope's propositions amongst other matters provided for two Army Corps, the First and Second Army Corps, and a Third Army Corps, formed both of Regulars and Irregulars, and Sir Coleridge Grove mentioned that this scheme was not known to the public, that it was a scheme kept in the archives of the War Office; in point of fact, as far as the public were concerned, they did not know what the scheme of defence or offence was?—Was not that the fault of the public? I suppose Mr. Stanhope's scheme must have been published.

13267. With regard to the Defence Committee, which you state will meet to-morrow, is that in reference to a scheme of defence for the Army?—It has nothing, I believe, to do with the organisation of the Army; it is to consider matters of defence.

13268. Is it to establish the nature of the Army that England is to possess?—We have never met yet, and I have not seen any agenda for to-morrow, but I have no doubt that the outcome of our discussions will be to decide the nature of our Army, and whether we want more infantry, cavalry, or artillery.

13269. In your evidence at Question 10243 you said: "Before the war the force readily available at home for expeditionary action abroad, was, in my opinion, inadequate, and efforts are now being made to remedy this defect by increasing the Army Reserve, and adding a Third Army Corps to the two previously organised for such action"?—Yes.

13270. In your opinion is it now adequate?—It is a question as to what the Army may have to do. Before the war I suppose the Government never dreamt of having to send out 250,000 to South Africa.

13271. You say it is inadequate for any expeditionary action abroad, not merely for South Africa?—Yes, "before the war" I said.

13272. Is it adequate now, putting South Africa out of consideration for the moment?—We have not got any Reserve now to speak of; our Reserve is almost depleted, and we shall require some time to recuperate. We had a Reserve of 80,000 Regulars before and about 20,000 to 30,000 Militia, but now the Regular Reserve has come down to considerably less than half. At the present moment we are certainly not in a satisfactory condition.

13273. What do you consider the object of having a Reserve is?—The object of the Reserve is, when a regiment is ordered abroad, to bring in a certain number of men of mature age, who have been taught soldiering, to take the place of recruits and immature men who are not fit to go abroad, and to bring the regiment up to its full strength for service.

13274. (Sir John Edge.) Who are ordered abroad on actual service?—Yes.

13275. (Sir Frederick Darley.) The Reserve in point of fact is not to fill up casualties in the fighting line?—The balance would be to fill up the casualties in the fighting line. For instance, in this war I do not think the Reserve was used up much under the first year. It was able to fill up the vacancies in the battalions and also to fill up the casualties which occurred during the first few months. In one regiment, the Grenadier Guards, there was such a very large Reserve from the three years' service system that it was not ever used up.

13276. Are the regiments now forming the First Army Corps such as will require to be filled up in case of war?—Yes, if we had to go to war they would.

13277. Do you think that is expedient?—It is part of our system; and I do not see how we could in any other way have regiments in this country fit for service in the field. There are in India alone more than 70,000 British soldiers, about one-fifth of whom have to be replaced by drafts every year, and as soldiers are not sent there under 20 years of age, it follows that regiments in this country must always have a number of immature lads whose places must be taken by Reservists.

13278. Are they up to their numbers?—Yes, at the present moment the strength of the Army altogether is over the numbers, particularly the cavalry; we have got 7,000 more cavalry than we are entitled to, and we had to stop recruiting for it; and the infantry is very nearly up to its numbers.

13279. Only they are not quite efficient?—Many of them are recruits and boys. We do not allow boys to go to India under two years' service, until they are 20 years of age, and that means you have to take away

As regards artillery, I do not know that we can improve them very much except train them to separate and conceal their guns, and to give them better weapons, both of which we are now rapidly doing.

13248. At certain stages of the war, towards the end of the war, there was a very curious thing, that the horse artillery was taken away to help the mounted infantry?—I think that was simply because we had not enough mounted infantry.

13249. I suppose they had too many artillery?—When the war became of a guerilla nature the artillery was not so useful; the Boers were in very small numbers themselves, and we had a large force of artillery and not enough mounted men.

13250. The greatest change you think is necessary in the cavalry?—I am sure of it, and we should also have more mounted infantry, the rôle of which is quite different to that of cavalry. Although, as I have said, cavalry must be taught to fight as infantry, they also must be trained to ride longer distances, and take better care of their horses, and occasionally use shock tactics. On the other hand, mounted infantry is really an infantry soldier who is put on anything—a bicycle, cart, or a pony, in order that he may travel more quickly than it is possible for him to travel on foot. A battlefield is now of such an extent that other means than men's legs are required to get parties conveyed to any distant point where their services may be needed.

13251. But you would not keep them permanently as mounted infantry?—No; if that is done they become a sort of bad cavalry; they must be kept simply as

infantry, call them mounted if you like; but it does not matter what the machine is on which they may be mounted. I am sure for our wars in future we must have a very large number of mounted troops available, the best trained cavalry, and infantry soldiers on ponies, or any other suitable means of conveyance. Bicycles are not so convenient, because they cannot be taken off the road, and a number of men on bicycles are not easily managed. Ponies or mules are the best.

13252. Have you any suggestion to make with reference to the better organisation or the better training of the Colonial troops? I assume that in all wars where Colonial troops are employed they should be mounted, as that is their great forte?—Yes.

13253. You saw them, and they did good service on many occasions. Do you think they could be organised better in their own countries? Recollect always that they are self-governing Colonies, and that they may dispense with them altogether if they please. Do you think those who came could have been better trained, considering the circumstances of their life?—I have no doubt they would have done better if they had been better trained, but, as a rule, they did very well. They are very intelligent, and they had what I want our men to have, more individuality. I noticed particularly they would find their way about the country far better than the British cavalryman could. As a rule, messages sent from one place to another were entrusted to Colonials. Their mode of life, which is different from that of most of our men, helped, no doubt, to this end. If they could be trained better they would be still more valuable, for they are most excellent material. Their officers also need to be better trained.

13254. You think the officers were not well trained?—Not well trained.

13255. Some remarks were made about the medical service, and one witness said he thought the Army Medical Department suffered and was greatly hampered by its over organisation, and as the organisation got knocked on the head in service a good deal it got better; did you observe that at all?—I did not notice it. I confess, as far as I saw the Army Medical Department, they did very well. They were overtaken by the extraordinary number of men who got sick in a few days, both at Bloemfontein and Kroonstad, but those I had with me worked splendidly.

13256. It was stated that there was a great deal too much clerical work, and that officers who should have been employed in medical or surgical work had a great deal of their time taken up by administrative work?—It was not brought to my notice, and when I went to the hospital I never saw it.

13257. You never saw them absent?—No, they probably knew I was coming, but I never found them away.

13258. And you think, on the whole, they did their work very well?—I think so.

13259. There was evidence given that the medicines were rather behind date, and that the instruments were of a rather antiquated description, and so forth?—I confess I never took any of the medicines, and I did not want any of the instruments, so that I do not know myself, but I never heard any complaint of them.

13260. There is a good deal being done for the improvement of the Medical Department at the present time?—You mean in the last two years?

13261. With the Advisory Board, and so on?—A great deal, I think.

13262. And they are being more instructed, being given additional opportunities to study and so on?—Yes, before promotion they are to be examined, and a Medical College is being started for them.

13263. And you are satisfied that that will effect a considerable improvement?—I think so.

13264. (Sir Frederick Darley.) The present organisation of the Army is based upon Mr. Stanhope's five propositions, is it not? It has been stated here that the public have never been made aware of those propositions, or on what basis it is that the Army is at present organised?—I cannot tell you why they should not know it.

13265. It has been stated here by a very high officer, Sir Coleridge Grove, that the scheme propounded by Mr. Stanhope has never been placed before Parliament, and that the money they have been voting has been in effect voted in the dark?—I do not know really what Mr. Stanhope's propositions are.

13266. Mr. Stanhope's propositions amongst other matters provided for two Army Corps, the First and Second Army Corps, and a Third Army Corps, formed both of Regulars and Irregulars, and Sir Coleridge Grove mentioned that this scheme was not known to the public, that it was a scheme kept in the archives of the War Office; in point of fact, as far as the public were concerned, they did not know what the scheme of defence or offence was?—Was not that the fault of the public? I suppose Mr. Stanhope's scheme must have been published.

13267. With regard to the Defence Committee, which you state will meet to-morrow, is that in reference to a scheme of defence for the Army?—It has nothing, I believe, to do with the organisation of the Army; it is to consider matters of defence.

13268. Is it to establish the nature of the Army that England is to possess?—We have never met yet, and I have not seen any agenda for to-morrow, but I have no doubt that the outcome of our discussions will be to decide the nature of our Army, and whether we want more infantry, cavalry, or artillery.

13269. In your evidence at Question 10243 you said: "Before the war the force readily available at home for expeditionary action abroad, was, in my opinion, inadequate, and efforts are now being made to remedy this defect by increasing the Army Reserve, and adding a Third Army Corps to the two previously organised for such action"?—Yes.

13270. In your opinion is it now adequate?—It is a question as to what the Army may have to do. Before the war I suppose the Government never dreamt of having to send out 250,000 to South Africa.

13271. You say it is inadequate for any expeditionary action abroad, not merely for South Africa?—Yes, "before the war" I said.

13272. Is it adequate now, putting South Africa out of consideration for the moment?—We have not got any Reserve now to speak of; our Reserve is almost depleted, and we shall require some time to recuperate. We had a Reserve of 80,000 Regulars before and about 20,000 to 30,000 Militia, but now the Regular Reserve has come down to considerably less than half. At the present moment we are certainly not in a satisfactory condition.

13273. What do you consider the object of having a Reserve is?—The object of the Reserve is, when a regiment is ordered abroad, to bring in a certain number of men of mature age, who have been taught soldiering, to take the place of recruits and immature men who are not fit to go abroad, and to bring the regiment up to its full strength for service.

13274. (Sir John Edge.) Who are ordered abroad on actual service?—Yes.

13275. (Sir Frederick Darley.) The Reserve in point of fact is not to fill up casualties in the fighting line?—The balance would be to fill up the casualties in the fighting line. For instance, in this war I do not think the Reserve was used up much under the first year. It was able to fill up the vacancies in the battalions and also to fill up the casualties which occurred during the first few months. In one regiment, the Grenadier Guards, there was such a very large Reserve from the three years' service system that it was not ever used up.

13276. Are the regiments now forming the First Army Corps such as will require to be filled up in case of war?—Yes, if we had to go to war they would.

13277. Do you think that is expedient?—It is part of our system; and I do not see how we could in any other way have regiments in this country fit for service in the field. There are in India alone more than 70,000 British soldiers, about one-fifth of whom have to be replaced by drafts every year, and as soldiers are not sent there under 20 years of age, it follows that regiments in this country must always have a number of immature lads whose places must be taken by Reservists.

13278. Are they up to their numbers?—Yes, at the present moment the strength of the Army altogether is over the numbers, particularly the cavalry; we have got 7,000 more cavalry than we are entitled to, and we had to stop recruiting for it; and the infantry is very nearly up to its numbers.

13279. Only they are not quite efficient?—Many of them are recruits and boys. We do not allow boys to go to India under two years' service, until they are 20 years of age, and that means you have to take away

men that are mature to send to India to fill up vacancies.

13280. Did you personally find any inconvenience from inefficiency of staff during the war?—Yes, I have explained before that in some instances our Staff officers were not sufficiently trained in the knowledge of ground and reading maps.

13281. You told Sir Henry Norman that one of the great lessons to be learnt from the war is that cavalry ought to be trained to fight on foot if occasion requires it?—Yes.

13282. Is there any other great lesson, broadly speaking, that you can mention which is to be learnt from the war?—I mentioned also that we must have a large number of mounted infantry available, too. I do not think there is anything else required beyond that. I also mentioned the individual training of the infantry and the necessity of doing all that can be done to make them efficient shots. We have got excellent material in the men. I also mentioned that we want the officers of the Auxiliary Forces to be better trained.

13283. In point of fact, you want better training of men and officers?—Yes, particularly officers.

13284. (*Sir John Edge.*) Sir Frederick Treves, in giving his evidence the other day, expressed the opinion that our Army Medical Service was a wasteful and extravagant service, basing that mainly on the ground that the highly paid senior officer was frequently employed not in attending to his hospital, but in doing clerks' work, which might be done by a quartermaster at a quarter of the pay. Has that ever come under your notice?—What they call administrative offices?

13285. Yes. I will read you his answer to Question 11977. The question is: "But in an army on a peace footing at home that might be a suitable form of organisation." And he answers: "I think so. It is, however, very laborious, and puts an enormous amount of work upon men. It is an exceedingly extravagant service; it is worked in the most costly possible way. You obtain an officer who is supposed to be a specially qualified man, who receives high pay, and charge pay, and then he is put to do work which is practically much better done by an ordinary clerk for a pound or so a week"; and he mentions in Answer 11986, I think referring to some field hospital after Spion Kop, that they had there an exceedingly good man as surgeon and physician in charge of this hospital, but he could have nothing to do with the sick, as his time was spent in looking after accounts, and so on?—It seems very absurd if that is the case.

13286. That, of course, would not come under your notice at all?—No, I am unaware of it.

13287. You told us that I think in France they put them through the ranks in a year?—That is what Sir George Goldie mentioned—the educated men who come as a sort of volunteers—and it is the case in Germany, too.

13288. Apart from the knowledge of drill, do you think you could impart that thorough discipline into men which will enable them to hold together in difficulty by one year's training?—I think if the men are educated, intelligent men it can be done. I take the City Imperial Volunteers; they were educated men from different Volunteer regiments, and all of them, or the very great majority, were very able, intelligent men, and when they came out I do not think they were more than three or four weeks in the country. I did all I could to get them kept as long as possible unemployed, to get training, and to get together under their officers, with the result that when they came into the field they did extraordinarily well. Then they had a Regular officer commanding them and a Regular officer as adjutant, both as regards the infantry and the mounted infantry, and at that very battle I referred to near Johannesburg, Sir Ian Hamilton had his own old regiment, the Gordon Highlanders, of which he very properly thinks so highly, but he spoke in almost equal terms of the City Imperial Volunteers, who were nearly as much tried as the Gordon Highlanders on that day, and I think that showed that if we have intelligent, well-educated men we can deal with them very much quicker than we can with the ordinary recruit.

13289. I think possibly you could instruct them much quicker—it is a difficult thing for a layman to explain—but what I mean is that feeling that comes from thorough discipline, that men will hang together in cases of difficulty; could you get that into a body of men in a year's training?—It depends upon the class of man.

I think it could be done with intelligent, well-educated men; and, moreover, the training that is needed now is not so much that machine-like training, where you want men to hang together, as you expressed it just now. What is required is to get men to act more individually, and be able to think for themselves; the better educated the men are the quicker this kind of training is accomplished.

13290. There would be the same hanging together, even although they were extended to 20 or 30 paces, because if they do not hang together and some give way the whole may give way probably?—I think I would answer your question this way; if I had 1,000 well-educated men of the stamp of the City Imperial Volunteers, I think in one year I should be quite satisfied that they would be thoroughly well trained; if I had the ordinary recruit who comes into Westminster, I should say he wants two or three. Education and intelligence make all the difference in the world, to my mind.

13291. The City Imperial Volunteers behaved well all through the war?—Very well. They had the great advantage of being commanded by a Regular officer, and they had a Regular Adjutant, and many amongst them were old soldiers.

13292. The majority of them had probably had years of training as Volunteers?—Yes.

13293. With regard to the Mounted Infantry, would the Mounted Infantryman carry his ordinary arms with only a shorter rifle?—Yes, he would carry his rifle; at present they carry the Lee-Enfield rifle, and they will carry the shorter one.

13294. How about a personal weapon—a sword bayonet?—He will have his bayonet. He will be absolutely an infantry soldier, only he will be able to be moved quicker than he could walk to any distant point where he may be wanted.

13295. Your idea is that the Mounted Infantryman should have a personal weapon—his bayonet—with him?—Yes, he would be an infantry soldier, only he would travel on a horse, or a cart, or a bicycle.

13296. (*Sir John Jackson.*) You were speaking about your disappointment with some of the staff officers, and you mentioned that they did not understand maps; do you really suggest that a staff officer would not understand a contour map?—Some much better than others, I think.

13297. Some of them were not smart?—I have seen some staff officers who had really a difficulty in explaining a map; and others, again—and I think those are fewer—could take up a map and explain it intelligently.

13298. At what age do the officers generally pass into the Staff College?—They must pass before they are 35.

13299. How long do they remain there?—Two years.

13300. Then do all the staff officers pass through the Staff College?—With few exceptions; there have been instances after one year of officers being told they need not come back, as there was no prospect of their being good staff officers.

13301. But you have officers on the staff who have not passed through the Staff College?—We have officers on the staff who are considered qualified for staff employment from having done well as staff officers on field service; the names of these officers are shown in the Army List.

13302. With regard to the training, there is a great difficulty, is there not, in England of getting proper training grounds for manœuvres, where you could have long-range firing, and so forth?—There is, but in manœuvres nothing but blank ammunition is used.

13303. But if you come to firing at a target there is a difficulty in getting ranges?—We have great difficulty in getting suitable ranges, as we require them much longer than we have hitherto had, both for artillery and infantry. We are searching all over the country for artillery ranges.

13304. There has been some suggestion of having large training grounds abroad; for instance, in Canada and the Cape?—I have read that in the paper.

13305. And to have great centres there for the training of the troops. Are you in favour of that idea?—I do not think it is practical. I do not know how our system of reliefs or how mobilisation would be carried on under those circumstances.

13306. It was suggested at the Cape, 6,000 miles away.

Would it have any advantage if the suggestion were made with regard to Canada?—I do not know Canada personally, but I daresay Lord Strathcona can say whether there is ground available there for the purpose. I have been told that Canada is very much covered with dense forests, and that it is very difficult to find much spare ground.

(*Lord Strathcona and Mount Royal.*) In the eastern portion of Canada; but the western portion, of course, is all plains.

(*Witness.*) When the places have been found barracks must be built for the men.

13307. (*Sir John Jackson.*) What is your chief objection—that these places are too far away?—I think the great difficulty would be about drafts for the armies abroad.

13308. Have you felt satisfied with the efficiency of the Intelligence Department?—During the war?

13309. Yes?—Yes, I was very well served during the war. I think as a rule they gave me—in fact, from my narrative you can see that I had—very good information almost everywhere.

13310. Is it your opinion that in times of peace our Intelligence Department is as efficient as the Intelligence Department, say, of Russia or Germany?—I do not know either of those, but I think our Intelligence Department now works very well indeed. I never ask a question, and I never hear of a question being asked by the Foreign Office or the Colonial Office without a satisfactory answer being given.

13311. (*Sir John Hopkins.*) There is a small detail about handbooks based upon evidence which we had from an officer who was raising Colonial troops; he said that if he had had a handbook on which he could have gone to work, containing a good deal of the information which he had to pick up piecemeal, he would have got on very much quicker; have you any handbooks at the War Office now prepared from the experience of officers doing that kind of duty?—A sort of manual of field service?

13312. Yes?—We are getting a new manual made, something like the one in India, which is better than the one in this country.

13313. I think we had that in evidence too?—I hope we will get ours on the same system as the Indian one.

13314. Would that help you also in operations connected with buying horses, and outside arrangements of that kind?—I am not sure whether it goes to such an extent as the Remount Department. I think it is more for the ordinary instruction of the officer with regard to the payment of the men, et cetera.

13315. (*Sir Henry Norman.*) There was evidence that there was a very good manual in India as to the purchasing of remounts. Colonel Deane gave us that evidence, and stated that it gives information as to where to get horses in every part of the world, and how many can be produced, and so on?—That is so in India, but the Admiral was asking whether our manual here would include that sort of thing, and I do not think it does so in this country.

13316. (*Sir John Hopkins.*) Of course, there is a vast amount of information now in people's heads in connection with all these questions which should not be allowed to perish?—And I hope it will not be.

13317. (*Sir George Taubman-Goldie.*) I wish to revert to the question that Lord Esher raised about the Intelligence and Mobilisation Division at home and the Brain Division of the Army. You said, in answer to one of my questions, No. 10450*: "The Intelligence Department should undoubtedly be under the Quartermaster-General, both in India and in England. In India it is so, and in this country it was so at one time, and it was removed and put under the Adjutant-General. Then, after a time, it was removed again, and put under the Commander-in-Chief, and there it is now": in the Quartermaster-General's Division of the Army, and I am speaking of the Quartermaster-General not as the Director of Supply and Transport, as he really is now, but as you conceive he should be—he would represent the business of the Army?—Yes.

13318. And the Adjutant-General or the Commander-in-Chief would represent the discipline of the Army?—Yes.

13319. The Intelligence and Mobilisation Division is a purely thinking division, is it not? They think out

plans of campaign, offensive and defensive, they acquire information, and they think out schemes of mobilisation, but it is not an executive department in itself?—It is scarcely right to say that it is not in a sense an executive department. On service it certainly is. I used to employ Intelligence officers to let me know where the enemy were, what kind of country was in front, et cetera; very much the same kind of duty as the officers of the Quartermaster-General's Department are expected to perform on service.

13320. I was going to suggest that there seems to be a little confusion in the minds of the public, and even in the minds of some members of the Commission, between Intelligence officers in the field and the Intelligence Division at home, and there is really little connection between the two. As it happens, there were in South Africa some members of the Intelligence branch at home, such as Colonel Altham; but the Intelligence Division in the field has no connection with the Intelligence Division at home at all, and my question was directed, and, I think, Lord Esher's was also, to the Intelligence Division at home. Is that not a purely thinking department—a brain department?—I doubt very much if it would be useful as a brain department unless it had practical experience. I think you would find that a man would do much better in the Intelligence Department if he had practical experience or had been trained under the Quartermaster-General in the field.

13321. That is to say, only the men who have had practical training in the field ought to go into the Intelligence Department at home?—Yes.

13322. But once they get into the Intelligence Department at home, is it not their duty to form plans of campaign?—Certainly, but I think they would be extremely useful in helping to carry on the campaigns, too. I noticed at the German manoeuvres last year that some of the officers who were told off for staff duties came from the Intelligence branch. They were apparently not tied to their desk always, and I do not think it desirable that officers should for ever be employed in forming plans of campaign. Such work must come to an end in time.

13323. Are not conditions constantly varying?—To a certain extent they are, and plans may have to be revised; but I noticed in Germany last summer that the staff officer, of whom I saw a good deal, belonged to the Intelligence Department, and he was excessively smart and clever in the field. My own idea is that the Intelligence Department and the Quartermaster-General's Department are very closely allied.

13324. In the field?—Yes.

13325. But not at home?—I think you must work in peace time much as you do in war time. I should use all my Intelligence officers at home to assist in manoeuvres and staff rides, because from their knowledge of maps and ground they are able to instruct the other officers.

13326. There is no room, you think, in this country for a purely thinking department?—In my opinion the officers of the Intelligence Department would be better able to do the thinking part of their duties, if they were occasionally employed on Staff duties in the field.

13327. My suggestion is rather that in this country in the past we have put thinking aside too much?—I think so, too; but I would not confine the Intelligence Department too much to office work.

13328. The work of a General like Von Moltke was largely that of planning?—Yes; but he was the head of a department. The junior men, I think, lose by being too much in an office.

13329. I was taking Lord Esher's suggestion that there should be an officer of high rank who should have the charge of the thinking department, and who, for that reason, should have one of the independent positions in the War Office?—Yes.

13330. (*Chairman.*) Independent of the Commander-in-Chief?—I do not think so.

13331. (*Sir George Taubman-Goldie.*) I was going to raise that very point. We might have a Commander-in-Chief who has seen service in many parts of the world, but it might be a part of the national policy to have a Commander-in-Chief who had not had such experience, who might be a member of the Royal Family, or who, for some reason or another, might be highly qualified to conduct the discipline of the Army, and to do what we might call the highest Adjutant-General's

Field Marshal The Right Hon. Earl Roberts, V.C., K.G., K.P., G.C.B., O.M., G.C.S.I. G.C.I.E.

work, to receive foreign generals and so on when they come here, to carry on the pomp of the Army and to deal with the *personnel* of the Army, but yet who might not be a Moltke or a great general. I only put it to you whether in such a case as that, assuming we had a Commander-in-Chief of high social position of that kind, chosen for that reason, it might not be better that the thinking department of the Army should have, under the Secretary of State, of course, an independent position, like the Quartermaster-General, which you suggest there should be?—I do not think you could organise the War Office so as to fit into different kinds of Commanders-in-Chief. The Commander-in-Chief might be perhaps a man of great experience, or a man without experience, and the head of the Intelligence Department would assist him more perhaps if he had no experience; but, at the same time, he would also assist him if he had experience.

13332. I suggest whether you could not have a dual system in the War Office, which would apply in the one case to the Commander-in-Chief being an experienced General and in the other to his not being so, and I suggest that there would be less inconvenience in having the thinking department independent when they had a General at the War Office than there would be in having him dependent, when they had not a General as Commander-in-Chief?—Personally, I should not like it at all, and I think it would be a great mistake. I think it is quite enough to have the spending departments independent of him, but the Adjutant-General and the Director-General of Military Intelligence should be under the Commander-in-Chief.

13333. You have admitted that there has been too little thought of thinking in this country in the past, and especially, perhaps, at the War Office, and I wondered whether you would not rather give a *caché* to the thinking department by giving it an independent position?—I am not in favour of it myself.

13334. Not under any circumstances?—No.

13335. Not even if we had another Commander-in-Chief?—I cannot answer for that.

13336. Going partly into another question which Lord Esher raised about the Staff College, officers do not exercise any option when they go to the Staff College whether they will go to the A or B Department?—When they come out it is exercised for them.

13337. But not when they go in?—No, I do not know that they do. When they go in they all pass the same examination, and they all have the same training while there; but I have always found that when they leave, the reports given with regard to them are extremely good and accurate; in fact, from a considerable acquaintance with Staff College reports I should say they hit the officers off exactly. They will report, for instance: "This officer has shown great aptitude for work in the field; he is very quick at staff rides, the orders that he gives to all the subordinate commanders are very clear, and I should recommend him strongly to be a Quartermaster-General"; while another man is said to be "very precise and methodical in his arrangements, and to have a great knowledge of military law and discipline. I should recommend him to be an Adjutant-General." The reports are usually very good indeed.

13338. Do you not find in time of peace that the best officers are anxious to get into the Adjutant-General's Department and in the time of war to get into the Quartermaster-General's Department?—That is because the Adjutant-General's Department has been made the principal one in our Army, and the Quartermaster-General's has been practically done away with.

13339. As the Quartermaster-General's Department is so much the more important in time of war, could you not in time of peace do something that would invert their positions, and make the Quartermaster-General's Department the more important?—That is what I was advocating when I gave my evidence here the first day.

13340. In the same way for the men who exercised an option for the Adjutant-General's Department, would not one year's training at the Staff College be enough, as their duties are comparatively small and easily acquired, while the two years' training might be given to the others?—I daresay that might be done if it was settled beforehand what branch of the staff they were to join.

13341. If they exercised their option beforehand one year might be enough to teach them all the military law and official work. There is only one other point, and that is about mounted rifles or infantry: you are opposed to training mounted rifles or infantry on a large scale in time of peace?—I do not want it to be an organised body; I want to train as many men as possible, so as to have them available in war time.

13342. Under the existing system, if a war broke out again to-morrow we should again have to get men from each regiment to act as mounted infantry?—Yes.

13343. They would not be horsemasters any more than they were in the last war?—As I have said, there is no real necessity for their being on horses.

13344. I think you said you preferred ponies to bicycles?—Yes, because they are more useful as a rule. It is very desirable that the officers should be well trained and understand how to look after horses, but if the mounted infantry were given a permanent organisation, in a year or two they would be aping to be cavalry.

13345. Would not that be a matter for the War Office?—The War Office cannot do everything. Permanent mounted infantry would want to wear spurs, and, as I have said, become cavalry, besides under such an organisation you could not get the great number of men trained as we do by the method which I favour. It is really an officer's question looking after horses.

13346. Is there not another disadvantage in taking men in that manner from infantry battalions in a hurry, that you select probably the best shots and you disorganise the battalion?—You mean when a war breaks out?

13347. Yes?—They would be replaced in the same way by the reservists as the short service men are.

13348. Would they not be losing their best men?—I do not know that they are the best men always.

13349. Commanding officers make complaints on that subject?—It is no doubt a difficult question, but if mounted infantry are made into battalions it means so many more battalions in the Army; except for war, they would not be wanted, and I am sure that if mounted infantry are given distinct organisation they would soon become not mounted infantry, but inferior cavalry.

13350. (*Lord Stratheona and Mount Royal.*) Your operations were much interfered with and greatly retarded on more than one occasion, and especially on one occasion, I think, by the destruction of bridges?—Railway bridges—yes.

13351. Do you consider that sufficient consideration had been given to that probability in advance, and that reasonable measures had been taken for meeting any such emergency?—Do you mean with regard to the reconstruction by engineers?

13352. That it had been sufficiently considered in advance? Of course, it was well known that the enemy would naturally destroy the bridges, but had sufficient provision been made, in your opinion, for dealing with such emergencies?—I can only answer that the engineers were surprisingly quick in their renewals. Temporary bridges had to be put up in the first instance over the Orange River at Norval's Pont and Bethulie, and across all the rivers onwards to Pretoria. Diversions had also to be made in many places, and I was thoroughly satisfied with the way everything was done. Besides the Royal Engineers, we were greatly assisted by a Pioneer regiment, composed mainly of civil engineers, miners, and artisans from Kimberley and other places.

13353. You think, then, there was no delay?—No, I think it was very remarkable the rapid way work was done. The engineers knew perfectly well that over the Orange River we should have to make bridges at once, and the very moment the Boers departed they were ready with their material for putting on temporary bridges at both places.

13354. And there was no delay that could have been prevented?—I do not think so.

13355. Would it not have been an advantage to have had a body of men, say from Canada—those who are accustomed to deal with wooden structures on railways? In this country there is no necessity for them, as the structures are always permanent, but in Canada and the States almost everywhere there are temporary bridges on the whole of the railways; consequently, they are well accustomed to deal very rapidly with any damage or obstructions?—We had the great advantage of having Canadians; we had two Canadian officers

—Girouard and Joly de Lothbinière—who were excellent, and they were the chief of our Railway Department, the rest were chiefly excellent men from Kimberley, and I do not know anybody who could have been better.

13356. I thought workmen who had been accustomed to similar work if under the direction of such men as Colonel Girouard and others would have been preferable?—I certainly was not in any way fettered by any unnecessary delay.

13357. Going for one moment to Paardeberg, do you think, Lord Roberts, that the Canadians there, besides showing dash and courage and bravery, acted with discretion and firmness as well?—Yes, I think so. They had a very good commanding officer and some very good officers with them, and I think they behaved very well throughout.

13358. And you consider that was the case generally with the contingents from the oversea Colonies—that besides their intelligence they acted with firmness also before the enemy, and with good discretion on all occasions?—I think they behaved very well.

13359. So that in that respect they came very well up to the Regulars?—Very well indeed.

13360. Sir Ian Hamilton, in speaking of the education and training of officers, says that he himself would prefer taking an officer from the Universities, rather than that they should be trained as they were trained and educated formerly in such schools as Sandhurst. Do you think that it would be better not to have such institutions at Sandhurst, and to look for educated men just from the Universities?—No, I think Sandhurst, properly organised, is a very useful place to get our young soldiers from. At the same time, I would not debar young University men from coming into the Army, because some of them have proved exceedingly good officers; but, as a rule, they come in older, and, of course, in a service where officers are superannuated at certain ages, coming in older may be a great disadvantage. We are improving Sandhurst very much, I hope, since Sir Ian Hamilton spoke of it. This last term we have got an officer whom you may know—Colonel Kitson—who was at the Royal Military College in Canada, and afterwards at Washington. He has taken it in hand now, and I hope he will prove a great success. We have Sandhurst, Universities, and Militia now to draw upon for officers.

13361. May I ask if there was much interception of messages on the part of the Boers from the telegraph?—Yes, I believe they tapped our lines several times; in fact, we know they did.

13362. And there were some marked instances of information having been got?—That is so; they also read our heliographs. I picked up a Boer book full of some of my messages to Kimberley which had been accurately deciphered—messages from me to Colonel Kekewich. They were not, however, of much importance.

13363. (Sir John Hopkins.) And that was in code?—Yes.

13364. (Viscount Esher.) How many men have we got in South Africa at the present time?—We shall have, when the regiments now under order for home leave, about 27,000.

13365. And you say the Army is rather over its strength than under?—Rather over than under.

13366. As to these Army Corps which are under the new organisation, will they be complete shortly when we get these regiments back, with the exception of 27,000?—Yes, practically speaking.

13367. They will cease to be what people call paper Army Corps, any of them?—The 5th and 6th are composed almost entirely of Militia and Volunteers; there are very few Regulars in them.

13368. It was never intended that there should be?—No, they are chiefly Militia, Yeomanry, and Volunteers. The First will be complete, and the Second will, in a measure, be complete; the barracks are not ready at Salisbury Plain; but the troops will be in the country somewhere.

13369. And to which did the term “paper Army Corps” apply?—I daresay until the troops returned it applied to all of them. Seventeen battalions of infantry are now under orders for home; 12 have started, and five will leave shortly, and the balance left in South Africa will be about 27,000 men.

13370. And that will not disturb the Army Corps system?—No; but the corps will not be quite so strong as they would be if more battalions were at home.

13371. (Sir George Taubman-Goldie.) Will that enable you to complete the Third Army Corps?—The Third Army Corps is in Ireland; that will be practically complete.

13372. So that you will have three Army Corps complete when these come home?—I think so, except as regards cavalry; more of this branch are being kept in South Africa than has hitherto been considered necessary in proportion to the other arms. There will be in South Africa 11 regiments of cavalry to 18 or 20 battalions of infantry, which is a very large proportion.

13373. (Viscount Esher.) Is your First Army Corps complete now?—It will be complete when the battalions now on their way home arrive, except as regards the cavalry.

13374. Is there not a Fourth Army Corps?—The Fourth Army Corps is the London one.

13375. Is that complete?—It is practically complete, except as regards cavalry.

13376. Then the Second Army Corps is the Salisbury Plain one?—Yes. It includes Portsmouth, Plymouth, Dover, as well as Salisbury Plain.

13377. That was very weak when Sir Evelyn Wood gave evidence here, but is that very different now?—Yes, in a very few weeks it will be very different.

13378. And the Third Army Corps is in Ireland?—Yes.

13379. (Sir Frederick Darley.) About what number of men will be left in South Africa after these 27,000 come home?—The 27,000 are to be left there; there are 17 battalions on the way now, which will leave 27,000 there.

13380. Do you think that will be sufficient?—I hope it will be more than enough in a year or two; it depends on how the country settles down. It is all the authorities there have asked for.

APPENDIX.

During the few days I was in Pretoria, before the battle of Diamond Hill, Lord Castletown told me that a Dr. Scholtz, ear and throat specialist, of Cape Town, who had been attached to the Langman Hospital, and came to Pretoria on Major-General Brabazon's staff, was anxious to obtain my consent to go to the Boer camp, as he had reason to believe, from information received from President Kruger's family, that the President would be willing to surrender if he could be assured that he would not be separated from his family and sent to St. Helena. I saw Dr. Scholtz, and told him that if President Kruger surrendered before the 20th June, I promised that he should neither be separated from his wife nor sent to St. Helena, and I said he had my leave to take this message to Commandant-General Botha for delivery to President

Kruger. It was arranged that Dr. Scholtz should be accompanied by Mr. Koos Smit, Chief Commissioner of Railways, and Mr. J. F. De Beer, Chief Inspector of Offices under the Transvaal Government, all friends of the Kruger family. They left Pretoria on the 11th June, and passed from the British to the Boer lines while fighting was actually going on, taking with them letters from Mrs. Kruger and Mrs. Eloff, the President's daughter, also the following letter from Lord Castletown:—"9th June, 1900.—Dear Dr. Scholtz,—I have again seen Field Marshal Lord Roberts, and he allows me to confirm what he said to-day, viz., that if His Honour the President of the South African Republic will come in and surrender unconditionally he will not be separated from his wife, nor will he be sent to St. Helena.—Believe me, yours very truly

(signed), CASTLETOWN, Lieutenant-Colonel. Please consider this letter as confidential." The three gentlemen were received by Commandant General Botha, who promised to send the letters on to Mr. Kruger, but added that, as war was going on, Mr. Kruger would do nothing without consulting him. Dr. Scholtz returned from his interview with the Commandant-General, and met me on the battlefield on the 12th June, and pressed me to write to the Commandant-General and propose an interview. This I declined to do, but, after being further pressed by Dr. Scholtz, I wrote the following letter:—"To Commandant-General Botha, Headquarters of the British Army in South Africa, Zwartz Kopjes, near Pretoria, 12th June, 1900.—Your Honour,—I address these few lines in the hope that they may have the effect of inducing your Honour, in the cause of humanity, to refrain from further resistance. The British force under my command so greatly exceeds the Boer Army in numbers that, although the war may be prolonged for a few more weeks, there can be but one result. After the gallant struggle your Honour and the force under your command have made, there can be no question of loss of honour should you decide to accept the counsel I now venture to proffer.—I have the honour to be your Honour's obedient servant (signed), ROBERTS, Field Marshal." This was taken by Dr. Scholtz and my A.D.C., Captain Waterfield, to the Boer outposts, whence it was conveyed to the Commandant-General, Louis Botha, who wrote to Dr. Scholtz as follows:—"From Acting Commandant-General Louis Botha to Dr. Scholtz, Donkerhoek, 12th June, 1900.—Circumstances make it impossible for me to meet you, neither this evening nor to-morrow morning. If either you or Captain Waterfield have a letter for me from Lord Roberts, please deliver it to my adjutant, by whom I send this. If an answer to it is required, I can send it under a flag of truce to Lord Roberts. By order.—(Signed) N. J. DE WET, Military Secretary to Acting Commandant-General." On the night of the 13th-14th June I received a letter from the Commandant-General, as follows:—"From Commandant-General Botha to His Excellency Field Marshal Lord Roberts.—Your Excellency,—In answer to your letter of yesterday, wherein your Excellency advises me, in the interests of humanity, not to continue this strife any longer with your army, as your force exceeds ours so greatly in numbers, I wish to give your Excellency the assurance that the subject is receiving my serious consideration. However, for the purpose of arriving at a decision, it is not only absolutely necessary for me to call a General Council of War of my officers, and to consult them, but, above all, it is necessary for me to consider the subject with my Government. I trust that, for the sake of humanity, your Excellency will give me the opportunity for such consideration and consultation. As some of my officers are near the Natal border, and I am also a long way separate from my Government, this will require some time. I ask your

Excellency kindly, therefore, for an armistice for six days, beginning from to-morrow morning at sunrise, during which time no forward movement will be made on either side within the territory of the South African Republic. I should like very much to receive from your Excellency to-day an answer to this request, and, if possible, by the agent who is taking you this letter.—I have the honour to be, your obedient servant (signed), LOUIS BOTHA, Acting Commandant-General, S.A.R." To this I sent the following reply:—"To Commandant-General Botha, Army Headquarters in South Africa, Pretoria, 14th June, 1900.—Your Honour's letter of yesterday reached me during the night. I am anxious to meet your wishes and to enable your Honour to communicate with the Government of the South African Republic, but as the movements of my troops in that Republic are intimately connected with operations in progress in other parts of South Africa, it is impossible for me to accede to your Honour's request that there should be an armistice for six days, during which time there should be no forward movement on either side within the territory of the South African Republic. I am willing, however, to refrain from making further movements in district to the east of the Elands River Railway Station, our present most advanced post in that direction, and also in the district north of the Volksrust and Johannesburg Railway, for a period of five days, commencing at dawn on the 15th June, on the condition that no movement westward or southward is made by the Army of the South African Republic during that same period. This will, I trust, give your Honour the opportunity you desire of consulting your officers and conferring with your Government, and I sincerely hope that the result will be of such a satisfactory nature as to prevent further unnecessary loss of life. I have the honour to be your Honour's obedient servant, (signed), ROBERTS, Field Marshal, Commanding the British Army in South Africa." On the 16th June I received Commandant-General Louis Botha's reply, which was couched in the following terms:—"To His Excellency Field Marshal Lord Roberts, Commandant-General's Camp, 15th June, 1900.—Your Excellency,—In answer to your letter dated 14th June just received by me, in which your Excellency agrees to a cessation of hostilities for five days, with the reservation, however, of the right to move your forces in all directions through the South African Republic, excepting east of Elands River Station and north of the Volksrust-Johannesburg Railway. I have to state to your Excellency, with regret, that this reservation makes it impossible for me to accept the cessation of hostilities, which I so much desired.—I have the honour to be, your Excellency's obedient servant (signed) LOUIS BOTHA, Acting Commandant-General of the S.A.R." I caused the messenger who had brought the letter to be informed that I had received it, but that I had no reply to send to it.

THIRTY-SECOND DAY.

Wednesday, 11th February, 1903.

PRESENT :

The Right Hon. The Earl of ELGIN and KINCARDINE, K.G., G.C.S.I., G.C.I.E., (*Chairman.*)

The Right Hon. The Viscount ESHER, K.C.B., K.C.V.O.
The Right Hon. The Lord STRATHCONA and MOUNT
ROYAL G.C.M.G.
The Right Hon. Sir GEORGE DASHWOOD TAUBMAN-
GOLDIE, K.C.M.G.
Field-Marshal Sir HENRY WYLLIE NORMAN, G.C.B.,
G.C.M.G., C.I.E.

The Hon. Sir FREDERICK MATTHEW DARLEY, G.C.M.G.
Admiral Sir JOHN OMMANNEY HOPKINS, G.C.B.
Sir JOHN EDGE.
Sir JOHN JACKSON.

BERNARD H. HOLLAND, Esq. (*Secretary.*)

Lieutenant-General Sir WILLIAM F.

BUTLER, K.C.B., called and examined.

*Lieut.-
General Sir
William
F. Butler,
K.C.B.*

11 Feb. 1903.

13381. (*Chairman.*) You held the command at the Cape in 1898 and 1899?—I went out in November, 1898, and I remained in South Africa until August, 1899.

13382. During part of that time, in addition to your command, you were Acting Administrator?—Yes, during the months of December, 1898, and January, and part of February, 1899.

13383. So that it was in consequence of that temporary appointment that you had some correspondence with the Colonial Office?—I was Administrator and High Commissioner there for those three months.

13384. And therefore corresponded direct with the Colonial Office?—Quite so.

13385. I asked that question because in a letter to our secretary you suggested that the Commission should obtain all communications sent by you during that time to the Colonial Office?—Quite so.

13386. The Colonial Office have been good enough to give us the papers, and they are here, but I find on examination that so far as I can see they deal chiefly with the affairs that came before you as Administrator, and not directly with any matter that comes within our Reference?—I did not know what the extent of the questions which the Commission desired to put to me would cover, so I thought it best to let them have every paper that I could.

13387. I mean that our Reference refers, as far as you are concerned, as you were not out there during the War, to the question of the preparations which were made or were not made for the War. We do not enter into the political questions between yourself and the Agent at Pretoria, but at the same time, of course, if there is anything in any one of those papers bearing on the preparations for the War, or any advice which you thought it necessary to give to the Government in consequence, that would be interesting for us to have pointed out. Do you think there is anything of that character?—I thought that these papers might probably put the Commission in possession of my views as to what would happen, or what was likely to happen if certain lines were continued, that was all. I thought they would see the matter as I saw it looking at it at the moment.

13388. Your view, as I understand from other documents, also, was to the effect that if there was a war, it would be of the nature of a civil war?—Amongst other characteristics that it would partake of the character of a civil war.

13389. Would you explain what that means?—The fact that the two Dutch Republics had no Army in the sense that we know an army, led me to think that the operations would be very much of the character of a civil war, and that they would be likely to extend into those parts of our Colonies which had Dutch populations; that the affinity of race, and relationship and family ties would probably produce such combinations as are usual in civil war—our communications interrupted, etc., etc., etc.

13390. The interruption of our communications by disaffection in our own Colonies?—Quite so.

13391. Did you bring the point specially before the Government?—I think so.

13392. Could you point to any particular paper in which you did so?—Yes; in Paragraph 7 of my despatch of 14th June, 1899, (*Vide Appendix to Report Vol., page 205*), I wrote as follows—

13393. Is that to the War Office?—To the War Office.

13394. Is that the earliest reference?—Oh, no. I think there is an earlier one in some of my despatches, but this was in these words: "The detailed disposition of the forces in Cape Colony as sketched above is given below, but I must premise again that this depends on the political situation of the moment, for it is quite possible that if the Dutch population north of the great range extending from Sneeuw Berg on the west, past the Zuur-Berg to the Storm Berg, is actively hostile to us, it might be out of the power of the officers commanding the detached forces to reach the stations they have been directed to occupy." Again, I said, "The foregoing details explain generally the dispositions I would propose for adoption in the event of its becoming necessary to protect the frontier line. I would, however, desire to remark that the consideration of this question presents many possibilities which make it different from preliminary operations which would be undertaken in the event of war between two regular military powers whose populations were divided by defined frontiers. In the case of South Africa, there dwells on our side of the frontier a preponderating Dutch population, closely

connected by family ties and mutual intercourse with the people on the other side. The events of the past few years have served to increase suspicion and racial antagonism, and therefore the possibility that at least the opening stages of war between the Dutch Republics and ourselves might produce active or secret combinations against our communications must be considered." That is one of many I sent of a similar nature.

13395. (*Viscount Esher.*) What date is that?—It was written between the 9th and 12th June, and forwarded by the mail of June 14th, 1899.

13396. (*Chairman.*) That is the first?—No. I would not be sure; the complications in the Colonies I think are alluded to in my despatch to the Colonial Office of January 22nd, 1899.

13397. I have it here. (*Vide Appendix to Report Vol. page 205.*) You did say in writing to the Colonial Office on the 25th January, 1899: "This policy in my opinion can only end if persisted in in producing a war of races, a conflict the ultimate consequences of which no one can adequately estimate." That is the same point, I imagine?—That is four or five months earlier than this more detailed statement.

13398. Yes, this was the 25th January?—Yes.

13399. I referred to it because so far as my examination of the papers of the Colonial Office was concerned that was the reference which you made to the subject at that point?—Yes, I have not got a copy of that despatch, and I am speaking from a memory of four years, and therefore I am rather "out of it" in talking of that despatch of January 25th. I only have "draft" pieces and particulars of that despatch, which I have tried to put together, but I have no detailed copy of it.

13400. We have it before us, and that expression of opinion occurs in it, and that so far as I can see was the first?—Yes, I was only two months in the Colony when I wrote that—not two months.

13401. And indeed during the time you were Administrator it is the only reference to the Colonial Office on that subject, I think?—Yes, I should think it would be.

13402. Then passing to the communications with the War Office, I think that on the 21st December, 1898, the War Office wrote to you on the subject of the whole of the military position; (*Vide Appendix to Report Vol., pages 201 and 202*), do you remember that?—I remember that letter; I have not got a copy of it, but I recollect it.

13403. It was signed by Colonel Stopford; there were two letters of that date, both from the Assistant Adjutant-General?—Yes.

13404. One referring to the military position and the other, I think, more to equipment and stores?—Yes.

13405. Do you remember when you replied to that communication?—I was at the time that communication was received Acting Administrator, Governor, and High Commissioner. It was received, I think, in the middle of January. As soon as I was freed from my civil labours, which were very continuous at that time owing to the strained state of political relationship, the killing of Edgar and the rest of it, I set about the large question that letter involved, that is to say the preparation of a Defence Scheme for South Africa. I started, I think, three or four days after I handed over the civil duties to Sir Alfred, now Lord, Milner.

13406. In February that was?—Yes, he came, if I recollect correctly, on the 13th February, and I left on the 20th for the frontier; I think that would be about it. The first purpose in my mind was to examine the frontier, which, I need scarcely tell the Commission, is an extensive one. It was something like 1,500 miles, and was at its nearest place 700 miles distant from where I then was. However I decided to visit the Natal frontier, and I went to Natal in the end of February, and I visited the northern angle of Natal, and Ladysmith and Glencoe, and about 60 miles south of the Tugela, and then I returned to Cape Town. I intended to visit the other part of the frontier, that large section between Mafeking and Basutoland, a distance of some 700 or 800 miles, later, and then to draw up the Defence Scheme and reply. In June I received a telegram asking me for this Defence Scheme which I had formulated in my own mind in case any cir-

11 Feb. 1903.

circumstances should arise to call for action, but I did not wish, as I say, to commit myself to paper until I had visited the whole of the frontier, which was a very detailed business. Meantime, unfortunately, the state of public feeling became so acute that the movements of any body of troops, much less the General commanding, was a matter of some consequence. It was not easy to go to the frontier without exciting suspicion, but in the beginning of June I placed the detailed Defence Scheme in the hands of the War Office.

13407. Then you did not draw the attention of the Government or the War Office to any question connected with the defence of the Colony until the beginning of June?—Oh, I would not say that. I drew their attention to many points.

13408. Can you refer us to the papers, because I have not been able to find them?—I proposed a larger Remounts Establishment, areas for camping troops and exercising them, and there were many things I proposed in the intervening time, which, I may add, were all negatived.

13409. I again ask you, can you refer us to the papers?—I do not know what papers you have got.

13410. If you would give us any reference we could test whether we have got them or not?—Have you got my letter of the 4th November, 1901, addressed to the Secretary of State for War?

13411. 1901! I am speaking of 1898 or 1899?—Yes, but that letter is calling attention to these other matters of which you have asked me.

13412. We have not got that letter?—It is dated 16th December, 1901.*

13413. These later papers the War Office are preparing, but they have not sent them to us yet. Surely if you made them officially they must be on record earlier than that?—Oh, yes; these letters all refer to earlier correspondence.

13414. What points then were raised in that later correspondence?—This point upon which your Lordship is asking me, this Defence Scheme.

13415. Would you tell us the heads of the letter of 1901?—Certainly. The series of these letters Nos. 1, 2 and 3, beginning on the 4th November, 1901, and ending on the 7th February, 1902, about three months, arose out of some statements that had been made by a Cabinet Minister relative to me. I addressed the Secretary of State, as I had previously done whenever any statement was made with reference to me in either House of Parliament. Being debarred from replying in the Press, I thought that the best thing to do to get on record whether I agreed or disagreed with these statements, so I adopted that course, and in following it I got into a correspondence with the Secretary of State, which is covered in these three letters as far as I am concerned. The points your Lordship has just raised about that Report or Defence Scheme are all covered in the third letter.

13416. Would you mind reading us the third letter?—I shall be very glad. The third letter was addressed to the Adjutant-General at the War Office, because I received a communication from the Secretary of State not to address any further letters to him, but to address them to my military superior. I therefore addressed the third letter, which is as follows, to the Adjutant-General:—"Devonport, 7th February, 1902. Sir,—I was recently compelled to draw the attention of the Secretary of State for War to a reference to myself made by the Secretary of State for the Colonies, in a public speech, to which I, holding His Majesty's Commission, was debarred from making a public reply. In the correspondence which ensued the Secretary of State for War admitted the undoubted warnings I had given the Government, but he subsequently raised a fresh issue upon points, such as the time taken by me in the preparation of the South African Defence Scheme, which he considered might have been the 'work of a few days or hours,' and, again, that 'he is unable to trace any letter in which I made a definite request for an increase of the garrison of South Africa, with a view to repelling the impending invasion of the troops of the Dutch Republics, or that I had submitted an estimate of the expeditionary force

which would be needed to bring the War . . . to a satisfactory conclusion.' I propose to deal with these issues in separate letters. In November 1899, when I was made the subject of attack by a portion of the Press" (in this country) "I wrote to the War Office, asking either that some specific charge might be made against me in relation to my late Command in South Africa, or that they (my military superiors) would themselves defend me from these libellous accusations. I was informed by the Military Secretary that my letter had been carefully considered by the Secretary of State in consultation with the Commander-in-Chief; that it was not desirable that officers should take notice of criticisms in the press as to the manner in which they had discharged their duties; that the Commander-in-Chief was of opinion that I had done well to take no notice of the accusations to which I had referred, and that he trusted I would continue to leave them unnoticed. I concluded, therefore, that my superiors had no charge to make. But now, when more than two years have elapsed since this correspondence, I understand the Secretary of State in his letter of January 3rd to suggest that I failed to furnish the War Office with a detailed Scheme of Defence in due time after the receipt by me of a War Office letter of the 21st December, 1898. I submit that if there had been any negligence on my part in respect to the preparation of the Defence Scheme for South Africa within reasonable time, it should have been made the subject of criticism or charge against me three years ago when the supposed delay occurred. Reference by me to official documents is now in most cases impossible. I was recently informed at the War Office that much of the confidential correspondence of that time had been destroyed by order of the authorities in Cape Town. I have, however, been able, from the papers in my possession, to supply in some degree the want of documents, and I propose now to state the circumstances connected with the preparation and rendering of the South African Defence Scheme. The War Office letter of the 21st December was received at Cape Town about the middle of January, 1899, when I was performing the duties of Acting Governor and High Commissioner in the absence of Sir Alfred Milner in England. The time was one of unusual political unrest and official labour, and, as my constant cable messages and despatches to the Secretary for the Colonies will show, the situation required my closest attendance in Cape Town. Sir Alfred Milner returned from leave a month later, and having handed over the civil duties to him, I immediately turned my attention to the defence questions in South Africa. It is enough to say here that within a month from the date of the Governor's return, I had travelled 3,000 miles, had inspected the Natal frontier, had visited the railway junctions of the northern portion of Cape Colony, and had, in my own mind, decided the outline of the Natal and Cape Colony Defence Scheme. But, as I subsequently reported, 'I had not yet been able to see even the general line of frontier lying between Basutoland and Fourteen Streams' (about 400 miles), and I did not wish to forward to the War Office a scheme on all parts of which I had not formed my opinions from a personal examination of the ground. The Secretary of State suggests that I might have used Staff officers to visit various parts of the frontier; he lays stress upon the 'assistance' given to me in the War Office letter referred to 'by a concise recapitulation of the main features of the frontier'" (that is the letter I think you have before you), "and he thinks that the whole question of the defence of South Africa was capable of being decided 'under circumstances as favourable as those under which a general officer in the field may frequently be called upon to determine within a few days or hours.' I respectfully submit that there is no analogy whatever between the two cases cited. The misconception arises from a confusion of ideas between the plan or forecast of war known as strategy and the operations which involve immediate action called tactics. A glance at the defence scheme for England—which has been for many years in preparation and is not yet complete—will show that a scheme of defence for even a small Island is not to be confounded with the operations which a general in the field may be called upon to 'determine in a few days or hours.' To the suggestion that I might have made use of staff officers for the purpose of visiting various parts of the frontier, I reply

*The letters were subsequently sent in. Vide Appendix, page 88, post.

that I was not disposed to deal at second hand with this important question, even had staff officers been available, but there were none. I do not propose to dwell upon the exception taken to the use of the word 'uncertain' when writing of the attitude of the Orange Free State, in the possible event of war, beyond observing that the official documents of the period speak of the attitude of the State in that term, and there is, I believe, a letter extant, written by a very competent authority, which gives as the reason for the postponement of hostilities from June to October, 1899, that 'we are not yet quite sure of getting the Orange Free State into the Bag.' I pass to consider the presumed assistance given in the letter of December, 1898, towards forming my decisions for defence in South Africa. In the War Office letter of that date lay my principal difficulty for the following reasons: It recommended to me, both in Natal and in the Cape Colony, the initial occupation of advanced positions, the adoption of which would, to my mind, have involved the earliest and the most complete initial disasters. It pressed upon me seizing all the bridges of the Orange River between Cape Colony and the Orange Free State, as well as Van Reenen's Pass and other advanced positions in Natal, by the small force under my command. I had, therefore, not only to write a scheme of defence, but I had to argue it against the War Office proposals, hence the efforts on my part to give detailed reasons for my decisions in my despatch, 7th—12th June, and hence, too, my desire to personally inspect the entire frontier before putting my opinion into conflict with the views of the War Office and of the officers who had been sent from England to inspect and report upon these frontiers 18 months earlier. It was comparatively easy to frame in my own mind my own scheme of defence for Natal and the Cape Colony, but it was another matter to formulate the reasons for my dissent, to show cause for not pushing forward my weak force into the Drakensberg passes on one side, or to within a half rifle shot distance of the Orange Free State on the other. Reference to that despatch will show almost in every line this purport. After proposing to place all available Infantry at De Aar, Naauwpoort, and Stormberg, I wrote: 'As it would be impossible to hold all the bridges named by you on the Orange River, except by detachments whose weakness would only invite attack, I propose to hold Orange River Bridge within our territory,' and I pointed out how concentration at that point from the right, i.e., Stormberg, Naauwpoort via De Aar, could be rapidly effected (this movement was afterwards carried out with brilliant results by Earl Roberts), but despite the reiterated warnings of my despatch, so wedded were the War Office authorities to their original ideas of defence, that after my proposals had been received and considered in London I was again urged by a War Office telegram to reconsider my decisions with reference to Natal, and to occupy Van Reenen's Pass on the edge of the Orange Free State—."

13417. Have you got the date of that?—I can place the date within a week; it would be about the middle of June—in the second week in June, I should think between the 9th and 14th.

13418. Of 1899?—Yes.

13419. At that time your despatch could not have reached the Secretary of State?—Yes, it reached him by telegram; the greater portion of the despatch was cablegram.

13420. We cannot find the telegram from the Secretary of State to which you refer?—I should say it was between the 9th and the 14th, but I have not got a copy of it; it was all in the confidential papers at Cape Town.

13421. (Sir George Taubman-Goldie.) You have not the words of that, but have you the substance of it?—I have the substance of it here.

13422. (Chairman.) We will not interrupt you in your reading?—"I was again urged by a War Office telegram to reconsider my decision with reference to Natal, and to occupy Van Reenen's Pass on the edge of the Orange Free State. I declined to do so. These telegrams are doubtless in your possession, and it might be of some interest to compare their dates with that of my arranged supersession in the South African Command in the event of war—I think they

will be found to synchronize. The opinion held by the Secretary of State upon the simplicity of the problem of defence"—

13423. (Sir George Taubman-Goldie.) I beg pardon for interrupting you, but could it have been as late as the 8th of August?—No. I am certain it was the first fortnight of June, and I can localise it between the 9th and 12th.

13424. (Chairman.) Will you finish your letter?—"The opinion held by the Secretary of State upon the simplicity of the problem of defence with which I had to deal in South Africa, is one which was evidently not held at the time by the Intelligence and Mobilisation Authorities in England, as the following extracts from the correspondence of the time will show—"I am afraid that you will find a good deal of work in front of you in connection with defence matters" wrote one Staff Officer in very high position: this has been 'caused' partly by a certain amount of misunderstanding at headquarters." Again, I find, even as late as the month of May, 1899—five months subsequent to the War Office letter referred to by the Secretary of State—the problem of South African Defence thus spoken of: 'It is difficult to unravel the various directions sent to you from the different branches here, each without the knowledge of the other branches concerned!' Again, I find the same subject referred to by another high War Office authority on South African Defence questions, as follows:—"There has been a good deal of confusion at headquarters from various branches having taken action without reference to the Commander-in-Chief's Department. Neither . . . nor . . . knew what was going on. I venture to suggest, Sir, that these extracts, taken from my papers, do not point either to the simplicity of my work in the preparation of the Scheme of Defence for South Africa, or to any large measure of 'assistance' which I could have derived from the collective efforts of the War Office, although I read later on the more sanguine assurance that 'we are all now working together, and hope there will be no more misunderstanding.' I observe too, that the Secretary of State suggests that the letter of December 21st, 1898, pointed so the extreme urgency with which, in view of an 'impending' war, the War Office regarded the preparation of the Scheme of Defence. I have referred to my papers, but can discover no trace of this feeling. I think the War Office letter of December 21st begins with the seemingly unurgent observation that 'the possibility of a war with the Dutch Republics had not wholly passed away.'" (I was quoting from memory as I had not a copy of it).

13425. The exact expression was, 'Her Majesty's Government had no special reason to apprehend any hostilities with the Republics in the immediate future?'—"A sentiment which I find reiterated five months later in a letter from the same source, which reached me late in June, 1899, in the following words: 'Without entering into any close consideration of the political situation, we cannot shut our eyes to the fact that the possibility of war in South Africa has not yet been eliminated.'" (That was in June, 1899.) "Nor is this forecast much widened when I find the small reserve of rifles in my ordnance store at Cape Town at this period thus referred to: 'There has been a misunderstanding as to the reserve of rifles sent out, and you have a good many more than can possibly be needed.' I quote these sentences, not because of the optimism they reveal even up to June, 1899, but to show what little reason I had to suppose that the War Office authorities were in urgent haste to possess my scheme, and what was the real nature of the 'assistance' I had received from the War Office in its preparation; still, notwithstanding the absence of any indication of urgency, the War Office were in possession of the new Defence Scheme for South Africa within four months of the return of Sir Alfred Milner from England—the scheme itself differing in its most essential features from the previously expressed opinions of the experts whose views were based upon the reports of Officers specially sent out from England to examine the frontiers of Natal and the Cape Colony, a year or two earlier. Had the War Office conveyed to me at any moment between January and June, 1899, the slightest intimation that a diplomatic initiative war

about to be taken with the Dutch Republics, or that there was an early probability of war, I might perhaps have saved a few weeks in the preparation of this report, and undoubtedly I would earlier have given to the War Office the emphatic warnings which were so often repeated in my despatches and telegrams of the end of June. Had I even been made casually acquainted with the consultations and interchanges of ideas and proposals as to armaments and frontier movements which took place in London in the end of January, 1899, and upon which so many matters of vital importance afterwards turned, I would have devoted myself (as I did later in June, when I became aware of some of those things) to the attempt to show the Home Authorities how inadequate was their conception of what war in South Africa would mean, how deceptive were the assurances, and how dangerous was the advice they had received. In my despatch of July 4th, I stated the circumstances under which I had come out from England seven months earlier, without instructions of any kind in 'either civil or military matters,' nor was it deemed necessary to send me any instructions after my arrival in the country. Indeed, the obscurity in which I found myself in this respect was more than merely negative. Asking in my office at Cape Town, some time after my arrival, for an official book in which my predecessor had kept copies of his confidential correspondence with the War Office, I ascertained that this record had been destroyed. I then found that some 70 or 80 pages of the book had been torn out, and I subsequently discovered that this action had not been taken because of any request made by General Goodenough before his death, nor at the instance of the widow or executors of the late General. One other instance before I quit this somewhat painful subject. Under date 3rd of August, 1899, the following telegram can be read in the Official Blue Book: 'Propriety of moving troops nearer to frontier so as to watch Laing's Nek is being considered by Her Majesty's Government. If it be desired to garrison Laing's Nek, would Colonial troops be sent with British?' This telegram, the execution of which would undoubtedly have produced immediate hostilities, was never communicated to the General Commanding in South Africa, although two months previous to its date, he had officially recorded his opinion that the position proposed for occupation was, for a variety of reasons given, 'a dangerous one.' I do not think I need pursue this subject further. Looking back from the present time to those early months of 1899, the sole sign of impending changes which I can trace is to be found in the obscure movement of the families of some of the officials; the sudden sales of the racing studs of the chief financial millionaires in Johannesburg; and the arrival in South Africa from England of the most noted persons connected with the Jameson Raid of 1895-6. The last named immigration will be found mentioned in my despatches of June, 1899. But who could have imagined that the persons to whom I have referred, could have been the recipients of any information as to a coming war, which had not been communicated to the General in command in South Africa? In the many duties devolving now upon me, I must ask permission of the Commander-in-Chief to refer to another letter, the consideration of the remaining matters touched upon in the Secretary of State's letter, which pertain to the months of June, July and August, 1899. In the present communication, I have dealt with matters relating to the earlier months of that year. I may here state, however, that so far as I have been able to understand the general tenour of the suggestions and criticisms put forward in the letter of the 3rd January, it would seem that while in June, 1899, I was severely censured because I had ventured to warn the War Office in forcible language as to the nature of a war with the Dutch Republics in South Africa, I am now taken to account for not having made my warning of that time still more emphatic."

I then received a communication that I was not to continue the correspondence. I have read that letter 9, because it pertains to the matters as to which you were asking me.

13426. You say you had not during that period any intimation from the Government that they apprehended war?—None whatever.

13427. But, on the other hand, I do not think that except in references to the nature of the war, to which

we have already referred, namely, that it would be a racial war, the Government received any warnings of your apprehension that a war was imminent?—Nor was a war imminent unless certain things were done.

13428. You did not consider that the gradual accumulation of warlike material and stores by the Boers had any bearing upon the subject?—That began immediately after the Raid.

13429. I am aware, but it had been going on?—Well, war was imminent in the sense that you might have had war at any moment, but you might have had it protracted or postponed to any time, too.

13430. You think so; that was your view at the time?—That was my view at the time, and it was based upon many considerations which I was looking at at the moment.

13431. Now with regard to the Scheme of Defence which you were asked to prepare, did you consider that was to take up the Scheme of Defence by your predecessor on the same lines, namely on the conditions of the King's Regulations?—No, Sir. I altered the original scheme very considerably.

13432. Quite so, but I do not think you follow what I mean. I understand that the King's Regulations are that an Officer commanding on the spot, if he is asked for a Scheme of Defence, submits it in relation to the troops which he has at his disposal in his command?—Certainly.

13433. And that was the basis of your predecessor's scheme?—Yes.

13434. Did you consider it was your duty in taking up the revision of the Scheme to consider it from the same point of view?—I was told to deal with the troops there at the time, and I dealt with them.

13435. You did not go further than that; you did not express any opinion as to the adequacy of the garrison?—Oh, yes, I think I did. It was a scheme based altogether on the initial preparations or preliminary steps to be taken pending the arrival of other troops, that was the nature of it.

13436. But looking to the preparations for war which were being made in the Transvaal, to which I have referred just now, it did not impress itself upon your mind that the number of troops in the Colony would be unable to hold their own during that interval?—No, they would have been able to hold their own had the scheme been carried out in its entirety, and they did hold their own as a matter of fact. I do not know if you have the Scheme of Defence before you?

13437. Yes, you mean yours contained in the despatch of the 14th June?—Yes.

13438. Yes, I have it before me (*Vide Appendix to Report Vol. page 205*)?—That Scheme was drawn up by order of the War Office to deal with the troops then in Natal, and they were put in such positions as, to my thinking, would have enabled them to maintain themselves, falling back of course, not advancing until the arrival of such troops as would have turned the tide the other way; in other words, I think we could have filled in at the back behind that scheme anything from 50,000 to 150,000 men.

13439. In time?—In time; we did it on one side and why not on the other?

13440. Your Scheme involved the holding of Ladysmith?—No, you will see that it is based on Estcourt, 30 miles south of the Tugela, and more than 40 from Ladysmith.

13441. But it is based also surely on a force at Ladysmith?—Certainly, it dealt with the force already at Ladysmith. The Scheme was based on the placing of troops in such a position as would enable them either to advance, to stand fast, or to retire, as circumstances would determine. It was based, if you might take the simile of a telescope drawn out to its full length, and that telescope might have been closed at one end, or in the middle, or at the other end as circumstances, which alone could be dictated by the enemy, would determine.

13442. But as I read paragraph 4 of your despatch of that date, you moved up the greater part of the Ladysmith force to Glencoe, and moved up the Maritzburg force to Ladysmith?—Yes; to Glencoe, not to Dundee.

Glencoe is the highest point of the railway running through the Biggarsberg Pass.

13443. And then you say: "The fresh Ladysmith force would then be in a position either to support Glencoe and maintain the line of the Biggarsberg or to operate against Van Reenen's Pass should circumstances necessitate"?—Quite so: "should circumstances necessitate"; as I say, if you will look at the points named in it, Estcourt was the base of it.

13444. And "entrenched posts would be formed at a point between Newcastle and Estcourt"?—Yes.

13445. If you form entrenched posts I suppose you mean to hold them?—Not at all; to hold them from detached raiding parties of six, eight and ten men at night, but you see it is not easy to recreate the position exactly. Let me explain it: you had 120 miles of railroad exposed to danger, and were you going to abandon that railroad from the outset? Were you going to leave it open to the attack of seven or ten men with dynamite, or to a raiding party of 20 men, or were you going to protect it until such time as the enemy came in force? If the Boers did not mean to take the initiative, which was quite possible—and I am not sure that they would not have done better if they had not—we, by abandoning all that line of railroad, left 120 miles of railroad open to them to seize, not even to destroy, but to seize, so that if they meant to invade subsequently they would have had that line to use.

13446. That is what I want to get at; that your idea was to have the garrison of Natal so distributed as to protect the Colony against raids?—Yes, raids on the railroad.

13447. And it was the danger of a raid which you principally had in your mind?—Or of the attack of a small commando or party; circumstances can alone decide when the troops are placed how you will subsequently handle them. The Scheme in its essence was a defensive scheme; when later it was made an offensive scheme the whole value of the scheme disappeared. It was made an *offensive* scheme; it was a *defensive* scheme.

13448. The object of your Scheme was pretty much this, that although the Northern strip of Natal might have been occupied by the Boers, yet it was unlikely that any further serious advance into the heart of the Colony would be undertaken?—Oh, no, I did not consider it unlikely, and I put the troops in the position I thought would meet either of the three eventualities that I have named, either that the Boers would remain within their frontiers and raid us, or that they would invade from the Transvaal and not from the Orange Free State, or that they would invade in force, in which case we should have retired over the Tugela on Estcourt.

13449. (*Sir George Taubman-Goldie.*) Where would you have accumulated your stores for the extended force?—I did not accumulate any stores, but you are asking me now about a thing after it has occurred. I should have been very loth to accumulate stores in positions where they could be reached by the enemy. I give you that general answer. I would have accumulated them at Maritzburg or Estcourt, or wherever I made my base.

13450. (*Chairman.*) At any rate at that time, as I understand, you did not anticipate the urgency of preparations against an invasion in force such as afterwards occurred?—Oh, no, I would not say that. I did not know the diplomatic initiative would be taken with the rapidity with which it was taken, but nevertheless you notice that despatch begins with the words—

13451. Which despatch do you refer to?—The one you are dealing with of the 14th June. It begins with the words, "On receipt of orders." If I remember aright it begins with the remark that these movements would take place on the receipt of orders.

13452. That is in the telegram, I think. "On receiving instructions"?—Yes, "On receipt of orders from England," it was originally, but the ciphering is a troublesome matter. The initiative of the movement was thrown altogether upon the Home authorities; that is to say these movements would not take place, as proposed by me, there, until they were ready at home. There is the initial idea: the key of the thing

is in these first words. I was not going to move these troops as I proposed until everything was ready behind; that was the meaning of it.

13453. (*Sir John Edge.*) What do you mean by everything being ready behind?—Until the people in England—the Government—had fully made up their minds what they were going to do.

13454. (*Chairman.*) Supposing the Boers did not wait for that?—Then we should have had to make the best hand we could, and I think we could have made a very good hand too.

13455. (*Sir John Edge.*) What arrangements were you proposing with regard to a descent across the Orange River? Did you think you had sufficient troops in South Africa to hold the frontier of Natal and to hold the frontier in Cape Colony until troops could come from India or England?—I never proposed to hold the frontier; the whole gist of my despatch was falling back.

13456. I will put it in another way: Had you sufficient troops to cover Durban and to cover Cape Town?—Absolutely. They did it. Take De Aar: it was never stirred. Naauwpoort was never stirred. Stormberg was abandoned, and needlessly abandoned, because we tried to retake it the week after. These three points, taking Cape Colony first, were never stirred during the War. Orange River Bridge, which was right up against the Free State, was never stirred. De Aar was never taken. Naauwpoort was never taken, and Stormberg, as I say, was abandoned.

13457. If the commandoes that descended on Natal had descended on Naauwpoort and the Orange River they would have taken them, surely?—They would have stood their siege; they were entrenched positions. In the despatch from the War Office I was urged to go forward and I said "No, I cannot do it, they—the detachments—will be overwhelmed at once," and I took up certain positions in the Cape Colony which I maintain were never touched during the whole war.

13458. How many troops had you allotted under your scheme to the covering of Cape Town, that is covering it at any place you like back from the frontier?—It is all stated in that despatch. I had very few troops—three battalions and a battery, and details and Volunteers and Irregulars.

13459. Surely if the Boers had descended with 20,000 men they could have masked your three battalions and marched into Cape Town?—Certainly, no matter what you did at any moment you might have that state of things if the Boers came on in overwhelming force.

13460. Does it not resolve itself into this, that looking at the troops you had under your command in the colonies, you had not a sufficient force to cover Durban or Maritzburg?—Oh, yes, I think I had sufficient force to have delayed any force coming on until such time as reinforcements should be run in. We were 12 days from Bombay and 21 days from England. You apparently forgot the existence of the Natal Colonial troops, and of the 5,000 or 6,000 Irregulars which came to us from the Rand before the war.

13461. Supposing you had been Commander of the Boer Forces and made up your mind to descend upon Cape Town, was there any force anywhere between Cape Town and the frontier that could have held you?—No, they would have cut the communications, as they did later when there was ten times that force in the country.

13462. They would have been in Cape Town?—Cape Town is a strongly entrenched position covered with a fleet. It is a very long march from Bloemfontein to Cape Town, and there was a large fleet there. They could have landed the sailors and covered the place with the guns of the ships by moving them round to Table Bay. Those were again the Colonial Irregulars.

13463. What would have been the result from the military point of view if they had masked the three or four battalions that you had towards the frontier in Cape Colony and had marched down on Cape Town? What would have been the result on the Dutch populated districts of Cape Colony?—I think it would not have been as bad as it was later on. I think the active aggression would have been so blatant so visible

Lieut.-General Sir William F. Butler,

11 Feb. 1903.

to the world, that they would have met with a considerable amount of local resistance.

13464. In the Dutch part of Cape Colony?—I do think so. I think if there had been an aggressive invasion in the earlier days—sweeping down there—they would not have met with the support they afterwards met with.

13465. I do not want to pursue it, but looking back from your present experience do you conceive that you had a sufficient force in Cape Colony and Natal to cover Maritzburg or to cover Cape Town?—We did cover Cape Town.

13466. Did you consider that you had a sufficient force? You covered Cape Town no doubt in this way, that the Boers descended upon Natal, but looking back on it, do you contend that you had a sufficient force (I am speaking of the time before the Indian Contingent arrived) in Cape Colony and in Natal to cover your capitals?—Yes, until reinforcements arrived, I think so, certainly. As I have said, we did it, and we had no necessity to move the fleet.

13467. (*Viscount Esher.*) Had you as many troops as General Goodenough had asked for?—I do not know what troops General Goodenough had asked for.

13468. (*Sir George Taubman-Goldie.*) Had you any documents passed on to you from your predecessor?—I told you that all confidential documents were destroyed.

13469. For instance, on the question of transport there was a letter of the 8th June, 1898 (*Vide Appendix to Report Vol., page 195*), from the Quartermaster-General to the General Officer Commanding in South Africa, which stated, among other things, that the Secretary of State for War had "approved of a standing contract being entered into for the necessary animals to horse the vehicles alluded to in preceding paragraph within seven days."—I remember that.

13470. Did you see that?—Yes. It was afterwards annulled.

13471. Because I notice in a later despatch of your own, I think in this very one we have been discussing, you mention that horses could be procured in a period of from one to three weeks?—Yes. What is the date of that telegram?

13472. The original one to General Goodenough is dated 8th June, 1898, whilst this other one is at the end of your letter of the 14th June, 1899, a year later—the letter we have been discussing at length. It is in paragraph 11: "These animals could only be obtained and forwarded to join their units after the expiration of a period varying from one to three weeks." It speaks of the animals as animals that could be procured in the future?—Yes.

13473. But it seems to me rather strange that a year before, on the 8th June, 1898, the Secretary of State had authorised a standing contract being entered into for animals to be ready within seven days?—That contract was sent home and never ratified, and the letter of the Quartermaster-General, to which you allude, was subsequently annulled; you will find allusion to it in several of my telegrams. Have you got my telegram of the 23rd June to the Secretary of State for War?

(*Chairman.*) Yes, I have got it here: "Mules could probably be obtained here, but period of delivery would chiefly depend upon Mr. Weil, who is now in Zambesia, and has been telegraphed for," &c., &c.

13474. (*Sir John Jackson.*) Who was Weil?—A large contractor who had been a contractor in the Matabele War and in the Raid, and who was a contractor during the recent war for great numbers of transport animals.

13475. A horse dealer?—A general contractor for everything.

13476. (*Sir George Taubman-Goldie.*) My point really was this, that this telegram and some others all spoke of the probability of mules being obtained as a thing for the future, whereas this letter to General Goodenough of the 8th June, 1898, gave a definite decision apparently of the Secretary of State with regard to a standing contract being made ready for war?—That contract was sent home and not ratified, and the letter, as I have said, was cancelled. It is one of the matters alluded to

in the extract which I read, viz., "There has been a good deal of confusion at headquarters from various branches having taken action without reference to the Commander-in-Chief's Department," &c., &c.

13477. Could you put us in the way of finding evidence of that?—I can trace allusions to it all through my own telegrams.

13478. (*Viscount Esher.*) When you say "sent home" by whom was it sent home?—By my predecessor.

13479. (*Sir George Taubman-Goldie.*) This letter to your predecessor of the 8th June, 1898, was a very definite letter which really gives the impression of the Secretary of State preparing for hostilities in case they should break out, and then a year later we find the thing is discussed as a problematical affair again?—I refer to my telegram of the 10th July, 1899: "Referring to telegram of 21st June and subsequent cables received, it is necessary to clear up situation, and so prevent misapprehension. Contracts are now out for 1,470 mules; they are being supplied by about the 20th July at following average rates: Natal, 750 at £30; Cape Colony, 720 at £33," etc. I save on that contract alone £20,000.

13480. Do I understand that the contract which General Goodenough was authorised to enter into was cancelled or not allowed at your request?—No, it was sent for ratification, and it was not ratified.

13481. (*Viscount Esher.*) But before you took over the command?—Before I took over the command, and I must say at once fortunately not ratified, because instead of spending the enormous sum that was spent on mules and horses we should have had to spend double. Remember you proposed starting that contract at £40 in one Colony and £45 in the other for mules that I was getting at the same time at a saving of £20,000 on only 1,470 mules, or some 2,000 animals. If you struck the first note of your contract at that enormous price, I think it might have gone to anything you like later on.

13482. (*Sir George Taubman-Goldie.*) I am not contending that such a contract should have been confirmed, but that the principle of the letter of the 8th June, 1898, should have been carried out, and that a standing contract should have been entered into for the necessary animals as early as possible, for assuming war had broken out between 8th June, 1898, and the time you assumed command, we should have been without animals?—Yes, by a sudden invasion, of course, but I do not think there could have been a sudden invasion without our knowing what was going on beforehand. We were as free to go into Bloemfontein and Pretoria as you are free to go into Kensington. We were constantly travelling and moving about, and I do not think that that was a contingency to be reckoned. We had tens of thousands of our people in the Transvaal. I will not say it was not possible, but a sudden rush of that sort was certainly most improbable; that it could have taken place in force was impossible.

13483. (*Viscount Esher.*) In reference to the questions the Chairman put to you, it must have been present to your mind in May and June that the policy which the Government were pursuing might lead to war and probably would lead to war?—I think you will find that in my despatches in June particularly, not in May so much.

13484. Having that present in your mind, did you deliberately come to the conclusion that the number of troops in South Africa was sufficient?—No, it was never anticipated for a moment that the number of troops in South Africa was sufficient.

13485. I mean sufficient to make a stand until reinforcements arrived?—No, nor did I think that in all contingencies. If the initiative was pressed to a certain point, then it became a question. We were moving at that time more rapidly in one direction than in another, but that we could have held our own on these lines of retirements in face of advances until reinforcements came I have not the least doubt.

13486. Anyhow, you did not advise the Government to reinforce the garrison in South Africa at that time?—No; if you turn to the despatch of the 23rd June you will see I am censured for even suggesting it.

Have you had that despatch? It is so difficult to get on to a level plane in these things of four years ago that I will read it for you.

13487. (*Chairman.*) What do you refer to?—On the receipt of this telegram, ordering the provision of mules, which I put at 2,000, but which the War Office cut down to 1,340, after a deal of telegraphing they asked for "any observations." I do not know if you have the telegram there, it is a long one. I took stock of the situation then.

13488. What is the date?—It is dated 21st June, from the Secretary of State: "Referring to letter of 8th June last year, and pending the receipt of your Report now on passage home, you are authorised to obtain immediately the animals, with proportion of native drivers, necessary to complete Regimental Transport of the Force in South Africa. We calculate present deficiency on scale of your letter of 24th June last should not exceed 1,340 mules. Can you get these on the spot? Telegraph this as soon as possible." And at the end it says: "Main object of these steps is to increase efficiency of existing force, apart from question of reinforcements, which is not now raised. Do you desire to make any observations?" That mystified me a good deal, because the purchase of these animals could not be done in a hole and corner, it would be known from one end of South Africa to the other, and it seemed to me that it would be a very considerable advance on anything I had got before. Up to that time we had been retrenching, as I have already stated to the Commission. My proposals for the acquisition of a large farm for remounts, drill facilities, hospital accommodation, and Ordnance stores, were negatived; our reserve men—trained men—were taken away from South Africa. A battalion of infantry which had been at Ladysmith for two years and knew all the surrounding country had been removed to India—the experienced officer who had held command at Ladysmith had been recently recalled to England. There was no General in Natal. I looked on the one side, and I saw what seemed to me a very serious political agitation going on with a Party that I have not alluded to yet, whom I had always looked upon as a Third Party; they were pressing on all they knew. The Government did not seem to be aware of that, and this telegram brought matters to such a point that I thought it gave me the opportunity to speak. So I took those words "any observations," and answered in a way which I thought would at least ring the War Office bell. I think you will find my answer there.

13489. On the 23rd June, that is the one we referred to before?—Yes. I had no power to spend a £5 note, but I had power to send a telegram.

13490. Your answer to the observations was as follows: "You ask for my observations: present condition of opinion here is highly excited, and doubtless the news quoting preparations referred to in your telegram, if it transpires, will add largely to the ferment which are endeavouring to reduce by every means. Persistent effort of a party to produce war, forms in my estimation, graver elements in situation here. Believe war between white races, coming as sequel to Jameson Raid, and subsequent events of last three years, would be greatest calamity that ever occurred in South Africa"; that is the one I quoted to you before?—I do not think you read that part to me.

13491. (*Viscount Esher.*) What do these words mean, "Persistent efforts of a party"?—That is what I did not think the Government were aware of at the time.

13492. Who was the third party?—The third parties that were pressing on the War were the Party of the Raid.

13493. You mean the late Mr. Rhodes and his followers?—Well, I am sorry to name anyone, particularly a man who is dead, but I say the party of the Raid.

13494. (*Sir Frederick Darley.*) The party of the South African League; is that what you mean?—The party of the South African League and of the Raid.

13495. (*Sir John Edge.*) Did you think that party was likely to involve us in war in the immediate future?—No, I knew that as long as certain forces were kept distinct from that Party they would not involve us in war; in

other words, I knew the Boers would sit perfectly quiet, as they did before, but it was a very different thing the minute I, representing the Government or the War Office, came into the field, even with the purchase of horses. That is what I knew. There is one Chairman of the South African League; perhaps your Lordship might like to look at him (*handing in a photograph*).

13496. (*Sir George Taubman-Goldie.*) You say you were censured?—I read it in that light; have you got the telegram?

13497. It is from the Secretary of State, dated 27th June, 1899: "Concluding paragraph of your telegram of 23rd; you have evidently misunderstood my telegram of 21st. You were invited to offer observations as to suitability of War Office proposals to secure object in view, viz., increased efficiency of existing force, not as to general merits of policy adopted by Her Majesty's Government. You cannot understand too clearly that whatever your private opinions, it is your duty to be guided in all questions of policy by High Commissioner, who is fully aware of our views, and whom you will, of course, loyally support"?—I received that for my attempts to tell them what I thought was the gravity of this course that was then, to my mind, being inaugurated.

13498. (*Sir John Edge.*) Is that photograph a fair sample of the South African League?—It is a fair sample of the up-country Chairman at that time.

13499. It was never in your contemplation that Mr. Kruger would declare War?—My view was this, that as long as I held the neck of the bottle, so to speak, there would be no war. The Boers knew perfectly well the difference between that Third Party that I allude to—the party of the Raid—and the Imperial Government, and they would look on perfectly quietly at any attempts at raiding by that Third Party, but the minute the Imperial Government moved then I looked for the most serious state of things, and I could not put into stronger language than I did that view.

13500. The Imperial Government moving in what way?—I had all along pointed out in my despatches that there was a Party there working all they knew for war. The Imperial Government was distinct from that party, distinct in the eyes of the Boers and distinct all along through South Africa; but to my mind the minute there was the least indication of the Imperial Government coming in, in front of, or behind, that party then there would be a serious state of things. Until then there was, to my mind, no probability—no possibility—of an invasion. That was the state of my mind at the time, and I wished to point it out before final decisions were arrived at. "Let us get our house in order, let us get our stores, and our Staff, let us at least know what you are going to do." You will find urgent telegrams home a few days later asking for a B Staff, as we were being robbed already in contracts, and I said, "Let us make such preliminary arrangements as are necessary to meet the altered condition of affairs if these decisions are arrived at." That was my view, but, as I have said, up to that date, the trend was the other way.

13501. (*Chairman.*) What do you mean by the Reserve men being taken away?—The men who would pass into the Reserve at the expiration of their time with the Colours.

13502. The time-expired men?—Yes, time-expired with the Colours, but a large body of old soldiers.

13503. (*Sir George Taubman-Goldie.*) Is there any power under the Act of Parliament to retain these men unless there is a state of national emergency?—I think there is. You call out the Reserves in a national emergency, but I think you could have retained them longer without a national emergency.

13504. (*Chairman.*) I think the fact that you could not retain them was proved by this, that in order to retain them in India during the War they had to be offered advantages?—I only give that as an instance of how little the idea of "an impending war" was made visible to us from England.

13505. If I understand your argument aright it is this, that although you wished to have any deficiency in the equipment of your existing force made good, you would have deprecated any additions on the ground that you would have brought about the very contingency

which you wished to avoid?—Unless the whole question was to be considered and taken as it was, but merely a reinforcement of a few thousand men, 4,000 or 5,000, or 10,000, would have added to the state of suspicion and tension which existed. As I said before, as long as I held the neck of the bottle there, and made no move with the troops, the raiders might do what they liked, they might go anywhere they liked, and they were going all through the Transvaal at the time, but I knew well that nothing would grow serious, and nothing did grow serious, until we came into line. It was a calculation of chances, as everything in war must be, and see how it turned out! Nothing became serious until we moved the troops. Despite my protests against movement, you will see in the telegram of the 3rd August, a proposal to move the troops to Laing's Nek, in Natal, which I was not even informed of: that, if carried out, would have produced immediate war, and we would have been still less prepared.

13506. (*Sir George Taubman-Goldie.*) May we take it that there is not a word of truth in the statement that has been currently reported that you wrote either to the War Office or to the Colonial Office or to some public authority that in the event of a union between the South African Republic and the Orange Free State 100,000 or 150,000 men would be required?—There is no document in evidence of that, but I stated 100,000 men over and over again; to be more particular, I stated 80,000, irrespective of the lines of communications, and the thing was growing. I was asked by a very high authority early in May if it was necessary to bring pressure on the Boers with reference to some political questions, such as the Franchise, could the existing force in South Africa be of any use if moved towards the frontier? I laughed openly at the idea. "No," I said, "the existing force in South Africa could only hold a few positions, which I have in my mind, until reinforcements arrive, and to bring pressure on the Dutch Republics at least 40,000 men will be required." That was early in May—a sudden off-hand question, nothing more. As things went on I put that number very much higher, and I said to my Staff, "80,000 men, exclusive of the lines of communication"; and that was nothing wonderful, as the Dutch were writing to that effect at the time.

13507. Did you put that in an official document of any sort?—I do not know that I put it into any official document.

13508. (*Sir John Edge.*) Did you inform the Government or the War Office?—No, in fact I waited to be asked my numbers, because this question of numbers was a very critical thing; the question of numbers depended on a good many things. First of all it depended on what you were going to war about, what you were to fight the Boers on. A question which would involve the whole of the Boers coming together would be a matter of such a nature that no man could say how many troops would be needed to meet it, because on that question would depend the numbers against you. For instance, if Mr. Kruger had fought on the Drifts question seven years ago, I do not think he would have got one third of the Boers to follow him, but fighting on a question which involved the independence of the country, he would get 95 per cent. of the Boers on his side; so that to say off-hand how many men it was necessary to fight the Boers with was only the work of a tyro, and no man would attempt to state it.

13509. (*Sir George Taubman-Goldie.*) And as a matter of fact you did not?—To the best of my recollection, I never put it down, because I knew once down it would have been a dangerous thing, but I spoke of 100,000 then.

13510. I ask this question because for the last two years we have heard of a document that went to the War Office or the Colonial Office with that view of yours, and that it bore on the face of it the word "Preposterous," written by a very high authority, and one wants to knock that report on the head once and for all if it is not true?—It was never put down that I know of, but that it was spoken of a dozen times is equally certain. As to the word "preposterous" written on the face of my despatch, I know nothing about it; but such a word or thought would, in the temper of the time, have not been improbable.

13511. (*Viscount Esher.*) You never heard of such a document containing a reference to a statement of yours to that effect having been sent to the War Office?—It is quite possible that the people to whom I spoke of the matter may have mentioned it. I used to say 80,000 men irrespective of the lines of communication, but that was only arrived at late in June when matters had become different. The Boers themselves were putting it at 100,000, and it was in the Cape Town papers: "100,000 men will be necessary to conquer us if it is a question of our independence."

13512. (*Sir George Taubman-Goldie.*) And your 80,000, irrespective of lines of communication, would mean 100,000 with lines of communication probably?—Yes, but allow me again to make a remark or two. Not only was the question complicated by what you were to fight the Boers on, for on that would depend the resistance of the Boers and the numbers against us, but it was further complicated by what you were going to do. If it was to be a case of "no goldfields and no territory" I think 50,000 men would have sufficed to beat the Boers; but if it was a case of going to the extreme end, then you ran up the numbers by ten and twenty times, you might multiply as you pleased. It is evident that what would take the German Army to Paris would not take it to the Pyrenees, for instance; it is evident that what would defeat the French if the Germans engaged them somewhere within 100 miles of the frontier would not take them over the whole of France, nor would ten times the number; so that talking of the numbers necessary is to me the most intensely foolish thing because it all depends on these varying circumstances. Napoleon when he was invading Spain in 1808 said he would conquer it with the loss of 100,000 men, but he did not conquer Spain with 350,000 men. There is no such "rot" in the world as that forecasting of numbers. Excuse me for using the word "rot," but there is no other word to describe it.

13513. (*Chairman.*) We are getting a little far afield I think, but I would like just to put to you one or two quite precise questions to see if I have gathered your meaning correctly. I understand from what you have said that before the War, during the time of your command, you were of opinion that the force that you had in South Africa was as you have described sufficient to cover the capitals and to act as a defence against raids pending the arrival of reinforcements. Was not that so?—I think that the plan of defence was one, taken strictly as a defensive measure, which would have delayed operations sufficiently to enable reinforcements to arrive.

13514. And although you wished the equipment to be made complete, you did not urge the Government to increase the force by any moderate number of men, because you considered that that would do more harm than good, and precipitate matters?—Not so at all; if you will follow the context of my despatches you will find that when I found that nothing was being done I went on trying to impress upon them what I considered this War would mean, and you will find a despatch of mine on the 23rd August in which I fixed the unit of preparation at "divisions of cavalry."

13515. That is later than I am speaking of?—I know. My attitude was this—I told them on the 23rd June what I thought; "This is going to be the biggest thing you have been in," and as a matter of fact my draft telegram had an allusion to the American War of 120 years ago as a parallel to this war, but I cut it out because historical references might be supposed to impinge on politics.

13516. I do not want to interrupt you, but I really want to keep to the point. I want to get at what your view was in June, at the time you sent in your scheme, and I really did understand you to say that at that time you would have deprecated the sending of a few additional thousands of men because that would have brought about the contingency which you feared?—I would not have deprecated it, in the sense that I would have opposed it, but I do not think a few thousand men would have materially altered the defensive part of the scheme. If you will allow me I will just show you what I thought. I considered the scheme adequate to the conditions contemplated in the War Office letter of the 21st

December, 1898, and existing up to the 12th June, 1899, in South Africa. It was a wholly different matter when its nature, essence and purpose were changed when we assumed the initiative in September, 1899.

13517. Quite so, but I am wanting you to take it at June. At that time you did not urge the Government to increase the force in South Africa, for the reasons you have stated?—And for the fact that they said in their telegram to me that the question of reinforcements would not then be considered.

13518. And I think I gathered from you that you thought that if they had gone on with the accumulations of stores even at that time it might have precipitated matters?—Not exactly: I was urging the preparation of stores and of staffs in July; the necessity to my mind first was to have a staff for these contracts.

13519. In advance of the force you had in South Africa?—No, not in advance—behind, at the base.

13520. I meant in addition—a force in addition to what you had in South Africa?—Yes, you will find my telegrams asking for a full B staff; that was after we had entered into the purchase of the animals and wagons for the force then in South Africa. The idea that the force in South Africa was sufficient never entered one's head; it was always alluded to as a question "pending reinforcements." You will see that in my telegram to the Secretary of State, 11th July, 1899, after summarising the situation to date, I say "These arrangements 'promise to complete all orders received from you relating to efficiency of existing forces apart from question of reinforcements.'" That was the reason why I put my base at Estcourt, to give ample time to fall back on a position which was 30 miles behind the Tugela. I would like to read to the Commission a letter which I wrote, because when I sent what I looked upon as a very important warning about "the greatest calamity possible," in answer to the request for observations, I thought it right to let Sir Alfred Milner know that I had sent that message, and I forwarded a copy of my despatch to him with what I had said, and I received this letter from him; "June 24th, 1899.—I have to thank you for sending me a copy of your reply to the War Office telegram of June 22nd. I regret that you should have thought it necessary, in the observations with which your telegram concludes, to enter into political considerations, especially as the tendency of your remarks is in my opinion calculated to convey a wrong impression of the actual situation here, and of the effect likely to be produced by a resolute attitude on the part of Her Majesty's Government. I have informed the Secretary of State for the Colonies that I entirely demur to these observations." I was then placed in this position to my mind, that if I tried to warn the Government of what I thought was coming I was running counter to Sir Alfred Milner. I wrote to him in reply: "I am obliged for your letter of the 24th inst., in which you thank me for having sent you a copy of my message, answering the War Office telegram of the 22nd June. I regret that the observations in the concluding portion of that message, replying to the Secretary of State for War, should not have commended themselves to you, but I cannot admit that those observations can be fairly defined as 'political considerations.' They refer to the possibilities of war and to war in its worst form. They were made in what I believe to be the highest interests of the Empire and for the honour of Her Majesty's Army." That brought matters more or less to a climax. I found that if I tried to warn my people, as I thought I was entitled, and even bound to warn them, I was running counter to Sir Alfred Milner; so having received that message I said on the 4th July, "If I am not satisfying you I can only place my resignation in your hands." As to saying whether 100,000 or 200,000 men were necessary it never entered my mind to send calculations as to numbers, because, as I say, everything depended on the two things, what you were going to fight the Boers on, and how far you were going to push your conquests. If you were going to dictate terms, 50,000, 60,000, or 70,000 men would do it if properly handled. If you were going on the other hand to pursue matters to extreme lengths, "not a shred of independence," "up to the Limpopo," and the rest of it, then it might take

200,000 men to do it. But to expect a man before you told him you were going to war at all, and when in effect you told him you were not going to war, when you had already told him, as in the message of 27th June, he was not to bother his head about it and was only to make the things that were there efficient, and that the question of reinforcements would not then be considered—to expect him, I say, on such premises, to ask you for reinforcements and give you estimates of numbers required for the conquest of the Dutch States is now rather a wide postdiluvial demand. I come now to another point. You will find that on the 23rd August I placed the unit of preparation at divisions of Cavalry, divisions of Infantry, and divisions of Artillery.

13521. By telegram?—No, by demand on the Ordinance.

13522. (Sir George Taubman-Goldie.) That was the day on which you left South Africa?—Yes.

13523. There is one question I wish to ask. I think you recommended that we should not attempt to defend the bridges of the Orange River, excepting the Orange River Bridge?—Yes.

13524. That being the case, did you advise that preparation should be made for the destruction of the other bridges so that the Boers could not take possession of them?—No, because the bridges were destroyed by the Boers, which showed they looked upon them as inimical to them.

13525. Did they not, in the first instance, use them to invade the Colony, and then destroy them on retiring?—Yes, they used them to come to Colesberg and to Stormberg, but they never stirred that line that I had taken up with these Infantry detachments.

13526. On the question of bridges, is it not good policy in war, when you have retired, to destroy the bridges, knowing that the enemy will use them?—We were not retiring, although we were not advancing.

13527. You were allowing the Boers to invade Cape Colony?—We were leaving bridges standing that we deemed necessary to our own advance afterwards.

13528. Could we use them for an advance if the Boers took them and destroyed them when they retired?—I may mention that the measurements of all these bridges were sent home in July, I think in case the Boers destroyed them. That shows the view we held.

13529. So as to replace them?—Yes. I think you will find that despatch some time in July or August; about that time the measurements of all those bridges were sent home, and I think the girders were provided.

13530. Did you not afterwards regret that you had not made preparations to destroy those bridges?—No, I did not, because I thought that would at once have brought on a conflict.

13531. I mean after the declaration of war?—No, I did not regret that we did not destroy them, inasmuch as we were fearful that the Boers would destroy them. I do not say we ourselves, but the Intelligence Department were.

13532. (Sir John Jackson.) I think you said in the letter of 7th February that the scheme of defence was spoken of as a thing that could have been got up in a few days?—Yes, that is what the Under Secretary of State stated in his letter. I thought it was a matter of much greater delay, and thought, and consequence, and consideration, than "a few days or a few hours."

13533. And in point of fact you were personally anxious to go over the ground yourself?—I thought that necessary.

13534. You thought that a matter of great importance?—Of the greatest.

13535. When you got the instructions to get up this scheme, was it within your knowledge that the people at home contemplated the probability of war within a short time?—Not the slightest. I cannot give you a better answer to that than that I brought out all my family in March.

13536. But in any case, you got no instructions indicating that the preparation of this scheme pressed

Lieut.
General Sir

Feb. 1903.

as a matter of urgency?—On the contrary, I thought it was a matter that required mature deliberation, the more so inasmuch as I had to differ with the War Office on so many points.

13537. And in point of fact I think you told us that although the War Office suggested that a good deal of this work might have been done by staff officers, you had no staff available?—No, I had a very small staff; I think I had an Assistant Adjutant-General, a Commissariat officer, an Ordnance officer, an Engineer and Artillery officer, all fully occupied with their respective duties.

13538. But no men you could have spared for that particular purpose?—Not at all; I had a very small staff and a very large command.

13539. Is it the fact that prior to the War you had an entire absence of modern guns in South Africa?—Except in Natal.

13540. In Cape Colony?—In Cape Colony I had only the old seven-pounder guns. I think you will find a demand for a battery of modern guns to be sent out at once in that telegram of the 9th June.

13541. Do you not think that guns could have been sent out at that time without causing a rupture with the Boers, or do you think it would have been likely to cause rupture with the Boers?—No. The three batteries of Artillery that were at Ladysmith were sent out there a year and a half before the time we are dealing with, in 1897; there were 18 modern guns there for two years before the war began.

13542. As far as I have read, I do not see that you made any particular requisitions for Artillery, but there is something said about the want of rifles; then I think in your evidence this morning you stated that you got a reply to that request that you had more rifles than were needed?—I was told I had more rifles in Ordnance store than could possibly be needed or than were likely to be needed; it was a very small supply of 800 or 1,000, perhaps.

13543. (*Sir John Edge.*) In preparing a scheme for the defence of those Colonies, I suppose you would consider what would probably be the line of advance of a possible enemy?—Quite; it was with that view that the dispositions I proposed were recommended.

13544. Did you consider that the line of advance would be into Natal and not into Cape Colony?—No; I considered it depended on whether the Orange Free State at that time joined or did not join. If we were at war with the Transvaal only, the line would have been undoubtedly Natal, and possibly Kimberley, because the Transvaal approached Kimberley within 40 or 50 miles, but if the Orange Free State joined the Transvaal, then, the Cape Colony would have been liable to attack.

13545. Did you place your forces in your line of defence as far as Cape Colony was concerned, to defend the bridges over which Lord Roberts subsequently advanced?—Yes, I held the Orange River Bridge, and I held Naauwpoort, Stormberg, and De Aar, the lines upon which he concentrated and by which he advanced.

13546. Could you give me even, roughly, the number of men you had; you had one battery of seven-pounder old-fashioned guns; you had no Cavalry, had you?—In Cape Town?

13547. Yes.—None, except the irregular Cavalry and some Mounted Infantry.

13548. How many Infantry had you?—I had four battalions, I think.

13549. In Cape Colony?—I will let you know exactly.

(*Sir George Taubman Goldie.*) In Cape Colony when Sir Forestier Walker arrived there were two and a half battalions, three Mounted Infantry companies, and two companies Royal Garrison Artillery, being one battalion and one Mounted Infantry company less than the peace garrison, owing to the Liverpool Regiment being ordered to Natal.

13550. (*Sir John Edge.*) I suppose, in any scheme of defence, you would allot a proportion of that force to the protection of Cape Town itself, would you not?—No.

13551. Would you leave Cape Town unguarded?—

We had the Volunteers and the Navy, and sailors from the ships; we were not leaving it unguarded there was a wing left in Cape Town. Cape Town is under the fire of the guns of the Fleet.

13552. I want to see how many troops you had in the front?—There were three and a half battalions at the time you ask about, reduced afterwards to two and a half battalions, and reinforced shortly after by two battalions.

13553. Then were these bridges unguarded, and what was to prevent the Transvaal and Free State marching over these bridges and getting right in your rear?—They did it afterwards when we had 300,000 men.

13554. Assuming that they had come on, it was an event you would have to contemplate in drawing up the scheme of defence, and assuming that they did come on, what was to prevent them getting into the rear of your force?—Nothing, and I believe that the army we would have concentrated would have given them an overwhelming defeat somewhere much nearer Cape Town than we subsequently fought at, and I do not think they would ever have got back.

13555. That is another question, but you did not contemplate fighting retiring actions?—Not in Cape Colony; I did in the other direction, destroying the line of railway as I went.

13556. In Cape Colony you could not have retired?—I say, if you look at my despatch, that it might have been impossible that they would ever reach it.

13557. (*Sir Frederick Darley.*) Were you aware of the quantity of ammunition, guns and general munitions of war that the Boers were obtaining during the time you were out there?—We were aware of it. I think we got pretty accurate information as to what they were getting in, except at the last. I think there is a certain amount of misapprehension on that question of ammunition; if we could get an exact return of the Boers' ammunition and armament, I think you would find that they got fifty per cent. of it in the last four months; they were running it in undoubtedly all through August, September, and October. For instance, they had very few Vickers-Maxim guns in the beginning, and they got them in just before, or at the time, hostilities broke out. I happen to know from an agent of Vickers-Maxim when they were shipped from here.

13558. (*Sir John Jackson.*) Were those pom-poms?—Yes, I think they went out at the same time from the Docks here that the first Artillery went out.

13559. (*Sir Frederick Darley.*) Large quantities of that material came through Cape Town?—No, none of it through Cape Town; they may have smuggled some in, but 80 per cent. of it came through Delagoa Bay.

13560. But during your time there did not large quantities come through Cape Town?—Not that we knew of; there may have been something smuggled, but we knew nothing of ammunition coming through Cape Town. There was a certain amount of ammunition found to have gone through Port Elizabeth, but that is 500 miles from Cape Town.

13561. You are not aware of its coming through Cape Town?—No.

13562. But you were aware there had been large quantities of ammunition and guns reaching the Boers?—They were duly reported home to the Intelligence Department every week.

13563. Did you know of these large guns of position, the 4.7 guns?—Yes, our despatches were mostly put together in June for the Intelligence Office book, but I think the greater part of the armament or a great portion of it was received subsequent to June.

13564. Did you form any opinion as to what the Boers required those large quantities of guns and ammunition for?—There is no doubt that when they determined to offer resistance to the end they provided for it with ammunition, and they had the forts round Pretoria to arm with big guns.

13565. Resistance against whom?—Against us; when they made up their minds that they were going to

resist, to fight for certain points, I think they laid in a stock of ammunition that appeared to many excessive, but as the war went on they always seemed to have enough of it.

13566. It was not only the question of ammunition, but the large quantity of guns, rifles, and heavy artillery?—Yes.

13567. What was your opinion as to why they required that armament?—I do not know their minds. I suppose they thought they would need them in a protracted war, and it was also expected they would stand a siege in Pretoria.

13568. Against whom?—Against us.

13569. Then you must have thought at that time that they intended war against us?—No, I did not think they intended war against us. I always held that if certain forces that were working for war went on, war must come. They, I believe, thought the same, that is to say as to the action of the Third Party I have alluded to. They prepared to meet that contingency after the Raid, and they continued on to the very edge of the war.

13570. And you think then that the Boers were simply getting all this ammunition, and providing themselves with all this heavy artillery, rifles, and so forth, for the purpose of defence?—I do not know that they had so very many of these heavy guns. Their plan of attack was to invade Northern Natal.

13571. In point of fact they had only four, but they had ordered sixteen; it was believed by the Intelligence Department that they were in possession of 16 heavy guns?—They had ordered them, but they had not been delivered. We knew of the delivery of at least two large guns, but I knew that, whatever might be the amount of their armament or ammunition, we must have one hundred times more.

13572. It was believed by the Intelligence Department that 16 had been delivered?—The evidence received was very conflicting; one man wrote that they had 22 in July, but one knew what that meant in transport, and never believed it. The reports we were getting were very mixed, and one had to run a line through them. On the whole I think the intelligence that was transmitted to the Intelligence Department was fairly accurate, only it did not cover the guns received during the last two months.

13573. You are of opinion that, notwithstanding the Boers provided themselves in this way, war might have been staved off?—That is a very difficult question to answer. I do not know whether it could have been staved off or not for ever, but that it could have been delayed I have not the smallest doubt.

13574. If you were of opinion that it might not be staved off, did you not think it would be prudent to make provision for the contingency of war?—I do not say it might not have been staved off; I say it is a difficult matter to decide, and I would not like to answer the question yea or nay. Time will answer its prudence.

13575. Under those circumstances do you not think it would have been well to advise the home people as to the number of troops that might possibly be required even for defence?—I have already explained what the numbers of troops meant. I certainly should have attempted to say what I considered necessary had I been asked, but I was not, and numbers are very deceptive things, as they proved over and over again in the war. I could only talk of the general nature of the war if it was to come, and I could scarcely exaggerate the impression of its importance that I held, not only to the War Office, but to everybody with whom I spoke. It was the common subject of many pessimistic views. I was laughed at and ridiculed and villified for it, but as to numbers I was careful because, as I say, it depended on circumstances and eventualities over which I had no control or knowledge.

13576. Was there nothing in the state of affairs of political parties in the Cape Colony at the time which would indicate that there was some combination existing here as between the political party known as the Bond and people in the Transvaal and Orange Free State?—Between what parties?

13577. The Bond?—No, we did not know of any.

13578. Were no reports of that kind made at the time?—I do not think there were any reports; I do not know at this distance of time. Of course, there were remarks and newspaper assertions to any extent.

13579. And you did not know of any?—I did not know of any. There were a great many Intelligence documents sent home on the matter, but I do not know that any definite statements were made naming any people or bodies by reliable persons.

13580. Were the documents that were sent home by the Intelligence Department not supplied to you?—They should be sent by the Intelligence officer through me. That they were all thus sent I cannot say, nor can I say that all the reports were laid before me.

13581. You knew it was their opinion that the Boers were preparing for war against us?—We knew that the Boers were armed.

13582. Were preparing for war against us; that was the Intelligence Department's view?—Yes, that was frequently stated—preparing for war.

13583. But you did not agree with that?—No, I do not say I did not agree with it; I thought the Boers were arming, had armed, and had ammunition.

13584. And were preparing for war against us?—And were preparing for the eventuality of war.

13585. I quite see your point about the number of troops, and its being very difficult indeed to foretell the number required under certain conditions, but you might have apprehended that a certain number would be required for the purpose of defending the frontier?—The essence of the Boer position was this—suspicion; they suspected everything we did, and you will find that running through all my despatches. The essence of the difficulty of the position was suspicion on the part of the Boers that they were going to have repeated a Raid or series of Raids, and they had not been prepared in 1895-96; as a matter of fact they had hardly any ammunition at that time, and the first thing they did after the Raid was to begin to lay in rifles and ammunition, to build forts and order guns. In that sense they were preparing for war, but according to my belief, in that sense only. You will find all through this suspicion on the part of the Boers that they were to be raided; you will find it in the Proceedings of the Bloemfontein Conference; you will find it in the telegrams which I had to send to Natal where they were making preparations with armoured trains and running them about the railway. On June 17th I sent the officer commanding in Natal, Colonel Chisholm, this telegram: "General Officer Commanding, having received from High Commissioner your letter of May 26th, requires full explanation by telegraph as to recent proposals and recommendations made by you to the Government of Natal involving important military action on the frontier without any previous reference to him. This action has been taken in the face of orders and rules to the contrary. Send by mail detailed statements of your proposals for mobilisation. No movement is to be made or order issued without General Officer Commanding's authority." The Boers we knew were in a state of constant watchfulness and alarm along that frontier all that time. I doubt if the members of the Commission know exactly the state of the frontier at that moment. In July Colonels Hore and Baden-Powell arrived on the frontier and raised two regiments within sight of the Transvaal, at Mafeking. They were not under my command; they were acting under the High Commissioner. At this time, 17th June, that telegram marks the state in Natal: "No movement is to be made or order issued without General Officer Commanding's authority." But it was not so on the other frontiers—Bechuanaland and Rhodesia. You will find in these telegrams orders to send arms and ammunition to Rhodesia. I objected to these because they were outside my command, and therefore I could not have authority over them after they crossed the frontier, so I asked the Secretary of State's authority:—Would I send these rifles and ammunition wanted by the Rhodesian forces, which were being raised in Rhodesia and in the Protectorate, volunteers and others? And after a few days I got the sanc-

Lieut.-General Sir William F. Butler, K.C.B.

Lieut.-
General Sir
William
F. Butler,
K.C.B.

11 Feb. 1903.

tion to do so. I think you will find in the beginning of July these various armaments going up. All that set the Boers in a state of unrest greater than they had been in before, which I think you will find repeated in my despatches. I have many telegrams and letters of that nature, but I do not want to weary the Commission with them, but I will give another letter which shows the state of the Western frontier, and how completely it was out of my control. In my telegram of the 12th June, I say: "South African Dutch community form very suspicious views as to intentions of the British Government." The essence of the situation was intense suspicion. With regard to the armoured train in Natal, I believe they had the idea that that would go raiding up into Pretoria.

13586. The point I was wanting to bring out was that everything at this time was really pointing to the Boers intending an attack upon us at some time?—I demur from that. Let us go to fact and not to opinion. We moved up in the middle of September those troops I was urged to move in June, and I declined, saying I would not do it. I said I would do it by order of the Secretary of State, but I said to Sir Alfred Milner, when other movements were suggested: "If you write me an order I shall do it," but that was not done. Then the raising of the two regiments took place on the frontier at Mafeking. The arrangements for the raiding from Tuli took form in June or earlier; they were to be 1,400 strong, to make a movement on the Transvaal, on Pretoria, or Pietersburg. I am afraid I laughed the thing to scorn; it was like throwing bits of bread at a stone wall; in fact many of the Third Party never got beyond the idea of the Raid of 1895-96. Baden-Powell went up to Rhodesia and came down to Mafeking and raised 250 men, and Hore raised 200 men, with the intention of invading the Transvaal, and their wagons were loaded up to march the day the Boers cut the railway, on or about the 11th October. These are facts that cannot be denied; they are not opinions but facts. The raid from Tuli I objected to. I said, "If I arm these people this Raid will be brought off by people not under my orders, the lines will be cut, and in the absence of information or communication they will carry out war on their own hook." My telegrams and letters are snapshots taken at the moment. My scheme, which you talk of now, and which does look so small, was a defensive scheme, but it was made an offensive scheme, and the whole nature of the thing was changed. The attitude of the Boers was one of intense suspicion; they thought they were to be raided and invaded, and they armed up to the eyes, but they did not move one man or cut the railway until we had encircled them round by troops. You will see that telegram of the 3rd August urging an advance on Laing's Nek. Of what? Of my little force in Natal—a telegram which I was not even shown. You will see that in September the garrisons from Cape Town and King Williams Town were moved to Stormberg, Naauwpoort, and De Aar and into Kimberley, where I never wanted them to go. I will give you, if you wish, the reasons why I objected to these "entanglements" at Ladysmith and at Kimberley. Following on the movements of the troops to the frontier the Boers did not make a move until we had 10,000 additional troops in Natal from India and the Mediterranean; they did not even move then. What was it made them move in the end? The mobilisation of the Army Corps and the appointment of Sir Redvers Buller to command.

13587. (Sir John Edge.) And, I suppose, food for their horses being on the veldt at the time?—The idea that the Boers wanted to produce war is to my mind wrong; it is a wrong reading of the situation, and on that all my preparations were based, and I was right. As a matter of fact the Boers never did move until the reinforcements had arrived and the Army Corps was mobilised.

13588. (Sir Frederick Darley.) In point of fact your opinion is that the action of England provoked the war?—No, I will not say that. We moved up a number of troops round the frontier.

13589. And in doing that provoked the war?—We sent a dozen officers from England into the Transvaal and the Orange Free State in July, raised troops at

Mafeking, reinforced Natal with 10,000 or 12,000 men, organised a raid from Tuli, moved troops to the frontiers and, finally, mobilised an Army Corps, and then the Boers moved. My calculation of the chances was the right one; I said, they will not move as long as certain things are not done. Now I wish to make one statement to the Commission. When I came back I thought I should have been seen by the Ministers. I had many papers marked to be shown, but I saw Lord Lansdowne alone, and only for ten minutes. He asked me the question: "If we move to the Biggarsberg, what will happen?" I said, "If you move the force now at Ladysmith?" and he said "Yes." "Out of a hundred there are forty chances that that will bring on war," was my reply. "And if we cross the Biggarsberg," was his next question, and my answer was, "Then out of a hundred there are seventy-five chances that it will bring on war." That conversation took place on the 12th September. I was treated with suspicion; they would not send for me or ask me anything. Of course at that time they were being told it was a case of ten millions of money and the whole thing over at Christmas, or at furthest at Easter. Every officer in the Army knows that; any one who told them the opposite was called names, ridiculed and laughed at, he was either a fool or a knave, or, as they said of me, I was both. I may talk with heat, my Lord, perhaps more than I ought to, but things were said of me which I believed were wholly unjust, and for years I have been silent.

13590. (Chairman.) I quite appreciate your position, Sir William, and I have not interrupted you for that reason, but I think now if you have any other document to give us we might have it, and then we will get on?—I had a great many, but this matter of the Tuli Raid I suppose the Commission never heard of before.

13591. (Sir George Taubman-Goldie.) You were to read a protest against the Tuli Raid?—I thought it was to be a Raid again. My position was this: "Let my Chief at the War Office tell me what I am to do, and I will do it, but I cannot be dragged by Syndicates in South Africa, and I will not obey them, they are not my Chiefs. They brought us into terrible trouble in 1895, and then left us in the lurch." I refused to have anything to say or do with them, and they turned on me the Press which they commanded.

13592. (Sir Henry Norman.) I think I have only one question to ask. When you were in command in South Africa, you found already a pretty considerable garrison at Ladysmith, three batteries of Artillery?—I could give you the exact figures—three batteries of Artillery, a regiment of Cavalry, one battalion of Infantry, a company of Engineers, and details.

13593. Then, of course, before the siege of Ladysmith took place there was an immense accumulation of stores of various kinds, Ordnance stores, and so on, there?—The first thing I did when I got out was to put two months' supplies into every place; I found they had a month or less, so I took the precaution of placing two months' reserve supply at every station in the place.

13594. That was calculated, I presume, for the force then there?—For the existing force.

13595. And not calculated to provide for the large force that came from India?—No.

13596. And it would not have been your intention to hold Ladysmith as a defensive post?—Certainly not; but, again, circumstances alter cases; if the Boers did not invade, yes; but if the Boers invaded in force, decidedly not; I should have fallen back behind the Tugela.

13597. And I presume that is where you would have accumulated your reserve stores?—I should not have accumulated any reserve stores until I knew what I was going to do, because in war, as I need not tell the Field Marshal, the point of concentration is everything, but the point of concentration is just the problem to find out. I put the troops so that I had room and liberty and opportunity to concentrate in three or more different positions. Once you are concentrated you are done so far as choice is concerned. I never meant Dundee nor Glencoe to be a concentration, nor did I mean Ladysmith to be a concentration. That would depend on after circumstances, when the War

opened, but I placed my men so that I could concentrate here, here, and here, as the War developed, but to run up the supplies first, and then, as it were, to be forced to concentration within easy reach of the enemy, in a place which could be cut off, I could not believe to be safe strategy.

13598. To the best of your belief, there were only those reserve stores for the actual garrison of the place?—Stores that three trains would have carried. We had a railway there, and a very well-equipped railway, and three or four trains—a dozen trains certainly—could have carried them anywhere you wished.

13599. (*Viscount Esher.*) You say that the essence of the difficulty was suspicion on the part of the Boers; I suppose you also found considerable suspicion on the part of our own people there?—Of invasion?

13600. Yes, or did you find any trace of that?—None, except in the extreme angle of Natal, which we put outside the zone of possibilities from the beginning; there the farmers wrote asking what protection would be theirs in the event of war. I have many memoranda on the subject, but, as I say, I do not want to weary the Commission.

13601. Again, you talk of a Third Party, the Third Party being persons who were Englishmen?—The Third Party, openly, was Mr. Rhodes, and those who acted under him.

13602. And your point is that they were egging on a war?—I did my best to keep Cæsar separate from Cecil.

13603. Did you ever hear of a Fourth Party in the Transvaal?—Absolutely; we all knew there was the extreme Dopper party represented, I suppose, by Mr. Kruger at the head, but I do not think the extreme party in the Transvaal were more than 10 or 15 per cent. of the Boers.

13604. As you knew of the existence of a Fourth Party—I only want to get this clear—did it not occur to you that possibly they might get their way and provoke a war?—If they did I thought we should have coped with them.

13605. You thought, with the force you had in Africa, you could have coped with them?—With the force I had to act on the defensive and fall back I do not think they would have got as far down in Natal or in Cape Colony as they did when we had first 50,000 and later on 200,000 men in South Africa. I do not think they would ever have got beyond Beaufort West on one side or crossed the Tugela on the other, because they would not have had the hold they afterwards had.

13606. The point is this: Do you think, in view of the policy which the Government were pursuing, and which you knew they were pursuing, they were justified in leaving that small force in South Africa, and not adding to it larger reinforcements than the Indian contingent?—I have never said anything which would lead you to suppose that, nor do I think it, but I think, in the position matters had then reached in South Africa, if they filled in that drop they must have been prepared to fill in the whole bucket. That was but a drop.

13607. (*Sir George Taubman-Goldie.*) Of what time are you speaking?—Of September and October.

13608. But before the Bloemfontein Conference?—Before the Bloemfontein Conference there was nothing.

13609. Could not the garrison have been filled up then, when they had made up their mind?—Absolutely.*

13610. (*Viscount Esher.*) For some years previously the Intelligence Officers had been making reports to our Government, and you think that, as we were adding to the force we had then, the Boers were justified in taking any steps on their part?—I should be sorry to criticise the Government in that way, but what I would say is this, that they appeared during these months to be at the parting of the ways; the parting of the ways ceased if they reinforced the Army in South Africa, owing to the suspicion then existing in the

country. They were on one road then; the minute the troops were augmented to even the proportion of 20,000 men the balance was turned. I do not know if I explain myself right.

13611. (*Sir George Taubman-Goldie.*) There again you are speaking of after the Bloemfontein Conference?—Yes, I am speaking of after the Bloemfontein Conference.

13612. But prior to that?—Prior to that all depended on the number sent out.

13613. If we had sent out 10,000 men?—That would have been a serious addition to the state of suspicion then existing, 10,000 men coming out. The point was this—that there was a school there, I do not want to mention names, which held that the Boers would never fight. How often it used to be said to me, "Ten Boers killed at Laing's Nek, and there is an end to the War." Some persons put it at 40, and they were rather fond of saying, "Forty Boers killed at Laing's Nek, and there is an end of the War." That was the sort of thing I could never understand. I could never believe it, and I said, "No, the Boers will fight to the very last man if you menace their independence." I also mentioned the women and children; and when I spoke previously of a civil war, I meant that the women would help and the children would fight.

13614. (*Viscount Esher.*) The phrase you used to the Government was that the War Office appeared to think that the situation would be a purely military one as between military powers, and they did not realise how many civil war conditions such a crisis would involve; that really sums up the whole advice you gave to the Government?—Oh, no.

13615. Was not that really your whole point?—Excuse me.

13616. What is the essence of it?—There was a great deal more than that.

13617. What was the essence, in one sentence, of the whole of your advice to the Government?—Perhaps I might take these sentences here where they are collected together in another communication I made to the Secretary of State: "Following the close of the Bloemfontein Conference, I sent a series of telegrams and despatches to the War Office in which I extended to the utmost limits of official language my warnings of what war with the Dutch Republics, and the Dutch race generally in South Africa, would mean. These opinions will be found chiefly under dates 12th, 21st, and 23rd June, and I think I am within the meaning of those communications when I aver that the gravity of the warnings therein given could not easily have been greater." Have you my despatch of the 21st June?

13618. Yes?—It is summarised there.

13619. I remember that, but really what does it all come to? It comes to this—that you warned them of the seriousness of the war upon which they might possibly enter; was that not it?—That the war would be of a nature which they had not the smallest idea of. Look at my despatches of the 12th, 21st, and 23rd June and of the 4th July.

13620. Is it for that reason that when you came home you were treated with suspicion. Is that your point?—Well, you know the suspicion with which I was treated; the papers told you that.

13621. And, as I say, it arose out of that?—No, I believe it arose because I failed to confuse Cecil with Cæsar; that is my answer to that question. Had I merged Cæsar into Cecil I should have been a very different man to-day.

13622. You see you told us that the Government had been told that the whole thing would be over by Christmas, and it was to be a comparative walk-over, and it was in consequence of your not having taken that view that you were treated with suspicion. Is that so?—Yes, I think that is a very fair deduction to make. I believe

*Lieut. -
General Sir
William
F. Butler,
K.C.B.*

11 Feb. 1903.

* Witness subsequently stated that this answer had not been correctly reported, and asked for leave to alter it as follows:—"Impossible to say what the result of filling up then would have been. That they might have been ready to fill up is another matter, provided the readiness did not involve publication by the Third Party. They published everything: you will find my telegrams to the War Office dealing with that fact. But we must not forget that the Government were negotiating with the Dutch Republics all through July and August. On July 19th a telegram from London announced, on the authority of the 'Times' that all had been arranged, and that the crisis was over."

Lieut.-
General Sir
William
Butler,
K.C.B.
Feb. 1903

that in order to reduce the gravity of my warnings, motives were attached to them. I wished to do the best I could by my employers, and to tell them the thing I was looking at, but when I came back to the War Office I was told, "You are the best abused man in London." I knew nothing about it, but I found I was.

13623. It has been recognised since in the penultimate paragraph of the Adjutant-General's letter to you: "I understand that the Commander-in-Chief considers it unnecessary and inexpedient further to discuss this subject. His Lordship has no reason to doubt you acted to the best of your judgment and ability during the period in question, and he observes that your recall from South Africa was not due to any neglect of military duty on your part, but to your own resignation on the ground that your presence at Cape Town was likely to be a source of embarrassment to Her Majesty's High Commissioner?" (*Vide Appendix, page 92 post.*)—I have already told the Commission and read to them the correspondence which took place between me and Sir Alfred Milner on the 24th and 25th June, but when I received a communication to the effect that I was running counter to what Her Majesty's Government wished (it was a private communication, but I allude to it because it was an important question) I at once went to Sir Alfred Milner and said, "Have I been a hindrance to you, Sir, in the prosecution of your designs or your plans?" He said frankly that I had, and he named three occasions upon which I had been a hindrance to him. One was in not taking up the proposed Tuli Raid: another was in not employing a Mr. Wools-Sampson who came to me in the middle of June, who was a very active, energetic man and who visited me at the request of Sir Alfred Milner to see if I could propose anything to him. I saw him in the presence of my military secretary and told him frankly, "Mr. Sampson, I have the greatest respect for your services" (because he was a very brave soldier and had fought well in the first Boer War), "but I know nothing from my chief in London of a war; if there is to be war I have not the least doubt you will receive a good command, but I can say nothing to you whatever." And the third was about the remarks I had sent to the Secretary of State on the 23rd June in reply to his query of "any observations?" I said it would be easily managed, and I wrote the first letter offering my resignation that night.

13624. When did you come home?—I wrote that letter on the 4th July, and I think at the end you will find expressed my position. It was accepted on the 10th August by cable. I got two or three telegrams

to hasten my departure, which I did. I do not know whether they are there or not.

13625. When you got home did you see Sir Redvers Buller?—Yes; I had a long conversation with him.

13626. And you saw the Commander-in-Chief?—Yes.

13627. And the Secretary of State?—I saw the Commander-in-Chief, and he took me to the Secretary of State for about ten minutes.

13628. When did you get a fresh command—how soon after?—I got it in South Africa. On the 10th August they sent me a telegram accepting my resignation and telling me to hand over, and I communicated with Sir Alfred Milner, and the same day I received the offer of the Western District, which I declined with thanks. Two days afterwards I received a personal telegram, very kindly worded, from Lord Lansdowne begging me to reconsider my decision with regard to the Western District, and I thought it would be churlish to refuse it although I would sooner have refused it, and I accepted it in the terms in which he offered it.

13629. So that when you came back here you took up your command?—At once.

13630. And you hold that command now?—I hold it now.

13631. (*Sir George Taubman-Goldie.*) There is only one question I should like to ask: Can you remember about what date you first learned that the Government intended to make the Franchise question a vital question at the Bloemfontein Conference?—Not until the proceedings of the Bloemfontein Conference were published; I forget what date that was.

13632. Not before?—Not before, except what the London papers may have told us.

13633. (*Sir Frederick Darley.*) I understand you to say that previous to the Boers entering Natal, crossing the frontier, you understood that there was a force at Mafeking, or about Mafeking, ready to invade the Boer territory under Baden-Powell?—From July Colonel Baden-Powell was at Mafeking and north of it raising a force.

13634. But not to invade before war was declared?—I have told you already that the wagons were actually spanned ready to march.

13635. Waiting for war to be declared, I suppose?—Yes. There are many other points, my Lord, and in threshing so much ground it is not easy to cover it all or to see things to-day as one saw them then, but I have endeavoured to state them as well as I could

Sir William Butler desires to add the following statement as a note at the end of his evidence.

REINFORCEMENTS FOR SOUTH AFRICA, 1899.

The position with reference to reinforcements, so far as I could judge it in June, July, and August, 1899, was as follows:—

I had sent the War Office my Scheme of Defence on June 9th–12th, 1899. The only reply from the War Office was a suggestion by cable that the preliminary movements of the force under my command should, in the event of a crisis, include the occupation of Van Reenan's Pass. I demurred to this suggestion. On June 23rd I received the telegram directing the provision of mules and transport for the garrison then in South Africa, the telegram ending with the observation that the question of reinforcements was not then being considered.

A fortnight later I reported the completion of these orders, and added that they were for existing forces only "exclusive of reinforcements."

I have already stated the essence of the situation then and before was the intense suspicion on the part of the Dutch Boers. This feeling dating from the Raid had been largely increased in 1897 by the sudden arrival in South Africa of reinforcements from England and India, consisting of three batteries Royal Field Artillery, one regiment of Cavalry, and one Battalion of Infantry. All these were placed at Ladysmith, which, until then, had not been occupied by troops. At this period (June, July, and August, 1899) negotiations were in active progress between our Government and that of the Transvaal. On the 19th July the London *Times* announced as an official communication that the diplomatic crisis was satis-

factorily ended by the concessions of the Boer Government on the question of the Franchise. That announcement telegraphed to Cape papers only seemed to redouble the efforts of the "Third Party" already mentioned.

It seemed to me that if I asked for reinforcements under such conditions, and when I had not received any intimation from the War Office that war was contemplated, when they had even markedly told me in the message of the 25th–26th June that I had exceeded in my mind the meaning of their message of the 23rd, it seemed to me to say such a demand at such a time would be to force the hands of the Government, play into the hands of the "Third Party," and render myself liable to the accusation in the future that I had by this premature action produced or hastened hostilities.

I have already tried to explain the work of the "Third Party" through its telegrams from London, how even the movements of the Intelligence Officers, 10 in number, and the embarkation of Colonels Baden-Powell and Hore were made the subjects of immediate cablegrams to the Cape Press.

My letter of July 4th must have been received in London about the 24th July. No response came from the War Office until the 11th August. Even then there was no intimation that war was likely, but before I embarked for England on the 23rd August I had signed the Ordnance Demand for Stores, which had made the limit of preparation at Divisions of Cavalry.

(Signed) W. F. BUTLER

CORRESPONDENCE BETWEEN LIEUTENANT GENERAL SIR W. F. BUTLER, K.C.B., THE SECRETARY OF STATE FOR WAR, THE UNDER SECRETARY OF STATE FOR WAR, AND THE ADJUTANT-GENERAL, BETWEEN 14TH NOVEMBER, 1899, AND 18TH FEBRUARY, 1902.

Government House,
Devonport,
14th November, 1899.

SIR,
In view of recent circumstances connected with the command of the troops at Bristol to-morrow, I beg to bring to the notice of the Secretary of State for War the fact that for some time past persistent attacks have been made by a section of the London Press upon my character as an officer and upon my conduct of military affairs while in command of Her Majesty's troops in South Africa.

These attacks began at the time of the publication of the South African "Blue Book," in June last, in which a despatch addressed by me as Acting High Commissioner to the Secretary of State for the Colonies appeared. They have increased in violence since the opening of hostilities in South Africa.

In conforming with the rules of the Service, I have taken no notice of these libellous accusations, but I now find that in the immunity which my silence gives my libellers I am more and more pointed out to the people as being responsible for the existing state of military affairs in South Africa, and I have been, in consequence, threatened with insult or violence during the visit of Her Majesty to Bristol. It is said that I am responsible for the surrender of the Gloucester Regiment at Ladysmith, and that it is on that account the feelings of the Bristol mob are incensed against me.

I respectfully submit that the time has come for some action by my military superiors in the matter of these continued attacks—either that I should be given the opportunity of meeting some specific charge in relation to my late Command in South Africa, or that they (my military superiors) should do something to vindicate my character.

In suggesting either course, I would beg, however, to add that if there should exist any reasons of public expediency or State policy why no steps should be taken at present to put a stop to these libellous attacks, I shall still deem it my duty to bear them in silence.

I have the honour to be, Sir,
Your obedient servant,
W. F. BUTLER, Lieutenant-General.

SIR,
I am directed by the Secretary of State for War to acknowledge the receipt of your letter of the 14th November, which has been carefully considered by him in consultation with the Commander-in-Chief.

In reply, I am to state that it is not desirable that officers should take notice of criticisms in the Press as to the manner in which they have discharged their duties. In the Commander-in-Chief's opinion, you have done well to take no notice of the accusations to which you call attention, and he trusts that you will continue to leave them unnoticed.

I am, etc.,

From Lieutenant-General Sir W. F. Butler, K.C.B., to
the Under Secretary of State for War.

Devonport,
4th November, 1901.

SIR,
In his speech at Edinburgh on the 25th October, the Secretary of State for the Colonies thought fit to designate as "another fable" the idea that my despatches, written from South Africa before the war, had in any respect differed in opinion or forecast from the general belief held by the servants and advisers of the Government regarding war with the Dutch Republics in South Africa.

In consequence of this assertion of the Secretary of State for the Colonies, it has become my duty to break the rule of silence which I have observed for more than two years upon this subject, and to state, officially, the nature of the convictions expressed by me to the Colonial Office and to the War Office between December, 1898, and July, 1899.

I affirm that in December, 1898, and in January and portion of February, 1899, I pointed out in numerous telegrams and despatches, and in unmistakable language, the efforts that certain parties were then making to produce and inflame racial feeling in South Africa, and to bring about racial conflict at all costs. I showed the utterly unreliable nature of the information which was being sent to England by the agents of these parties, and I distinctly warned the Colonial Office of the consequences which must inevitably follow their intrigues.

That the telegrams and despatches in which this information was conveyed were duly noted at the time is shown by the terms of the cypher message sent to me from the Colonial Office on the 21st-22nd January, 1899, as well as by the proposal made to me four months later by Sir Alfred Milner, under the direction of the Secretary of State, that I would consent to the elimination of certain passages from my despatches of the previous January for the Blue Book then in preparation for Parliament.

The cypher message of 21st and 22nd January was replied to by me in a despatch dated the 25th January, and the proposal made in May, 1899, relative to the omission of passages from my despatches was declined in my telegram of the 26th May, 1899.

I now turn to the communications which I addressed to the Secretary of State for War.

Following the close of the Bloemfontein Conference, I sent a series of telegrams and despatches to the War Office, in which I extended to the utmost limits of official language my warnings of what war with the Dutch Republics and the Dutch race generally in South Africa would mean.

These opinions will be found chiefly under dates 12th, 21st, and 23rd June, and I think I am within the meaning of these communications when I aver that the gravity of the warnings therein given could not easily have been greater. The message sent on the last-mentioned date contained the following words: "I believe that a war between the white races, coming as a sequel to the Jameson Raid and the subsequent events of the last three years, would be the greatest calamity that ever occurred in South Africa." It is unnecessary to do more than call attention here to the manner in which that message was replied to on 27th June, but it is of grave interest to note the sense in which it was regarded by Sir Alfred Milner.

I sent the High Commissioner a copy of the cablegram received from the War Office on the 22nd June, and I added that a copy of my reply would also be sent to him.

I subjoin his answer:—

"Mount Nelson Hotel,
"24th June, 1899.

"DEAR GENERAL BUTLER,

"I have to thank you for sending me a copy of your reply to the War Office telegram of 22nd June.

"I regret that you should have thought it necessary in the observations with which your telegram concludes to enter into political considerations, especially as the tendency of your remarks is, in my opinion, calculated to convey a wrong impression of the actual situation here, and of the effect likely to be produced by a resolute attitude on the part of Her Majesty's Government.

"I have informed the Secretary of State for the Colonies that I entirely demur to these observations.

"A. MILNER."

I replied as follows:—

"Erinville,
"25th June, 1899.

"DEAR SIR ALFRED MILNER,

"I am obliged for your letter of the 24th instant, in which you thank me for having sent you a copy of my message, answering the War Office telegram of the 22nd June.

"I regret that the observations in the concluding portion of that message, replying to the Secretary of State for War, should not have commended themselves to you, but I cannot admit that these observations can be fairly defined as 'political considerations.' They refer to the possibilities of war, and to war in its worst form. They were made in what I believe to be the highest interests of the Empire, and for the honour of Her Majesty's Army.

"I remain, etc.,
"W. F. BUTLER."

Whenever reference has been made to me or to my opinions and despatches—in either House of Parliament—during the last two years, I have been content to write unofficially to the Ministers concerned, pointing out inaccuracies or mis-statements made in their respective replies. I did so in the hope that this course would have sufficed to prevent a repetition of such mistakes. It has not done so, as the phrase, "another fable," used by the Secretary of State for the Colonies in his recent speech proves.

I regret that I am thus compelled to write at some length on a subject which, notwithstanding the historical interest given to it by subsequent events, is still largely personal to myself.

I have, etc.
W. F. BUTLER, Lieut.-General.

From the Under Secretary of State for War to Lieut.-General Sir W. F. Butler, K.C.B.

War Office,
27th November, 1901.

SIR,

I am directed by the Secretary of State for War to acknowledge receipt of your letter of 4th November in reference to remarks made by the Secretary of State for the Colonies in reply to an interruption during his speech at Edinburgh on 25th October.

Mr. Brodrick has made a careful examination of the documents to which you refer, and fails to find that the language of the Colonial Secretary of which you complain traverses the information conveyed in those documents.

In your despatches you undoubtedly warned the Government that for reasons which you stated the outbreak of hostilities between Great Britain and the Dutch Republics in South Africa might, in the existing state of feeling, produce a racial war, which you pointed out would be "the greatest calamity that ever occurred in South Africa."

But the passage to which you take exception in the Colonial Secretary's speech was to this effect:—"As far as I know, there was not one single man who was entitled to the slightest confidence, or even pretended to be an authority upon the subject, who anticipated the prolonged resistance which we have incurred."

Your warning to the Government was directed to the political effect likely to occur, which you held to be calamitous in the highest degree, whereas the Colonial Secretary spoke of the nature and extent of the military resistance likely to be offered.

Had you held the opinion that the war would not be concluded in two years, by the employment of 200,000 British troops, Mr. Brodrick cannot doubt that you would have advised the then Secretary of State for War that the racial war which you apprehended would have involved preparations of this magnitude; but Mr. Brodrick cannot trace that you made any demand of the kind upon the Government, or that you at any time pressed for the employment of a larger force than that put under orders upon the first outbreak of hostilities.

On the contrary, the Secretary of State observes that on the 21st of December, 1898, your attention was called by a secret War Office letter to the extensive military preparations of the South African Republic, to the fact that the Free State was in close alliance with the Transvaal, and to the great numerical inferiority of the British garrison in South Africa to the formidable force which the two Dutch States could put in the field for

offensive operations beyond their frontiers. You were directed, therefore, to submit, at an early date, a report on the distribution of the troops under your command which you would make in the event of hostilities. To this letter you made no reply, until more than five months later an answer was called for by cable. In the report you then submitted (telegram dated 7th June, and letter dated 14th June, 1899) it does not appear that you pressed for further reinforcements, or that you assisted the Secretary of State for War with any advice as to the military force needed to defend Cape Colony and Natal, or the additional force that would be required to bring a war with the Republics to a satisfactory conclusion. On the contrary, the force which you proposed for Natal, consisting in all of three battalions, eight squadrons, and four batteries, was far inferior to that which the Government decided to dispatch. You pointed out, it is true, in a subsequent letter to the War Office, dated the 21st June, 1899, that, "in the event of the crisis of war being reached, the situation which would probably have to be met would be one more of civil conflict than of regular military operations"; but general observations of this character cannot be held to be of the nature of a definite warning or advice to His Majesty's Government as to the military preparations which, in your opinion, should have been made to meet the contingency of war with the Dutch Republics, or as to the probable duration of such a war.—I am, etc.,

E. W. D. WARD.

From Lieut.-General Sir W. F. Butler, K.C.B., to the Under-Secretary of State for War.

Government House, Devonport,
16th December, 1901.

SIR,

I have the honour to acknowledge the receipt of your letter of the 27th November last in reference to the remarks made by the Secretary of State for the Colonies on the 25th October.

You characterise the warnings given in my dispatches as directed to the political results likely to occur and not to the military resistance likely to be offered in the event of a war. To this statement I respectfully demur.

In one sense, no doubt, my dispatches dwell upon the political aspects of the matter, but not in the sense which your letter seems to assume.

It is a soldier's duty, as a rule, to ignore politics, but it is equally imperatively his duty to recognise and to draw to the attention of those in authority any political conditions which affect the military situation. The state of feeling of His Majesty's subjects, the attitude of the non-combatant population of the country through which, of necessity, the troops would have to pass, and in which the military base must be situated, are amongst the more important of such conditions, because of their bearing upon the difficulties to be encountered, and, consequently, upon the duration of resistance. The greatest military authority the world has seen laid it down that in war the moral was to the physical as three to one, having primarily in his mind such matters as I have alluded to.

Such is my conception of the duties of a soldier, and what were my warnings when it suddenly, in June of 1899, became clear that the Government were bent upon war?

You have quoted some but not all of these warnings. Briefly, they may be summarised as follows:—

On the 12th June, 1899, I telegraphed—"In the event of a crisis arriving situation would be more that of civil war than of military operations free from complications."

On the same day (the 12th June, 1899), I wrote: "The War Office appear to think that the situation would be a purely military one, i.e., as between two military powers; they do not seem to realise how many civil war conditions such a crisis might evolve."

On the 21st June, 1899, I repeated this warning in almost identical terms, pointing out "that the inhabitants on both sides of the frontier, both in the Cape Colony and in Natal, were composed of similar Dutch elements. That there was no abstract political situation in South Africa as distinct from a military one, but that both were involved together."

And again, "that the war might commit the white races of South Africa to a possible internecine struggle wherein about one million of men and women, scattered over an area nearly as large as Europe, might be involved."

On the 23rd June, 1899, I cabled that: "I believe that a war between the white races coming as a sequel to the Jameson Raid, and the subsequent events of the last three years would be the greatest calamity that ever occurred in South Africa." Again, on July 4th, I wrote that "I could not accept the responsibility which might justly be mine if I failed to bring to your notice powerful outside influences, which might, at any moment, prove of the gravest military importance to South Africa, and to the Empire."

And in the same dispatch I wrote that "as matters seemed shaping themselves in England and South Africa towards results which did not appear to me to be realised at home in their fullest gravity, I had endeavoured to place the exact position before you as it appeared to me at the moment."

Such were some of the clear and emphatic warnings which I gave. They were addressed by me, in my military capacity, to my military superiors, and were intended to be, and I contend were, military warnings which could have no other meaning, coming from a man in my position, than that the conflict would partake of the nature of a civil war, and that the prolonged resistance and the peculiar difficulties which always attend civil war must needs be prepared for.

The warnings were emphatic enough, and I can only put down their not being understood to the infatuated conviction which, it seems, at that time was prevalent at home, that the display of "a resolute attitude" would speedily cow the Dutch-speaking population throughout Africa.

That my warnings were understood in the sense they were intended by Sir Alfred Milner there can be no doubt, for, in reply to my letter sending him one of my cable dispatches, he, on the 24th June, 1899, protests against that dispatch on the ground that it would convey a wrong impression "of the effect likely to be produced by a resolute attitude on the part of Her Majesty's Government."

I conclude this portion of my letter by protesting that the words of the Colonial Secretary which I complain of, although carefully picked and chosen, convey a false impression of the facts of the case.

I would willingly not continue my letter further, having dealt with the point which seemed the only one at issue, but it has been thought right to introduce a new matter with which it is my duty to promptly deal.

You make a suggestion that I neglected for five months to answer a request from the War Office as to the disposition of the troops in the event of a war, and that I suggested that the force needed in Natal in the event of a war should only consist in all of three battalions, eight squadrons, and four batteries.

If it is really believed that there was anything in the complaint it should have been made long ago, and not after a lapse of two and a half years. But what are the facts?

I was, in December, 1898, asked to make a report as to the disposition of the troops then in South Africa, and under my command, in the event of war, and, as my report in answer to such requests will show, I dealt as I was requested with such troops, and with such troops alone.

This was a subject upon which my predecessors in command had also reported, and it was of the usual defence scheme character common to all military commands.

But why did I not make my report, such as it was, earlier? The answer is simple. Five weeks after my arrival in South Africa I was asked to report upon a question embracing a frontier of more than 1,000 miles in length, and in some places 1,500 miles distant from where I was living, and to deal generally with defence matters over an area almost as big as Europe, and I was asked to report on these matters "at an early date."

Secondly, when the request arrived I was, as the authorities sending the request well knew, conducting, in the absence of Sir Alfred Milner, the civil duties of High Commissioner and Administrator, and was, therefore, not free to make any journeys to the points which it would be necessary for me to visit before reporting until Sir Alfred Milner's return from leave of absence.

As soon as Sir Alfred returned I took up the matter and dealt with it as promptly as possible.

As regards your suggestion that I proposed the force I have above quoted for Natal, this is wholly incorrect and misleading. I did not propose this force; I found it there, and I proposed to dispose of it in certain positions.

I have no desire to unnecessarily prolong the length of this letter, but, if the complaint you suggest is to be fully discussed, the subject shall have my further attention and consideration.

During the months of March, April, and May, 1899, my proposals as to field manoeuvres, training grounds, remount establishments were negatived or reduced; we were directed to give up ordnance establishments and to diminish hospital accommodation. Reserve men were withdrawn from South Africa; a battalion of infantry which had been at Ladysmith for two years, and had become acquainted with the surrounding country, was removed to India; the experienced officer commanding at that station was recalled to England; and at the time these reductions, retrenchments, and removals were being made it is now suggested that I, without being acquainted with the aims or objects of the Home Government, should have divined their minds and pressed for further reinforcements. And, further, this suggestion is put forward although your cablegrams expressly informed me, late in June, 1899, that the question of reinforcements would not then be considered.

May I conclude by saying that I much regret having had to abandon the attitude of silence which I have so long maintained, but when statements are put forward in public such as that of which I complain I shall continue to protest and prove their inaccuracy, as I have done in this letter.—I have, etc.,

W. F. BUTLER, Lieut.-General.

From the Under Secretary of State for War to Lieut.-General Sir W. F. Butler, K.C.B.

War Office,
January 3rd, 1902.

SIR,

1. I am directed by the Secretary of State for War to acknowledge the receipt of your letter of the 16th instant, and to communicate the following observations thereon:—

2. The Secretary of State for War agrees that it may at times be the duty of a General Officer Commanding to call attention to political conditions affecting the military situation. I am, however, to point out that beyond somewhat vague statements that, in your opinion, certain sections in South Africa were making efforts to bring about a racial conflict at all costs, and that a civil war, which would be the greatest calamity that ever occurred in that country, was impending between the two white races, the Government does not appear to have received from you any specific warning which gauged the military situation with more accuracy than the forecast made in War Office secret letter No. 266/Cape/30, of December 21st, 1898. Indeed, in your letters addressed to this Department you referred to the attitude of the Orange Free State as uncertain, whereas in the War Office letter above quoted you were informed that in a war with the Transvaal "it is probable that we should find the sister Republic ranged against us." You pointed out, it is true, the possibility of the natives of Basutoland, Pondoland, and the Transkei being a "source of trouble to us," but your anxiety on this score has not been justified by the events of the war. Moreover, predictions of the nature indicated above are of little military value unless accompanied by definite recommendations and estimates; yet the Secretary for War cannot trace any letter in which you made a definite request for an increase in the garrison of South Africa with a view to repelling the impending invasion of the troops of the Dutch Republics or in which you submitted to Her Majesty's Government an estimate of the strength of the expeditionary force which would be needed to bring the war, if war took place, to a conclusion.

The Secretary of State must therefore adhere to his opinion that a careful examination of the reports made by you to this department fails to indicate any inaccuracy in the statement of which you complain, made by the Colonial Secretary at Edinburgh on October 25th last.

3. With regard to the latter portion of your letter now under reply, I am to observe that, although the Secretary of State for War is aware that during a portion of the first six months of 1899 you were acting as High Commissioner of South Africa, in the absence of Sir A. Milner, he cannot accept that fact as a sufficient explanation of the delay which occurred in replying to

59337
81.

the request from this Department for a statement at an early date of the dispositions you would propose for the defence of the frontiers of Cape Colony and Natal in the event of invasion. The War Office letter of December 21st, 1898, impressed on you the possibility of hostilities with the Transvaal and the Free State, and besides assisting you by a concise recapitulation of the main physical features of the frontier, called your attention to secret publications which contained accurate information regarding the military forces of the Republics and the more important strategical points. These publications were in your possession, you had personally the advantage acquired by previous service in the country of a general knowledge of the military geography of South Africa and its methods of warfare, and it was open to you to despatch staff officers to examine any particular localities about which you desired further detailed information. Under these conditions the Secretary of State for War is unable to admit that a general officer of your standing and experience needed five and a half months to decide what dispositions he would make to meet a contingency which might arise at very short notice. It seems to Mr. Brodrick that the circumstances under which you were asked to consider your dispositions were at least as favourable to a decision as those under which a general officer in command in the field may frequently be called upon to determine his plan of operations within a few days or hours.

4. I am further to remark that if you were of opinion, having regard to the military situation in South Africa, that the various decisions, communicated to you in the early months of 1899, impaired the efficiency of the garrison for war purposes, it would have been to the benefit of the public service, had you, as the General Officer in responsible command, made a special representation of your views for the Commander-in-Chief's consideration. In connection with this point I am to say that you are under a misapprehension in thinking that the War Office telegram of June 20th, 1899, expressly precludes the consideration of reinforcements. The telegram in question indicated certain preliminary steps which were being taken to increase the efficiency of the force then in South Africa, and to avoid misunderstanding you were informed that the "question of reinforcements is not now raised," i.e., in relation to the particular measures then under reference. Mr. Secretary Brodrick cannot understand how this sentence could have been interpreted as prohibiting you from making any representation which you might have thought necessary to Her late Majesty's Government on the subject of reinforcements.

5. The Secretary of State for War having dealt with the questions raised by your letter of November 4th, which was prompted by a reference to yourself in a speech on general politics by the Secretary of State for the Colonies, thinks it will be more convenient if any further correspondence on a matter so largely military were addressed to the Adjutant-General in the ordinary course.—I have, etc.,

G. FLEETWOOD WILSON.

From Lieut.-General Sir W. F. Butler, K.C.B., to the Adjutant-General.

London,
7th February, 1902.

SIR,

Having been directed by the Right Hon. the Secretary of State for War to address to you any reply I might desire to make to his letter to me of the 3rd ultimo, I have now the honour of forwarding the accompanying answer to you.—I have, etc.,

W. F. BUTLER, Lieut.-General.

From Lieut.-General Sir W. F. Butler, K.C.B., to the Adjutant-General.

Devonport,
7th February, 1902.

SIR,

I was recently compelled to draw the attention of the Secretary of State for War to a reference to myself made by the Secretary of State for the Colonies, in a public speech to which I, holding His Majesty's commission, was debarred from making a public reply.

In the correspondence which ensued the Secretary of State for War admitted the undoubted warnings I had given the Government; but he subsequently raised a fresh issue upon points such as the time taken by me in the preparation of the South African Defence Scheme, which he considered might have been "the work of a few days or hours," and, again, that "he is unable to trace any letter in which (I) made a definite request for an increase of the garrison of South Africa with a view to repelling the impending invasion of the troops of the Dutch Republics, or that I had submitted an estimate of the expeditionary force which would be needed to bring the war to a satisfactory conclusion. I propose to deal with these issues in separate letters.

In November, 1899, when I was made the subject of attack by a portion of the Press, I wrote to the War Office asking either that some specific charge might be made against me in relation to my late command in South Africa, or that they (my military superiors) would themselves defend me from these libellous accusations.

I was informed by the Military Secretary that my letter had been carefully considered by the Secretary of State in consultation with the Commander-in-Chief; that it was not desirable that officers should take notice of criticisms in the Press as to the manner in which they had discharged their duties; that the Commander-in-Chief was of opinion that I had done well to take no notice of the accusations to which I had referred, and that he trusted I would continue to leave them unnoticed.

I concluded, therefore, that my superiors had no charge to make. But now, when more than two years have elapsed since this correspondence, I understand the Secretary of State in his letter of January 3rd, to suggest that I failed to furnish the War Office with a detailed scheme of defence in due time after the receipt by me of a War Office letter of December 21st, 1898. I submit that if there had been any negligence on my part in respect to the preparation of the defence scheme for South Africa within reasonable time, it should have been made the subject of criticism, or charge against me three years ago, when the supposed delay occurred.

Reference by me to official documents is now in most cases impossible. I was recently informed at the War Office that much of the confidential correspondence of that time had been destroyed by order of the authorities in Cape Town. I have, however, been able, from the papers in my possession, to supply in some degree the want of documents, and I propose now to state the circumstances connected with the preparation and rendering of the South African Defence Scheme.

The War Office letter of December 21st was received at Cape Town about the middle of January, 1899, when I was performing the duties of Acting Governor and High Commissioner in the absence of Sir Alfred Milner in England.

The time was one of unusual political unrest and official labour, and, as my constant cable messages and despatches to the Secretary for the Colonies will show, the situation required my closest attendance in Cape Town.

Sir Alfred Milner returned from leave a month later, and having handed over the civil duties to him, I immediately turned my attention to the defence questions in South Africa. It is enough to say here that within a month from the date of the Governor's return, I had travelled 3,000 miles, had inspected the Natal frontier, had visited the railway junctions of the northern portion of Cape Colony, and had in my own mind decided the outline of the Natal and Cape Colony Defence Scheme. But, as I subsequently reported, "I had not yet been able to see even the general line of frontier lying between Basutoland and Fourteen Streams" (about 400 miles) and I did not wish to forward to the War Office a scheme on all parts of which I had not formed my opinions from a personal examination of the ground. The Secretary of State suggests that I might have used Staff officers to visit various parts of the frontier. He lays stress upon the "assistance" given to me, in the War Office letter referred to, "by a concise recapitulation of the main features of the frontier"; and he thinks that the whole question of the defence of South Africa was capable of being decided "under circumstances as favourable as those under which a General Officer in the field may frequently be called upon to determine within a few days or hours." I respectfully submit that there is no analogy whatever between the two cases cited.

The misconception arises from a confusion of ideas between the plan or forecast of war known as strategy, and the operations which involve immediate action called tactics.

A glance at the Defence Scheme for England—which has been for many years in preparation, and is not yet complete—will show that a scheme of defence for even a small island is not to be confounded with the operations which a General in the field may be called upon to determine in a few days or hours.

To the suggestion that I might have made use of Staff officers for the purpose of visiting various parts of the frontier, I reply, that I was not disposed to deal at second hand with this important question, even had Staff officers been available; but there were none.

I do not propose to dwell upon the exception taken to the use of the word "uncertain" when writing of the attitude of the Orange Free State, in the possible event of war, beyond observing that the official documents of the period speak of the attitude of the State in that term; and one competent authority was reported to have stated as the reason for the postponement of hostilities, from June to October, 1898, that "we are not yet quite sure of getting the Orange Free State into the bag." I pass to consider the presumed assistance given in the letter of December, 1898, towards forming my decisions for defence in South Africa.

In the War Office letter of that date lay my principal difficulty, for the following reasons:—

It recommended to me, both in Natal and in the Cape Colony, the initial occupation of advanced positions, the adoption of which would, to my mind, have involved the earliest and the most complete initial disasters.

It pressed upon me seizing all the bridges of the Orange River between Cape Colony and the Orange Free State, as well as Van Reenan's Pass and other advanced positions in Natal, by the small force under my command. I had, therefore, not only to write a scheme of defence, but I had to argue it against the War Office proposals—hence the efforts on my part to give detailed reasons for my decisions in my dispatch 7th—12th June; and hence, too, my desire to personally inspect the entire frontier before putting my opinion into conflict with the views of the War Office, and of the officers who had been sent from England to inspect and report upon these frontiers 18 months earlier.

It was comparatively easy to frame in my own mind my own scheme of defence for Natal and the Cape Colony, but it was another matter to formulate the reasons for my dissent to show cause for not pushing forward my weak force into the Drakensburg Passes on one side, or to within a half rifle shot distance of the Orange Free State on the other.

Reference to that dispatch will show almost in every line this purport.

After proposing to place all available infantry at De Aar, Naauwport, and Stormberg, I wrote: "As it would be impossible to hold all the bridges named by you on the Orange River, except by detachments, whose weakness would only invite attack, I propose to hold Orange River Bridge within our own territory"; and I pointed out how concentration at that point from the right, i.e., Stormberg, Naauwport, via De Aar, could be rapidly effected (this movement was afterwards carried out with brilliant results by Earl Roberts); but despite the reiterated warnings of my dispatch, so wedded were the War Office authorities to their original ideas of defence that, after my proposals had been received and considered in London, I was again urged by a War Office telegram to reconsider my decision with reference to Natal, and to occupy Van Reenan's Pass on the edge of the Orange Free State. I declined to do so. These telegrams are doubtless in your possession, and it might be of some interest to compare their dates with that of my arranged supercession in the South African Command in the event of war; I think they will be found to synchronise.

The opinion held by the Secretary of State upon the simplicity of the problem of defence with which I had to deal in South Africa, is one which was evidently not held at the time by the Intelligence and Mobilisation authorities in England, as the following extracts from the correspondence of the time will show: "I am afraid that you will find a good deal of work in front of you in connection with defence matters"—wrote one staff officer in very high position—(this has been) "caused

partly by a certain amount of misunderstanding at headquarters." Again, I find even as late as the month of May, 1899, five months subsequent to the War Office letter referred to by the Secretary of State, the problem of South African defence thus spoken of: "It is difficult to unravel the various directions sent to you from the different branches here, each without the knowledge of the other branches concerned." Again, I find the same subject referred to by another high War Office authority on South African defence questions as follows: "There has been a good deal of confusion at headquarters from various branches having taken action without reference to the Commander-in-Chief's department, neither nor knew what was going on."

I venture to suggest, sir, that these extracts taken from my papers, do not point either to the simplicity of my work in the preparation of the scheme of defence for South Africa, or to any large measure of "assistance" which I could have derived from the collective efforts of the War Office, although I read later on, the more sanguine assurance that, "We are all now working together, and hope there will be no more misunderstanding."

I observe, too, that the Secretary of State suggests that the letter of December 21st, 1898, pointed to the extreme urgency with which, in view of an "impending" war, the War Office regarded the preparation of the scheme of defence. I have referred to my papers, but can discover no trace of this feeling. I think the War Office letter of December 21st begins with the seemingly unurgent observation that "The possibility of a war with the Dutch Republics had not wholly passed away"—a sentiment which I find reiterated five months later in a letter from the same source, which reached me late in June, 1899, in the following words: "Without entering into any close consideration of the political situation, we cannot shut our eyes to the fact that the possibility of war in South Africa has not yet been eliminated." Nor is this forecast much widened when I find the small reserve of rifles in my Ordnance Store at Cape Town at this period thus referred to: "There has been a misunderstanding as to the reserve of rifles sent out, and you have a good many more than can possibly be needed."

I quote these sentences, not because of the optimism they reveal, even up to June, 1899, but to show what little reason I had to suppose that the War Office authorities were in urgent haste to possess my scheme, and what was the real nature of the "assistance" I had received from the War Office in its preparation; still, notwithstanding the absence of any indication of urgency, the War Office were in possession of the new defence scheme for South Africa within four months of the return of Sir Alfred Milner from England, the scheme itself differing in its most essential features from the previously expressed opinions of the experts, whose views are based upon the reports of officers specially sent out from England to examine the frontiers of Natal and the Cape Colony a year or two earlier. Had the War Office conveyed to me at any moment between January and June, 1899, the slightest intimation that a diplomatic initiative was about to be taken with the Dutch Republics, or that there was an early probability of war, I might perhaps have saved a few weeks in the preparation of this report, and undoubtedly I would earlier have given to the War Office the emphatic warnings which were so often repeated in my dispatches and telegrams of the end of June. Had I even been made casually acquainted with the consultations and interchange of ideas and proposals as to armaments and frontier movements which took place in London in the end of January, 1899, and upon which so many matters of vital military importance afterwards turned, I would have devoted myself (as I did later in June, when I became aware of some of these things) to the attempt to show the home authorities how inadequate was their conception of what war in South Africa would mean, how deceptive were the assurances, and how dangerous was the advice they had received.

In my dispatch of July 4th, I stated the circumstances under which I had come out from England seven months earlier without instructions of any kind in "either civil or military matters," nor was it deemed necessary to send me any instructions after my arrival in the country. Indeed, the obscurity in which I found myself in this respect was more than merely negative. Asking in my office at Cape Town some time after my arrival for an official book in which my predecessor

had kept copies of his confidential correspondence with the War Office, I ascertained that this record had been destroyed (some 70 or 80 pages of the book having been torn out), and I further ascertained that this had not been done because of any request made by General Goodenough before his death, nor at the instance of the widow or executors of the late General.

One other instance before I quit this somewhat painful subject. Under date August 3rd, 1899, the following telegram can be read in the Official Blue Book:—

"Propriety of moving troops nearer to frontier, so as to watch Laing's Nek, is being considered by Her Majesty's Government. If it be desired to garrison Laing's Nek, would Colonial troops be sent with British?"

This telegram, the execution of which would undoubtedly have produced immediate hostilities, was never communicated to the General Commanding in South Africa, although two months previous to its date he had officially recorded his opinion that the position proposed for occupation was for a variety of reasons given "a dangerous one."

I do not think I need pursue this subject further. Looking back from the present time to those early months of 1899, the sole sign of impending changes which I can trace is to be found in the obscure movement of the families of some of the officials, the sudden sales of the racing studs of the chief financial millionaires in Johannesburg, and the arrival in South Africa from England of the most noted persons connected with the Jameson Raid of 1895-96. The last-named immigration will be found mentioned in my despatches of June, 1899.

But who could have imagined that the persons to whom I have referred could have been the recipients of any information as to a coming war which had not been communicated to the General in Command in South Africa?

In the many duties devolving now upon me, I must ask permission of the Commander-in-Chief to defer to another letter the consideration of the remaining matters touched upon in the Secretary of State's letter, which pertain to the months of June, July, and August, 1899. In the present communication I have dealt with matters relating chiefly to the earlier months of that year.

I may here state, however, that, so far as I have been able to understand the general tenour of the suggestions and criticisms put forward in the letter of the 3rd January, it would seem that while in June, 1899, I was severely censured because I ventured to warn the War Office in forcible language as to the nature of the war with the Dutch Republics in South Africa, I am now taken to account for not having made my warning of that time still more emphatic.

I have, etc.,

W. F. BUTLER, Lieut.-General.

From the Adjutant-General to Lieut.-General Sir W. F. Butler K.C.B.

War Office,
18th February, 1902.

acknowledge the receipt of your letter, No. 59337/82, dated 7th February, 1902, forwarding a communication dated 3rd idem, on the subject of your action when commanding the troops in South Africa.

2. In reply, I am to remark that in a letter, dated 4th November, 1901, addressed to the Under Secretary of State for War, you took exception to a statement made in a speech at Edinburgh on 25th October by the Secretary of State for the Colonies to the following effect: "As far as I know, there was not one single man who was entitled to the faintest confidence, or even pretended to be an authority upon the subject, who anticipated the prolonged resistance which we have incurred." In consequence of an interruption, Mr. Chamberlain, who, in the first instance, had not mentioned your name, characterised as "a fable" the suggestion that you formed an exception to his general statement.

3. Your letter was answered by the Under Secretary of State, who informed you that, after a careful examination of the documents to which you had referred, the Secretary of State for War was unable to find that the language of the Secretary of State for the Colonies was at variance with the tenour of those documents.

4. You again addressed the Under Secretary of State on the 16th December, 1901, demurring to the Secretary of State's reply, and dealing at considerable length with your proceedings while in command in South Africa.

5. This letter was fully answered under Mr. Brodrick's orders in a communication from the Under Secretary of State, No. 59337/81, dated 3rd January, 1902, in which you were informed that the Secretary of State for War was unable to admit any inaccuracy in Mr. Chamberlain's statement at Edinburgh. It was added that, as the question raised in your letter of 4th November had been dealt with, any further correspondence on subjects unconnected with Mr. Chamberlain's speech should be addressed to the Adjutant-General.

6. In your letter to me under immediate reference you review the course of events in South Africa while you were commanding the troops in that country, and give your reasons for the delay which occurred in furnishing the defensive scheme called for by the War Office. In discussing this matter you ascribe to the Secretary of State opinions as to the "simplicity of the problem of defence" which are not to be found in his letters, and you cite correspondence with officers at home whom you do not name, which appears to have been of an unofficial character.

7. In reply, I am to say that the Commander-in-Chief considers it unnecessary and inexpedient further to discuss this subject. His Lordship has no reason to doubt that you acted to the best of your judgment and ability during the period in question, and he observes that your recall from South Africa was not due to any neglect of military duty on your part, but to your own resignation on the ground that your presence at Cape Town was likely to be a source of embarrassment to Her Majesty's High Commissioner.

8. I am to add that the Commander-in-Chief directs that this correspondence should now terminate.

I am, etc.,

T. K. KENNY, Adjutant-General.

59337
82.

SIR,

I am directed by the Commander-in-Chief to

(After a short adjournment.)

General Sir F. W. E. F. FORESTIER-WALKER, G.C.M.G., K.C.B. : Colonel J. K. TROTTER, C.B., C.M.G., called and examined.

General Sir
F. W. E. F.
Forestier-
Walker,
G.C.M.G.,
K.C.B., and
Colonel J. K.
Trotter,
C.B., C.M.G.

13636. (Chairman.) (To Sir F. Forestier-Walker.) You have been good enough to send us some notes (*vide Appendix, page 590 post*) upon which I will ask you questions. You arrived at Cape Town and took command there on September 6th, 1899?—Yes.

13637. And you were there throughout the War, I think?—Not for the whole of the War. I came away in April, 1901. I came away on three months leave, and then I was told within a week of the expiration of my leave that I was not to return.

13638. During the time that you were out there you were in command of the communications?—I was in command of the Lines of Communication, but only in the Cape Colony during the latter part of the time. From the time when Lord Roberts arrived at Bloemfontein I was only in command of the Cape Colony. He sent for me to Bloemfontein, where I met him and the High Commissioner, Lord Milner, and it was then decided that my command should be in Cape Colony as regards the Lines of Communication.

13639. The other part of it was under another officer?—The Orange River Colony, I think, was put under General Kelly-Kenny. Lord Roberts considered that there would be sufficient for me to do in Cape Colony, and I was to remain at the base with Lord Milner practically.

13640. Would you give us the state of the forces at the time of your arrival?—The combatant forces in Natal then under me were two regiments of Cavalry, three batteries Royal Field Artillery, one Mountain Battery, and four Battalions with four companies Mounted Infantry, being one battalion, and one company of Mounted Infantry in excess of the peace garrison which had existed since May, 1897. In Cape Colony there were two and a half battalions of Infantry, three companies Mounted Infantry, two companies Garrison Artillery, this being one battalion and one Mounted Infantry company less than the peace garrison. The difference was caused by the transfer from the Cape to Natal of one regiment, the Liverpool regiment. Then there were two battalions at the time on the sea for the purpose of reinforcing the South African garrison, one for the Cape and the other for Natal, but the one for the Cape was not to provide a Mounted Infantry company, I was informed; so that on its arrival I felt that the garrison would still be deficient of that unit, a Mounted Infantry company. Then there were two companies of Engineers above the normal strength in Cape Colony, and one in Natal. At Kimberley there were three officers of the Royal Engineers, but no troops; there were also two Corps of Mounted Infantry, which had been raised in Mashonaland and Bechuanaland, 450 strong each; but when I arrived at the Cape those were not under my orders, they were directly under the High Commissioner. The horses for these had been purchased, but the authorised number of recruits was not at the time complete.

13641. And all the troops had regimental transport?—They had all complete regimental transport, but there were no Field Auxiliary services, such as bearer companies, field hospitals, or ammunition columns.

13642. Then as to the purchase of horses and mules, that had been put before the authorities for some time?—Yes, the authorities had been pressed to allow us to purchase horses and mules.

13643. Before you arrived?—Before I arrived.

13644. But that recommendation had been refused?—The recommendation to purchase in excess of our requirements at the time had been refused.

13645. Was everything complete for the requirements of the force that you had in the country?—Yes, practically; but just about the time, or shortly after I arrived, we were ordered to purchase a certain number of mules and of horses too, and Colonel Bridge (I do not know whether he has been examined before the Commission) had been previously sent out in the time of Sir William Butler with that object to act as transport officer; but he was very short-handed, he had only one officer to help him at Stellenbosch, where we had a

Remount Depot, and consequently we could not send round the country to purchase horses which resulted in our having to pay very much more for horses than we should have done otherwise. If we could have sent round we could have purchased them in large numbers for much less.

13646. You think a large number were available?—Yes, and we ought to have been able to purchase horses in the Orange Free State before the War and in the Transvaal. It would have been of great importance to reduce the number of horses in those two countries.

13647. But I think some witnesses have said that it would have made the situation more acute if we had purchased horses?—It might have been so; that I cannot say; it might have made the situation more acute.

13648. That might have been the reason?—It probably was. I merely mention it as a fact that it would have reduced the price. But whilst I am speaking of the horse question, I might say that we did not get Martial law in Cape Colony practically throughout until the beginning of 1901, and the result of getting it was that I was able in Cape Colony to get, between the 1st of January and the end of March, 1901, 32,000 horses without much difficulty. I believe a second haul was being made at the time I left, and I believe a considerable number again were obtained by commandeering, which, of course, we could not resort to before.

13649. That, I think, some of the transport officers called our attention to; that we ought to have purchased more horses. I think Sir Wodehouse Richardson mentioned that?—He would know all about it.

13650. He went out about the same time as you did?—Yes, he arrived about three weeks or a month after I did.

13651. And he was in charge?—He was in supreme charge of the supply and transport, but his duties were mainly with supply; transport was left with Colonel Bridge almost entirely.

13652. Subject to your direction?—Subject to my supervision.

13653. I think we had it from Sir Wodehouse Richardson that at the time the troops began to come out he had collected sufficient transport for the corps as they arrived?—Yes, sufficient transport was collected for the corps as they arrived. And we had also received instructions from home to have 700 ox wagons ready, which were to be ready for wherever they might be required to go at a certain time.

13654. How was that arranged for?—That was arranged for by contract, and, I think, speaking from memory, it was done through the Weil contract; I think that was the 1st of December.

13655. Was that contract made after you arrived?—That contract was made after I arrived. There was nobody else who could do it but Weil.

13656. At that time did the Home Authorities make up the Field Auxiliary Services, which you say were deficient at the time of your arrival?—Yes, so far as possible.

13657. When you arrived, you had no definite information as to any outbreak of war?—None whatever.

13658. You had no instructions when you came out in September to meet any emergency?—I had no instructions whatever. I was told, of course, to report fully home, which I did accordingly by cablegram.

13659. But in taking up your command at the Cape at that moment you simply succeeded as in the ordinary course?—Yes, I succeeded Sir William Butler in a time of peace, practically.

13660. Without any distinct or special instructions from home?—I had no distinct or special instructions from home.

13661. You were not instructed to consider and scheme of defence of the Colonies, or anything of that

11 Feb. 1903.

General Sir F. W. E. F. Forestier-Walker, G.C.M.G., K.C.B., and Colonel J. K. Trotter, C.B., C.M.G.
11 Feb. 1903.

kind?—No, but I naturally, on arrival, as any General would be bound to do, went into the question of defence. Sir William Butler had reported shortly before; he had also made proposals for a frontier defence of the Colony with the force that then existed, and practically for the defence of Natal. I wrote home that so far as I could see those views were sound and that I did not think I could improve upon them with the force that I then had. That was for the occupation of the frontier posts, Naauwpoort, Stormberg, and so on.

13662. That was dealing with the matter in the way in which these defence schemes are dealt with, namely, with the existing garrison?—Yes.

13663. There had been certain reports upon bases and depôts, and so on, by Intelligence Officers, had there not?—Yes, that had been carried out; I think, some time beforehand.

13664. And I think among others there was a report upon the defence of Kimberley by Colonel Trotter?—Colonel Trotter went to Kimberley, and drew up a scheme for the defence of Kimberley; I believe I am correct. (Colonel Trotter.) Yes, that is so.

13665. (To Sir F. Forestier-Walker.) That was before you arrived?—That was before I arrived, and then Colonel Trotter returned to his post, and his scheme was the one which, in the main, was carried out.

13666. And was successful?—And was successful.

13667. Had you any information about troops from India at the time of your arrival?—Yes, I had. I will not be certain, but I think I heard of it first upon my arrival at Cape Town.

13668. And also the four battalions from the Mediterranean?—Yes.

13669. What did you gather was the intention with regard to these troops?—I gathered that of the four battalions two were for Natal and two for Cape Colony, practically to strengthen the garrisons, and I regarded the force from India as being for the purpose of preventing probably a raid into Natal, which was very vulnerable. Of course, their destination was to be Natal.

13670. I think you say in your *précis* that general indications rather pointed to an advance through Natal on the Transvaal?—Yes, because we did not know at that early time whether the Orange Free State, as it was then, would be involved in war, whether they intended to join the Transvaal, and if they had not joined them, it was felt that we should not be able to go through their territory.

13671. But you speak more of an advance than of a defence?—I thought the advance would be through Natal. I did not know that I had spoken more of an advance.

13672. You say, "I gathered from the general indications given, that in case of war, the troops would advance through Natal to the Transvaal"?—Yes, it was so, that in case of war the advance would be made, I thought, probably through Natal, and very probably from Kimberley, because they were the two most northerly points in our possession at the time.

13673. But what I rather meant by my question was the general impression at the moment?—You meant that I might have thought from the force coming from India, that it was probable that there would be hostilities?

13674. Yes, but that the hostilities rather pointed to an advance by our troops into the Transvaal, than, as it turned out, a defence by our troops of our own territory against an advance by the Boers. You had rather an impression of an advance by our troops at that moment?—I should not think we should advance unless we got further reinforcements than the force coming from India.

13675. But you looked forward to an advance through Natal to the Transvaal?—It was proposed, I believe, by the Secretary to the Colonies to the High Commissioner that we should occupy Laing's Nek, and I pointed out that I thought it would be an extremely dangerous proceeding, certainly until those reinforcements had come from India. But I had no notion that we should entertain the idea of moving further until we got much larger reinforcements than that.

13676. Had you formed any idea of the number of troops that would be required?—I certainly did not think so large a number would be required as were required, but I do not think I had formed really any idea of the number of troops that would be required. I knew later on that it was proposed that an Army Corps was coming, and I heard, before I left England, I think, rumours that an Army Corps would be sent in case of war.

13677. Natal, at the time of your arrival in Cape Town, was still under your command?—Yes.

13678. Did you go into the question of a defence scheme then?—No, I had not really very much time to do so, and I rather trusted to General Penn Symons, who had been there some time, and who knew the country, and to what Sir William Butler had reported with regard to it before.

13679. Your general impression was that the force that was there might have been sufficient against a raid, but not against an invasion?—No, not against an invasion certainly.

13680. Did you think that an invasion in force was a possibility?—Yes, I thought it certainly was possible.

13681. And in that case were the dispositions of the forces in Natal satisfactory at the time of your arrival?—I think they were satisfactory at the time of my arrival. Ladysmith was our most advanced post.

13682. Was Dundee not occupied then?—No, Dundee was not occupied.

13683. Dundee was not occupied during the time that Natal was under your command?—Yes, it was; Dundee was occupied at the instance of the Lieutenant-Governor of Natal, I believe. I have telegrams here, which I can show, from General Penn Symons, asking information, saying that he had been requested to occupy Dundee for the purpose of defending the coal fields, and asking permission to do so. The High Commissioner, Lord Milner, spoke to me on the subject, and also in reference to a further advance to Laing's Nek. I distinctly deprecated any advance to Laing's Nek, but I said that if it was so pressing I would not forbid an advance, as General Penn Symons seemed to recommend, to Glencoe and Dundee.

13684. And that was done?—And that was done. I thought myself at the time that the object was to keep the coal fields open, and it appeared to me that the force could fall back, that we should have plenty of time to occupy our former position if it was considered necessary to do so, and of that General Penn Symons, on the spot, was much better able to judge than I could be at the distance I was.

13685. Did you consider the question of the occupation of Ladysmith at all?—No. You mean, practically a permanent occupation?

13686. Yes; that you had not considered?—No, I had not considered it.

13687. Then as soon as the Indian Contingent arrived Sir George White also arrived, and the command passed out of your control?—Yes. Sir George White arrived in Cape Colony, and deprecated the troops remaining at Glencoe, and the dissemination of the troops, and I quite concurred with him about it. He found that the most rapid way of going to Natal, with no ships starting at once, was to go up through Cape Colony, right round to East London, and embark there, and so to Natal. He left the day he arrived in Cape Town with that object in view, and having arrived, as you are aware, he left the troops as they were; he did not move them.

13688. Then, after that your command was restricted to Cape Colony. Would you tell us how the matter stood with regard to the defence of Cape Colony?—I think perhaps I had better say, first of all, that immediately after I arrived, or within two or three days, Lord Milner being very anxious indeed about the condition of Kimberley, was anxious to send troops up to Kimberley. The Colonial Government were extremely averse to any troops advancing at all, and they almost absolutely, I may say, refused to allow any local troops to be organised at Kimberley at the time; that was in the first instance. I sent up Colonel Keke

wich to Kimberley to report upon the situation, and shortly afterwards, in consequence of what he said, I sent up half a battalion of his regiment; and I think I sent up six guns and some garrison Artillery from Cape Town to man them, and that practically was all the force that we sent to Kimberley altogether. In addition to that they raised a local force up there, which the Cape Government allowed them to do a little later on. I have pointed out, I think, in the *précis* exactly what was done in regard to Kimberley. Lord Milner was very anxious that another half battalion should go. I thought that half a battalion was all we could spare, and that if the inhabitants put their shoulders to the wheel it ought to be sufficient for the defence of Kimberley, as it practically proved to be. At Mafeking, General Baden-Powell, as you are aware, had practically his two regiments under him, and he brought one of those into Mafeking, which he organised as a place for defence, and, as you know, it held out in the most splendid way.

13689. There had been a proposal to occupy the bridges?—There had been a proposal, but it did not seem to me to be wise to occupy the bridges with the very small force of two and a half battalions that I had in Cape Colony. In the first instance, Lord Milner was very averse to troops being sent up through the Colony at all. However, I got permission to occupy De Aar, and I sent half a battalion up there, gradually reinforcing them, and as I reinforced them I sent the troops I could spare on to Orange River. I felt that it was of the greatest importance to hold the Orange River Bridge, because it was the main line of advance to Kimberley and Mafeking. It was a railway bridge, and I had it made available for all arms to pass over it. The only other forces I had available were a battalion in the east, at Grahamstown and King Williams Town, and I sent half of that battalion to Naauwpoort and half to Stormberg; that was practically in accordance with Sir William Butler's suggestion for the defence of the frontier. But I thought it would be very rash, and most unwise, and would rather invite attack, if we were to hold the bridges with an inadequate force; therefore I did not equip either Naauwpoort or Stormberg for some time. In fact, I do not think that Stormberg was ever equipped at all, but I threw a quantity of stores into De Aar, because I knew that De Aar would be a place of great importance, and, from what I saw of it, I thought it was very unlikely that the Boers would come there, and it was more or less easily defended by a small force.

13690. With regard to the bridges, your force was quite inadequate to hold them?—Quite.

13691. And the general result of your evidence is that with the forces at your disposal you could not do more than hold certain points without reinforcements?—It was quite impossible, and when Sir Redvers Buller arrived, he said, after a few days, "I do not think we are strong enough to occupy Naauwpoort and Stormberg," and he withdrew the garrison from both Naauwpoort and Stormberg, and ordered me to destroy the works there. I had, in the meantime, strengthened Stormberg by a detachment from the Navy—I got 300 blue-jackets there—as I felt rather anxious about Stormberg. Those two garrisons were withdrawn, and shortly afterwards Sir Redvers Buller re-occupied Naauwpoort, but, as you know, Stormberg was left for a considerable time, till General Gatacre endeavoured to get it back from the Boers who had meantime occupied it.

13692. You say that the attitude actually taken up was only justified by the belief that the Boers would not take the initiative by invading Cape Colony?—Yes, I personally always thought that Mr. Schreiner, who was then Prime Minister, had very great influence with the President of the Orange Free State (as it was then), and that that, to a great extent, prevented the troops in the Orange Free State from crossing the border. I may be wrong, but it has always seemed to me that that was the case, because he was so particularly averse to our moving a single man away from Cape Town. With the greatest difficulty I got him to let me have two guns, which were really very good; they were up to date field guns, belonging to the Volunteers, but it was only with difficulty.

13693. Are those the two guns that you have mentioned as being sent up to General Baden-Powell?—No, those were mountain guns. The guns I mean got as far as Orange River. I meant to send them as far as Kimberley, but we could not get further than Orange River. We were stopped by the War breaking out.

13694. Were they used during the War?—Yes, I think they were. I do not remember where they went to from Orange River, but afterwards, when the Volunteers took the field, I know we got a battery together in the end, and the other four guns were sent up either to Naauwpoort or Stormberg. I am not sure which, I know they were used.

13695. And most of the guns, I think you say, were obsolete?—Yes, they were. They were muzzle loaders.

13696. They belonged to the Volunteers?—Yes.

13697. I see you state that the actual dates when the troops detailed for the defence of Kimberley and Orange River Bridge were despatched were the 18th and 19th September, and on the 25th September the De Aar detachment left?—That is so.

13698. At the same time you were purchasing horses. and so on?—Yes, we were doing our utmost.

13699. And you did get some from the Republics?—Yes. We had first of all to remount one squadron, or a great part of one squadron, of the 9th Lancers, who lost their horses on the way from Natal. I cannot state the exact number of horses we had in the dépôt, because I do not remember, but I fancy we had about a thousand—a very small number compared with what we afterwards got together.

13700. But after the end of September, of course, you could not go beyond your own borders in that matter?—No. The first shot was fired, I think, on the 13th of October; that was when the two guns were captured at Kraaipan.

13701. Were any Irregular Corps levied in Cape Colony?—We were anxious to call out the Cape Town Volunteers, the Cape Town Highlanders, and other Cape Town corps, but the Ministers were very averse to it, and they were not practically called out until after War had been declared. But before that I had got permission with very great difficulty to raise a force of scouts under Colonel Rimington. I asked leave to raise I think only 200, and that was refused in the first instance, but afterwards Lord Milner put a little pressure on the authorities, I think, and it was granted. In the first instance for Rimington's Scouts the number was 200, and afterwards Lord Milner himself wired home and asked permission that we might have 2,000 men raised, and that permission was given.

13702. Were the 2,000 men raised?—They were.

13703. In the Cape Colony or in Natal?—In the Cape Colony and in Natal; they were gradually raised; they took some time to raise.

13704. Now the first information about the Army Corps and your position in command of the line of communications came to you from General Buller?—Yes. I do not think I have sent that telegram in. Would you like me to read it? I do not think you have it.

13705. Will you read it, please?—I received it from the War Office, from General Buller.

13706. (*Sir George Taubman-Goldie.*) What is the date of it?—The 29th September: "Government have decided to send out an Army Corps, a Cavalry Division, seven battalions for Communications, and to make the main advance on Pretoria through the Orange Free State. The concentration of the troops will, therefore, be in Cape Colony. You are appointed General Officer commanding the Lines of Communication, which I hope will suit you. You had better disembark Richardson on his arrival at Cape Town, he will not be wanted in Natal. Tell George White to send to Cape Colony any of the Indian contingents he can spare as they arrive. He will not suffer now by his going to Natal." I do not know what that paragraph meant; I never could understand it. "I hope you will be able to arrange for details to disembark at Cape Town, Port Elizabeth, and East London simultaneously, but leave this to your own judgment. I expect to start on the

General Sir F. W. E. F. Forestier-Walker, G.C.M.G., K.C.B., and Colonel J. K. Trotter, C.B., C.M.G.

11 Feb. 1903.

General Sir F. W. E. F. Forestier-Walker, G.C.M.G., K.C.B., and Colonel J. K. Trotter, C.B., C.M.G. 7th, certainly on the 14th October. Keep the intention to move through the Orange Free State secret as long as you can. Treat your preparations as for defence of Cape Colony, and always speak of Natal route as being the main objective. Major Girouard, R.E., leaves on the 7th October to help you with the railways. (Signed), Redvers Buller, 29.9.99."

13707. (*Sir John Edge.*) This was a telegram to you? —Yes.

11 Feb. 1903. 13708. (*Sir Frederick Darley.*) From London?—Yes.

13709. (*Chairman.*) Had you any official intimation then about the coming of the Army Corps?—I cannot say. That was the first intimation that I got. The next telegram, which I got the next day, was from the Secretary of State for War ordering me to "confer with General White and disembark for Cape Colony, ex 'Tantallon Castle' and 'Gaul,' such Army Service Corps personnel as he concurs with you in thinking necessary. Nineteen Transport Companies Army Service Corps, 1 Supply Company, about 270 strong all ranks, with 86 Army Service Corps officers, including 12 for Staff, embark in the 'Braemar Castle,' 6th October, calling at Cape Town for orders. One more Transport Company, about 50 all ranks, with some 30 Supply details, follow on the 13th instant. Those sailing on the 6th and 13th are for an Army Corps and Lines of Communication." So that that was, on the 30th September, practically informing me specially that there would be an Army Corps. Then in answer to General Buller's telegram I sent the following. I do not know whether this has been handed in; it is no use my troubling you with reading it if it has.

13710. I do not suppose we have those from Sir Redvers Buller?—This was from me to Sir Redvers Buller on the 30th September, acknowledging his telegram of the 29th: "Your instructions will be carried out. I propose to establish depôts for disembarkation at Port Elizabeth and East London as well as at Cape Town as soon as administrative officers become available; and advanced depôts at Naauwpoort and Stormberg Junctions. An advanced dépôt is now being formed at De Aar, and a rest camp at Stellenbosch. Every effort will be made to indicate as line of advance Natal. I think it would be a good plan to make home papers announce all troops embarking as proceeding to Natal."

13711. (*Sir John Jackson.*) Were all these telegrams between London and the Cape sent by a private code?—They all came in cipher. Then on October 2nd Sir Redvers Buller telegraphed to me: "Your proposals are just what I wished, but I feared suggesting depôts at Naauwpoort and Stormberg, as I did not know if you had sufficient troops to safely guard them. It will not do to risk a loss. I leave this to your local knowledge. I sail on the 14th inst.—(Signed) Redvers Buller." I then telegraphed to him, telling him exactly what I had done, and in answer he telegraphed to me from Madeira: "I fully concur in your dispositions. Orange River Bridge is the most important at this moment. Do not risk much at Naauwpoort or at Stormberg until you feel yourself strong enough. If the sailors are going to Stormberg, send good Royal Engineer officers with them, as sailors are inclined to select posts exposed to long range fire." That was practically a private telegram.

13712. (*Chairman.*) In order to carry out those arrangements you had to confer with the railway people?—Yes, I did so far as I could confidentially. I pointed out that under any circumstances it would be necessary to establish bases at East London, Port Elizabeth and Cape Town, and that one would really like to know what facilities for railway transport, and so on, for movements in the Colony there would be.

13713. And you had to arrange for the sites for the collection and despatching of troops at Cape Town, and for sidings and huts?—Yes, we had to do all that.

13714. Nothing had been done to prepare for that beforehand at all?—Nothing had been done before I arrived. I thought about it, of course, when I got to Cape Town, naturally, from the time of my arrival.

13715. But there was no scheme for making preparations for the landing of a large force?—No, there was no scheme, but we drew out a scheme so far as we could, for landing the force at those three points. We did not know whether the whole Army Corps was coming to Cape Town, or going to Port Elizabeth or

East London; we did not know how it would be divided, or whether it was all going to Natal. In the first instance it would seem as if the whole landing would take place in Natal.

13716. I mean that up to the 29th of September, when you got that telegram from Sir Redvers Buller, nothing was in preparation at all?—Except in our own minds. One was not justified in doing anything else.

13717. But if there had been an apprehension of sending an Army Corps previously to that date, would it not have been a reasonable precaution to have made some arrangement, say, with the railway companies which could have been done confidentially?—Most certainly; but I conferred with the railway authorities confidentially as soon as ever I could with regard to all those things in order to find out the facilities that there were and what they could do. I found out that it took six trains to convey an Infantry regiment, and it took nine trains to convey a cavalry regiment, so that only a limited number of troops could be sent up on one day.

13718. That meant that you had to provide for their camping somewhere near the base?—Yes, and we had to consider the possibility of having to provide rest camps en route.

13719. And all that had to be done in a state of emergency?—Practically.

13720. If it had been possible to inform the General Officer Commanding at the Cape two or three months earlier that there was a possibility of an Army Corps coming out, some of that emergency work might have been saved, might it not?—Yes, it might undoubtedly, but at the same time I think his common sense would have induced the General Officer Commanding to take into consideration what he should do, even if he could not consult very much, because I conclude that with the condition of affairs at the Cape, it was not thought desirable even to take the Ministers into one's confidence, so little could be said. Of course I used to see Lord Milner and discuss the situation with him, but I think, as regards the preparations, that everything was all ready at Cape Town when the troops arrived, and everything was ready at Port Elizabeth, and everything was ready at East London. I do not think there was any unreadiness.

13721. The preparations were made, but made with an extra strain upon yourself and your staff, I suppose?—Yes. Naturally if the preparations could have been extended over a longer time there would not have been so much pressure.

13722. And you were able to get ground?—Yes, we got everything. We got a hospital at Wynberg, and we got stores at the docks, which was a very important matter; we made arrangements for them to give us priority of entry into the docks, and we got increased accommodation for our Ordnance stores, which was also very important; and we got a rest camp established at Stellenbosch. I think everything that could be done was done, and I do not think the troops suffered on arrival. We got a very large camp established at Green Point.

13723. And you had armoured trains and ambulances?—Yes, the armoured trains were put under way, and the ambulances.

13724. Still if the exigencies of the political situation had not prevented it you might have done a good deal by a moderate expenditure of money beforehand, might you not?—Yes, I think we might. I think it is always the case that if you can only be allowed to spend money before war, it will save a great deal of expenditure afterwards, because a General is allowed to do nothing of his own initiative before war.

13725. If the General Officer Commanding on the spot could have dealt with some matters without reference home it would have saved a good deal of money?—Yes, I think it is of the very greatest importance that he should be allowed to do so. That is why I mentioned the question which I had on my mind of Rimington's Scouts, because it was such a very small matter, 200 intelligent men that he could get hold of at the frontier at the time. But they would not listen to me at home when I first proposed it, although I thought it was of the greatest possible importance.

13726. After the troops began to arrive they all in a way passed through your hands on their way up country did they not?—All those that arrived at Cape Town. Some went straight on of course to Port Elizabeth and others to East London.

13727. But whether they went to Port Elizabeth or East London they all passed through your command?—Yes, they passed through my command but they did not come under my eye as it were.

13728. But I mean they passed through your command as being in charge of the line of communications; all troops and everything passed through your command?—Yes, but as a matter of fact Sir Redvers Buller arrived before his Army Corps and he was at Cape Town for some little time; he arrived, I think, on the 2nd of November, and he left on the 23rd for Natal; so that for those three weeks he was in command at Cape Town; he was living in Cape Town and had his own staff there. The Army Corps was arriving almost every day from the time he arrived until he left, and as they came in he used to say where they were to go, because the Army Corps arrived a good time after the war broke out.

13729. What was your duty at that time?—My duty was practically to work under Sir Redvers Buller; it was a little involved, but my duty was generally to look after the Cape Colony, mostly Cape Town. While General Buller was on the spot he used to tell me what he wished done as far as possible, and worked through me.

13730. And afterwards it was entirely through your hands?—It was in a way. Sir Redvers Buller went to Natal on November 23rd, when the Cape Colony was in my hands, and the troops arriving were in my hands; but I had instructions from Sir Redvers Buller what he wished me to do.

13731. You had charge of all the troops landed?—Yes.

13732. We have had some evidence that the officers in charge of the disembarkation appealed to you in cases of difficulty?—Yes, they were all under me, of course.

13733. You are of opinion, I gather, that that part of the work that was done by the Admiralty was well done?—Yes, it was very well done. I think the embarkation work was extremely well done. We were fortunate in having a very good embarkation officer, who got on extremely well with the Naval Transport Officer there, and everything worked most harmoniously.

13734. And you are of opinion that on special occasions that part of the work is best left in the hands of the Admiralty?—I am; what the Admiralty had to do is best left to them I think. They must work in well of course with the Army. It is no use to have a senior embarking officer who does not get on with the Naval officer. If I found he did not get on well with the Naval officer I should move him and get someone else who did.

13735. But you would not wish to dispossess the Admiralty of the control?—No.

13736. (Sir John Edge.) Your embarking officer was not under the command of the Admiralty was he?—No, he worked directly under me, but he had to be in constant communication with the Naval people. In fact the work was so hard for my embarking officers at Cape Town that they had shake downs at the Docks, and they used to sleep there and be up the first thing in the morning and work all day and all night, too, at times; they used to get a snack of dinner on some ship coming in. I had three or four officers working as hard as any officers could work, but they got on extremely well with the senior Naval officer; but then he was a most admirable officer too.

13737. (Chairman.) Did requisitions for supplies and stores from England go through you?—Yes.

13738. Were they carried out satisfactorily?—Yes, they were carried out very well.

13739. You had not any difficulty in getting what you wanted?—No, I think they were extremely well carried out.

13740. (Sir Henry Norman.) Do you refer to Sir Edward Chichester?—Yes, he was at Cape Town.

13741. (Sir John Edge.) Was he your embarkation officer?—No, he was the Naval officer.

13742. Who was your embarkation officer?—Major Lascelles.

13743. (Chairman.) You have given us a note as to a variety of reports, which you have submitted from time to time to the Secretary of State?—Yes, I thought that they would show more clearly than anything else what was done, but I am sorry to say I cannot find the first of them, one written on the 13th of September, in which I sent home what were General Butler's proposals for the defence of the frontier. I have them all here if you would like me to hand them in, except that one of the 13th of September. There are seven I think. I may say that I wrote a private letter to Lord Wolseley each week, also, which contained a certain amount of matter which is not in the reports. (*The Reports were all subsequently handed in and will be found in the Appendix at the end of this Volume of Evidence, vide pages 592 to 611.*)

13744. Are these official reports to the Secretary of State for War?—Yes.

13745. (Sir Henry Norman.) Why do they end in November, 1899?—Because Sir Redvers Buller came out, and I was no longer in supreme command, so that I did not report direct to the War Office.

13746. But after he went on to Natal, did you not resume reporting direct to the War Office?—During the three weeks he was in Cape Town I did not write to the Secretary of State, except immediately after his arrival; but after Sir Redvers Buller went to Natal I used to communicate with him, and I think my communications with the War Office were almost entirely done by cablegram. The operations were chiefly in Natal. And with regard to what Lord Methuen was doing, I forwarded Lord Methuen's report to Sir Redvers Buller, and also sent copies home. I sent cablegrams home, but I did not send home any special reports of my own. I thought General Buller would do that as he was Commander-in-Chief.

13747. (Chairman.) And then you reported to Lord Roberts after that?—Yes.

13748. And these reports which you have handed in are the reports which went direct?—They are the reports which went direct while I was in command in South Africa and while I was in command at the Cape, after Sir George White arrived and before Sir Redvers Buller arrived.

13749. (Sir George Taubman-Goldie.) There is one report I should like to see, that of the 11th October, reporting weakness in the Army Service Corps officers?—That is one that I hand in.

13750. (Sir Henry Norman.) That weakness I suppose was weakness in numbers?—Yes. "As I am so weak in Army Service Corps officers and men I am not able to send staffs to Port Elizabeth and East London to perform B duties." I was certainly under the impression that when it was decided to send an Army Corps out, and when the authorities had made up their minds where that Army Corps was to land they would also send me out an organised staff for the Lines of Communication both for Base Commandants and for various other positions for which Lines of Communication officers are wanted. In the first instance I wired home to ask for a certain number of officers, and I was allowed to keep some of those that Sir George White brought out. I kept three—one of whom I appointed to Port Elizabeth, one to East London, and one I sent up to De Aar. Afterwards certain officers were sent out and handed over to me, but there was no special organisation for the Lines of Communication, and I certainly thought that would be arranged for at home, and it was very much wanted.

13751. (Chairman.) But that was not done?—No, and that of course rendered us very short-handed at the base for a considerable time; we had not an officer to send.

13752. How did you supply the want?—They sent out a certain number of officers afterwards and I appointed them just as I best could.

13753. (Sir George Taubman-Goldie.) Did you fill up the gaps by Volunteers at all there?—I think I had one or two Volunteer officers, but we managed afterwards to get sufficient officers. What I mean is that one's difficulties in the first instance were considerably enhanced by a want of organisation as regards the lines of com-

munication officers and staff. There is a book which I daresay you know, a pamphlet on the lines of communication, pointing out what the lines of communication of an Army Corps should be, and what staff there should be. And I was under the impression that when they found at home that war was almost a certainty they would send out an organised staff; that is to say, they would send out so many Base Commandants, so many officers for Station Commandants, and Assistant Adjutant-Generals, and so forth; but they did not do it.

13754. What was the intention, do you know; had they intended you to secure men there?—I cannot quite make out. I wired home to say that I must have five special service officers. I kept three of Sir George White's, as I have told you. Then they sent out five more younger officers, who were really too young for what I wanted. But I do not think the authorities at home grasped the situation as I had been hoping that they would. I am bound to say that I did not ask to have the whole organised staff sent out because I thought they were sure to come. But I think there is always a sort of idea that lines of communication can get on some how.

13755. (Chairman.) That is not your experience?—Certainly not.

13756. I suppose that perhaps not so formally, but you did report to Lord Roberts in the same way as you made these reports?—Written reports do you mean?

13757. Did you not send written reports to Lord Roberts?—No, there was not time. Everything almost was carried out by cablegram or telegram. We were telegraphing all day long backwards and forwards, in fact.

13758. From your experience in command of the line of communications in this important campaign are there any suggestions that you wish to make to us?—I think the General Officer who is in command of the lines of communication should be supreme in his command; that is to say, that all the troops on the lines of communication should be under him, and that he should not have anyone who is not under him practically—for instance, the Chief Ordnance Officer. I am bound to say that he worked with me because he found it was better to do so, but he was not under me; he was on the Headquarters Staff, but was stationed at Cape Town. The Chief Paymaster, again, was on the Headquarters Staff, but was stationed at Cape Town; he used to come and tell me what he was doing, but practically he was not under me. Lord Roberts left an officer, Colonel Herbert, who was his representative as Assistant Adjutant General on Headquarters Staff; he left him at Cape Town for the purpose of opening correspondence which might come for him, and I do not know what other duties there were for him to perform—nothing, in fact, very much; but he was on the Headquarters Staff, and so much did he consider himself to be on the Headquarters Staff that he once or twice sent me memos, "By Order, Herbert, Assistant Adjutant General." I pointed out to him the impossibility of the situation. I told him, "There cannot be two of us in command here. If you are here you must be under me or else I must get somebody else who is." I am not mentioning this as a grievance or as anything personal against Colonel Herbert, but I think in future it would be better that there should be nobody to interfere with the General Officer—the General Officer should be supreme. Then I think, looking at the importance of the lines of communication, it is very necessary that the Chief Staff Officer to the General belonging to the lines of communication should be left there when he has mastered everything. Colonel Trotter, who was my Chief Staff Officer, was of the greatest assistance to me, but it was found necessary at home to send for him to take up a position in the Intelligence Department at the War Office. I asked Lord Roberts to let me keep him, but he said he was afraid the authorities wanted him at home, but I might keep him for a month. He was succeeded by an officer who was an excellent fellow but who had had no experience but commanding a battalion; he came out knowing nothing of the work to be done, and it took me all my time to try and help him through his work instead of his being of assistance to me. I think that is a very great mistake. I do not think there are any other points that I wanted

to mention. I have mentioned about the necessity for a proper organisation beforehand, and I do not think there is anything else that came within my province that I ought to allude to.

13759. (Sir Henry Norman.) When the heads of Departments at Cape Town were sending on stores to their respective depots did they do that after communicating with you or did they send them on independently?—They communicated with me. I used to have a meeting of all the officers of the various departments, about 20 of them, every morning, and I saw them together in my office, so that we could arrange for whatever was being done during the day. I had my own staff there at the same time, and the various heads of departments and the officers who were not directly under me found it in their own interests convenient to attend too, so that practically I knew everything that was going on. And that had its advantages in this way. Supposing that the Ordnance Officer was anxious to send up a quantity of ordnance stores, and the Supply Officer was anxious to send up a certain amount of supplies, the representative of the railway, the railway staff officer there, could tell us whether it was possible to get sufficient transport, and then I would decide as to which should have precedence; and in that way it saved a great deal of time, so that really I saw everything that was going on.

13760. Did the various heads of departments receive requisitions direct from the front, or did they come through you?—They received all requisitions direct from the front.

13761. And I suppose they informed you of them?—Yes, they did.

13762. You had entire control of the prison, I suppose—all prisoners of war?—Yes, I had.

13763. Did that give you much trouble?—We had the camp at St. Helena, of course, and afterwards those prisoners abroad; one could not have much to say to them. But as regards all prisoners in the Colony I had a good deal of trouble.

13764. There was altogether a considerable collection of prisoners?—Yes, and of course that took officers; we had to find officers and assistant staff officers for prisoners, and it was a very difficult matter at times to find the officers, because an officer in the lines of communication is peculiarly situated. Lord Roberts told me, and Sir Redvers Buller told me at the beginning of the War, "Impress on your lines of communication officers that they will never suffer from being on the lines of communication." And Lord Roberts quoted his own example; he had been on the lines of communication in Abyssinia. Of course I did impress it upon them, but I found that the officers naturally were keen to get to the front, and therefore one was always fighting, so to speak, with one's officers, who were anxious to get away. And in some cases officers were taken away from me without my being consulted, and once or twice I had to replace them as best I could. Then again an officer on the lines of communication gets a medal after the war, but he gets few clasps, and he naturally feels that he has not the chances of distinction that officers at the front have. So that I think really all the junior officers deserve special consideration. It does not matter about the General, but the other officers I mean.

13765. Under these officers did you place army non-commissioned officers, or did the staff officers directly deal with the Boer prisoners?—We had interpreters.—I do not think that we had many soldiers working with them. We had of course a guard over them every day, but we managed to get several good men who spoke both English and Dutch, and who were absolutely loyal, to look after them and to act as interpreters.

13766. I suppose you must have had a great accumulation of sick men, invalids, and so on, at Cape Town or in the neighbourhood?—Yes.

13767. Men who wanted to go home?—Yes, we had a very large number waiting to go home sometimes at Wynberg, and coming down the line; we were often crowded in that way.

13768. And I suppose the senior medical officer was constantly communicating with you as to how many men were ready to go or ought to be sent?—

Yes, he always communicated with me in regard to everything, practically.

13769. You must have had a great variety of duties to perform when you were at Cape Town?—It was all right when we got into the swing of it, but of course it is being so shorthanded in the first instance that is the trial. But I had a most excellent base commandant at Cape Town, Colonel Cooper, who did extremely good work.

13770. Then I suppose as to sending drafts for regiments up the country you had some general instructions from the Commander-in-Chief as to when to send them or how long to keep them?—Yes. Unfortunately as regards horses in the first instance (that is a different question, perhaps) the horses were sent off long before they were ready, but that could not be helped, because they were wanted; they were ordered to be sent to the front, and once at the front they were used. But one difficulty at that time was in getting our drafts to the front at all; one officer on the way up found that he was likely to have a raid, and he used to take the troops out of the train, and another officer would help himself to the horses. At one time I found it desirable not to send the horses up by one line because they never reached their destination, and yet one was powerless to get at the people who took them.

13771. You did your best, I suppose, to keep the horses until they were thoroughly rested?—We wanted to keep them all until they were absolutely fit for work, but it was impossible. We were always just one lot of horses behind. We never could get quite up to date with our horses practically, so that we were always a little behind, and it was most unfortunate, because the consequence was that the horses were worked to death. Even when, as I say, we got to 32,000 they were taken off by all the columns in Cape Colony—it was at the time the Boers were in Cape Colony—and they were dead in a week, galloped off their legs.

13772. The evidence that we have had has shown us that sending up the horses so quickly caused an enormous mortality?—Yes, it was a very great pity.

13773. In fact, it was not worth sending them up, really, because they died so soon. I suppose it was a choice of evils?—Yes, you could not help it.

13774. (Sir Frederick Darley.) You had, I think, communication also with the oversea colonies, had you not?—Yes, with Australia and New Zealand.

13775. I think I have seen some of your correspondence from time to time?—Yes, it covered all the oversea colonies.

13776. At one time you reported all the casualties of the oversea men and so forth?—Yes, and all about the contingents embarking and re-embarking.

13777. Afterwards there was a casualty officer appointed, I think?—Yes, but practically it all came through me, although he was appointed.

13778. I think you gave instructions to communicate with the casualty officer?—Yes, we appointed him in order to try and decentralise a little.

13779. But at that time it was all done from your Department—it all came from you, in fact?—Yes.

13780. I think all the letters were signed by you?—Yes.

13781. What would you propose with respect to officers and staff for lines of communication in any future campaign; how would you prepare for it? I suppose they ought to have some training for the position?—I think we require to have something better than the present book. This is the book drawn up by the War Office for organization; but it is for an Army Corps. I pointed out to Lord Kitchener the necessity for working on this book, and he said it was only intended for small expeditions. We departed from it and worked to a certain extent, I think, in rather an unsystematic way. I think it is necessary that we should have something more elaborate than this book for any larger force than this in the event of any future campaign. It would be rather long to go into the whole question, but I think you require to have so many officers for the different positions on the lines of communication, and if they know when they come out that they are for the lines of communication and that once

there they ought to stop there I think they would be more content than if they knew there was always a possibility or a probability of their getting moved and getting to the front. Those three officers who came out with Sir George White came out fully expecting to go to the front, and they were greatly disappointed when I got hold of them. Afterwards they did of course succeed in getting on.

13782. Officers for the lines of communication ought to have some previous training, ought they not?—Yes, I think you should select officers who are suitable for the places. But I think even Lord Kitchener had an idea that any officer was good enough for the lines of communication, because sometimes if an officer did not do well at the front he used to say, "Send him down to Cape Town," and I had one or two sent down to me whom I did not dare to employ: officers who had lost their nerve not from any fault of their own.

13783. And sometimes very critical work may devolve on the lines of communication?—Yes, but it is always, of course, very difficult to get the right man in the right place. I daresay they found that out in the War Office in sending out officers in charge of horses. For instance, one Artillery officer on arriving said that the whole of his horses had been suffering from glanders, that he had already thrown 50 overboard and regretted that he had not had time to throw more over. On a veterinary examination it turned out that there had not been a single case of glanders on board; one or two horses had suffered from something or other and he threw them over the side wholesale, and the horses adjoining and the horses two or three off. That was an accident: the man had gone off his head; but such things will happen. They told me "on no account employ this man with horses again." Naturally I should not have done so, but they wired that out to me from the War Office.

13784. (Sir John Jackson.) When you went out you approved of that scheme of defence that General Butler had got out?—I did. I thought it was perfectly sound with the force that we had.

13785. Getting out a scheme of defence like that at that time was a little more difficult than usual, was it not, having regard to the fact that there were no thoroughly good maps of the country?—I think so far as Cape Colony is concerned our maps were all right.

13786. And you would say the same up in Natal?—I believe the maps for Natal proved very defective; Sir Redvers Buller found them so.

13787. Sir William Butler has told us that he considered it necessary to go personally over the ground; would you have considered it necessary at that time to go personally over the ground?—I should like to have done so. As a matter of fact immediately before the War, when I had got all the advanced posts there, I went round to Naauwpoort and Stormberg. I had great difficulty in getting away, but I wanted to see the country and see what the positions were like.

13788. If you had been asked to get out a scheme of defence in that case, and you had had time to go over the ground personally, would you have thought it the right thing to have done, or would you have relied upon your junior officers?—If it had been possible I should have gone round myself, otherwise I should have had to rely upon my junior officers.

13789. You spoke of the advantage of having a little money spent in early preparations. We have been told a great deal to the effect that the reason why the Government held back from providing the money for making preparations was that they did not wish to precipitate a war. Do you think that if in June, 1899, we had had say 40,000 men out in South Africa, the Boers would ever have ventured an attack?—I think it would have been a very great advantage to have had 40,000 men in South Africa in June, 1899.

13790. Do you think the Boers would have ventured to attack us if we had had such a force out there at that time?—No, I do not think they would have ventured at all. I do not know, of course. I may say that I had a conversation with Mr. Rhodes immediately before the War broke out, and he told me even then that he did not think war was likely to take place, and I am sure that if we had had a large number of troops in the country it would not have done so.

General Sir
F. W. E. F.
Forester-
Walker,
G.C.M.G.,
K.C.B., and
Colonel J. K.
Trotter,
C.B., C.M.G.

11 Feb. 1903

General Sir
F. W. E. F.
Forestier-
Walker,
G.C.M.G.,
K.C.B., and
Colonel J. K.
Trotter,
C.B., C.M.G.

11 Feb. 1903.

13791. So that if we had had 40,000 or 50,000 men in the country at the time, the Boers would have felt it was no good going to war?—I think they would.

13792. (*Sir John Hopkins.*) There have been some complaints about the undue detention of transports, and so on, and we have had it in evidence from transport officers that there was no help for it: that they had to take the ships inside. Would that be your view?—Yes, we had to take them inside, and sometimes we could not get them discharged for some time.

13793. So far as you know there was no delay which could have been avoided?—No, we did all we could to get them off, because we knew how much they were wanted, and there was a heavy charge for demurrage; and also a vessel pitching about outside might be in a very bad way. There was one hay ship wrecked.

13794. So far as you are aware are the War Office going to get out a more extended hand-book in connection with the lines of communication work to replace that small one?—I should think they probably would. I really do not know; I have no means of knowing.

13795. It is of course very important now that these things are fresh in everybody's mind that advantage should be taken of that information?—Certainly.

13796. (*Sir George Taubman-Goldie.*) Can you remember, approximately, how long a time elapsed, how many days, between your first receiving orders to go to South Africa and your sailing?—Four days.

13797. Did you go to the War Office at all in that interval?—Yes. I saw Lord Wolseley the day before I sailed, I think.

13798. Did he go into any questions with you as to your line of conduct out there?—No, he asked me to write to him directly I got there and by every mail, which I did.

13799. There was no question whatever raised as to your policy?—No, there was no question raised.

13800. You were there such a short time before hostilities commenced that perhaps it is hardly fair to ask you the question, but did you consider the question of preparing to destroy the bridges that you were not going to hold?—Yes.

13801-2. What conclusion did you arrive at—not to do so?—Not to do so.

13803. On what ground?—It is difficult to say. I do not know quite, but I came to the conclusion that it would not be wise to destroy the bridges.

13804. Do you hold that opinion still?—Yes, I do.

13805. Would you mind explaining why?—As you are aware one bridge was blown up; it was blown up without my knowledge, and it was reported to me. It is an extraordinary thing that Lord Wolseley wired out to me, "Remember Hopetown bridge," and I could only reply, "Hopetown bridge was blown up to-day," but he did not mean Hopetown bridge really, he meant Orange River bridge, which we kept intact, and which was of the very greatest importance.

13806. Bearing in mind that a bridge allows the enemy to advance first and then he has it in his power to blow it up so that it will be of no use to you, will you explain why it was that you came to the conclusion not to attempt to blow up the bridges?—You may say that bridges were easily repaired, but the rivers there are for the greater part of the year fordable at any particular point, and on many grounds it did not seem to be worth while.

13807. But as a matter of fact when we did make our advance the fact of those bridges having been destroyed hindered us very considerably, did it not?—It hindered us in a way, but they were rapidly made usable. I do not say that they were rapidly restored but temporary bridges were put in their place.

13808. But you will remember that it occasioned considerable delay?—It did cause some delay. I do not consider that the delay was really considerable from the destruction of the bridges.

13809. But you approve of the general principle that in war it is a good thing to destroy bridges, because the enemy can cross by them and can destroy them?—Yes, I think it is a good general principle. It is

difficult to say why, but I certainly was of opinion, and am still of opinion, that it was not desirable.

13810. You do not feel that you can state the reasons?—No.

13811. You cannot support it by argument?—No, I cannot.

13812. I will not press you any further upon that point. Then another point is, have you the correspondence with the Attorney General—that was Sir Richard Solomon, I suppose?—Yes.

13813. And Lord Milner about commandeering, about putting the Local Burgher Act in force, because we have not got it?—No, I have not got it.

13814. But you remember that at the time, October 1899, the question did come up?—Yes, I wanted it put in force, but the Colonial Government would not hear of it. You must remember that Lord Milner and I were working with the utmost difficulty with these people.

13815. I understand that thoroughly. But you have not got the correspondence?—No.

13816. Then we shall have to get it from the War Office?—Yes, I do not think I ever saw it.

13817. There is only one more point I want to put to you. I will not of course take you into the question of the merits of regimental transport as opposed to general transport, and the change made by Lord Roberts and Lord Kitchener, but as regards the regimental transport which was supplied to you by the Regulations before the change was made, would you say that it was up to all requirements as far as it went?—Yes, I certainly thought it was. I have heard it quoted for instance, that it was not, because Lord Methuen was unable to leave the line when he went to Kimberley, but then it must be remembered that Lord Methuen was not sent up to relieve Kimberley; he was sent up with the object of throwing supplies into Kimberley and bringing away all the population that was useless, not occupied in the defence of Kimberley—all the women and children he could bring out. In order to enable him to take supplies to Kimberley and bring back that population his transport was absolutely insufficient, therefore he required to hold on to the railway and equally he required the railway to bring away the women and children.

13818. Then without pronouncing definitely on the merits of one system of transport against the other, speaking generally, you would say that on the system then established for regimental transport the units were satisfactorily supplied?—Yes, I would. I thought they were. I considered that the transport was satisfactory, and that that system was satisfactory.

13819. (*Lord Strathcona and Mount Royal.*) I think you have mentioned that you were satisfied with the arrangements for the debarkation of troops, and for discharging the stores and cargoes generally?—Yes, I was quite satisfied.

13820-1. Was it not the case that there were very great detentions occasionally, that it was impossible to land the stores and leave them under proper shelter?—It was a difficulty, but we did get them under proper shelter, and I do not think there was much delay in landing them. They were not exposed. Of course the Cape Town docks were limited in extent, and ships coming in one after another and being disembarked with great rapidity necessitated a large number of things lying about in the docks, but they were not articles that would suffer from lying about.

13822. Even with an immense quantity of stores being broken you think that upon the whole the arrangements were good?—Yes, I think they were distinctly good, both at East London, Port Elizabeth, and Cape Town. I visited all the places at various times, and I always found that the stores were being very well dealt with.

13823. Did you consider the constitution of Green Point Camp good and satisfactory from a sanitary point of view?—I do not know that it was a spot that I should have chosen, on account of its vicinity to the town, but it was the only spot available.

13824. It was on the whole a poor place for a camp?—
—I think it was, but I do not think that anybody
can point to a better one.

13825. A better one could not be got there?—No, and
it was very convenient for the docks, for troops arriving
or invalids just starting, to have a camp close at
hand.

13826. Was it infected with glanders and other
diseases from which horses suffer: did many of them
suffer from glanders?—No; we did at one time have
an outbreak there, but I think it was nothing—not
extensive.

13827. And there were no other horses introduced
during that outbreak of glanders?—No.

13828. (*Chairman.*) (*To Colonel Trotter.*) Is there
anything that you wish to say in addition to what Sir
Forestier-Walker has told us?—I do not know that I
have anything particular to say beyond what Sir
Forestier-Walker has said. I could answer Sir Taub-
man-Goldie's question about not destroying the bridges.

13829. (*Sir George Taubman-Goldie.*) If you please?
—The real reason why the bridges were not destroyed
was that in the first instance we were not allowed, by
particular request of the High Commissioner, to go
anywhere near the frontier. Up to the last moment
he hoped to keep the Orange Free State neutral. The
original scheme was to occupy the bridges, but on that
ground he said that it should never be done, and, as Sir
Forestier-Walker has said, we had not troops enough
to do it. Therefore we never went anywhere near the
frontier, and at the end of the time when the bridges
might have been destroyed it would have been impos-
sible to have sent anybody up there because it was
practically in the possession either of Boers or of disloyal
people about.

13830. Military occupation of bridges, of course, is
one thing, but taking steps to blow them up is another
matter?—We never could have blown them up at any
rate until we had permission from the High Com-
missioner, which would practically not have been until
war had broken out because up to the last moment we
kept away from the country, and even then when that

time came it would have been impossible to have got
near them.

13831. With a military force no doubt it would have
been impossible, but could you not have got them blown
up by anybody?—No, not by anybody. The tele-
graphists you know were captured and were in
Colesberg

13832. But among the Dutch-speaking population
would not a certain sum of money per bridge have pro-
duced their destruction?—Possibly.

13833. There are very few things that you cannot do
in South Africa with money?—Yes, it might have been
done in that way.

13834. From a military point of view, at any rate, you
would have approved of its being done?—Yes, but then
again there is another question to be considered. We
had almost an assurance from Mr. Schreiner that the
Orange Free State would not invade Cape Colony so long
as Cape Colony did not invade the Orange Free State,
and I believed the High Commissioner believed that, and
we did.

13835. But not after the outbreak of war?—Up to
the actual outbreak of war.

13836. I think it is a little earlier than that; I think
Mr. Schreiner's assurances were rather discounted
towards the middle of September?—Speaking from
memory I am almost confident that we believed up to the
very last moment that the Orange Free State would not
invade Cape Colony unless Cape Colony invaded the
Free State.

13837. Then might I just ask you about Kimberley
and your report that you made. Were the suggestions
that you made in that report fully carried out?—Yes, I
believe so. I went up originally to Kimberley in 1898,
the year before the war. Then I went up again in June,
1899, with an Engineer officer, Major Scott-Turner,
who was afterwards killed there, and I think the pro-
posals that we made then were most of them carried out
as soon as possible.

13838. Substantially, what you recommended has
been carried out?—Exactly.

*General Sir
F. W. E. F.
Forestier-
Walker,
G.C.M.G.,
K.C.B., and
Colonel J. K.
Trotter,
C.B., C.M.G.*

11 Feb. 1903.

THIRTY-THIRD DAY.

Thursday, 12th February, 1903.

PRESENT:

The Right Honourable The-EARL of ELGIN and KINCARDINE, K.G., G.C.S.I., G.C.I.E. (*Chairman*).

The Right Honourable The Viscount ESHER, K.C.B., K.C.V.O.

The Right Honourable The Lord STRATHCONA AND MOUNT-ROYAL, G.C.M.G.

The Right Honourable Sir GEORGE DASHWOOD TAUBMAN-GOLDIE, K.C.M.G.

Field-Marshal Sir HENRY WYLIE NORMAN, G.C.B., G.C.M.G., C.I.E.

The Honourable Sir FREDERICK MATTHEW DARLEY, G.C.M.G.

Admiral Sir JOHN OMMANNEY HOPKINS, G.C.B.

Sir JOHN EDGE.

Sir JOHN JACKSON.

BERNARD H. HOLLAND, Esq., *Secretary*.

Lieut.-General SIR IAN S. M. HAMILTON, K.C.B., D.S.O., recalled, and further examined.

*See Q. 10857 to 10940, Vol. I. for Sir Ian Hamilton's previous Evidence.*13839. (*Chairman*.) You went out first with Sir George White, I think?—Yes.

13840. In what capacity?—As Assistant Adjutant-General. I was his Chief Staff Officer.

13841. Until what time?—Until we landed in Natal. One day after landing in Natal I was superseded by Sir Archibald Hunter, who had gone out in advance, and was to be Sir Redvers Buller's Chief Staff Officer, but in Sir Redvers Buller's absence he took up my position with Sir George White.

13842. And then what did you do?—For two or three days I helped in the Staff work, and then I got a brigade of troops—of Infantry.

13843. And you held that position throughout the siege of Ladysmith?—Throughout the siege.

13844. After the siege of Ladysmith, you joined Lord Roberts, I think?—After the siege of Ladysmith Lord Roberts telegraphed for me. I had got rather anæmic during the siege, so I went round by sea and stayed about a fortnight at Cape Town, and then went up to Bloemfontein.

13845. And after that what position did you hold?—After that I was given the command of the whole of the Mounted Infantry, which command I never assembled, so to say, under my own hand—they were always split up; but I usually had at least two corps of Mounted Infantry with me; and by a succession of rather curious events I gradually came to be in command of a large column, called Hamilton's force. I was sent out to try and clear some waterworks at Sanna's Post with my Mounted Infantry alone. Lord Kitchener told me that he was very doubtful if I should be able to do so as the enemy were probably too strong, but I must make a demonstration there. However, if I did succeed I might call upon Smith Dorrien's Brigade of Infantry to make good and occupy the waterworks. I succeeded in clearing the enemy out of Sanna's Post Waterworks with my Mounted Infantry, and I called upon Smith Dorrien's Brigade to come up to me. I left Bloemfontein thinking that I would be away for two days; I left my papers and everything on my table, and a good deal of my kit. I never went back there. I got a telegram in the middle of the night after getting to Sanna's Post, to say that the enemy were retreating in front of General French through Thabanchu from Wepener. What would I suggest? I suggested an advance on Thabanchu to try and cut them off. I moved out to Thabanchu; we had some fighting there, and I got another Infantry Brigade sent to me, Bruce Hamilton's, and from that time forward we moved up on the right of Lord Roberts's advance.

13846. All through to Pretoria?—All through to Heilbron, when we were brought across the front of the main advance from east to west.

13847. Then you came home, I think, with Lord Roberts?—Yes.

13848. And for a time you held an appointment in the War Office?—Yes, I was appointed Military Secretary at the War Office.

13849. Then, again, you went out?—Yes. I went out as Chief of the Staff to Lord Kitchener, arriving on the day that Lord Roberts had handed over the command in the previous year, the 29th of November.

13850. And, after some time on Lord Kitchener's Staff, you again had a command in the field?—After Lord Methuen's business in the Western Transvaal, Lord Kitchener sent me off at a few hours' notice to take command of the Forces in the Western Transvaal, where I remained for the last two months of the war.

13851. So that you saw a great many phases of the war?—Yes, I did.

13852. To go back to the first period of your service in Natal, you commanded, I think, at Elands-laagte?—I commanded the Infantry.

13853. And in Ladysmith itself you held a separate command?—A section of the defence—five miles.

13854. Was that separately allotted to you?—It was, on the evening after our repulse or defeat on Mournful Monday.

13855. And when you say that command was separately allotted to you, does that mean that you were responsible for the command in every way?—Yes, in every way.

13856. The question has been raised whether it would have been possible (I do not put it as a question of strategy, whether it would have been a proper thing to do) to have withdrawn from Ladysmith behind the Tugela at the time when the siege was imminent. Have you any opinion upon that point?—It would certainly have been possible to withdraw behind the Tugela, but at the sacrifice, I should think, of the greater part of our stores.

13857. At what date do you mean?—I thought you meant immediately after our repulse on Mournful Monday, the 27th.

13858. It has been put at two dates, I think. In the first place it would, I suppose, have been practicable to have taken up a position behind the Tugela on Sir George White's first arrival in Natal?—I think it would.

13859. We had it from Sir Edward Ward, who was in charge of the supplies at the time, that at that moment the supplies in Ladysmith were two months' supplies for the normal garrison, and that the supplies which you had eventually in Ladysmith, were pushed up afterwards?—That is so.

13860. Therefore, at that moment, I suppose, it would have been possible, at the sacrifice of the smaller amount of supplies, to have withdrawn behind the Tugela?—Yes, and probably even without the sacrifice of the smaller amount of supplies, because having got up the greater amount, you could have got down the smaller.

13861. Then there was a later date also put, namely, at the time when it was clear that the Boers were closing in upon Ladysmith. Do you think it would have been practicable then to have withdrawn behind the Tugela?—I wish to distinguish very closely between practicable and advisable. I think it would have been practicable certainly.

13862. Practicable at the loss of a large portion of the stores?—Yes.

13863. As to the advisability of so doing, what do you say?—I think it would have been most disastrous.

Lieut.-
General Sir
Ian S. M.
Hamilton,
K.C.B., D.S.O.
12 Feb. 1903

without a long previous preparation, especially in making lateral communications along the south bank of the Tugela. To hold the Tugela you would have had to hold it along a very broad front, and you would have had to have good communications to reinforce threatened points, and to feed your troops, and there was no such communication. It is very hilly, broken, bad country, indeed. If we had taken up such a position, either our line would have been pierced at some point, or it would have been turned. If it had been turned as effectively as it was when we were driven back at Ladysmith on Mournful Monday, well, then, we should have been in a very different position if we had been ringed up there from what we were in Ladysmith.

13864. In what way do you mean?—I mean that in Ladysmith we had a centre, we had houses, and we had all these provisions stored; whereas if anything had happened to us on the Tugela, and we had been surrounded by the Boers, we could not have stood a siege.

13865. On the south bank of the Tugela?—On the south bank of the Tugela; because we must have been extended along a very broad front in order to hold the Tugela.

13866. I think one way in which it was put to us in evidence was, that there might have been a central place selected, but south of the Tugela, which you might have held in the same way as you held Ladysmith, such as Estcourt?—Having seen the country, I do not believe that we could have prevented the Boers crossing the Tugela or turning our right flank; and, of course, they would have been greatly encouraged by our having fallen back so far.

13867. You used the expression, "If we had been driven back in the same way as we were on mournful Monday." What did you mean exactly by that?—I mean to say, that we returned to Ladysmith in a state in which a large number of the troops were discouraged, and in which for a day or two we had lost the power of any vigorous initiative.

13868. It took them that time to recover?—Yes.

13869. But the Boers did not press?—No, the Boers did not press.

13870. If they had pressed it might have been serious?—If the Boers had really pressed, if they had had some disciplined body to which they could have given the order to vigorously attack and pursue, I think it might have been a bad business.

13871. But that, I suppose, was a quality which the Boers did not display?—They did not possess it.

13872. All through the war?—All through the war.

13873. And especially through the siege of Ladysmith?—Especially through the siege of Ladysmith, extraordinarily so.

13874. I suppose it was an exception, perhaps, on the 6th January?—Yes, I think so, especially from conversations which I have had since with men who were on the Boer side who were in it, such as Commandant Truiter, and men of that sort. He commanded the Harrismith Commando, and he told me that they were getting very much exasperated and disappointed at the delay in the fall of Ladysmith, which they had confidently anticipated would occur very quickly, and that they hardened themselves to make a big effort.

13875. The point on which the attack was principally developed was the point of your command, I think?—Yes, the point of Wagon Hill.

13876. And that was a serious attack?—It was a very serious attack.

13877. They did come on as an attacking force?—Oh, yes; they came on well, and not only did they come on well in the first instance, but they made several strong efforts during the day to turn us out.

13878. That was an exceptional case?—Quite exceptional until towards the end of the campaign. I saw at the very end of the campaign a most dashing charge of the Boers in Delarey's commando against Colonel Kekewich, which showed that they were gradually becoming veteran soldiers; but in all the part of the campaign, which is now under consideration, I did not see anything more determined than their behaviour on Wagon Hill day.

13879. Was their holding back due to a want of discipline, to their not being disciplined troops?—I think it was, because if you have disciplined troops, men may not be very keen, they may perhaps even try to make

excuses; but if they are told they must go, they must go.

13880. So that if the siege of Ladysmith had been carried on by disciplined troops it would have been a different matter altogether, probably?—It probably would have been.

13881. I think some witnesses have said with regard to that question that towards the end of the war the Boers had become encouraged by the absence, particularly in the case of Mounted Infantry, of any personal weapon of offence. Do you think there is anything in that argument?—How do you mean "any personal weapon of offence"?

13882. I mean that the Mounted Infantry only carried the rifle, and therefore they were not like Cavalry, who had a personal weapon with which to make a charge?—But the Mounted Infantry carried the bayonet.

13883. Yes, they did?—On the day after Doornkop there was a desperate Irishman on the Boer side with two or three comrades who were running about the sand-heaps taken out of the mine and firing, and a Mounted Infantryman fixed his bayonet, galloped straight at him, and brought him to his knees at once. The Mounted Infantry could on occasion charge as well as anyone else.

13884. I only put the question as arising out of an answer that you gave, because I remembered that it had been a particular argument for arming Mounted Infantry or Yeomanry with some personal weapon, some officers said preferably with the sword, so that they might be capable of shock tactics, which I think is the proper expression; have you any opinion on that point?—I am quite against giving Mounted Infantry a sword; I am very strongly and clearly in favour of Mounted Infantry being Infantry. I think that on a rare occasion, if a Mounted Infantryman wanted to charge he could fix his bayonet and charge.

13885. That is as an individual?—As an individual in a loose swarm. You could hardly charge with the bayonet in serried mass.

13886. I think what was meant was a charge in mass to check the approach of a force like that of the Boers, who had no personal weapons, I presume?—No, they had not; but they had a tremendous reliance on their rifle. As the war came to an end they showed a greater determination in their attacks; and I do not agree with the inference drawn by some witness that it was because they knew that they would not be charged by regular Cavalry. I think they came on more gallantly towards the end of the campaign, first because they were becoming veterans and acquiring a regular sort of discipline—in fact, I am sure of it; and secondly, because our mounted troops which they were then encountering, the second Yeomanry, and so on, shot so badly that they knew they could gallop in and would probably not be hit. Those people that I saw of Delarey's who had charged Kekewich, cantered along in line two and three deep from a mile off, and there was a most terrific fire on them, it was most alarming, guns, pom-poms, and rifles firing all they knew, but none of them tumbled down until they got very close indeed.

13887. This is what I am basing my question upon: *See Q. 6861.* "One thing I made rather a point of was that our fellows had no arm of attack. For Yeomanry Cavalry it is essential to have a weapon, an arm of offence, and if you take away from them that arm of offence you put them under a great disadvantage, in my opinion. . . . We had the rifle, but the rifle is essentially an arm of defence, and we had no arm of offence" ?—I do not agree. I think that regular Cavalry ought still to have a weapon of offence, because for hundreds of years it has been so intimately connected with every cavalry story and their whole history that, morally, it gives them an idea that they can do things which they really cannot, but still they think they can, and therefore it enables them to act really with greater boldness than they otherwise would. This does not apply to Yeomanry or Mounted Infantry.

13888-9. Is there any other point with regard to the period of your service in Natal of which you would like to speak?—I may say that I felt the want very much of two or three alternative schemes of action under certain circumstances. I have always felt that we ought to have been provided with that. It would have given definiteness to our ideas whilst going out in the steamer and thinking what we would do, and on arriving in Natal and thinking what we would have to do. If we

Lieut.-General Sir Ian S. M. Hamilton,
K.C.B., D.S.O.

12 Feb. 1903.

*Lieut.-
General Sir
Ian S. M.
Hamilton,
K.C.B., D.S.O.*
12 Feb. 1903.

had had two or three schemes, say, "Supposing you have got very few troops, less than 10,000, and you have to take up a defensive position, and that you are threatened by an invasion from the north and from the west, then we think that you ought to fall back and take up a position at Pietermaritzburg or Estcourt, or something of that sort; or else we think the invasion will best be met by a defensive against the west and a vigorous offensive towards the north," and drawing up step by step what our actions ought to be, it would have been of great assistance.

13890. You are speaking now as a staff officer?—I am now speaking of the brief period during which I was chief staff officer.

13891. We had expected to have had Sir George White before we received this evidence from you, but it has been necessary to postpone the taking of his evidence, and that was why I did not ask that particular question; but we are very glad to have that opinion from you?—As you know, in India the Intelligence branch do draw up specific schemes; but there was nothing of that sort given to Sir George White that I ever saw. There was a good deal of useful information given us in books, but there was nothing to guide us as to what our action should be.

13892. You had all the information that the Intelligence Division could give you, I suppose?—Yes, we had all that.

13893. But no distinct instructions or schemes?—No schemes. In fact, I do not think the Intelligence Department considered it their business to do that at that time.

13894. There were local defence schemes, as I think I mentioned to you on the last occasion when you were before us?—Yes, there were.

13895. But I think when you were here before you said that you had not seen those schemes?—No, I did not even see them.

13896. Those, of course, existed, but they were drawn up under the conditions which the Regulations lay down, namely, that they should deal only with the normal garrison?—Yes.

13897. So that that probably would not have helped you much?—Not a bit.

13898. But the view that has been put before us is that a general officer sent out to command is better left to deal with the matter when he sees the circumstances on the spot?—I cannot understand that line of argument. He is not bound by the schemes necessarily. He has two or three schemes for different situations; but if he is a man of any character at all, he will say, "None of those situations have arisen, and these views are modified by what I have found awaiting me."

13899. You say that in India that would have been done?—In India, if the Viceroy wants to go to Chitral he tells the Commander-in-Chief, who wires to the Quartermaster-General. The Quartermaster-General there is not only in charge of the movement and distribution of troops, but he has also the Mobilisation and Intelligence under him, and he, through his Intelligence branch, has a scheme drawn up for, say, two columns, one starting from Peshawur and the other from Nowshara, to invade Chitral. He will lay down the number of troops and everything else, and then from his other branch he can exactly say where the troops are to come from, and having done that, he sends it instantly to the Commander-in-Chief, who may modify it, and the Viceroy may modify it, but, at any rate, they have a scheme, or very likely they would have two or three schemes. That is not so here.

13900. But then that was for the Commander-in-Chief and the authorities at home; but those schemes were also in the hands of the officer appointed to command the force?—Yes.

13901. And then, when the officer got on to the spot he could alter his dispositions if he found it expedient to do so; but he had all the information, and he had the schemes before him in making up his mind?—That is so, exactly.

13902. But in your case, on your arrival in Natal there was nothing of the kind?—Nothing of the kind.

13903. Then if we pass on to your next phase of service in the command of the Mounted Infantry on the right of Lord Roberts's advance, are there any particular points to which you wish to draw our attention?—I think the history of it all is pretty well known. The

troops did very well; they were very enthusiastic; they had not quite shaken down in some ways into campaigning habits.

13904. Were they troops that had just come out that you had under your command?—Yes, they were largely troops that had just come out, fairly recently—City Imperial Volunteers, I mean to say, and people like that who had not been out very long.

13905. I think you had a good opinion of the City Imperial Volunteers?—Yes; they ripened very quickly. They improved before my eyes. At the crossing of the Sand River was the first time I let them go at all, and I was not quite sure of them, but they were all right, and then they did better still at Doornkop, and at Diamond Hill they did very well indeed.

13906. I think we have been told that you ranked them nearly as high as the Gordons on that occasion?—Yes, I think so.

13907. You could not say more?—No, I cannot say more than that.

13908. Were the Mounted Infantry that you had with you from Regular battalions or from the Yeomanry?—They were Mounted Infantry drawn from Regular battalions; I had no Yeomanry at that time.

13909. But you had Yeomanry afterwards?—I had a little Yeomanry afterwards in the west.

13910. Not till then?—No, not in the phase that this Commission is considering.

13911. Did you have any difficulties with regard to your supplies during that march?—Great difficulties.

13912. You were at times a considerable distance from the base?—Yes, we had eight days' supplies for 14 days; that is what we got through with.

13913. You mean that you had to go for 14 days on eight days' supplies?—Yes; we were able to some extent to supplement that. I do not mean to say that the men were starving.

13914. What period are you speaking of?—That is during my advance on the right.

13915. Up to Heilbron?—Up to Heilbron, and then we were worse for a day or two after we crossed the railway. As you know, I was brought across, and we were to have been met by a large convoy under an officer called, I think, Corbelis; anyhow, this convoy went utterly astray somewhere, and as I was very keen, and everyone was very keen, to go and support General French, we marched without it, and the men were on half rations, and the day that we fought the action of Doornkop we finished our rations. Next morning there was nothing.

13916. And what happened then?—Oh, nothing could stop us, you see, then. We went on to Florida.

13917. And you got supplies there?—We got lots of supplies there.

13918. But I suppose that that delay in supplying you was unavoidable?—Yes, it was unavoidable. In this particular instance something went wrong.

13919. Yes, about that particular convoy; but, as a rule, you were well supplied?—Yes.

13920. Difficulties, of course, must occur in that sort of campaign?—Yes. The men, I may say, thoroughly realised that.

13921. You have not any general complaint as regards the supplying of your force?—Not at all.

13922. Is there any other point you wish to mention at this moment with regard to that part of the campaign?—No, I do not think so.

13923. Then the next phase was when you were Chief of the Staff to Lord Kitchener, I suppose?—I went on for a bit after that to Diamond Hill, and so on, and then I came back with Lord Roberts; and then the next phase was when I was Chief of the Staff to Lord Kitchener.

13924. Was that chiefly at Pretoria?—Chiefly at Pretoria. I found that I did my best service by being there as the senior officer, who could be held responsible, thus allowing Lord Kitchener to move about freely, and to go down to Cape Colony or Natal and see the troops and people, which he had not been able till then to do.

13925. He did move about?—Yes, he began to move about a great deal more.

13926. And left the control in your hands?—He left

the control in my hands; that is to say, it was my duty, of course, to tell him of any untoward event; but I felt that if I did so I entirely spoilt his tour, and brought him back; so that I used to postpone doing it. Then at times things grew worse, one passed sleepless nights, and so on; but, as a rule, I told him as little as I could.

13927. Were you in telegraphic communication with most of the columns at that time?—Yes, I used to get immense numbers of telegrams.

13928. And it was your duty to collate those?—Yes.

13929. And to get any orders from the Commander-in-Chief that were necessary?—That was it. We used to get up at half-past 5 o'clock and do all the operations work before breakfast, read all the telegrams, study the maps, study the operations, and write all the operations telegrams before breakfast at 8 o'clock. Then, when all the Departmental officers came to know where supplies should go, or where materials for block-houses should go, or anything of that sort, the operations having been all settled, it was easier to issue those orders.

13930. The work must have been very heavy at that time?—It was.

13931. Had you a sufficient staff?—Yes. We had not a very enormous staff, but we managed it.

13932. There has been some criticism of the staff officers in the campaign; were you well served at that time?—At the time I am speaking of now, when we were with Lord Kitchener, everyone had got to know his work, and had fitted into his place, and although the work was very hard, I think they got through it all right.

13933. One criticism which has been made of the staff officers is that they were not able to read maps sufficiently well to carry out the duties in the field? Had you any experience of that?—I have had great experience of numerous staff officers, of course. I think that a staff officer could hardly have been through the Staff College who could not read maps; but there is a great difference in individuals; some men have a genius for reading maps, and others are stupid at maps, however hard they work at them. But as regards the Quartermaster-General's part of the work, I think it is universally admitted that there was a great want there—that the Quartermaster-General's side of a staff officer's education in England had been allowed to go down.

13934. Would you define exactly what the Quartermaster-General's side means?—The Quartermaster-General's side in this connection means a knowledge of the country, water supply, movements, and (overlapping to some extent with the Intelligence) reconnaissances and knowledge of the enemy and his whereabouts.

13935. (Sir George Taubman-Goldie.) Selection of camps?—Selection of camps, of course; as a matter of fact, the general himself often does that; but the selection of camps is very important, and, if you remain long in camp (overlapping again with the Medical Department), the sanitary arrangements.

13936. (Chairman.) And in all those points you were apt to find differences in the staff work?—I think you want someone to bring together the Intelligence Department, the Royal Engineers, and the doctors—some officer on the general staff to work all that sort of thing, such as you had in the old Quartermaster-General's man whom you had in India; and there is no reason why we should not have him again in England.

13937. (Sir George Taubman-Goldie.) In the field?—In the field. Of course, the Quartermaster-General himself here is quite a different person. He deals chiefly with supply and transport.

13938. (Chairman.) Then the last phase of your service was the later phase at the end of the war, when you went again to the field?—Yes.

13939. That was after Lord Methuen's disaster?—Yes. After Lord Methuen's last affair two officers commanding columns telegraphed in to Lord Kitchener on a Saturday to say that it was very difficult without any head to make plans, and they wanted a local head, and they both suggested me. Lord Kitchener showed me the telegram, but did not make any remark. Next morning, after I had done the work which I have just described to the Commission, just before breakfast, he said: "I think you had better go out to the Western

Transvaal." I waited all day, thinking I would have a very long discussion as to what measures should be taken, but I heard no more, and I went off that night. I took it that Lord Kitchener really wanted me to go, and just see whether I could do anything, and that if I thought I could not do anything I would probably come back, and if I thought I could do something I would go on. I went as fast as I could; I joined one of the columns; we had just enough supplies to enable us to make a march into the enemy's territory, which we did, when, fortunately, he attacked us, and was broken at Rooivaal. That was the time when the Boers charged so gallantly. After their back was broken in that way, it became possible to institute driving operations, and we drove the country.

13940. That is, of course, a period beyond our reference?—Yes.

13941. You have been good enough to furnish us with papers with certain remarks on various points which we shall be glad to have in your evidence?—If you please.

Deductions.

The South African War marks a very important epoch in the evolution of military tactics. During the wars of Frederick the Great the ruling factor was a perfectly trained and disciplined unit; I mean to say that mere numbers were at a discount compared with the cohesion, skill, and experience which characterised the veteran regiment or battalion. Hostilities were then still carried on by the monarch with his mercenary troops, largely consisting of foreigners, which he paid from his own exchequer. Armies were fed from the Royal magazines by elaborate supply trains and communications behind them. They made no attempt to live on the country, and, in fact, were models in the way they behaved towards the ordinary civil population, which, generally, only felt the effects of a war through an increase of taxation. The French Revolution upset this, together with many other things. It simply put the whole male population of France into the fighting line, and supplied them with an enthusiasm which compensated for mechanical deficiencies. Napoleon, in his turn, taught these masses how to live on the country they were fighting in, and thus gained for his forces advantages of mobility and crushing numerical superiority at any point, which with the improved use of artillery and small arms, completely broke up and destroyed opponents organised in the older style. The Prussians merely elaborated this general principle by the system of reserves, and by providing their huge armies of partially trained men with a supremely well-trained staff, who saw to it that the most careful preparations were made beforehand for utilising for war the whole resources of the State the moment war began. Thus far the changes of the last century have been economical and political rather than tactical, and the method which the French Revolution initiated, Napoleon improved, and the Prussians perfected, has resulted in Providence siding with the large rather than the highly-trained battalions. Now the moment has arrived when the question will have to be faced as to how far the necessity of a very high standard of individual training in the men, as well as in the officers, is compatible with the maintenance of large armies of short service conscripts. If the experience of the South African War can be taken as a guide, the big battalion phase is now about to pass away, and we are entering upon a period when the efficiency of an army will depend far more upon the morale and high training of the individuals who compose it than upon the mere numbers of these individuals who may be available. I believe that an army composed of individuals each so highly trained as to be able to take full advantage of the terrain, and of his wonderful modern weapon, and each animated with a morale and trained to an efficiency which will make him capable of acting in battle on his own initiative, will break through, scatter and demolish less efficient opposing forces, even if greatly superior in numbers. No doubt this principle will be more strikingly exemplified in the case of such countries as we are accustomed to wage war in, than in the comparatively small, enclosed, and highly civilised countries of Europe. For where numbers are limited by questions of transport and supply, the folly of despatching anything but superlatively good soldiers is accentuated. In other words, while with our regular army the one important thing is to improve the quality, without troubling too much about mere numbers, numbers may still have a certain advantage for the home de-

fence of England. It must not be supposed that in insisting upon the necessity for individual initiative and training I wish in any way to ignore or depreciate discipline. Discipline there must be, but it must be discipline on a higher plane. It must be the aim of the new discipline to make the private soldier capable of keeping steadfastly in mind for the whole of the day, or even for several days, and striving with all his might to carry out what he has been told by a superior who is no longer present, and who, for all he may know, is dead. Within a mile of the enemy and in open country it will no longer be possible for the brigade-major to gallop up to the colonel with a folded piece of paper prescribing his next movement. Nor can the colonel send his adjutant to tell the captain to change direction or reinforce. Within a thousand yards of a hostile position the captain can hardly hope any longer to influence the company as a whole by orders, or even by personal example, and the idea of swarms of men surging forward by word of command to the assault of a position is one which we should do our best to encourage among our potential enemies. If a battalion in open country can succeed in getting within 500 yards of the enemy's defensive position, they will have done all that they can do as a collective body. The men will be lying widely extended and pinned down to some small depression, or bits of cover by streams of bullets passing just over them. At some part of the line, however, it is almost certain that a brook, or ditch, or imperceptible fold of the ground will give some trifling shelter to a further advance. Half a dozen private soldiers may find themselves at this spot. If they possess sufficient training to recognise the possibilities of their position, together with sufficient new discipline, initiative, and enthusiasm to take advantage of it, they will creep on. They will be followed by others, and if, as a result, the enemy's line is penetrated, even by a few men, the power of their modern armament will make their flanking fire so demoralising and effective that the position will either be abandoned forthwith, or so much attention will be concentrated on the intruders that an assault may become practicable all along the line. It will be evident that to do this the mind of each man must be imbued with a firm conviction that the other men of his own rank, whom he does not see, and who may be anywhere within the next few miles, are also doing the same and trying to seize hold of every opportunity; in other words, active discipline on the higher plane really consists in an unalterable confidence that it also exists in others, and that the individual is not risking his life for nothing. All this means added importance to a thorough disciplinary training, and to *esprit de corps*. That is, I believe, where the conscript soldier will fail. Only imperfectly acquainted with his officers and with his fellow-soldiers, he will tend at the first difficulty to remain lying under cover because he has no conviction that they are likely to do much more than he is doing, and is not imbued by the sense that he is giving his comrades away by not doing more. It is the magazine rifle, with its smokeless powder, which is at the root of this startling and imminent change in both tactics which I have endeavoured shortly to indicate. The modern firearm has been improved and perfected far more rapidly than the soldier. We want an army composed of men each of whom can be trusted to make the fullest possible use of the finest and most delicately-adjusted rifle that can be made. I have noticed a feeling in our army that improvements in armament cannot be carried further, because the private soldier would not be able to avail himself of such niceties. This is indeed putting the cart before the horse, and it should be clearly understood that the private soldier of the future must be sufficiently educated to take every advantage of all that science can do for him. Dispersion, concealment, and intelligent use of the ground are also essential to success for either the attack or defence, and this demands a high standard of individuality. There is a timid school of theorists who are eager to explain that the defence is more likely to be successful than the attack. If attacks are, indeed, to be conducted as they are now on the continent of Europe, or as they were until recently in our own Army, then this is undoubtedly true; but to my idea, under skilful leading, the attack has rather gained than lost by the new conditions. There is so much more scope for manoeuvre, and so much more frontage of ground comes into the sphere of operations, that it is almost always possible to take up flank and supporting positions, from which a deadly fire can be kept up on the enemy's line of defence whilst small bodies work their way close up

and effect a lodgment as previously described. The difficulties of estimating the strength of an enemy or the direction of his fire will give great advantages to a bold and vigorous general, who keeps on the move, and who is well served by his scouts and his patrols. The defence has then to extend its line, and the opportunities for a clever concentration to envelop one flank or to break through in the centre are largely increased. This is hardly the place for an essay on tactics, but I should like to say that I, personally, have never seen a determined and skilfully led attack fail when directed against a passive defence. From Nicholson's Nek or Elandsplaagte to Doornkop and Diamond Hill it has always been the same story. The siege of Ladysmith can hardly be quoted to the contrary, for it was only by successive determined counter attacks that Caesar's Camp and Wagon Hill were retained on the 6th of January. Notwithstanding, then, the obvious fact that, where the defence is provided with good cover and has in front of it a field of fire offering but little cover, the wider area of the fire-swept zone is locally in favour of the defence. I am a strong supporter of the attack. Far from thinking that a great preponderance of numerical strength is necessary before an attack can be delivered, I think that under the new conditions it may often be possible for the weaker force successfully to attack the stronger. Even if the country is open there will always be ways of getting across the fire-swept zone. If the worst comes to the worst, the attack can be delivered in the afternoon so that it is becoming dusk, as the men get within point-blank range. Or failing this, a night march over carefully reconnoitred ground will bring your troops up to the desired point. Or, again, rain, fog, or dust may come to assist the would-be assailant, and, of course, in wooded countries like Europe there is often good cover available. In any case, I am certain that an attack can always be brought off somehow, and that with good men and skilful leading the chances are greatly in its favour. Granting, then, that the military supremacy of the future must be sought through the medium of a high standard of individual efficiency rather than by the preparation of masses of semi-efficients, it is clear that it cannot pay to keep soldiers who are only partly educated up to the potentialities of their armament. It may be that in some cases we cannot get enough of the class of men who will be of use in the wars of the future at the rate of pay we offer. In that case, I say most emphatically, we must pay more, even at the cost of a proportionate reduction in mere numbers. The ideal trooper should be able to travel by day or night, guiding himself by compass, map, or sun. He should be a finished horseman and a crack shot with his rifle. The ideal infantry soldier should have his body and brain developed to the utmost during his military service. If not properly educated before enlistment, the Army must put the schoolmaster to him and see that he is able to understand things, just as the gymnastic instructor must see that he is able to do things. He should be able to shoot up to the standard of excellence which is expected from the chamois hunter, and march 30 miles when required. He should have a good idea of terrain and cover, and of entrenchments. It is impossible to teach such things on a cricket-field. The soldier can hardly be expected to take much interest in soldiering or to see the sporting side of it when all his training is carried out on strict make-believe lines. The victorious army of the future must have ample training grounds, and if we cannot afford to hire or purchase them in these small islands, then we had better keep our troops somewhere where ground is abundant. In war we revert to primitive conditions, and every sort of subtlety or trick must be recognised as part of the game. Such a trifling device, for instance, as constructing lines of entrenchment precisely at those spots where there is no intention of posting troops may cause the enemy to misdirect the whole of his preliminary artillery fire. It is an idea which would readily occur to a schoolboy, but such points seem sometimes to be considered frivolous, irregular, and almost derogatory to the regulation military punctilio. The fondness of our officers for sports, such as hunting, polo, and shooting, assists them a good deal in such matters, for it must be remembered that war itself is, after all, a game, just like any other game, only that the stakes are the most important we can conceive. Whether on horse or foot, 50 sporting young officers would prove a match for 300 average young soldiers of the present type, although the soldiers may be just as brave as the officers. Similarly men of the stamp of University graduates, or young barristers, if taken to

a country like South Africa and trained there, would, in the course of a year or two, be able to make short work of many times their numbers of Continental conscripts. Quality above quantity should be our motto. If the man in the street is asked, "What is the lesson you deduce from the war?" he will reply, "I deduce that all your barrack-square drill, and pomp, and pipe-clay is no use at all, and that a few farmers possessing individuality, horsemanship, and marksmanship proved, man to man, more than a match for you. I further deduce that the people of any country are able to defend themselves if they are fitted out with rifles and ammunition." There is just enough truth in this to make it misleading. The value of individual initiative and individual campaigning aptitude is so greatly accentuated by modern armament, smokeless powder, etc., that an armed populace possessing these qualities may easily be more than a match for soldiers, in whose training, education, initiative, and individuality, have been neglected and repressed. But the soldier of the future, selected, trained, and educated as he might be in a voluntary enlistment army, should stand, in fighting value, as far above local levies or armed populace as a mailed knight of the Middle Ages did in respect to the peasants of the Jacquerie.

Adequacy in Point of Strength of the Forces in the Field.

It is comparatively easy to solve a strategical problem after the event, but, judging the matter from this standpoint, I am inclined to believe that the Natal Field Force on the outbreak of war might, under certain conditions, have been strong enough to repulse the Boer armies who invaded that colony. Unfortunately, however, those conditions demanded that military action should be entirely untrammelled by regard for political exigencies. But under the British Constitution, the evolution of a leader who would regard himself, as the young Napoleon did, entirely absolved from the consideration of any but purely military requirements is practically unthinkable, and as a matter of fact, political exigencies ruled the situation. Thus it came that the Natal Field Force had to be split up to meet two forces of the enemy, each of which was, perhaps, weaker than our united army, but each of which was also more powerful in that country than either of the divided portions of our force. Now, the strategical position in Natal was admirably suited to an energetic offensive against any attempt at a simultaneous attack from the Transvaal and Orange Free State, if only for the very good reason that it was obviously impossible to make such an attack really simultaneous. On the other hand, the strategic situation of the British troops could not well have been worse than it was, if the attitude to be assumed was of a defensive character. Even on the day after Elandslaagte it is at least conceivable that a bold advance over the Biggarsberg, which would have brought General French right on to General Joubert's line of retreat and communication, would have caused a precipitate retreat of the latter, who was then still facing the victors of Talana Hill. Of course, such strategy would have involved the chance of Ladysmith falling before a *coup de main* from the Orange Free State before our troops could get back, and this is one of those risks which it is more easy to take in theory than in practice. No correct appreciation of the results that might have been obtained by a complete victory over the Boers in Natal at the commencement of the war can reasonably be based on the meagre results frequently obtained after subsequent successful actions. With the exception of the Johannesburg commando, which contained men of good position and education, animated by a particular detestation of the British, the Boers at the commencement of hostilities had not, from all I could learn, quite as much heart for the fight as they afterwards developed. As matters turned out, our opponents got breathing space to familiarise themselves with the dangers of war, and from that time forward gradually became more and more formidable until the close of the campaign. My object in putting forth these views is not to argue that we might have done better than we did, but rather to show that the variations in the game of war are so tremendous, and so much depends on policy and a hundred other considerations, that it is practically impossible to give any satisfactory answer to this question, at any rate, in regard to the opening battles. But I may say that, taking matters as they stood, another five or six thousand men should have made initial success certain in Natal. Once the forces of the Orange Free State

and the Transvaal had united, and had succeeded in enveloping Ladysmith, an entirely new set of conditions arose, to cope with which an entirely new army was required. I do not like to venture an opinion regarding engagements in which I did not participate, but I should say that the troops which were diverted to Natal for the purpose of relieving Ladysmith and clearing that colony were sufficient for the purpose. In the advance from Bloemfontein to Pretoria the troops were amply sufficient for all requirements.

Surrenders.

There may have been a few cases of unjustifiable surrender, and in a few cases also, although ultimate surrender was inevitable, there were grounds for the feeling that our troops should have held out longer than they did. But the great majority of the surrenders were, in my opinion, justifiable. I have noticed since I came home that senior officers who have seen much previous service, but have not taken part in the South African War, do not seem to be able to grasp the new factor introduced by the modern rifle in such conditions as when, for instance, a detachment becomes surrounded by a superior and mobile foe, in a position which affords insufficient cover. Under such circumstances it often happens that it will be manifestly hopeless for the troops to attempt to cut their way out. Such an attempt would involve a frontal attack on unknown numbers, which would have to be carried out whilst rear and flanks were being harassed by the enemy; not necessarily by the closing in of the hostile forces, who might in that case be beaten off, but merely by long-range fire. The moral of this would, of course, appear that a force should always be well extended, but a small party must sometimes concentrate, especially at night. Once the commander has realised the impossibility of extricating his force, he has to consider that his dispersed fire is practically valueless, whereas his own men may be falling at the rate of, say, one per minute before the concentrated fire of a ring of invisible enemies. If, then, he has no reasonable hope of rescue from outside, and if there is no prospect of darkness intervening in time to save him, it may become his painful duty to put up the white flag. The question of individual initiative to which I have referred under another heading is very applicable to surrenders. Soldiers trained under existing conditions cannot be got away from difficult positions out of which intelligent and resourceful individuals trained to the use of these qualities might extricate themselves with comparative ease. I am sure there were cases in which, although the commander was justified in surrendering, a fair proportion of the men might have got away if they had realised what was happening, and had had the power of initiative to act upon what they saw. There were other circumstances also which in South Africa may sometimes have inclined men's minds to surrender more easily than would have been possible had we been at war with, for instance, any Continental nation. First of these was the fact that Boers and English soldiers respectively had no religious implacability, or, indeed, any strong feelings, against one another. Quite the contrary. Accordingly, both sides were far more anxious to obtain a surrender than to kill or wound their adversaries. Secondly, the language was the same, inasmuch as the Boers usually spoke English, and the combatants could sometimes even call out to one another in a friendly way, point out the hopelessness of continuing the struggle, and thus tempt small detached parties to surrender. Once anything of this sort had taken place, it became most difficult for the main body to fire at Boers mixed up with their own men, and a sort of confused state of things occurred which inevitably led to surrender, unless the commander had his men extraordinarily well in hand, and was possessed of exceptional strength of character and determination. It is worthy of note that these same considerations had much the same result during the American Civil War, where several of the conditions were similar. In America, as in South Africa, there was desultory fighting over large areas; the Southerners were crack shots, horsemen and hunters; the Northerners were largely composed of townfolk and of the industrial classes, and therefore more like our own troops. As a result, the Southerners were defeated just as the Boers were defeated, but in the course of the war the Southerners took 192,000 prisoners from the Northerners. In the War of American Independence the similarity of language and of feelings seems also to have led to surrenders which would not have taken

place had we been fighting against foreigners. At the battle of King's Mountain, and on other occasions also, we read of officers galloping to cut down the white flag which some irresponsible subordinate had raised. But officers can neither gallop nor even rise from the ground without certain death when modern fire reaches a certain pitch of intensity, and thus it has become far more difficult than it used to be, when a commander had, so to speak, the whole of his force concentrated in the palm of his hand, to prevent some key to the position being given away by, perhaps, a mere handful of soldiers two or three hundred yards distant, whose officers and non-commissioned officers have been wounded or killed. A lofty standard of *esprit de corps* is the best safeguard, for when that is present in its perfection a private soldier is no more likely to yield on insufficient grounds than the highest General in the Army. This spirit can be fostered in many ways; partly by drawing closer and closer the associations which bind counties or towns to their respective regiments; partly by encouraging all those little distinctions of dress or designation which are so dear to the heart of a soldier, although they may appear mere troublesome trivialities to a certain class of official mind; principally, I think, by the development of the intelligence and initiative of the soldier, and by introducing this spirit into the whole nation through a system of disciplinary training in our schools.

Cavalry.

I would preface these remarks by venturing to express my opinion that it is more difficult to be a good cavalryman than to attain distinction or success in any other branch of our Service. Although every care may be taken to appoint only commanders who seem to fulfil all peace requirements, at least two or three of these apparently fully qualified men will certainly fail, perhaps with lamentable results, in war. Thus we may be practically certain that at least two out of three of the Continental cavalry leaders are actually effete, although nobody, not even they themselves, are or can be aware of the fact. We, on the other hand, if we have the courage to advance only men who have in South Africa emerged successfully from the supreme test, should be secure as regards this vitally important matter for at least the next three or four years to come. Relatively, we should be secure for very much longer, for by putting in tried young leaders a good standard will be set up, and a right train of thought will be encouraged. The juniors, too, will listen to their views with a respect which would not always be paid to the theories of men who had not done well in the field or who have not had the chance of being tested. I served with the Cavalry during part of the Afghan War, and I have had as much as two brigades of regular Cavalry serving under me at a time in the late war. I have thus been able to study the arm from the standpoint of an infantry soldier. I have no expert knowledge, but if my deductions are inaccurate, they are at any rate unprejudiced. The requirements other than discipline which future wars will demand from Cavalry seem to me to come in the following order of importance:—(1) Horsemanship and horsemastership, which together spell mobility. (2) Marksmanship. (3) Scouting and despatch riding by night and day. (4) Swordsmanship, steadiness, cohesion, drill. With regard to (1) only a moderate standard of horsemanship prevails at present, and the brilliant exceptions in every regiment have not learnt what they know in the riding school, but have picked it up for themselves in the hunting field or on the polo ground. I feel sure that Cavalry officers who have been out in South Africa will bear me out when I say that the average non-commissioned officer or trooper is not capable of "rounding up" a mob of horses or cattle, or of galloping across country with dash and individual judgment; nor does he possess a sufficiently intimate knowledge of or affection for his horse to enable him to nurse and save it when making an exceptional effort. As a matter of fact, when horses or cattle had to be rounded up and driven off at a gallop, the work was carried out by sporting young officers of Regulars or by Colonials or Kaffirs. Throughout the war I was struck by the fact that the Colonials rode better than our Regular Cavalry soldiers. Concerning horsemastership, I must confess I did not see much to choose between Cavalrymen, Mounted Infantrymen, overseas Colonials, or National Scouts. The only class of men I met who were constantly and eagerly on the look-out for a chance to ease their horses and give them a bit of grass or a drink of water were those South African Colonials, who rode their own horses. It has

been so fully recognised that some weight must in future be taken off the horses, that I do not here refer to that point, especially as a War Office Committee, of which I was a member, have dealt with the whole question. As regards (2), the marksmanship was indifferent, and nobody seemed to think that the fact of the men having no confidence in their firearm was any reflection upon their previous training. Cavalrymen would shoot better than Infantrymen if they got the same chances. As regards (3), our Cavalry have, as far as my experience carries me, a good deal to learn about scouting and despatch riding. In saying this, I do not forget Major Greenly, 12th Lancers, or the night in which he and Captain Boileau, accompanied by five Australians and five Regular Cavalrymen, rode 20 miles through the enemy's laagers, cut the telegraph lines, blew up the railway, and reported to me just as I was leaving camp next morning. Neither do I doubt there are many Cavalry officers who would not only be willing but able to carry out duty of this sort. But, after all, even in the instance in question, I gathered from these officers that they were mainly indebted to their Australians, who were able in the dark instantly to detect objects to be avoided, who, under all stress, maintained an absolute silence, who possessed a rough knowledge of the stars, and who in many ways excited the admiration of the Regulars and proved that riding across country through the night was no novelty to them, but a science which they had practised and learnt. I feel, however, that I have no need to labour this point, for if the Royal Commissioners will ask any column commander the question, he will admit that he would never send a Regular Cavalry soldier with a despatch, and that the whole of this work was done by Colonials or Kaffirs. Despatch riding is indeed an art which depends almost entirely on an eye for country, combined with individual initiative and a perfect self-confidence as regards horsemanship and marksmanship. As before stated, these are the precise points in which I think our Regular Cavalry might attain a higher standard of proficiency, although I confess that it will always be difficult to teach scouting or despatch riding in a small populous and game-preserving country like England. Every Cavalryman, however, more especially officers, might at least be practised in carrying despatches at a time of night when roads are empty and the use of a compass becomes necessary. Not many Regulars understand the use of this instrument. The high standard of marksmanship is also quite attainable even in England. In scouting, the best thing of all is to see without being seen; but it is also useful to kill the enemy's scouts if they have seen something, or to be able so to frighten them that they will think twice before they are too inquisitive. As to (4), the South African War did not make any great call upon these qualities. In so far as their possession tended to make the men draw together in face of the enemy, they proved to be a source of weakness and not of efficiency. I have heard it said that if the Boers had possessed Cavalry, in the European sense of the word, our men would have had a chance of showing the advantages of a boot-to-boot charge over a looser formation admitting of greater individual initiative. It is difficult to answer this sort of argument. If both sides were to agree to carry out their fight with punctilio and a chivalrous disregard of the requirements of scientific arms, then no doubt there would still be suitable scope in warfare for old-world methods. Knowing what I do of the Boers, I cannot, however, conceive that, under any circumstances, they would have given up the firearm for the sword, or loose for close formation. This fourth point leads directly to a consideration of Cavalry armament. Compared to a modern rifle, the sword or lance can only be regarded as a mediæval toy. Even in that pursuit of thoroughly demoralised troops which affords a special opportunity for the *arme blanche*, a trooper who merely used his horse to keep within easy range of the flying enemy, and employed his magazine rifle, would, by such a method, do more damage with less fatigue or danger to himself than he could with sword or lance. It must be remembered that sword and lance are still the same as they were in the days of King Arthur, whilst the firearm improves steadily, the latest step in this direction having taken place since the South African War. In scouting and reconnaissance especially, I hold that Cavalry who use their rifles must beat back or pierce the Cavalry screen of opponents who are thinking mainly of their swords or lances, and of how they can best come to close quarters so as to use them. Never-

theless, there is so much glamour and romance about the sword, and it is so essential to keep up the daring spirit of Cavalry which alone will inspire them to manoeuvre and attack with boldness, that I would give them a sword just for those reasons which render it so desirable to arm the Infantry with bayonets. Those reasons consist in the undoubted fact that the possession of a sword or bayonet is an encouragement to charge home, and I freely admit that on some rare occasions a determined charge by a swarm of horsemen with cold steel might have an effect on the morale of a shaken or surprised enemy which no rifle fire could produce. Therefore I say, arm the Cavalry with the sword as well as the rifle; but let the rifle have the place which is its due under modern conditions.

Royal Engineers.

Officers, non-commissioned officers, and men of the Royal Engineers are better educated than the corresponding ranks of the other branches of our Army, and this tells in their favour under all circumstances. Fighting did not fall very much to their lot, but when it did they always distinguished themselves, a memorable instance of this being the handful of Engineers under two young officers on Wagon Hill point. The calm, matter-of-fact manner in which the Royal Engineers in charge of a field telegraph would, when their wire was exhausted, retrace their steps alone through the enemy's country, winding up their wire so as to prevent this expensive material from being wasted has often excited the admiration of their comrades of the other arms. On the line of march the work of the Royal Engineers extends along the column of route from its advance scouts to the rear guard. They should also be the first into camp to prepare the water supply, improve communications, and, if necessary, to assist in improvising cover for outposts. A dismounted unit of Royal Engineers cannot, with the best will in the world, adequately fulfil these functions, and I formed the opinion in South Africa that a mounted detachment of sappers, to be used as divisional troops, would be extremely useful. In countries like England, with abundant roads, cyclist and motor Engineers could both do considerable things.

Mounted Infantry.

In the early part of the war (up to Pretoria) Mounted Infantry as an arm can hardly be said to have had a fair trial. It was, with few exceptions, hastily organised, the men having received no previous training in riding, scouting, or in the care of horses. It was officered also by men few of whom had had any previous experience with mounted troops. There was, from the first, observably a very marked difference in the efficiency of companies. Some line battalions generously spared their very best officers, non-commissioned officers and men for this extra regimental employment, but other Mounted Infantry companies were officered by individuals without much initiative, and contained men who could never have come up to the ordinary regimental average. The "Mounted Rifles," a term which includes all mounted troops other than Regular Cavalry and Regular Mounted Infantry, had their ranks filled with infinitely better horsemen and better scouts than the Mounted Infantry, but they were not as well officered and did not shoot as well, and were not, therefore, in my opinion, as valuable as they might have been. Notwithstanding these great disadvantages, the Mounted Infantry and Mounted Rifles proved most useful, and besides playing the rôle of Cavalry, fulfilled certain requirements which Cavalry did not satisfy. In action their musketry efficiency combined with their mobility assisted largely towards the success of every action in which they were engaged, but the want of previous training showed itself in the abnormal waste of horses and in the ignorance on the part of officers and men of their own powers and capabilities. In the latter part of the war, when the men had learnt to ride and scout, and the officers had gained experience, the Regular Mounted Infantry, especially the first ten regiments, were, in my humble opinion, the best mounted troops in South Africa. I attribute this partly to their superior marksmanship, partly to the professional knowledge and expert and gallant leading of the selected Infantry officer. The Mounted Rifles would have equalled or perhaps surpassed the Mounted Infantry had not the majority of the men of all Colonial regiments been discharged after a year's service, just as they became fully trained. Their places

were taken by fresh contingents, with new and untrained officers. It would be impossible to over-estimate the value of Colonial mounted troops if only their officers were trained. The difference between the first contingents under Colonially trained officers and the latter contingents which came out with untrained officers was remarked by all thoughtful observers. The same may be said of the first and second contingents of Yeomanry. Our experiences in this respect go far, I think, to show that with well-trained officers and non-commissioned officers, even comparatively untrained men can very rapidly be made into good troops. In every case a regiment commanded by a well-selected officer of our Regular Army was of more value than a similar regiment under a Colonial officer, and, as far as I could learn by many conversations with those most intimately concerned, the men preferred a good Regular officer to anyone else. I earnestly hope that Mounted Infantry training will be continued in our Army and encouraged in our Colonies. Under our existing organisation I consider the best results would be achieved by means of a training school in each Army Corps, each school to be able to train four companies, or 500 men, and the whole to be under an Inspector-General of Mounted Infantry. Each course should be of three months' duration; each regiment should send a complete company, with its officers and establishment, old soldiers and bad shots being eliminated and replaced by good shots and young soldiers from other companies. In the Colonies every encouragement should be given to the corps of Mounted Rifles, such as were being trained in Canada and Australia before the war. In conclusion, I would repeat once more that with Mounted Infantry and Mounted Rifles the best results can only be obtained when marksmen who have had previous training in mounted duties are led in the field by selected officers who have learnt to make use of such good material.

Artillery.

The senior officers require more practice in the handling of large numbers of guns and in selection of suitable positions. Otherwise the personnel is superb; we cannot improve upon it. The training, discipline, and horse management were all excellent, a result, in my opinion, of the Royal Artillery practice camps, where batteries get more realistic work in peace time than the other arms; also, to some extent, to the system of command, which gives responsibility to officers from the time they first join. On the other hand, there is possibly a certain want of adaptability and elasticity, especially in the higher ranks, due perhaps to a prolonged peace training in which originality is apt to be frowned upon, or at any rate smiled at. It may also be due in some measure to the fact that, although the young Artillery officer is fortunate in having some realistic and responsible work thrown upon him at once, the amount does not increase very much afterwards. In the Artillery the question of individual initiative causes no difficulty, for with a gun to work, cohesion and machine-like discipline must always be primary qualifications. I think, however, that if the expression may be permitted, individuality by sections should be encouraged rather more than at present. I hold that a battery with its three sections separated and concealed should in most cases be at the same time more effective and less vulnerable than a battery with all its six guns at the regulation interval. This view was particularly impressed upon me at the battle of Lombard's Kop. Our Field Artillery was outranged by the Boer guns, and this gave rise to some disappointment amongst the troops. I am assured, however, that the gun was really up-to-date in comparison with the gun of any other European Power, and that the only real fault was in the shortness of the fuses. Nevertheless, it is perfectly certain that the actual effect of the fire was disappointing to all arms in South Africa, and to none more so than the gunners themselves. The Horse Artillery gun is considerably less effective than the field gun. I have myself seen a section of field guns quickly shift an enemy who had apparently not been much troubled by previous fire from a whole battery of the Horse Artillery arm. Personally I hold very strong views that there is no longer any room for Field Artillery in a modern army. It is neither fish, flesh, nor good red herring. It is uselessly mobile for the Infantry and not sufficiently mobile for the mounted arms. Under the conditions of dispersion now obtaining, it is simply destruction for an Infantry company to do escort to a field battery. On the other hand, the great margin of mobility which the field battery possesses above and beyond the mobility

12 Feb. 1903.

of its infantry escort is, and must be to some extent wasted, although I admit that on occasion, it may be most valuable. In my humble opinion, we require (a) Horse Artillery to accompany mounted branches (the present field gun or a gun of that type would do excellently for this purpose if lightened of gunners and some of the equipment which must be carried either on horses or carts); (b) position artillery to accompany Infantry; this should rarely be required to go out of a walk; the bigger the gun, consistent with carriage of ammunition and that amount of mobility, the better it will be.

Infantry.

Under other headings I have indirectly referred to the Infantry combat. The endurance and contempt of danger displayed by this arm elicited the admiration of foe as well as of friend. Sometimes the Infantry used to say, in camp phrase, that they were just about "fed up" with fighting, but their finest characteristic seemed to me to be that it was practically impossible to give them too much fighting to do. On the contrary, the prospect of what they called a "scrap" with the enemy would bring every man out of hospital who could possibly put one foot before the other. Our Infantry shot well, and the Boers realised very clearly the difference between them and the mounted troops in this respect. When they have been trained in snap shooting at short ranges they ought to be very good marksmen indeed. The previous practical peace training of Aldershot proved itself quite unsuited to the requirements of South African warfare. This training was calculated to stunt rather than to develop the initiative of company officers, section leaders, and men. In the attack as practised in most battalions before the war, company commanders had little leisure either to study the ground across which they would have to move, or to exercise a general control over their companies. They were, on the contrary, as a rule, absorbed in waiting for orders from some senior officer in the rear. At that time the advance under fire was carried out by a company, or even sometimes double company rushes, whereby the section commanders were reduced to the position of mere ciphers. As long as every section and every individual adhered without deviation to the fixed movement prescribed by the commanding officer, then all went smoothly; otherwise there was trouble. Worst of all was the volley firing, which by the exactitude it demanded monopolised every idea of the individual soldier in peace, and in war betrayed its exact position to the watchful enemy. Volley firing was as unsuited to the actual war requirement of the Infantry as boot to boot charges were to those of our Cavalry. If only the Boers would have drawn together to fire volleys, they could have been defeated with one half of the loss and trouble which they actually cost us. It is only fair to add that until the Tirah Campaign no one was a greater believer in volley firing than myself. Considering, then, how little the teaching of peace time had resembled the realities of war, I think the adaptability shown by all ranks, and especially by captains of companies and senior subalterns, was somewhat remarkable. After the first bitter lessons all ranks seemed instinctively to realise that the old stereotyped methods must be abandoned, and commanding officers, captains, section commanders, and private soldiers, very soon began to rise to the occasion. It is earnestly to be hoped that no reaction to the previous state of things will now be possible, and that, at any rate, captains of companies will henceforth be left in a much more independent position, both in quarters and in the field. Coming to matters of greater detail, entrenchments played a prominent part in the South African War. I do not, however, advocate the soldier carrying a spade, as I place mobility above everything even for Infantry. Large quantities of entrenching tools should, however, be carried on transport, and should be readily available if required. I have noticed men, who were so pinned down to the ground by rifle fire that they could not raise their heads, use the butt-end of their rifles to push forward stones and loose earth in front of them, so as to make a small shelter. If the butt plate of the rifle were hollowed out or shaped in some way, so as to make it more adaptable to this purpose, it would, I think, be a good thing. Another point to which I would draw attention is the desirability of having two or three steel shields on wheels with each Infantry battalion; under cover of this half a dozen men at a time might be worked across the open into some angle of the enemy's position, where they would make their presence very un-

pleasantly felt. The shield might be quite light, as it would only need to be impervious to rifle fire or shrapnel. The risk of the enemy hitting such a shield with percussion shell would be infinitesimally small.

Medical Services.

I think these proved equal to all demands which were made upon them, except during the epidemic of enteric at Bloemfontein. But it seems to me that no nation could afford to supplement its military forces by a medical organisation capable of coping simultaneously with the normal results of a campaign plus a violent epidemic of sickness. The Army Medical Service is animated by a very high standard of duty. Nothing could surpass the devotion either of the doctors or nursing sisters with whom I came in contact. As the war went on, they became more and more popular with officers and men. The specially enrolled doctors were also admirable. There is one point, and one point only, on which I would discriminate between the Royal Army Medical Service and those doctors who came either from oversea Colonies, or who were recruited in South Africa itself. The latter seemed more free from red tape and less afraid of incurring responsibility, especially where a point had to be stretched regarding regulations, or where financial obligations had to be incurred. I have known Colonial doctors who would push ahead with the advance guard to the halting-place for the night, and who would fearlessly seize upon every good thing which might be in the place for the benefit of their sick; whereas a medical officer of the Regular Service would hesitate to commandeer so much as a solitary chicken, lest he might be contravening some order or running a risk of official displeasure. In my advance from Bloemfontein to Pretoria, I was singularly fortunate in having as the principal medical officer to my force Colonel Williams, now Principal Medical Officer of the Australian Commonwealth. I will give one example to show the sort of thing which a Colonial will do, and a Regular, generally speaking, will not or cannot do. After the fight at Doornkop, by Johannesburg, we had some 250 sick and wounded. Next day we marched into the mining village of Florida, and early on the following morning Colonel Williams asked my permission to visit Johannesburg to make some arrangements for his patients. Although Johannesburg, some twelve miles distant, and still full of Boers, was in a very unsettled condition, I had such reliance on his judgment that I allowed him to go. During the forenoon of the next day he asked me to go round his hospitals; I did so, and was surprised beyond measure to see what he had accomplished in so short a time. The officers and men were in clean and airy buildings; in bed, in many cases, with sheets, and in all cases with sufficient blankets. Three civilian doctors had been engaged in Johannesburg, and were in attendance, as well as several nursing sisters. There were tablecloths on the tables, and even vases filled with flowers. The men looked happy and comfortable, and I should have been proud at that moment to have received an inspection visit by the College of Surgeons. It will be observed that the entire responsibility for engaging these doctors and nursing sisters, and for purchasing or commandeering beds, sheets, and extra blankets, was cheerfully incurred by Colonel Williams without even troubling me with a reference which, indeed, under the circumstances, would have entailed at least 24 hours' delay.

Now I may be wrong, but I think that there are few officers in our Departmental Service who would take these financial risks; they would be intimidated, justly or not, by the dread of an interminable correspondence, which might end in a censure or in a heavy pecuniary loss. The Colonials, on the other hand, had never been checked for taking responsibility.

Transport.

My views regarding transport are based on having ridden for some thousands of miles alongside of hundreds of wagons and draught animals which it was a matter of vital importance to me to keep in an efficient condition. The conclusions I was forced to were that regimental transport animals grew fat under the precise conditions in which animals separately organised into transport companies starved and died by hundreds. The reason for this seems to me to be that English people are so constituted that whereas they will be in the highest degree enthusiastic and self-sacrificing in regard to the unit or association with which they may identify themselves, they are less conscientious where Govern-

ment property is concerned or where the interests of other units or associations happen to be placed at their disposal. For instance, I have observed over and over again that the escort to regimental transport do not for a moment permit tired or lazy men to sit on their wagons. With Government wagons such men were often found sitting on the wagons like flies upon a piece of sugar, and the strictest orders had only a temporary effect in putting this right. Regimental transport was never allowed to be overloaded. Government transport was overloaded whenever the close supervision of superior officers was temporarily relaxed. In my opinion, it becomes absolutely necessary on field service, where strict checks are impossible, to enlist some *esprit de corps* for the protection of the transport animals. Once this is done, then every effort will be made by all ranks for their light loading, feeding, watering, etc., etc. I am aware that a point is made of the fact that certain units were on the lines of communication near a railway station, and therefore did not need so much transport as those in the field. It was argued, therefore, that the regimental system entailed a waste of proportion of the transport. This, however, seems to me to be a mere detail which might have been adjusted without breaking up the regimental system. I do not know whether it has been sufficiently brought to notice that in the operations subsequent to the capture of Bloemfontein the regimental transport system was to some extent reverted to; that is to say, the transport companies often found it necessary to allot a certain number of their wagons, more or less permanently, to certain corps; these corps, however, did not regard the wagons thus allotted to them as really belonging to the regiment, and by this method the advantages claimed respectively for the regimental and company system of transport were foregone. It is obvious that no mere change of system, either from regimental to departmental or vice versa, could increase the number of mules, oxen, or wagons to the smallest extent. The transport was obtainable in South Africa, and the object to be obtained was to work it with smoothness and efficiency, and with as little loss of life to the animals and wagon wheels as was humanely possible. Finally, I would like to qualify all I have said on this subject so far by stating that towards the end of the campaign a considerable amount of *esprit de corps* and homogeneity had sprung up amongst the transport companies themselves, so that my remarks do not apply to the latter phase of the operations. I would go further, and say that, provided the transport organisation were permanent, under officers and men who had been specially trained and had got to make their reputation in that line of work, then it is quite possible that this might be the best system. Only this was not the case in the period under consideration.

13942. In the first place, you think that this war marks an epoch in the evolution of military tactics?—I do.

13943. Chiefly in the development of greater individuality on the part of the soldier?—I think so.

13944. And in order to meet that it will be necessary to consider the training of the soldier?—Yes. I may say that in the provisional new Infantry drill that appears to a great extent to have been done. If only these instructions are carried out in their spirit by the Army, they ought to go a long way towards the proper training of young officers and men.

13945. I observe that you say also that, although on first sight good cover may give an advantage to the defence, it does not necessarily always follow that the attacking party might not benefit?—I thought it very much my duty to put that down, because I have heard so many people argue—for instance, Monsieur de Bloch says that it will be impossible now to attack a place unless you have a majority of eight to one, and there are people in our own Army who have got ideas of the same sort. I think they are quite wrong.

13946. What proportion would you fix?—I think under certain circumstances it might pay a General to attack even although his force is the weaker. By skilful manoeuvring and handling, and with this smokeless powder and khaki uniform, your enemy must be so much in the dark with regard to your real numbers that, even if he is superior, he may make a mistake which will give you a chance of attacking.

13947. You illustrate that by the history of the 6th of January?—As I say, I have hardly ever seen a resolute attack fail against a passive defence. The reason

why I mentioned the 6th of January was because I thought it might be said that that was a resolute attack and yet it failed; but I think it would probably have succeeded if strong counter attacks had not been made. There was no question of our defence being passive.

13948. The way in which you established your defence was by making counter attacks?—Yes. 12 Feb. 1903.

13949. Does that mean that the Boers had established themselves on Wagon Hill at that time?—Certainly, they had twice knocked us clean off it and we re-took it—I mean the very point of Wagon Hill where the gun pits were. Twice there was not a British soldier alive and unwounded on the top.

13950. It would always be dangerous tactics, would it not, to attack a force in the open, at any rate?—Usually there is some cover to be got somewhere. If the terrain is perfectly open then you must choose the night.

13951. And you require a man who is well trained to take every advantage of it?—Yes, you would indeed.

13952. Do you think you could get the ordinary soldier to that pitch of training?—That is just it. Of course, the better educated the man the more easily you get him to that pitch of training; and the less well educated the more difficult and the longer it will be. Given men like the City Imperial Volunteers, you could reckon on making them good infantry in six months, working hard, but given the ordinary corner-boy or glodhopper, then you certainly will not do it much under two years.

13953. That raises the question whether you would like to have a smaller force more highly trained rather than a larger force not so highly trained?—Personally I would sooner have a smaller force highly trained. I think that the margin of efficiency has been so enormously increased, and the difference between the highly-trained soldier and the poorly-trained soldier, especially with these modern firearms, is such that it would pay best to have a man who would take the full advantage of his weapons and of the ground.

13954. And if it is the case that you cannot get a better man than the present recruit for the Army under any conditions that we can offer, would you rather offer larger conditions and get a smaller number of men?—Distinctly.

13955. You think that the British Army would be stronger if it were so?—Distinctly. I should like to say one thing—I am talking, of course, purely as a soldier—I quite recognise that from the national point of view it is a good thing to get half-starved striplings and pass them through the Army and make them into something decent.

13956. But looking at it as a fighting machine, that is your opinion?—Looking at it as a fighting machine, there is no doubt of it.

13957. You want even more from the cavalry soldier, do you not?—You want even more.

13958. You have stated the various qualifications which you think are required; how would you propose to get men of that kind trained in that way?—We get good material amongst the men in the cavalry. If the officers would really take up the question of individual training a good deal might be done. It is difficult in this country to train cavalry fully, as I have pointed out, in certain very important things—for instance, reconnaissances, dispatch riding, and so on; but a good deal more might be done, and I think they might ride better.

13959. They could be taught to ride?—They could be taught to ride.

13960. And it would be a serious matter to keep the troops elsewhere, would it not?—Of course, this country would lose the spending of their money, which would not come back to us.

13961. (Sir George Taubman-Goldie.) And there is a more serious question, is there not—that the Army would have to supply drafts to the Colonies and India if we kept it in South Africa?—If we kept it in South Africa it would have to be treated as a home army, and it would have under our present system to supply drafts to the coaling stations and India.

13962. So that they would never be at home at all for any part of their service?—No.

13963. Would not that be a difficulty?—Yes, it would be a difficulty.

13964. (Chairman.) You look at that, again, simply

Lieut.-General Sir Ian S. M. Hamilton, K.C.B., D.S.O.

Lieut.
General Sir
Ian S. M.
Hamilton,
K.C.B., D.S.O.

12 Feb. 1903.

as a question of the best way of getting a fighting machine?—Yes; I am sure you would get a very much better fighting machine trained in South Africa than in England.

13965. You expressed the opinion that the Natal Field Force on the outbreak of war might under certain conditions have been strong enough to repulse the Boer armies who invaded that colony?—I am inclined to believe that that was possible.

13966. That is to say, that by massing all the forces that you had in Natal at the moment you might have dealt with the different Boer forces?—Yes.

13967. But, of course, that is quite independent of any political considerations?—That is quite independent of any political considerations.

13968. That is a military opinion again?—That is a purely military opinion.

13969. There is only one remark at the end of that paragraph headed "Adequacy in point of strength of the forces in the field" which I should like just to ask you about. You say: "I do not like to venture an opinion regarding engagements in which I did not participate, but I should say that the troops which were diverted to Natal for the purpose of relieving Ladysmith and clearing that colony were sufficient for the purpose." What did you mean quite by that?—I meant to say that General Buller's forces, certainly by the time of Spion Kop, were sufficiently numerous, so far as numbers went, to enable him to relieve Ladysmith and to clear Natal, so far as I could judge. By what I knew of the Boers and Natal generally, I should say that he was well equipped for his purpose so far as numbers went.

13970. (Sir George Taubman-Goldie.) But not before Warren's Division arrived?—I should like very much to have tried.

13971. (Chairman.) And afterwards for the advance from Bloemfontein you had sufficient forces?—Yes, quite sufficient.

13972. The next point is one that has been before us already, with regard to the surrenders. You hold that the great majority of the surrenders were justifiable?—Yes.

13973. Owing to the changed conditions of warfare?—Yes. I have an example of a surrender in the American War that is rather interesting. When Lee crossed the Potomac in 1862, just before fighting McClellan at Antietam, he detached Jackson with some 25,000 men to capture the Federal entrenched camp at Harper's Ferry, which seriously menaced his communications. On the 13th of September it was entirely surrounded. On the 14th Jackson subjected it to a very severe bombardment. Next morning bombardment was resumed, and preparations were made for the assault, but before the charge was sounded the white flag was hoisted (at 7.30 a.m.), and with the loss of no more than 100 men Jackson had captured Harper's Ferry with his artillery alone. The surrender was unconditional, the fruits of it being 12,520 prisoners, 13,000 small arms, and 75 pieces of artillery. That I thought was a big surrender. That shows, I mean to say, that other people have occasionally surrendered.

13974. But that was a surrender on a large scale?—Yes.

13975. But in the case of a good many of the surrenders in South Africa they were either on a small scale altogether or else they originated in some surrender of a position by a small number?—Yes, I think that was almost invariably the case. It was so even at Nicholson's Nek.

13976. And that arises out of the modern conditions of warfare?—I think very much so.

13977. And also, you say, from the nature of the combat between the two races?—Yes, I think there was no very fierce animosity; I think that helped; I think it weakened the men. If they thought they really had not a chance it seemed absurd to throw their lives away if they had no very strong animosity.

13978. The remedy, you say, is *esprit de corps*?—I think the remedy is *esprit de corps*. There were certain regiments—it would be invidious to mention names, and I do not know all of them—who practically never had a man taken prisoner during the war. If inquiry were made it would be found that they were all regiments with a good deal of *esprit de corps*.

13979. And you attach a great deal of importance to distinctions of dress, and so on?—I do. It is extraordinary how much our people think of such things.

13980. When they are on service they are all alike, of course?—There is a very burning question at present as to whether the Rifle Regiments may not have their black button on service.

13981. Yes, we have heard that that had engaged the attention of the War Office?—Oh, but it is not over yet; it is going on still.

13982. And the kilt?—I hope the kilt is all right.

13983. Then you have given us two statements on the different branches of the Service; I really do not think it is necessary for me to take you through them?—No; I thought they might possibly be useful to the Commission.

13984. Yes, they will be of great interest to us. They are the results of your experience from the incidents in the war; that is what you intend them to be?—Yes. I think the only revolutionary remark in the whole of those statements is that about the artillery, where I give voice to a feeling which some artillery officers certainly have—that the Field Artillery is unnecessarily mobile. The more mobile it is the better, of course; even as an infantry arm it may be of the greatest importance to shift it rapidly from one flank to the other, but you may pay too dearly for mobility; if for the same amount of horses you could carry a much heavier gun at a slower pace.

13985. I understood your argument to be that if it were so mobile it ought to be Horse Artillery?—Yes.

13986. And if it is not to be so mobile, then it need not move out of a walk?—That is so. There is one point that I did not bring out perhaps: it is the enormous amount of ground taken up by the very large numbers of guns which accompany a modern army. A battery of six guns in action has a frontage of 100 yards, and, of course, if you get 100 guns in line it is difficult to find a position for them. Now two big guns are certainly more than equal, I should say, to six field guns, and they take up very much less room, either on the terrain in action or marching along the road, where one of our batteries takes up 240 yards. It lengthens out the column. We did not feel it so much in South Africa, where it is open veldt and you could move in a broad front, but in places where you have to go through a defile it makes the column very long.

13987. When you said that two heavy guns are equal to a battery of six guns, what did you mean?—I mean that two heavy guns will silence six field guns.

13988. The effect of their fire you were referring to?—Yes.

13989. (Sir George Taubman-Goldie.) Do you mean guns up to 4.7 inches?—I am thinking of the 5-inch gun, which is rather lighter.

13990. (Chairman.) Then I pass on to the Medical Service, and there you are very strong for a point which has also been brought under our notice of making the officer in charge of a hospital responsible, and giving him a free hand, so to speak?—I am very strong about that.

13991. That is not possible under the present Regulations, is it?—No, the present Regulations preclude it.

13992. We have had some evidence to show that as a matter of fact in South Africa the medical officers in those positions did exercise a freedom that was not allowed them by the Regulations, and I suppose this instance that you quote is one of them?—I think that in war the generals and finance people and everyone would have given medical officers the greatest freedom, but their habit of mind was such that they found it difficult to rise to it.

13993. And those officers whose conduct you quote had not been so subjected to the cramping influence of the Regulations?—That is so.

13994. But then is it proposed to modify the Regulations in peace time?—I have not heard that; it does not come much in my line of study, but I think it would be a most admirable thing, merely judging by the doctors I have met on service. I am quite sure that they want a little more training in taking responsibility, and I should think that the Regulations could be modified to meet this requirement.

13995. I think it was not denied that otherwise the

Lieut.-
General Sir
Ian S. M.
Hamilton,
K.C.B., D.S.O.

12 Feb. 1903.

Regulations are reasonable enough for peace time?
—Yes.

13996. But for that reason of increasing the officers' sense of responsibility you think it would be desirable to modify them?—Exactly, for that reason.

13997. Something has been said about the difficulties that the chief medical officer in charge of hospitals was subjected to by the amount of clerical work he had to do. Has your attention been drawn to that?—Yes, I have heard them complain of it.

13998. Did you find that to be so in the case of the hospitals attached to your column?—I certainly have heard the medical officers complain of the amount of clerical work and correspondence that they had to carry on.

13999. (Sir George Taubman-Goldie.) Was it a just complaint?—That I really do not know anything about.

14000. (Chairman.) It was put as strongly as this: that the fact of the matter was that the Principal Medical Officer in the hospital did no medical work at all; his time was entirely taken up with administration?—I think there may be some truth in that.

14001. There is some substance in it?—There is some substance in it.

14002. That, of course, is a disadvantage if that clerical work can be done, as has been suggested, by a quartermaster or clerk?—Yes, indeed.

14003. Do you think it could be?—I am afraid I do not like to offer an opinion.

14004. Are not those returns that would come in to the General?—The General would not look at any returns except those regarding the health of his force at the moment. The daily hospital returns that come to the General could be done by a Quartermaster under supervision, for they merely show the number of sick and the number attending hospital. But I do not suppose the Principal Medical Officer writes that return with his own hand. I can hardly think that.

14005. But you are not in a position to say more on that particular point?—I say if the Principal Medical Officer does write those returns with his own hand that is very wrong.

14006. (Sir Henry Norman.) And you see no necessity for him to do so?—No, I do not.

14007. In point of fact, I suppose you think he does not; he satisfies himself that it is correct, and signs it?—That is what he does I feel pretty confident.

14008. (Chairman.) Then the remaining question is with regard to transport; and, so far as I understand your view, you are rather in favour of regimental transport?—Yes. I know quite well that Lord Kitchener is tremendously in favour of what was done, and so is Lord Roberts, and so is General Nicholson. Still, I have thought it my duty to say what I believed. The gist of it all is that if you have this transport under the new conditions started by Lord Roberts and Lord Kitchener and Sir William Nicholson as a permanent arrangement, and if it had its own *esprit de corps*, and were all in working order as a going concern, then I think it might be all right; but what really happened was that the regimental system was broken up and the other one was substituted for it, and we were in the middle of operations; and shortly afterwards the regimental system was in form reverted to without the spirit, that is to say, you allowed a regiment to take a day's food with it. I venture to suggest that the result of that was that there was less care for the transport than there otherwise would have been.

14009. You must have either one thing or the other?—I say either one thing or the other. If you have regimental transport, of course you must have your director of transport, who must have supreme power over it. He sends for the regimental transport officers, and says: "I want all your wagons to go a march with a convoy." There must be no question about that, of course; but still, they belong to the regiment.

14010. That has always been the rule, I suppose?—That has always been the rule, I think. It certainly was in Ladysmith. Sir Edward Ward used to send to the Gordon Highlanders and say: "Send your wagons," and they sent them.

14011. (Sir Henry Norman.) I think you have almost said as much as that all the various departments—the medical department, and so on—did their work very well during the war?—I thought so.

14012. Does it occur to you to make any sort of suggestions as to any alteration in their organisation or their system, or, speaking generally, would you leave them as they are. For instance, in the Medical Department do you consider that it is sufficient when a regiment goes on service to attach a medical officer to them who is naturally or probably not acquainted with them in the slightest degree?—I have often regretted the abolition of the old regimental system in which each battalion had its own medical officer, who knew the shirkers and knew all about everyone. I believe its abolition was merely a matter of money.

14013. (Sir George Taubman-Goldie.) Where does the economy come in?—By grouping the people into station hospitals they do with fewer doctors.

14014. (Sir Frederick Darley.) Still, one man is now doing the duty that formerly four did?—That is so.

14015. (Sir Henry Norman.) You have no means of knowing, I suppose, whether this anticipated economy has been really realised or whether it is not more expensive in the end than the old system?—I am afraid I have no means of knowing that.

14016. I wonder if anybody has ever worked it out, because the great recommendation was the supposed economy. But do you think that the other departments, such as the Ordnance and Supply Departments and Transport, and so on, are fairly well organised?—Yes, I think so; I think they are.

14017. I suppose when it was necessary, owing to your supplies being exhausted and convoys not having come up, and so on, you got supplies by commandeering, did you not?—Yes, by commandeering. I had an Army Service Corps officer who was my supply officer—Major Atcherley. He rode on with the advance guard into any town, and he commanded everything that he could find and gave receipts for it, and then he issued it out.

14018. He did not pay?—He did not pay.

14019. Do you suppose that there is any ground for these complaints that we see are being constantly made of receipts given by officers which holders have not received payment for at the present time?—I am sure they have not—not yet.

14020. Would it be possible to establish a system by which payments should be made rather more promptly?—Well, I hear from South Africa that they are not paid yet.

14021. Was there no authority charged with the duty of paying these receipts?—You see, it was impossible probably until the war was over, because, as a matter of fact, very likely the people who had the receipts went away with their rifles and fought against us.

14022. Would the fact of a man who had got a receipt for 50 sheep, or whatever it might be, fighting against us afterwards debar him from getting paid?—No, I think not. I think it might if it had been proved that he had taken his oath under Lord Roberts.

14023. You think it would have been almost impossible for them to have been paid while the war went on in the great majority of cases?—Yes, in the great majority of cases.

14024. You said something about having a smaller army if you had a more highly-trained army, which, of course, is probably a very good theory, but would it be possible to reduce the British Army very much beyond a certain point, considering the immense number of places that we have to occupy, and we must occupy, with some sort of efficient strength?—I think that actually, say, you took the garrison of Meerut, if you had a higher class of really efficient men, trained to a very high standard, you could do with half the number; I mean, literally half. On the other hand, I think it is quite possible that the people of India might not understand at first that the reduced garrison were really as formidable as twice the number that were there before, and they might think that Meerut was dangerously weak and behave accordingly. That is the only danger that I see. I fully believe that if you get a higher class of men—highly trained men—they can take the place of a much larger number than is generally supposed of semi-trained men.

14025. I do not exactly know what is the advantage which you consider would result from having troops abroad and keeping them abroad in places where they can be more readily manœuvred?—The advantage of training and keeping them especially in South Africa would be enormous. I have been told that in Canada

Lieut.-
General Sir
Ian S. M.
Hamilton.
K.C.B., D.S.O.

12 Feb. 1903.

it would not be so much so, because it is all forest there, or else it is all wire fences and cultivation; but in South Africa certainly you would get the most admirable training for your troops.

14026. But what effect do you think it would have upon recruiting if the British soldier is to spend all his career, or nearly all his career, in a foreign country, which at all events at present is not a very popular country—South Africa?—He would be very glad to go out there at present to see what it is like if he got a Government passage out to the country as a recruit, he would be willing to enlist to go out to South Africa for three years.

14027. Do you think politically it would have a good effect upon the men if they came to feel themselves a sort of local troops; because there might not be war for many years in South Africa? Do you recollect the effect upon local corps in India?—It has always been said from the old Indian experiences that local troops rather deteriorated in discipline, but in India, of course, it was a very serious business going and coming backwards and forwards in those days, and the officers, for instance, would also become very much localised, more so than they would at present in South Africa, where they could constantly come back to England, and would do so, and, of course, if it is treated as a home army and the term of enlistment was only three years, a man would not have very long to get into slack or local ways.

14028. Then it would involve a great deal of going backwards and forwards if every man was to go and remain there for the balance of three years?—The principal objection to such a scheme is the very greatly increased transport charges.

14029. But with regard to the local troops in India, I daresay you may have heard that it was supposed, that though they were splendid soldiers for fighting, their feelings of loyalty to the country got rather weakened, as was shown by their behaviour when they were transferred to the Crown; that what you may call loyal feelings (they were perfectly ready to fight against any enemy) were rather weakened. Do you think there was any truth in that?—I cannot conceive of its happening just now in South Africa, because you must be either one thing or the other there now.

14030. It might be the other?—Well, it might. I can hardly believe it. That would be very bad.

14031. From what you have said, it occurs to me to ask you this question: Was there any real material amount of desertion to the Boers?—Certainly not. I heard of one man from Ladysmith. I think that is the only case that ever came to my knowledge.

14032. (Chairman.) Just one question about that matter of troops abroad. If you had a number of troops stationed in South Africa in that way, and their services were required in another part of the world, would they not be much less handy than if they were in this country?—It depends upon where their services were required. They would be much more handy for India or Persia.

14033. But in order to move troops you have got to get the transport for them; in this country you have the command of a vast amount of transport such as you would have to send to South Africa?—In a very few years there will be large fleets in Delagoa Bay, and the communication with India is immense by the fleets of the British India Steamship Company and all those companies in India.

14034. But they have to be sent to South Africa?—Yes, they have to get to South Africa.

14035. There is that point, is there not?—Yes, there is.

14036. (Sir George Taubman-Goldie.) If the troops were wanted in Canada the transports would first have to go from this country to South Africa, and then carry them from South Africa to Canada?—Yes, at present. But very soon there will be a lot of shipping in South Africa.

14037. (Chairman.) And if they were wanted in Europe?—That would be inconvenient, certainly.

14038. (Sir Henry Norman.) You mention that in the case of sending messages across country, and so on, the Colonials (Australians and perhaps Canadians) were much better than our own men?—That is certainly the case.

14039. From their knowledge of country, I suppose? In the case of the Australians, of course, it is only fair to say that belonging to the Southern Hemisphere the stars are familiar to them; but still they are much more in touch with nature and the way to get about country than our men are.

14040. They are accustomed to it, in point of fact?—Just so.

14041. Hardly any one more so?—That is it. Our men come from cities nowadays.

14042. And even if they are in the country they do not go about with cattle thousands of miles?—No.

14043. (Sir Frederick Darley.) An Australian knows the prevailing wind in the district?—Yes, all those things.

14044. And with this indication and others he generally knows how to get across that district?—Yes.

14045. (Sir Henry Norman.) Your opinion differs from some opinions which have been given here as to regimental transport, but did you ever in India investigate the system of regimental transport which prevailed in the old days in the Punjab Frontier Force?—I always knew that in the Punjab Frontier Force they were ready to go anywhere at 24 hours' notice. I suppose that showed that they had a good transport system.

14046. In point of fact they had permanently attached to them certain transport which was as much part of the regiment as the men themselves, camels and mules, and so on. And I have always understood—in fact, I have seen over and over again—the excellence of that system. But that system did not, as I understand, in the slightest degree prevent that transport being used for any general purposes?—Certainly not. It ought not to do so.

14047. And we had evidence the other day from General Rimington and Colonel Thorneycroft that they could not have got on at all if they had not had a small amount of transport to take three days' provisions and sufficient ammunition, which would always be up with them every evening. Was that advantage lost, do you think, by the transfer of the regimental transport to the general transport purposes of the Army?—I think it was lost for the time being, very greatly lost.

14048. We have had some evidence about mounted infantry, and yesterday we were told (what is a very general opinion) that it is not desirable to have permanent regiments of mounted infantry; that men should be taken for the time being (and for the time), and trained moderately as mounted infantry, but not to be allowed to form into regiments which would probably end in their being a sort of inferior cavalry?—I entirely agree with that. I have known all the more prominent mounted infantry commanders, I have taken great interest in the subject myself, and I am sure the men must be infantrymen, and that the way to have good mounted infantry is to keep training men and sending them back, and keep training them. When a man gets too wedded to his horse he ceases to be a first-class mounted infantryman. He must be always quite glad to dismount, and ready to attack as infantry attacks.

14049. You are aware, I suppose, that the Australian Mounted Infantry who went out were not taken from infantry regiments as a rule, but were permanent mounted infantryman?—Yes, but I do not think that changes my opinion. The Australians were possessed of so much individuality themselves and initiative that they would get off their horses and go and take a place. But still if I was going to make a serious attack and drive it home, there is nobody like our own regular mounted infantry drawn from British infantry regiments. Greatly as I value the Australians, the Australians would be the first to say it, and the Canadians, too.

14050. You did not find that they were anxious to ape cavalry at all?—No.

14051. (Sir Frederick Darley.) When you were moving on Lord Roberts' flank you were then in command of a distinct column or division?—Yes, quite distinct, 50 miles away.

14052. Were you in touch with Lord Roberts' column at the time?—Occasionally a messenger came through. Our field telegraph wire very quickly ran out, in the first day or two. Up to that time we were in telegraphic communication, and then we were only in communication

Lieut.
General Sir
Ian S. M.
Hamilton,
K.C.B., D.S.O.

12 Feb. 1903.

by mounted messengers, and occasionally we got a heliograph from a distant mountain.

14053. Then would you recommend a larger store of field telegraphs, so as to be able to keep in communication with a column on your left or your right as the case might be?—We were very short of wire—in fact, the wire absolutely ran out in the whole of the country at one time. I think we could probably do with a little more than we had.

14054. Had you a staff of field telegraphists with you?—Yes.

14055. Men who thoroughly understood that work?—Yes. We had a young Engineer officer with two or three men, and they had their two carts with wire.

14056. It is very important to be able to communicate with the body on your right or the body on your left as the case might be?—It is most important.

14057. When you went to Sanna's Post from Bloemfontein you say you never returned to Bloemfontein again?—I did not.

14058. Then you marched straight from Sanna's Post to where?—To Thabanchu.

14059. And then?—Through Houtnek to Isabellafontein, and on to Winburg, Ventersburg, Lindley, and Heilbron.

14060. Did you have many actions during that time?—We had 22 actions from the time we left Bloemfontein till we got to Pretoria.

14061. Twenty-two separate actions?—Some were skirmishes, you know, but others were fairly severe. We were fighting at Houtnek for two days, where we lost a considerable number of men—I do not know the exact number, but it was over a hundred, and at Doornkop we lost over 150.

14062. What was the space of time covered from the time when you left Thabanchu till you got to Heilbron?—Three weeks.

14063. Then you had really one action every day almost?—Yes, very nearly, but several of the 22 actions were after leaving Heilbron.

14064. Was General Hutton under your command at that time?—He was nominally under my command, as I was General Officer Commanding the Mounted Infantry, but he never really served under me during the whole campaign.

14065. But did his detachment of mounted infantry belong to your column at the time?—No, they were with the main force with Lord Roberts.

14066. You speak of having at one period only eight days' provision transport when you were 14 days out; if you had had regimental transport at that time would you have been in that position, do you think?—I do not think the possession of regimental transport or of Government transport makes the smallest difference in the number of carts or animals, but I do think that at that particular stage several hundred animals perhaps might have been saved if we had had the regimental system, and in that way we might have had a little more food—I am not quite sure about that either. I do not suppose any food was left behind—I do not think it would have made any difference.

14067. It did not at the time occur to you that the regimental system would have been the best?—Not in connection with the amount of food that we had, but it was very strongly occurring to me then that the regimental system would have been the best during that march.

14068. With regard to your own field staff, at that time they were thoroughly efficient in their duties?—Yes, I had a very good staff. All officers have their own peculiarities in these matters. I had Colonel Le Gallais as my chief staff officer, who was not what is called a highly trained staff officer; he used to hold his pencil like a hatchet, and he wrote very badly, but he was the most sensible, level-headed individual I ever saw. If I wrote anything that was not sensible he used to bring it to me and point out that it was not sensible, although, perhaps, he did not write very much himself.

14069. (Sir John Jackson.) Did he read maps well?—I think he read maps, and he certainly had a wonderful eye for country.

14070. (Sir Frederick Darley.) He knew his ground well?—Yes, he was a very gallant fellow, and had a very

good eye for country. He was a most beautiful rider, and excellent in all the practical part of the work.

14071. (Viscount Esher.) He had not had the advantage of a Staff College education?—No, he had not.

14072. (Sir Frederick Darley.) But yet he was a thoroughly efficient staff officer?—Thoroughly. Different staff officers suit different generals—that is what it really comes to.

14073. (Sir John Jackson.) You spoke a good deal of the value of *esprit de corps*; do you think if we were under a system of conscription you would have anything like the same *esprit de corps* in the regiments of the Army that you have at present?—I should doubt it; it would all have to start afresh. You might get it up by closely associating the regiments with certain towns and counties, but I think you could not replace those old traditions that there are with the present regiments.

14074. You think you could not expect it under such a system?—No. After a campaign you would get it, when certain regiments had greatly distinguished themselves, and so on.

14075. You laid a good deal of stress upon the advantage of having even a smaller number of more intelligent men as soldiers. I take it, therefore, that you would prefer to have your recruits from a slightly higher level than they are mostly got from at present?—Talking purely as a soldier, certainly.

14076. Even if, looking at it from a money point of view, you had to pay something more for them?—I would sooner have fewer men and pay more for them.

14077. For instance, if you only had 75 per cent. of the better trained men, you could afford to pay them 33 per cent. more?—I should say so, and I would gladly do so.

14078. Touching the question that Lord Elgin raised about the difficulty of transport, if we had a trained army in South Africa, and we wanted to convey troops to Canada, for instance, from the fact that ships would have to be sent out to the Cape and then go from there to Canada, is it not the case that you have a very large number of passenger steamers to Cape ports every two or three days?—Yes.

14079. And I take it that if the Government had an arrangement with these vessels for having an immediate call upon them wherever they could lay their hands upon them in the event of an emergency of that kind, a somewhat similar call to that they have upon the armed cruisers, that would get over the difficulty?—It would get over the difficulty, but I believe myself that the difficulty will be largely solved in the course of a very few years by large quantities of ships being into Delagoa Bay Harbour, and double, treble, or even four times as many vessels in South Africa.

14080. (Chairman.) If I may just interpose, would those ships carry horses?—No, they would not; they would have to undergo a considerable alteration.

14081. It was specially the training of cavalry that you spoke of?—Yes.

14082. (Sir John Jackson.) But still, these large liners could be adapted for carrying horses without any very great delay, could they not?—It is a biggish business; it takes about a fortnight.

14083. (Sir John Hopkins.) Touching the field guns, not the horse artillery, because the range of those guns, as you say, is small, did you find the range of field guns equal to what you could have wished?—No.

14084. They were outclassed practically by the Boer field guns?—They were outclassed by some of the Boer guns, Creusots and Krupps. The Boers had about 16 field guns that completely outclassed ours.

14085. And you felt the inconvenience of that?—Yes, very much indeed.

14086. Were you satisfied with the infantry rifle?—Yes, quite. I have discussed that with Boer Commandants often, and some of them like the Mauser and some of them like the Lee-Enfield.

14087. (Sir George Taubman-Goldie.) With regard to staff officers, I think in India there is more distinction drawn between those who take up the Quartermaster-General's work, the B side, and the Adjutant-General's, or A side, is there not?—Very much so, but there used to be a still greater difference.

14088. Even yet there is a great distinction?—Yes,

Lieut.
General Sir
Ian S. M.
Hamilton,
K.C.B., D.S.O.

12 Feb. 1903.

even yet the tradition remains, and there is a big distinction.

14089. Do you think it would be an advantage to introduce that distinction into this country?—I am sure we found the want of it in South Africa.

14090. Going back to the Staff College on that point, how do officers exercise an option when they go in there which side to take up? You keep them a year in the Staff College if they are going to take up A, and you keep them two years if they are going to take up B, the object being to be able to pass as many men through the small course at the Staff College as can possibly go through now?—I do not know about their option, but I think the commandant, if he is a good man, ought to be able to classify his students within six months, because they are a totally different type of men. One is a cut-and-dried sort of sensible person, and the other ought to be rather brilliant.

14091. Do you think that one year at the Staff College would be enough to teach a man all the A work?—Yes.

14092. (*Viscount Esher.*) Why not the B work as well?—B work is much wider. A "B" man, for instance, ought to be able to go into Euston Station or Charing Cross, and run the trains; he ought to have a good knowledge of the whole of the working of railways, entraining and detraining, how to run the trains and get back the empties, and all that sort of thing. Then he should be a first-class draughtsman in the way of topographical work; he should have a certain smattering of elementary medical knowledge so as not to go and pitch a camp in an unhealthy spot; and he should have a certain acquaintance with the Intelligence work, with which his work overlaps a great deal, so that he should be able to draw up schemes and proposals for movements, and even for attacks or retreats. The Adjutant-General's branch on service become gallopers, aides-de-camp to take a message; that has been my experience; whereas you rely upon the other men for important matters.

14093. (*Sir George Taubman-Goldie.*) And in that way, if that suggestion could be adopted, we could pass 50 per cent. more men through the Staff College?—There would be difficulties about it, because it would rather put the A men into an invidious position, and they would not want to be A men.

14094. At present I understand all the best men want to become A men in time of peace, and in time of war everybody wants to be a B man, because he gets fighting work?—That is so.

14095. And what you want is rather to invert that. You think that would put the A man in rather an invidious position—that is exactly the idea. There is only one other question I want to ask you: You said that you could make a good infantry soldier out of a man of the City Imperial Volunteer class in six months, whereas for a corner-boy and clodhopper it would require at least two years?—I was simply illustrating something by that statement.

14096. I quite understood the statement. Now I want to ask you, supposing you had a mixed force of all classes, where the corner-boy and clodhopper would be in contact with the tradesman's son, the gentleman's son, and all classes thrown together. I suppose some middle time between the six months and the two years would be the time that you would then choose, because the lower class man would learn from the other, and be spurred on?—I have a very strong personal theory that when you have bad and good together the bad becomes much the strongest force.

14097. They all become bad?—Yes.

14098. I wanted to elicit that answer from you. You hold that view quite firmly?—I have often thought over it, and that is the conclusion I have come to.

14099. But do you not find in playing games that one always plays up to a person a little better than oneself?—No doubt, but everyone is very anxious to excel in a game, and everyone is not so very anxious to excel in doing work.

14100. Supposing there was universal military training, you do not think that a year would make good infantry soldiers out of the whole lot together?—Do you mean, taking good and bad together, that one year would make a good infantry soldier?

14101. And strong discipline and real discipline. You would not be afraid of working the men when you could not lose them, when they could not go away?—

No, I do not think so. I think if you could select your companies out of a mixed lot like that, you could train half your regiment if you took it away separately into excellent infantry soldiers in a year, but the other half you would not.

14102. Out of a body such as that you might, at any rate, get in case of war a very valuable body of good trained volunteer and infantry soldiers?—You might.

14103. Assuming that the whole nation passed under arms year by year for one year only?—Yes; it would improve, of course, but whether taking men by force and making them serve for a year would not give them a distaste for volunteering afterwards is another question.

14104. (*Viscount Esher.*) You have had no personal experience of the Staff College?—No, I never was there.

14105. Is the new Director-General of Military Education under you?—He is not to be. At the present moment he is still, as regards education, referring things to me because I have been doing that work, but that is another very vexed question just at the present moment—under whom he is to be.

14106. Have you any strong opinion as to the necessity for a two years' course for anybody at the Staff College?—No.

14107. You have not considered that, I suppose?—I have talked to both Colonel Miles and General Hildyard, and they seem to think—I gather that their mind, if they spoke frankly what was in it, would be that officers do not come to them quite sufficiently educated to enable them to start off doing the interesting and important work at once, and they have to spend a year in more or less educating them.

14108. There is an examination when they pass out, is there not?—Yes.

14109. Is there an examination at the end of the first year?—Yes, there is.

14110. I suppose you do not happen to know whether the standard at the end of the second year is very much higher than the standard at the end of the first year?—I think it is a totally different sort of work altogether.

14111. You think that the examination at the end of the second year is of a totally different character?—Yes.

14112. However, you see the importance, do you not, of considering that question as to a two years' course?—I do, indeed.

14113. Because you might by a second course pass just double the number of men that you do now?—Yes.

14114. Then as to a smaller and more efficient army, I suppose no scheme has ever been worked out, has it, so far as you know, at the War Office, for carrying that principle into effect?—No; I do not know that the principle is even acknowledged there.

14115. I do not suppose it is acknowledged, but still, even hypothetically, so far as you know that has not been done?—No, I do not think so.

14116. Of course, if you leave the Indian and South African garrisons as they are now, you will have to consider whether you could, in view of the large number of drafts that have to go out every year under the present terms of service, reduce the number of regular troops in this country?—Yes.

14117. Anyhow, no such scheme has at present been worked out even as a hypothesis?—I believe not.

14118. (*Sir George Taubman-Goldie.*) As I gathered, you meant that smaller drafts would go out, that everything would be on a reduced scale?—Yes.

14119. (*Viscount Esher.*) If you reduce the forces abroad that would be so, but I am assuming that you keep the garrisons in India and South Africa up to their present strength?—I said that I gave the garrison at Meerut as an example.

14120. I quite understand that, but you see there are two ways of doing it; that was my point. It may be a necessity to keep the same number of troops in India and the same number of troops in South Africa?—I gather that it is, as a matter of fact, from what I have heard.

14121. At the same time, I suppose you will admit that it does not necessarily follow that if you alter the terms of service you will have to send out the same number of drafts every year. That necessity is only

forced upon you by the present terms of enlistment?—Certainly.

14122. (*Sir Frederick Darley.*) With regard to the matters which you mentioned as being done during the second year of a staff officer's career at the Staff College, could they not be done apart from the Staff College; for instance, acquiring a knowledge how to work trains on the railway, entraining or detraining troops?—I think a good deal might be done by subsidiary courses afterwards. I think an officer who is going to be a Quartermaster-General afterwards ought to go to the Army Service Corps and learn something about transport and supply. That might be a three months' course after he has finished.

14123. And in the Medical School?—Yes, he might do a subsidiary course in that away from the Staff College.

14124. Or for languages he might have a course on the Continent?—Yes.

14125. All that might be done away from the Staff College?—Yes.

14126. And yet he might be called upon to submit himself to examination at the end of the second year?—Yes.

14127. And in that way you get the two years' staff employment and yet only one year in the Staff College?—Yes, I wrote once myself suggesting that after the second year a man should go and be attached to a big railway office and learn to work trains.

14128. (*Viscount Esher.*) And in that way, as Sir Frederick Darley suggests, you would increase the capacity of the Staff College?—Yes.

14129. (*Sir John Hopkins.*) Were you satisfied with the way in which the wounded were brought in after the various actions by the bearer corps and people of that kind?—I think the bearer corps did very well, but there were sometimes great difficulties in their way in South Africa. I personally have no complaints.

14130. So far as the organisation of the bearer corps went, and so on, you were fairly satisfied?—Yes, I was satisfied.

14131. If there was any idea of a rearrangement of the scheme, you do not know that you could suggest anything better?—No.

14132. So far as the advance hospitals with the different columns are concerned, were you satisfied with them?—Yes, I was thoroughly satisfied with them.

14133. They did all that could reasonably be expected? They did.

14134. (*Chairman.*) I think it was a suggestion of Sir Frederick Treves' that what was called the collecting station was not required now?—No, I do not think it is. We always practise at manoeuvres to have an intermediate station between the advance hospital and the actual fighting line; but I do not think it is required. I never saw it used on service.

Lieut.-General Sir Ian S. M. Hamilton,
K.C.B., D.S.O.

12 Feb. 1903.

THIRTY-FOURTH DAY.

Friday, 13th February 1903.

PRESENT :

The Right Honourable The EARL of ELGIN and KINCARDINE, K.G., G.C.S.I., G.C.I.E. (*Chairman.*)

The Right Honourable The Viscount ESHER, K.C.B., K.C.V.O.

The Right Honourable The Lord STRATHCONA AND MOUNT-ROYAL, G.C.M.G.

The Right Honourable Sir GEORGE DASHWOOD TAUBMAN-GOLDIE, K.C.M.G.

Field-Marshal Sir HENRY WYLIE NORMAN, G.C.B., G.C.M.G., C.I.E.

The Honourable Sir FREDERICK MATTHEW DARLEY, G.C.M.G.

Admiral Sir JOHN OMMANNEY HOPKINS, G.C.B.

Sir JOHN EDGE.

Sir JOHN JACKSON.

BERNARD H. HOLLAND, Esq., *Secretary.*

Lieutenant-General The Lord METHUEN, G.C.B., K.C.V.O., C.M.G., called and examined.

14135. (*Chairman.*) You have been good enough to send us some notes (*vide Appendix, page 612, post*), upon which I will ask you questions. You went out with the Army Corps, I think, to South Africa?—Yes.

14136. In command of one of the Divisions?—The 1st Division.

14137. Was that an appointment made before you left home?—Yes.

14138. When did you arrive in South Africa?—I think early in November. It was the 7th November.

14139. What was the position with regard to the distribution of forces at that time?—One of my Brigades was sent on to Natal, and the Brigade of Guards arrived after my arrival; then I was given the 9th Brigade, consisting of Yorkshire Light Infantry, 5th Northumberland Fusiliers, Northampton Regiment, half battalion Loyal North Lancashire, the other half battalion being garrisoned at Kimberley. Then there was a Brigade Division of Artillery at Orange River, the 9th Lancers was given to me as a cavalry regiment, and I had about 120 or 130 Colonial Scouts, which were called Rimington's Scouts.

14140. And that was the force with which you moved for the relief of Kimberley?—That is so.

14141. Had you any distinct instructions with regard to the movement on Kimberley?—Yes, those orders I had given me by Sir Redvers Buller I have got, but I am sorry to say I have mislaid them. I wrote to Sir Redvers, and he told me that if I came to him

he would let me have a copy of them. You would be able to obtain a copy from him, but I shall probably lay my hand on them before long, and will forward the copy to you.

14142. You could let us have the purport of them, I suppose?—Yes. I gathered from Sir Redvers Buller that I had no reason for anticipating a determined resistance from the enemy in any very large numbers between Orange River and Kimberley, though probably they would elect to fight on the Modder. My movements were to be made with as great celerity as possible, because Kimberley seemed to be in straits according to Mr. Rhodes, and because there was the danger of reinforcements coming from Natal to the enemy directly they heard of my advance. I had to relieve Kimberley, throw in a large supply of provisions, clear out the non-combatants, and return to Orange River. These were, in short, the orders I got from him.

14143. The intention of your advance was simply to reinforce the garrison of Kimberley, and move the non-combatants, and come away again?—No; I could not say my object was to reinforce Kimberley, but it was to clear out, I think, something like 11,000 useless mouths, who were black men, and so on. I was to send up the trains holding provisions sufficient for Kimberley to go on with for some time, and clear out all these black men and send them down country or where I could; at any rate get them out of Kimberley.

14144. But you were to leave Kimberley again?—Yes, to leave Kimberley again at once. I was to move Mr.

Lieut.-General The Lord Methuen,
G.C.B., K.C.V.O., C.M.G.

13 Feb. 1903.

*Lieut.-
General
The Lord
Methuen,
G.C.B.,
K.C.V.O.,
C.M.G.*

Rhodes too, and having done that to get back as quick as I could.

14145. You were not to hold the line of country through which you advanced?—No.

14146. Where were you intended to come back to?—I should have come back to Orange River, and then I remember a telegram which I do not think was kept—I am afraid it was lost—in which Sir Redvers Buller telegraphed to me and said: "You are to return to Orange River, where I have got a million rations. You will probably be cut off from us all; you must fight the enemy where you meet him; and you must make your way across to Colesburg to join French." Therefore my intention when I went back to Orange River was to have worked my way across from Orange River and taken over General French's command as well as my own.

14147. How did you think those conditions were to be complied with?—With the utmost celerity, because Kimberley seemed to be in straits according to Mr. Rhodes, and because there was the danger of reinforcements coming from Natal to the enemy directly they heard of my advance. I had to relieve Kimberley, throw in a large supply of provisions, clear out the non-combatants, and return to Orange River. To fulfil these conditions it would not have been an easy matter to march through the country with a large force, because of the limited amount of mule transport (I had no ox transport), and the small supply of water in the country I had to traverse. For instance, after the exhausting day of the Graspan fight, there was only one well with a limited supply of water and a pond of muddy water for my entire force of men, horses, and mules. As matters turned out the enemy made a determined resistance from the first, and as their force consisted entirely of mounted men they could on the defence change their position with the utmost rapidity, changing thereby my flank into a frontal attack, notably so at Graspan.

14148. From the nature of your advance, therefore, you had to keep to the railway?—I had to keep to the railway; I had to keep to the railway, because I could only carry a certain amount, I forget how many days', of supplies with the mule transport, for most of that was required for the blankets, and so on, that had to go with the regiments, and the remainder of my provisions were carried by the railway which followed me day by day.

14149. Your transport was all mule transport?—Yes, and that was really only sufficient for the regimental and staff requirements.

14150. Was it regimental transport?—Yes; I may say, roughly speaking, it was regimental transport.

14151. Was there no question of ox transport?—No, the ox transport never came up at all.

14152. I was trying to lay my hands upon it, but something was said by some of the witnesses before about the ox transport, and my recollection was that it was suggested that ox transport should be given to your force?—I never heard of it, to the best of my recollection. What date did they say it was offered to me?

14153. On the 6th December, I think?—Yes, that was when I was at Modder River.

14154. This was a reply to a telegram referred to by Colonel Clayton in his evidence at Question 2752: "Your No. 106 railway line will be all right for Kimberley. Ox transport as suggested by you not required.—C.S.O., Modder River"?—You see, I suggested ox transport there.

14155. No, that is an answer from your staff officer. Then Colonel Clayton was asked this in question 2753: "You had that communication from Major Paul on the subject of transport for Lord Methuen's advance?" And he replied: "Yes, we had a communication from him to the effect that Lord Methuen had practically refused to have ox transport with him. We wished him to have ox transport as a reserve, in order that if he wanted to get away from the railway he could have done so. He refused on two occasions to have ox transport with him; he said he did not want such slow-moving transport"?—That would be after I got to Modder River.

14156. On the 6th December?—Yes, that would have been so. I think my force would not have been sufficient to have taken my mule transport and the ox transport I should have required, but I do not recollect the telegram at this moment.

14157. It was from Major Paul, apparently?—I do not recollect the telegram.

14158. But, anyhow, I understand you to say that with the object you had in view it was necessary for you to keep near the railway?—Absolutely. I am now talking of the advance up to Modder River, and there was no question there about ox transport. I think what you are referring to now is after I had got to the Modder River in my further advance up to Magersfontein, and when I had sufficient transport to take with me to Abbotsdam, and so to attack the Boers at Spytfontein, had I been successful at Magersfontein; but my force was not big enough for me to encumber myself with more than five days' provisions, and that I was perfectly able to take with the mule transport I had with me by first of all clearing the whole of the regimental transport and making use of all I could get hold of for my rations. The telegram you have quoted from is, therefore, quite correct. I should not have required the transport.

14159. You go on to point out in the statement which you sent in that your force had so small an amount of cavalry that you were immobile as compared with the Boers?—Yes. In such an open country, and against a force so composed, I consider my mounted force of one cavalry regiment and 120 mounted Colonials inadequate. A battery of horse artillery would have proved of great value. I had two batteries at first, and then I had three batteries when I got to Modder River, but if I had had a battery of horse artillery they could have moved forward with cavalry.

14160. Had you only one cavalry regiment?—Yes, the 9th Lancers; I am talking now of the time up to the Modder.

14161. That was the whole of your cavalry?—That was all; for instance, as I have said in my despatch of Belmont; when I took the position there I had at my feet, about 2,000 yards off, the whole of the Boer laager, but I had not anybody to go for it; if I could have got a battery of horse artillery on to the heights, which were not difficult to get up, I could have fired into their convoy as long as I liked, but the horses of the field batteries were dead beat, the guns were heavier, and they could not get up.

14162. The horses were not in good condition?—No, the horses were soon worn out, for they were in poor condition when they left Orange River, being dependent entirely on their insufficient ration; there was no grazing at Orange River. I do not recollect for certain what the ration there was; it should have been 10lbs. of oats and the ordinary ration of hay, and they might have had that; but then Sir Redvers said to me: "Mind you, you will find there is grazing up there, and you will make them graze; don't you listen to anyone if he says they want more for their horses." Well, there was hardly any grazing there, and the horses ought to have had a better ration than they had.

14163. Was that owing to any peculiarity in the season?—Oh, no; but you see the force had been there some time, and unless you can manage to cover a very great deal of ground your force soon eats up the grass around, and another thing is that all that part of the Karroo never gives good grazing. November, generally speaking, is a good time for it.

14164. Sir Redvers Buller must have had inaccurate information with regard to the grazing then?—I think he had too hopeful a view of the grazing there and the condition of the horses; but he did not get too hopeful a view from the officers who were up at Orange River.

14165. Were those horses that had been lately landed, or had they been some time in the country?—I think the 9th Lancers had been there a little time, and the Brigade Division was a Brigade Division that came from Aldershot; I think they went out somewhere about August, but that I cannot tell you.

14166. Then their horses would have had some time, at any rate, to acclimatise?—Some little time. I had better answer that I do not know what time they went there.

14167. I only asked the question because we have had so much evidence to show that the horses that were not acclimatised failed very rapidly?—Yes, that is quite true. I think you might say they were not acclimatised.

14168. The remarks you have now been making refer to the time when you were between the Orange River and the Modder?—Yes.

13 Feb. 1903.

14169. Will you now deal with the events after crossing the Modder?—As regards the Magersfontein reverse, without wishing to rake up more than I can help, the disputed question as to whether or no my force should have marched round the enemy's left flank, I consider that such a movement, entailing as it did quitting my line of communications, leaving the strong ridge of which Magersfontein formed the key in the enemy's hands, would have been unjustifiably hazardous. My reason for saying so was because my force was not sufficiently mobile, nor was my mounted force, augmented by one cavalry regiment, adequate. The question of transport would have been a matter of difficulty supposing my force had been adequate for the task set it.

14170. Does that mean that you had a second cavalry regiment at that time?—Yes, I had one more cavalry regiment; the 12th Lancers were sent to me.

14171. All your cavalry at that time was two cavalry regiments and 120 Colonials?—Yes.

14172. If you had quitted the line of railway, what would that have involved?—Do you mean the amount of rations I would have had to take?

14173. Yes, that is one point?—I should have had to be away from the Modder River five days, which would have entailed five days' provisions.

14174. Marching to the right to get round?—Yes, to get round the enemy's left.

14175. Had you transport to take that quantity?—Yes.

14176. But you would have had to guard your communications during that time?—I should have had to guard my communications by occupying Magersfontein with a strong detachment; that was the reason of my attacking Magersfontein. I should never have dreamt of going round the Magersfontein position and leaving it in the hands of the enemy, because all they had to do was to come right across my rear and cut me off from my line of communications. The very first thing I had to do was to secure my line of communications by occupying the key of the enemy's position, and having done that I meant to leave a strong detachment of the Highlanders on the Magersfontein ridge and to push on with the remainder of my force to Abbotsdam.

14177. I did not quite understand. I thought from what you said before that when you referred to "Leaving the strong ridge of which Magersfontein formed the key in the enemy's hands," you meant to leave them there?—To leave the enemy there?

14178. Yes, to leave the enemy at Magersfontein?—On the ridge?

14179. Yes?—No, I put it "leaving the strong ridge of which Magersfontein formed the key in the enemy's possession would have been unjustifiably hazardous." I considered that such a movement, entailing as it did quitting my line of communications, and leaving the strong ridge of which Magersfontein formed the key in the enemy's hands, would have been unjustifiably hazardous. I say that I meant to have taken the Magersfontein ridge, and to have left a detachment of Highlanders there.

14180. I understand now; what I understood was that you would have made your flank march leaving Magersfontein and going round it?—No, that is just what I say would have been unjustifiably hazardous, because I should have had my whole line of communications cut off.

14181. So that the taking of Magersfontein was a preliminary in any case?—It was absolutely essential, because I knew perfectly well that there was an equally strong, and I was told a stronger position between Magersfontein and Kimberley, called Spytfontein Ridge, and the Boers would have fallen back upon Spytfontein. From Abbotsdam to the ridges which form the position of Spytfontein was about six miles, and then I had to fight five miles before I got to the railway. If I had left the heights of Magersfontein in the enemy's possession, had fought them again at Spytfontein, and had not been successful, I would ask you what my position would have been; whereas, if I fought at Spytfontein (the Magersfontein ridge being in my possession), and was unsuccessful, my line of retirement was always perfectly secure.

14182. And at that period, as I understand you, you consider your force was inadequate in cavalry?—Yes.

14183. And in the matter of horse artillery?—No, not then, because I had got a battery of horse artillery.

14184. (Sir Frederick Darley.) What was the strength of the cavalry regiment approximately?—I could not give you its fighting strength, because the horses of the 9th Lancers were so wretchedly weak, and probably a good many men dismounted.

14185. (Chairman.) But in the other arms of the service was the force adequate?—No; considering the strong position held by the Boers at Magersfontein, according to the rules of war, for an attacking force I could not call the infantry force adequate, but I am not making any complaint on that score. I am still lingering on the fact that I had not enough mounted men.

14186. At the subsequent stages of your command you had adequate forces?—Yes.

14187. We had from Lord Roberts the other day an account of the various movements, and I do not suppose it is necessary to take you through the events that occurred during the time you were in command on the west?—No.

14188. The next point is with regard to the quality of the men, and in the first place as to their shooting?—The shooting of the Regular troops was conducted under exceptional difficulties on account of the clearness of the atmosphere, and because the enemy offered no good target, but my opinion gained from my experience during the Tirah and the South African campaigns is that the shooting of our infantry is not worthy of the accuracy and the long range powers possessed by the present rifle.

14189. (Sir John Hopkins.) May I interrupt you for one moment to ask you how the clearness of the atmosphere interferes with good shooting?—Because it is so difficult to tell the distances, after being accustomed to the English atmosphere.

14190. It is a case of judging distances?—Absolutely, and that would be the same in the Tirah too, although not to the same extent.

14191. (Chairman.) Will you proceed with your statement?—No money can be so well spent by the nation on the Army as it can be on musketry practice. I do not lay the blame on the soldier for his want of precision in aiming or his lack of knowledge in judging distances correctly. I blame ourselves, because we have set so far too much stress on the figure of merit in the different battalions in the Army, which, in the opinion of many, would be far better abolished. We require to devote far more time, money and intelligent interest on musketry practice, specially at movable targets. We should see that the soldier, whilst shooting, takes care he does not offer a target to the enemy. Good shooting, accurate judging of distance, and intelligent use of ground are the very essence of success in modern warfare, and well worth the purchase at a heavy price.

14192. What is the objection to the figure of merit?—I think it gives a fictitious value to the shooting of regiments. It is done a great deal with fixed targets, and they think much more of the figure of merit shown in a battalion than of the ordinary work that would be done by companies firing at movable targets, and so on.

14193. Does it mean that you want more individual training of the men?—More individual training of the men, and much more of the company officers, and much less parading before the Army what they are doing in each regiment, I think. I am speaking now rather from what I have been told by regimental officers themselves. In India, in Malta, and in England it is so very difficult to get the conditions the same. I think the conditions, for instance, at the Cape, at Malta, in India and in England are so different that you never can make the figure of merit perfectly fair, and at the same time it is the old story, it is a good self advertisement, whereas if you do the work modestly and quietly it pays the best in the end.

14194. The figure of merit, as I understand, represents the merit of the regiment in the mass?—Yes. You say one regiment has 141, and the next has 140, and no regiment is very content with itself.

14195. But in modern warfare what you have to look to is the individual man?—The individual work, and to make your company officer responsible, and see he does the work, and you need not bother so much about what the regiment's figure of merit.

14196. Of course, you cannot very well get over the differences of atmosphere?—No, and that is what I mean; the figure must be fictitious, if you are practising

one regiment at Malta, and one in England, where the conditions are so very different. Take the Cape, at Wynberg; all the men had to do was to walk about 500 yards down to their rifle range, and shoot just when they liked with the greatest ease. But now I take a battalion of the Guards; they would go down to Pirbright; they have to shoot perhaps in April in cold weather, with a good deal of wind, get through their shooting, and come back again; there is no fairness of comparison between the two. I only give you these two instances.

14197. But there would always be the difficulty of training soldiers in this country as completely as you could under better conditions elsewhere?—That is perfectly true, but what I have said applies to the figure of merit.

14198. Do you think you could get the individual soldier to learn the judging of distances?—Much better, but I do not think you want to hurry so much as you do. I think, as I say, that you want to spend more money and time in encouraging shooting and in encouraging company officers to take interest in it.

14199. You have also to see that the soldier keeps under cover whilst he is shooting?—Yes, that is very desirable. As to the shooting of the Militia, when I say that in many cases the men had not even gone through their musketry practice, and were recruits in a musketry sense, I do not think I need go any further.

14200. The Militia in any case cannot have the same amount of practice as the Army?—No.

14201. Did you see any Militia regiments or any parts of Militia regiments which had had sufficient training?—Yes, I had with me after Pretoria, during the last part of the war, a company of mounted infantry from Bedford and North Staffordshire, and I think they were perhaps the best company that I had in my Division, but there were a good number of old soldiers among them.

14202. And I suppose they had been out for some time?—Yes, they had been out for some time, and they are two exceptionally fine Militia regiments. The other Militia regiments had never had a chance of firing, as far as I remember.

14203. Have you seen enough of Militia regiments not only in the war, but otherwise, to say if it is possible with the present amount of training to make them good shots?—No, I do not think the present amount of practice for the Militia is sufficient. You have them out for a certain number of weeks, and they have to get through their drill and their musketry practice, and it is a scramble from beginning to end. Of course, it depends a great deal where they have their ranges; if the ranges happen to be close to barracks they save time; but I can safely say that if the present weapon is to be made proper use of and appreciated properly the amount of time they have for musketry practice is not sufficient.

14204. (*Viscount Esher.*) How many days do they have?—I cannot answer that question now, as they have altered the conditions. Then as to the shooting of the Imperial Yeomanry, I do not suppose any men would be more surprised than the Yeomen, were I to say their marksmanship was satisfactory. But it is not to be expected it would be. Anyone who has any knowledge of Volunteers and Yeomen will know how very seldom you find the combination of a man who is a good horseman, and also proficient with a rifle. I found that in 1884, when I had to get together at a fortnight's notice something like 600 men for Sir Charles Warren's Expedition. It was noticeable how few men who could ride knew anything whatever about a rifle, and *vice versa*; the men who would go down to the range and would take the trouble to shoot at a target could not ride a horse. It is very difficult to find a man who is a good rider to hounds who would care to go down to a range for an hour to fire at a target.

14205. (*Chairman.*) There was a difference between the first contingent and the second contingent of Yeomanry, was there not?—Yes, I have not said anything about the second contingent, because you stop at Pretoria. When the second contingent of Yeomanry came out their riding was hopelessly bad; they had no knowledge of a horse, or how to ride, and there were only a few farmers among them. In the first contingent the former element was not so large as one would have thought. In the second contingent there were mostly townsmen, and when first Lord Kitchener ordered me to make a combined movement with the new Yeomanry,

I pointed out to him that I could not possibly take them alone, and so I took my old Yeomanry and those of the new Yeomanry who were good enough. I then formed a column of them, and they did their work very fairly. Afterwards there came to me a certain number of men who I always understood were men from the East End, and they were men of an inferior stamp.

14206. Were they in the second contingent?—Yes. When I started for my first trek when they were all new Yeomanry, I told Lord Kitchener that I did so knowing perfectly well the danger, and I pointed it out to him, and some of them suffered accordingly from not having any knowledge of shooting or riding. I wish to say of the second contingent (because there has been a good deal of adverse criticism against them), that they were not in a position either through capacity for riding, shooting, or discipline at first to render a satisfactory account of themselves, but by the time they had once got into working order even those men who came from the East End, and who were quite a lower class, had their hearts in the right place, and did their work intelligently, and I have not one single word to say against them. I am very glad you have given me the chance to say this much for them, because I have seen so many criticisms abusing the men for their want of pluck. It was not their fault; it was sending them out unprepared, and not giving them a chance when they got to the country of getting into order before they were in front of the enemy.

14207. You must bear in mind with regard to that limitation on our Inquiry which you have referred to, that that applies only to military operations, and any question with regard to the men we can inquire into throughout?—Yes.

14208. The men of the first contingent, I think, our evidence goes to show were better riders, and knew more about horses?—Yes, good riders. I will now proceed with my evidence as to the shooting. We have now to make the Yeoman know that his riding powers are of little value unless he is at any rate a fair shot. The shooting of the Colonials from the Cape, Australia, New Zealand, and Tasmania varied very much, but in some corps was decidedly good. Making good use of ground came natural to them. Although the Colonials from Australia, New Zealand, and Tasmania joined me later on in the campaign, it is as well to include them in my evidence.

14209. You were satisfied on the whole with the shooting of the Colonials?—Yes.

14210. Then, as to the marching?—As soon as the weak men were weeded out, and the troops were in condition there was no question as to the men marching well. I cannot ever recollect the men not being ready to do more than I asked them to perform. I gladly include the Militia and the Volunteer companies in this statement. As long as the men are well fed and taken care of by their officers one need not fear stragglers. I except, as a rule, the men of Section D from the above remarks, as they fell out, and we left a good many behind at different places.

14211. What does that mean with regard to Section D?—They are men having special qualifications. I was going to say they are more or less veterans who go into Section D.

14212. (*Sir Henry Norman.*) Technically there is a particular meaning attached to Section D; it is men who have gone through the reserve, and are allowed to serve again?—Yes, they are allowed to serve again, for certain reasons.

14213. And they get the great advantage of being allowed, if they fail during the campaign from ill-health or wounds, to count the whole of their previous service?—I do not recollect.

14214. And he is a man who has gone through the reserve, and is allowed to come back?—Yes, and only for special reasons he is allowed to go on.

14215. (*Chairman.*) He may have fallen out because he was physically unfit?—That is it, I think, because he was more or less a cripple.

14216. As to the cavalry, you do not wish to express an opinion?—No, I do not mean to say anything against their horsemanship; but I do not care to give an opinion.

14217. In mentioning horsemanship in the memo-

random we sent to you, we did not mean only the cavalry?—No; I have mentioned the others. As regards the Yeomanry of the first contingent, I think, on the whole, their horsemanship was quite satisfactory. As regards the Colonial corps the rider and horse were one. The artillery were the best horsemasters in my force; then I put the cavalry next.

14218. Is that horsemanship or horsemastership?—I allude now to horsemanship.

14219. Will you now deal with horsemastership?—The artillery were the best horsemasters in my force, the cavalry next. The Yeoman and the Colonials seemed at first to have an idea that I had an unlimited supply of horses always ready for them at a moment's notice. After I made them march on foot for some little time they seemed to realise the value of riding, and in time became fair horsemasters.

14220. Does that mean you made them walk because they were not taking sufficient care of their horses?—Yes, when I found a great many of them knocking their horses up, I formed them into a company and attached them to the Loyal Lancashires, and told them they could walk with them. There were not so many of them on foot next time. We have in peace time to make the Colonials and Yeoman understand what a horse can do if properly tended, for at present they have very little idea of saving a horse or nursing a tender back.

14221. You speak there only of the Colonials and Yeomanry; I think some of our evidence goes further, and, indeed, all through, except perhaps in the artillery?—I had nothing to do with cavalry with my force after Modder River, except for a few days in the Marico country, because I only had Yeomanry and Colonials.

14222. Have you any reason to doubt that those observations apply also to some extent to the cavalry?—I have no experience.

14223. The next point is entrenchment and cover?—The Boers taught us the advantage of narrow deep trenches, the line being scarcely visible. We were at first too apt to show our line of defence. Our men had not much idea of selecting sites for entrenchments, or using configuration of ground to conceal themselves; the officers were not strong on this point. This is the fault of our peace training, and the want of suitable ground for practising entrenching. The Boers and Colonials made use of ground instinctively, probably from living in country away from towns, and many of them accustomed to stalking game.

14224. The conditions of modern warfare make that a very important point?—Very important indeed.

14225. Do you think you could bring the ordinary British soldier to a reasonable idea of the necessity of taking cover?—Yes, to a great extent, but I do not think you can ever expect any soldier in our disciplined Army to instinctively gain cover like a man who lives in an open country, and who is in the habit of stalking game.

14226. Would the class of man you get as a recruit for the Army have intelligence enough—he has plenty of pluck—to take up that idea?—As I said, to a certain extent, but you would never expect him to have the cunning and shrewdness of the Dutchman, or of our Colonials from New Zealand and Australia.

14227. And to get a really satisfactory Army from that point of view, you would have to go to a more intelligent class?—Yes.

14228. Then as to the physique of the men?—In the Guards very fine; in the Regulars very fair; in the Militia fair in some battalions, indifferent in others. My remarks are limited up to the time the troops reached Pretoria. When I was at Lichtenburg in the latter period of the war there came a strong draft for the Northampton, and I have seen a good many bad drafts when I was on the staff and commanding the Home District, but I do not think I ever saw so bad a draft as that.

14229. For the Northampton Regiment or Militia?—The Northampton Regiment; I reported it to the Commander-in-Chief at the time.

14230. Bad in physique?—Absolutely wretched, the physique and the general conditions of a man (the moral conditions of a man), in my opinion, go together. That is to say, if you get a wretched set of men like that, you may be perfectly certain that if they get into a tight corner they will not face it.

14231. Were they men recruited under the ordinary conditions?—I know nothing about them—I should think so.

14232. They came out as a draft?—They came out as a draft to the Northampton.

14233. The Yeomanry you have spoken to, I think?—In the first contingent of the Yeomanry the physique and stamina varied greatly, which fact, I assume, accounts for the large number who went home early in the war. A large percentage of those who found their way into hospital were either not strong enough or energetic enough to risk a second winter on the veldt. There was a very marked improvement in this respect in the second contingent of Yeomanry, for they did their best to avoid going into hospital, and then rejoined without delay. It is only fair to those men in the first contingent of Yeomanry who stayed out the whole of their time, many at very great self-sacrifice, and saw the really hard work, dating from the time we left Krugersdorp in July, 1900, to make this remark, and also because in the event of the Yeomanry being called upon to serve in any future campaign it is as well to bear in mind this abnormally large wastage in war.

14234. You mean that the men who stayed out in the first Yeomanry for the whole of the time were not those who found their way into hospital, and were invalided home?—No. There was no difficulty in getting home in the case of the first contingent; a man had to ask leave and Lord Roberts generally allowed it; but later on, with Lord Kitchener, I am glad to say a very firm hand was put down, and men could not get away.

14235. A good many of the first Yeomanry stayed out during the whole time?—Yes, a very fair number, but still the proportion of Yeomanry out of the whole force that went back to England was far larger than it ever should have been; I mean there were a good number of men who went home not having done their full share.

14236. They were only enlisted, of course, for a year?—They were enlisted for a year, and as long as the war would last, and that is what I got them to understand perfectly clearly; I had no nonsense about it. Whenever they came up to me with the year theory, I said, "Nothing of the sort; it is as long as the war will last." They said, "Lord Roberts has stated the war was over," and I said, "Is it over?" That is all.

14237. If that was the real interpretation of the condition, why were they allowed to go?—A man would come forward and say his mother had gone to a lunatic asylum, and there was nobody else to look after his sister, or that his wife was dying, and so on, and I sent all these forward. I must say they always had a remarkably good excuse, but it is extraordinary how all these reasons vanished when they knew they would not be allowed to go home any more. We could not write home to England always and ascertain if the story was absolutely true. With the exception of the objects of the above remarks I can conceive no troops possessed of higher morale than the men whom I had the honour to command throughout the campaign; and I hope I may not be out of order if I include the second contingent of Yeomanry, the Volunteer companies, the Volunteers in the other branches, and the Rhodesian Police in these remarks, all of whom served under me in the latter part of the war. The Volunteer companies are those that joined the infantry regiments there, and seemed to me to do very good work.

14238. They fell in with the regiments?—Yes.

14239. One witness seemed to think it was perhaps a little hard on a Volunteer company going out to find itself placed in a crack regiment, and that it was a severe strain?—It was very hard on them at the end, because I remember wishing the Volunteer companies "Good-bye" in August, or about that date, when they thought they were going home, and they stayed on for another five or six months after that, but I never heard any grumbling from them.

14240. I meant rather that it was a strain on their physique being brought out to join a crack regiment in hard fighting trim?—They did not march at first as well as the others.

14241. But they soon took up?—Yes.

14242. As to the intelligence of the men?—As to the cavalry soldier, what struck me in comparing him with the Yeoman or Colonial was the lack of individual initiative. To give an example of what I mean, I was marching through the Marico district, living from hand to mouth, and I noticed some nosebags of the

cavalry whilst on the march empty, although the Yeomen and Colonials had theirs all full of mealies—the two latter required no telling. I remember the Colonial Division which joined in the chase after De Wet—Cape men—and I do not know how they would have got on at all if what I have just said had not been true of them. I said: "If you have no provisions at all, how are you getting on?" They said: "Lord Kitchener gave us orders to live on the country, and we live on it"; and I must say they did. The cavalry soldier, on the contrary, had probably received no definite instructions; he had not been trained to look out for himself, and to use his own intelligence; he is dependent on his officer or non-commissioned officer, and if he finds himself alone he gets into difficulties. The shrewdest men I have ever had to deal with are the Colonials; anything they do not know is not worth knowing. They were quite the Boer's equal in everything but courage, in which quality they excelled him greatly. The Yeomanry gained in military knowledge to a surprising extent during the campaign. They bought their experience rather expensively at first, but I could place implicit reliance in them after a short time. This good result was due to their individual intelligence, their independence, and the confidence they, with justice, placed in the leading of many of their officers. The first Yeomanry had the great advantage of having men in the county whom they knew, and, therefore, here was a thorough county *esprit de corps*. The Royal Engineer fitted himself into any job, seemed theoretically and practically well educated for work and service, and it made no difference whether the officer was by his side or not. I question whether there is very much room for improvement in the gunner as a fighting machine. Most of my time in action was spent with a battery, and I give the officers the utmost credit for the fine fighting soldier they have formed out of the same material supplied to the infantry. The gunner thinks of nothing but his horses and gun, and there is little more he can be taught about either.

14243. Is the gunner the same material as the infantry?—Yes. The garrison gunner is a bigger man altogether; he is the sort of man you would have for the Guards for standard, but the ordinary gunner is much the same as we have for the infantry.

14244. Because otherwise your evidence about intelligence seems to point to the same thing, that if you want an intelligent soldier you must get a class that is intelligent to take him from?—Yes. The gunner does not require so much individuality; all he has to do is to be fixed on to his gun and he knows what he has to do, and it is extraordinary under fire, even under the hardest circumstances, how little the gunner notices anything else but his gun.

14245. But the infantryman has to exercise a great deal of individuality?—Yes.

14246. And that is where, perhaps, he fails?—That is where he would fail.

14247. Then as to officers?—Taking the regimental officer, a very great improvement has been shown of late years in the knowledge possessed, and the interest taken in his profession, by regimental officers. No doubt there is much more to be done. If they have shortcomings, let us be fair and not lay all the blame on them, but admit frankly the shortcomings belong to our system, and sometimes are our own. You cannot make bricks without straw, and can anything have been more disheartening to a zealous officer than to find himself in command of a company reduced from various causes to a unit not worth commanding? Added to this, he often finds himself restricted to ground quite inadequate, or unadapted for tactical instruction.

14248. Are you referring there to his training in peace time?—Yes, I am referring to his training in peace time.

14249. Do you refer in that to the fact which has been brought before us that in many cases regiments are so reduced that they scarcely can appear on parade at all?—Yes.

14250. (Sir John Edge.) Is that reduced by the men being taken away for other duties?—Not only that, but so many of them are recruits, and the regiment is often under strength.

14251. (Sir Frederick Darley.) And the men are taken away to perform menial duties?—Yes, they are taken away for everything—servants, for instance, or perhaps to do the gardens and what not. It is extraordinary

the number who are taken off duty from one cause or another, but, of course, hitherto there have been very many recruits to drill and drafts to send off to the regiments abroad.

14252. (Chairman.) We had it in evidence that for fatigue duties alone so many were taken that it seriously impaired the possibility of drill?—That is perfectly true.

14253. That you have seen yourself?—Yes.

14254. Does that obtain all through the Army?—Yes. I suppose it varies very much according to garrisons, but naturally it does prevail extensively. You must have your coal fatigues, and so on, just the same in every barracks.

14255. Would it apply to the Guards, for instance?—Yes.

14256. (Sir Frederick Darley.) We are told it does not apply to the cavalry, and that where the cavalry are with infantry the infantry do the work?—That is so; particularly with the Guards there are daily duties they have to perform; for instance, at Windsor I think it is 46 men that have to be found for guard every day, and if you multiply that by two, the guard coming off and the guard going on, there are 92 men on duty at once, and when you come to add to that the number of recruits and the number of men employed in barrack duty, and so on, you will find you have a very small company left.

14257. (Chairman.) And that impairs the training of the regiment and the training of the officers?—Absolutely. Of course, the authorities have done their best by fixing a certain period of time for company training when every man is supposed to be present. I think very likely in the Guards that is to some extent satisfactory, but in some line regiments even then, with the number of recruits that are always in barracks and the duties that take them away from their company, they have very small companies indeed.

14258. Have you ever considered how that difficulty could be met?—No; it is a very difficult matter to meet. I will not go so far as to say that I can give any suggestion; I can only point out what has been done.

14259. One suggestion made was that fatigue duties ought not to be met by men belonging to the regiment at all, but ought to be done by, say, Reservists?—That might be.

14260. Would that meet the difficulty to any extent?—Yes, that would meet the difficulty by increasing the expense to the country very considerably.

14261. The expense, no doubt, is the difficulty?—Yes, because that means employing so many more men in the Army.

14262. But if you are to have the men who are being trained properly trained, and the regiment made properly efficient by their officers being sufficiently trained, do you see any other way of doing it?—No, I cannot help you.

14263. The regiment must be kept fairly full in order that that result may be brought about?—I think the reason to a great extent is that of the men who are in the regiment there is an enormous number of recruits, and although the regiment on paper may be all right, it is full of a large number of immature men who are no good to anybody.

14264. But that surely is a different point rather, and as long as our present system of linked battalions goes on that must be so?—Yes, I think so. I think a considerable change is necessary, but what that change is I cannot venture to say.

14265. Outside that matter, if you take away in addition men who are trained soldiers and put them to other duties which should be performed by other men, you still further reduce the efficiency?—Certainly.

14266. (Sir Henry Norman.) Short service, of course, greatly increases that evil, because there are so many more recruits in the regiment than there would otherwise be?—Yes, we are always quoting Germany, but where they get their immense advantage is that it is a wheel all through the year; they begin in October, and go right round, and they have a system. As long as we have recruits joining all through the year we must be prepared for losing a great number of men every year from learning their work, and with our present organisation we can have no regular system.

14267. (Sir Frederick Darley.) Over what period are

the men expected to drill? I think you said there was some time when the men must all be there?—Yes, they have a company training, and that is about one month in the year; then you have the whole of your company together as strong as you can get it, and you train them; but, as I say, now, as a matter of fact, with the recruits, and men not available, very often the numbers have been far too few for the officer to take an interest in his work.

14268. (*Chairman.*) Will you proceed about the officers?—The best young officers I have ever met were serving in Native regiments in India; and why? Because they had commands in which they could take interest, plenty of ground for practice, and occupying positions of responsibility. It is this system which establishes the keenness in Continental armies, and if we wish to stimulate emulation in our regimental officers the remedy lies in ourselves. The more intelligent work I have given them, the more I have forced them to be independent, and not to rest on their seniors for support, the better and keener soldiers they were for it. Whether the double company system would not be a wise innovation, considering our small companies, I have for many years thought worth consideration. That is the important point; if you cannot suggest any means by which you can make the companies stronger than they are, there is always the solution of having in the infantry what they have in the cavalry, which is the squadron system, and there at once you get two fairly strong companies made into a good strong company. Our company system of eight companies gives you a small number of men, if you compare them with the big companies the Germans have.

14269. The German companies are larger?—The German companies are much larger—250 on war footing and the consequence is that if you have the double company system you would always have a unit well worth working. I advocated that years and years ago.

14270. (*Sir Henry Norman.*) And then the Germans call them companies, and not double companies?—Yes, but we could always work the two companies under the one officer.

14271. Do you not think it would be a better system to have them in one big company, as they have on the Continent?—Yes, but there is always the difficulty, particularly abroad, of sending a company complete on detachment; you might send half a company.

14272. (*Sir Frederick Darley.*) And you would have two captains to each company, in accordance with that suggestion?—Yes.

14273. (*Sir Henry Norman.*) They do not have that in the German Army?—No; there they have a big company.

14274. They have that in the Native armies now—the double company?—Yes, I never could see the objection to it, and I see great advantages in it.

14275. (*Sir Frederick Darley.*) The German captain commands a larger unit?—Yes, it is 250 on war footing. There is another very important matter, and that is whether you might not try to strengthen the territorial system by placing, so far as possible, officers in the regiments, Militia and Regulars, belonging to their own counties; that is to say, you find the county magnates putting their sons into Militia regiments which have nothing whatever to do with the county, and I think if it could be established as far as possible that the officers belonging to the Militia and the territorial regiment should be officered by gentlemen belonging to the county it would have a very good effect, certainly on the Militia and, I think, on the Line regiment, too. Everything you can do to bring together the feeling between the regiment and the county I think ought to be done.

14276. (*Chairman.*) That would increase the *esprit de corps*?—Yes, and I think it would improve the recruiting as well; for instance, in the Yeomanry the work is done a great deal individually, and I think if you found the gentlemen of counties in their own regiments they themselves would help to get recruits, and you would stimulate recruiting to a great extent, or to some extent, at any rate. Now I see, for instance, a popular Militia regiment in Scotland taking away two or three young officers in my own county who ought to be in their own Militia regiment.

14277. (*Sir Henry Norman.*) And that obtained to some extent in the Yeomanry?—Yes, most officers in the Yeomanry belong to their own county.

14278. (*Sir George Taubman-Goldie.*) Would there not be difficulty in the Regulars under the system of open competition?—Yes, but I mean as far as you could; I do not say you could do it altogether, but I would recommend that as the principle, and you could work up to it. You need not always carry it out, but as much as you can. If a Welshman comes up, and there is a Shropshire regiment and a Worcestershire, I would, for choice, put him into his own county regiment.

14279. Would there not spring up a feeling amongst the officers that they should try to get rid of anyone who did not belong to the county?—I belong to the Scots Guards, and I do not think there was any particular feeling there against the English. I spoke to an officer commanding a battalion in my own county, and he was very strongly in favour of my suggestion.

14280. But at any time there was an irregular regiment attached to the territorial regiment of which a large proportion of the officers were county men, some of these men getting in by open competition, and no special county men, would be considered as rather outsiders?—They might have their choice, but there is the ordinary luck, and you would put them into the county regiment if you could instead of putting them into a regiment of which they know nothing. The thing to do is to begin with the Militia.

14281. The Militia and Yeomanry would stand on a different footing, but I would be rather afraid of establishing a feeling in a Regular regiment of such a kind that there would be a tendency to get rid of any officer who did not belong to the county?—I do not think there would be; there might be. You might get 10 or 12 county officers in a regiment, but you would never get the majority.

14282. (*Chairman.*) Now, I suppose the county men go into the Militia of their own county?—To a great extent, but nothing like what they ought to.

14283. As to officers reporting, what have you to say?—It has been stated that officers cannot draw up a report. My experience on service does not bear out that statement. From the time I left Orange River to the time I left Modder River to take up my command at Kimberley, the reports and the sketches were as clear and comprehensive as they could well be under the conditions of modern warfare—that is the difficulties entailed by smokeless powder and long-range fire. Later on in the war the short reports sent me from the front were seldom misleading. What is required is not a well-finished sketch and a verbose report, but a rapid sketch, the situation described in as few words as possible in a clear hand. Of course before I went to Modder I had the advantage of Colonel Verner, who is a past-master at the art of reconnaissance, and then I had two extremely good officers, Colonel Cheston Masters, now commanding the Rhodesian Police, who was then a lieutenant, and Lieutenant Brooks, who has since passed through the Staff College. I was speaking to Dr. Warre, and he said, "You took picked men," and I said, "Naturally, because I wanted my work done as well as I could"; but all I know is that better work could not have been done. Afterwards when you are advancing on the march all you require is a sketch done fairly clearly and quickly, and with as few words as possible, written in a legible hand. I must honestly say that I have never had any complaint to make.

14284. You are speaking of your Intelligence officers?—No, I am speaking now of the regimental officers who had to give me their reports, because, if you remember, in the Committee which sat on the education of officers, that was a very strong point—that they could not draw up a report, and so on, but so far as I am concerned I cannot say that I found it so.

14285. You are not referring only to the two officers you have mentioned?—No, I am only telling you as a matter of fact, that I did have picked officers for it, but naturally any General would have picked officers. The one belonged to the 9th Lancers, and the other to the Rimington Scouts. I simply called on the regiments, and they sent me their two best men. Then there comes the training. I have already spoken about the training of the infantry. Musketry training all the year round, intelligent seeking of cover, a sufficiently large unit to give an officer interest in his command, and ample space on which to work. Given these conditions, let every opportunity be offered to the best officer to see his way to promotion as a reward for his zeal and ability. That will take in the shooting as well; where I found an officer do justice to his company's shooting I should look upon that as a very im-

portant matter in giving him promotion. I think I should lay more stress almost on the musketry than I should on anything else as long as he also showed his company knew how to take intelligent advantage of cover. The artillery officer, quite apart from his thorough military education at Woolwich, shows the good result of having an independent command. As a major he has a self-contained unit in the battery; and the three subalterns the same in their three sections, hence a very efficient body of officers. It really does not matter a bit in the artillery what battery you have given to you or what officer; they are all equally good, as far as I can see. I cannot speak too highly of them. It is, of course, due to a very great extent, I think, to taking them at the age they are taken at Woolwich, and then they go through a most thoroughly sound good curriculum there, and there is a very good tone among the officers. If you take them in sport or games, for instance, they get more fun for their money, at riding, polo, cricket, and in every way, than any other branch of the service, and they do it cheaply. On service they are the same; they know their work, and do it in a thoroughly professional style.

14286. (*Sir George Taubman-Goldie.*) You are in favour of getting officers young, and training them thoroughly?—Yes, my idea is to get them young, and to train them for two years.

14287. That is preferable you think to getting older men from the Universities?—I think so. I think it is just from the same cause that the Navy is so good, that you get the boy young, and you train him up as you want him; and I think if you get men from the University, although very often good men, they have got a little too old to shape.

14288. (*Chairman.*) It depends on the man?—Of course it does; there are of course exceptions, but, as a rule, I would rather shape a man young than when he gets a little bit older.

14289. (*Lord Strathcona and Mount Royal.*) When you speak of taking young men, up to what age do you mean?—I would take Woolwich, for instance, where the age is 17, I think; you take the boy at 17, and shape him just as you want him, and I naturally go by results. They are professional soldiers in every sense of the word.

14290. (*Chairman.*) And now with regard to the staff?—The great disadvantage a General labours under in our Army is going on service with a staff strange to him, though in the Army Corps system this will be rectified. It is essential if a General is to be well served, and to have his brain free to think out the general scheme, that he should be able with confidence to leave all details in the hands of his staff. For this reason it is essential the staff officers should have passed through the Staff College, or else have had a thorough practical experience of staff work on active service or in time of peace. To place any regimental officer, however capable, without the above qualifications, in a position of trust on the staff is unfair to himself, and likely to prove of danger to the country. More can be made of the fine training given at the Staff College than at present. The officers who go there should be manly, practical men, and more care exercised in shutting out the college to men who know everything, but can do nothing. There is a feeling now that if once the P.S.C. is gained, this is a certain pass for employment, whereas it should be no such thing. Only the best men should be selected, and more men should be encouraged to go there, so that there should be a larger choice to select from. Unquestionably, during the campaign many regimental officers with inadequate training filled staff billets, which would have been far better filled had we possessed a larger reserve of passed Staff College officers than we have at present. Then again it should be understood that the place of Professor at the Staff College should be a stepping-stone to high staff appointments. They should be men admittedly leaders in the field, as well as men of sound theoretical knowledge; men whose value is known throughout the Army. Far more care should be taken that an officer goes back to regimental duty from staff employment; "once on the staff, always on the staff," means injury to the man and the Service. I speak with some knowledge of the Staff College, because I was allowed as a full Colonel to attend the second year's course as a Volunteer.

14291. You attach great importance to the Staff College for staff officers?—The greatest importance.

14292. And, therefore, in order to have a sufficient number of staff officers qualified in that way the more men you put through the Staff College the better?—Yes. You see in the German Army it is not thought any discredit to an officer to go to the staff and then go back to his regiment, and never, perhaps, be employed again. There are something like ninety officers going through the staff at their General Staff College, and only about nine of those or perhaps a dozen go to the General Staff. They are tested by the Chief of the General Staff to see whether they are worth their salt, and out of that number there are only three or four selected for work on the General Staff. I well remember a case in point which shows what I mean; there was a great friend of mine who spoke English and French perfectly, and who was a highly educated man, and a very nice fellow in every sense of the word, and I asked one of my friends on the General Staff, "Why is not 'A' employed? He is a very able man?" and he said, "Yes, he is an able man, and theoretically excellent, but he is not practical enough." With that very strict selection they are able to pick out men who are very able and also practical men. Now every single staff officer with us who gets the P.S.C. considers he ought to get some employment for having gone through the Staff College.

14293. And does not wish to go back to the regiment?—That is the very last thing in some cases.

14294. You think they should go back to the regiment?—Certainly, and there again the Germans are so particular that they send back an officer who is on the staff to go and drill a battalion when he is on the staff. I have often been on the Templehof and seen a staff officer drilling his own battalion to get the practice, and to keep in it. The great mistake of the staff is ever to get out of touch with the regiments.

14295. One opinion expressed to us was that officers who served on the staff should be sent back to the regiments with promotion. Do you think that is a necessary qualification?—No, I do not see why that should be.

14296. They should go back as a matter of course?—Certainly. I think that would be the very last thing to do, to give dissatisfaction to the regimental officers, which that would do if they received promotion as a right.

14297. But in this war you think there were not enough qualified officers?—No, there was a very heavy strain indeed on the number of officers we had, and unless you increase the size of the Staff College to a very great extent you never can expect in any prolonged war to have the number of men you would like to have who have been through the Staff College course.

14298. (*Sir George Taubman-Goldie.*) Unless you shortened the course?—Yes.

14299. I suppose you knew that there was a certain amount of loafing going on there, as there is in other institutions?—There are about six or eight really good men out of the whole batch.

14300. (*Chairman.*) You say you went to take the second year's course?—When I came back from Sir Charles Warren's expedition I wanted to work at field engineering and surveying, and so on, which I had not had the chance to do when I was Brigade Major and Assistant-Adjutant-General, so I first got leave to go through the long course at Chatham, which is three months' surveying and engineering, and next I got leave to do my regimental work, and also to go through the course for the whole year at the Staff College, and the whole of the work I had done in Chatham came in, and I was able to do my work, I believe, satisfactorily for the second year of the Staff College, which is the interesting year. If you take the work I had to learn at Chatham it is much the same work as I should have learnt at Sandhurst, and it seems to me that at the Staff College there is a great deal of work in the first year which formerly was necessary, but which now really is not required, considering the instruction that they get at Sandhurst.

14301. (*Sir George Taubman-Goldie.*) So that a single year of the Staff College well employed would be quite sufficient?—Of course, I bow in deference to men like Major-General Hildyard, who know more, but I think certainly there is a great deal of work done the first year which should be unnecessary now that Sandhurst teaches what it does.

14302. Do you think some distinction might be drawn between the men going into the Adjutant-General A Department and the Adjutant-General B Department?—While at the Staff College?

14303. Yes, as regards instruction?—No, I think a man when he goes to the Staff College ought to be able to learn the whole of the A and B work, but I think that you ought to be most careful when a man has passed through the Staff College to mark what he is fit for, and not put a round man in a square hole. Occasionally you get a man fitted for B sent to A, and A to B, and so on. I do not think it would be interesting enough work otherwise; if I went to the Staff College I should like to learn A and B, and I could perfectly well learn it in a year.

14304. But some officers could not probably; some men are only fitted for the official work, the military law office work, and so on?—Yes, you can easily note that up when they leave the Staff College, and put down what they are fitted for.

14305. If you found a man really not fitted for the Quartermaster-General's work, would it not be more economical to give him a short training in his own line, and get rid of him, so as to be able to pass more men through the College? You are making room for more men to come in, the object being, of course, to pass as many through the Staff College for a given amount of money as you can?—I do not think I agree with you; I think he would have to do his A and B.

14306. Even if he showed no capacity for the B work, the knowledge of ground, reading of maps, and fixing of camps, etc.?—On service my B man might be disabled, and an A man have to do the work. I think a man ought to be able to grasp A and B perfectly, and at the end of the course you would probably see what his bent is. You would say: "I look upon Methuen as better for A Department, and somebody else as better for B Department"; but you would make them both go through it.

14307. (*Sir Henry Norman.*) You think it better that all should go through the same course, without making any invidious distinction?—Yes.

14308. And that afterwards the head of the Staff College should give his opinion as to what they are fitted for?—Yes.

14309. Do you think that is done now?—They will say it is done to a great extent, but I think they should be more strict about it, because officers are not always placed—it may be the fault of Headquarters afterwards—in that department of the staff they are best fitted for.

14310. We have had some evidence to the effect that a very reliable report is now given by the head of the Staff College as to the particular qualifications of an officer when he passes out?—Yes, but that should be noted and attended to by those at Headquarters.

14311. If that is not done it ought to be done?—Yes. Let me put it the other way, that the report rendered by the head of the Staff College should always be recollected at Headquarters, and acted upon, because there is no use for the Commandant of the Staff College to write, "Methuen is fitted for A" if the authorities at Headquarters put him to B.

14312. (*Chairman.*) With regard to supplies, I think you wish to say that they were admirable?—Excellent. I never recollect the food supply, and so on being better or so good as it was in this campaign; from the beginning to end I have not one word to say against it.

14313. (*Sir Henry Norman.*) Had you ever any difficulty with the ammunition? Was there always a sufficient quantity?—Yes, except after Magersfontein; I had got through so much ammunition at Magersfontein that I could not really have gone on. I had to wait then for a fresh supply, but that was my own fault, firing so much, and not the fault of anybody else.

14314. (*Chairman.*) And it was sent up pretty quickly?—Yes.

14315. Were you never short of food?—Never; my men and horses always, I think, except one day, had full rations.

14316. And you do not know of any delay or failure by contractors?—No.

14317. As to horses, what have you to say?—You have had the report of the Court of Inquiry on the administration of the Army Remount Department, and I do

not think I need say more. Of course the difficulties there were that the horses arrived, and they were not given a chance very often. It was nobody's fault; we wanted horses; everybody wanted horses; they landed, and they came up at once without a chance being given to them.

14318. And to that you attribute the great losses?—Yes, to a great extent. The moment they arrived I might get a telegram from Lord Kitchener (he was obliged to do it) saying, "I want you to start at once," and off I had to go with these horses not the least fit. It was nobody's fault, but the fault of the enemy requiring us to move.

14319. It was the exigences of war?—Yes.

14320. You do not wish to enter into the quality of any particular stamp of horse?—No. I agree with what the Court of Inquiry said, that the best horse was the Cape horse, and then the English horse, and particularly the 'bus horses, for the artillery; they did admirably. It is extraordinary how well they came out. I thought the worst horse the Argentine, with no exception.

14321. Did you see many of them?—Not more than I could help. I had them at first, but I did not get any more.

14322. And what have you to say as to transport?—I do not see that I can give any information of value, as it is a big question. If the Commission would name any special points I might be able to answer them. I may say that I am very strongly in favour of the regimental transport, and I thought it was a pity altering it, although when first Lord Kitchener came out they formed big companies of transport, and eventually that was all broken up. Really for most of the campaign I had more or less regimental transport.

14323. It went back of its own momentum?—Yes, because the regimental officers take immense trouble about their transport. They generally appoint a very good officer for it, and take great pride in it, and I think it is a very great thing for a regiment to know all about their own transport. They will take care of it, and when they go off with a detachment they have always their transport available. The system introduced for a short time on the Modder certainly caused friction, and at once disheartened the regimental officer, who at the time the change was made was taking very great trouble about his transport.

14324. For a big move is it not necessary to take away the transport from regiments?—I could always do that; for instance, two or three times when I was chasing De Wet I took the whole of the regimental transport for myself, and gave them the ox transport, and there was no difficulty about that. I used to say "You will have to take over these ox-wagons, and put all your goods upon them, as I am to take your mules," and I used the transport as long as I wanted it, and then it went back to them again.

14325. If the General has that power of control, that sufficiently meets the case?—Quite, but the system they introduced at the Modder was that they made them into big companies. I had five, for instance, and if French wanted to make a move I should have had to send probably three of these five companies off to him, and Cronje would know quite well that with two companies I could not move, and that I would have to wait till the three companies came back again. I think it might have caused a great deal of difficulty.

14326. As to the Medical Staff Corps, what have you to say?—I was quite satisfied with the Medical Staff Corps. The new and sweeping changes were recognised as necessary, and should give the Army an efficient Medical Staff Corps. The civilian surgeons, fresh from the hospitals, and up to all modern requirements, were of great value. I should judge that their services should be utilised in any future campaigns. The orderlies were not always good, but we are inclined to forget a large number were makeshifts from the Regulars and Militia. I have seen more than my share of sisters and nurses, and the Army owe them a very deep debt of gratitude.

14327. They were not with you at first?—No, they came on to me to the Modder afterwards, about the middle of January, I think. Lord Roberts sent them up to me.

14328. I think in the big fights your wounded were sent back?—Yes, they were all sent back, and I think they went straight down to Cape Town. It was ad-

mirably organised by Colonel Townsend, who was my Principal Medical Officer.

14329. It was well worked?—Admirably. Take Graspan, for instance: he only new that morning at 1 o'clock that I was to fight next day, and he cleared the train; by the time I was fighting he had it up without my knowing it, and by 3 o'clock in the afternoon the men were on the train on the battlefield, and sent straight down. After Magersfontein he got up the wounded during the night, and 300 of the Gordons volunteered to act as orderlies, and the next morning, the day I retired to the Modder, those men were on board the train going straight back to Cape Town, which was very sensible, because with men wounded like that if you cannot operate at once it is far better to put them in the train, which is fairly comfortable, send them down to the base hospital, and let them be operated on there.

14330. That you can only do when you have the railway?—Yes.

14331. When you are not near the railway we had some evidence that it would be better to have a large field hospital as close to the front as possible, in order that the men might be operated upon without being moved?—Yes, I think that very likely would be so; in all the last part, when I was moving, you could not have found any place where you would have put a field hospital, as I was all over the veldt.

14332. When you are really moving about like that the field hospital would have to come after you if you had one?—Yes, and that I should not require. I was never more than 50 miles, or not so much, from where I could land my men into the hospital. I could always go to Klerksdorp and Mafeking, and at Lichtenburg I had a very good hospital, which I had formed, and I never had to take my men more than 30 or 40 miles.

14333. Perhaps that to some extent would meet the case?—Yes. You know pretty well where Zeerust and Lichtenburg are; if you take Mafeking, then Zeerust and Lichtenburg are like two bastions; my work was always beyond Zeerust or Lichtenburg, and the consequence was that when I came back from trek I put them back into Zeerust, or Lichtenburg, until they were fit to be moved, and then they were moved to Mafeking, where my hospital was.

14334. (Lord Strathcona and Mount Royal.) Do you refer here, in this statement of your evidence, to women nurses—"sisters and nurses"?—Yes, I was referring to women; the sister is a superior nurse; the nurses are the underlings; the sisters are those who superintend.

14335. (Chairman.) And now will you deal with the Engineers' service?—The Engineers' service was too weak during the latter part of the campaign, being supplemented by natives, but it was always very efficient indeed.

14336. What do you mean by "supplemented by natives"?—There was much work that ought to be done by sappers, but I had not sappers to do it, so I got natives. I mounted these boys on donkeys, and I had about 20 of them; they were taken command of by whatever sapper I had, and made a very efficient black boy brigade.

14337. They did well enough?—Capitally.

14338. (Sir Frederick Darley.) Were they employed in entrenching?—No, in getting the drifts right, and looking after the water arrangements; the Engineers had little to do with the entrenching, but the moment we got into camp they put the pumps up, arranged the water supply, and got the drifts straight.

14339. (Chairman.) Will you proceed with your statement?—Then I come to the effectiveness of the guns. I know the artillery officers will repudiate my statement, but I cannot think our field gun equalled the Creuzot in range, nor do I think we found the range as quickly or accurately as the enemy. I think you will find most of the commanders agree with me, and none of the gunners do. They think their guns quite as good as the Creuzot, and they think they are extremely good at judging distances.

14340. (Sir George Taubman-Goldie.) There, again, the clearness of atmosphere comes in?—Yes, that is so, and the Boers were extremely good judges of distance. Then, as to the pom-pom; the pom-pom was of value, very light, it could easily accompany a mounted force. It did not, perhaps, do great execution, but it frightened the enemy. It certainly did little execution, but in a European war, where you will have more chance of firing at masses, the pom-pom will have a great effect. In South Africa it hardly had a target to fire at.

14341. (Sir Frederick Darley.) What range has the pom-pom?—4,000 yards, speaking off-hand; it is a weapon of wonderful accuracy. The Lyddite shell did not come up to its reputation, but I always took one howitzer with me in the hills, as it terrified the enemy more than any other arm. I very seldom hit anybody with it.

14342. (Sir George Taubman-Goldie.) Does the remark about European armies come in there also—larger masses?—Yes.

14343. Used against masses, it would have a great effect?—Yes. We had no reason to complain of the accuracy or range of our rifle, though the mechanism and general finish of the Mauser are superior. I have no fault to find with our rifle. The Maxim never had a good chance (nor had it in the Tirah campaign), for the only occasion when it would have been of value, that is at Tweefontein, my last fight, I had none. In both cases we were always attacking, and the Maxim when attacking has seldom a good chance, it is so essentially for defence. Both the pom-pom and the Maxim have the danger of jamming.

14344. (Chairman.) And that did occur?—Yes, and it seems always to be just at first, but you can never be quite safe about it.

14345. (Sir George Taubman-Goldie.) It depends a good deal on the man you have in charge of the Maxim, does it not?—Yes.

14346. (Lord Strathcona and Mount Royal.) I see that in speaking of the Colonials you do not mention Canadians; I presume you had no Canadians with you?—I had none.

14347. You saw nothing of them?—No.

14348. You would class them just as the others, I suppose?—Yes.

14349. With regard to mounted infantry, I ask what is your opinion of the mounted infantry as a useful body in war?—I consider them a most useful body.

14350. As compared with the cavalry?—I have always had the same opinion, that it is now essentially the day for mounted infantry as against cavalry, but I think that where our difficulty regarding the mounted infantry comes in is our system of selecting the best men and officers from each battalion. We know quite well that General Trochu, who was a very good authority in the French Army, pointed out what very great harm it did there, the best men going from line regiments to the Imperial Guard and the Zouaves, and it disheartens the men and officers. They say, "Our best officers and men go at the very time we require them," whereas if we had battalions of mounted infantry, and took remarkably good care that they did not develop into cavalry, as our dragoons have developed into our present cavalry, then I cannot help thinking that it would be far better. In saying that, I mean that we should have mounted infantry, which really were what the dragoons were, and what the dragoons ought to be now—that is, men as good on foot as they are on horseback.

14351. Looking to the great mobility of the Boer force, you would have considered it an advantage to have had mounted infantry with you, would you not?—They proved of an untold advantage to me afterwards, with the Yeomanry, who were nothing else than partially trained mounted infantry.

14352. We have had evidence before that the first body of Yeomanry were far superior in intelligence, and generally, to the second contingent?—They were from a different class of men altogether; the first were men from the country, some of them farmers, officered by their own county men; the second, on the contrary, were townsmen, as a rule, with very few farmers, and officered by men whom they knew nothing whatever about, and a great many of the officers sent with the second contingent were perfectly useless, and had to be sent back.

14353. But after a few months you found the second contingent to be good and useful troops?—Certainly; but I beg respectfully to say that I do not think in face of the enemy is quite the place to educate your men.

14354. The Regulars generally were not adepts at finding the spoor, as it is called, or the tracks of the Boers?—Are you talking of cavalry?

14355. No, the Regular infantry?—If you are looking for the spoor of the enemy it would be the mounted troops in front who would take it up. I only had

the 9th Lancers and Rimington's Scouts from Orange River to the Modder, and I have not one word to say against them; they happened to be an exceptionally good cavalry regiment, and they did their utmost for me. The horses, as I have said in my evidence, were worn out, and when they got to the Modder they could not get sufficiently close to the river to give me what I would call reliable evidence—they could only tell me what I had already been told, that the enemy were burrowing like rabbits, but I never knew myself until the end of the day on which side of the river they were; and now, with these modern weapons firing 2,000 yards, to reconnoitre over a perfectly flat plain and give any good reconnaissance report is an impossibility. Therefore I think the answer to your question is that, so far as I am concerned, the mounted Regular troops did very good work for me.

14356. You speak of the intelligence of the Royal Engineers; they are drawn from a different class?—From a superior class.

14357. Who are better educated and have more intelligence?—Yes.

14358. But the artillery are from the same class?—The artillery are from very much the same as the infantry.

14359. I think you mentioned also that the artillery were better horsemasters than the cavalry or mounted men?—Yes.

14360. Would that arise partly from the fact that they had more men to look after their horses in the artillery than in the cavalry?—No, because if you take the driver he has two horses and all the harness to clean.

14361. Their number was not greater in proportion?—No, but the officer commanding a battery has the unit entirely to himself, it is self-contained, the three subalterns all have their little self-contained units, and they are responsible for their two guns, and they get the work done.

14362. The horses as a rule are a better class of horse chosen particularly for the artillery?—They are a different stamp of horse; they happen to be very good horses, much heavier altogether than the cavalry.

14363. I think, from what you said about those officers, that you would not suggest that the B.A. or M.A. degree from a university should be a passport to entering the Army; you would prefer having younger men?—Yes, I would refer to what I said about Woolwich; I can only judge by the results, and all I can say is that I think the result of Woolwich is so satisfactory that it shows that if you can catch the officer at 16 or 17 and give him the curriculum he gets there for two years, you have a very good article for your money.

14364. I asked that question because I think we have had evidence that it would be better to have as many capable men from the universities as possible?—I do not say a word against the universities; I only give you the result of Woolwich.

14365. It is of advantage to begin early?—Yes.

14366. (Sir George Taubman-Goldie.) You spoke of the want of suitable ground for practising entrenching, and, of course, that want applies throughout this country for many purposes; and you spoke in another place of a young officer finding himself restricted to ground quite inadequate or unadapted for tactical instruction. Have you any practical remedy to suggest?—You have got Salisbury Plain now, and I should be inclined to say that you must go to the expense of sending companies to some manœuvring ground in the district of each Army Corps; that, for instance, if a company is at Leeds, and there is not suitable ground there, the country must go to the expense of sending it to some ground where it can work.

14367. To move the whole Army about the country like that would be an expensive process?—It would, but there it is; if you have not the ground at hand you must find the ground for them. Take Woolwich—I do not suppose there is any ground round Woolwich which would be available, and so the country must recognise that if it wants its troops properly trained it must go to the expense of moving the troops to places where they can train properly.

14368. Is there more ground to be found in Ireland for that purpose?—I do not know Ireland well enough to say. In connection with the First and Second Army Corps you have the answer at once—you have Salisbury Plain and Aldershot.

14369. Is it not said that Salisbury Plain is being spoilt for that purpose by buildings being erected upon it?—It is a pretty big area. I cannot suggest where suitable ground is to be found; I only point out the evil, and I will not commit myself to a remedy.

14370. We have heard a good deal of evidence on the question of brains versus numbers; supposing you were organising an army at a fixed sum of money, would you rather have an army say 100 per cent. strong, as our Army is at present, or would you rather have it 60 per cent. of thoroughly trained men, with the money spent on training rather than on the increase of numbers?—I prefer 60 per cent. thoroughly trained men.

14371. You attach more importance to brains than numbers?—Von der Goltz says quite clearly in one of his books: "This is the time when we have big armies, but you mark my words, that the nation that will do the best is the nation that can produce a small army, but absolutely good," or words to that effect, and I am perfectly certain that what we want is a small army and thoroughly good. Much that you see in the newspapers now on Volunteers is most misleading, because there are men like myself who have always taken an intense interest in the Volunteers, and have always recognised their value, and I am sure the Volunteers themselves will say that of me. I have had them with me in Sir Charles Warren's expedition and also in the Yeomanry in this last war. The mistake that is made is that a number of people not knowing very much about Volunteers always think it essential to give them undue praise. Those who have taken an interest and know about them, as I venture to think I do myself, simply say this: "We recognise the Volunteer is a man of use, but he must be well trained." The harm done now is that there are a number of Volunteers in this country who are not of much good, both officers and men, and what we should wish to see is a good Volunteer force in this country, not so big as it is at present, but absolutely reliable. What we do not want to see is this: If you remember, in Queen Elizabeth's time, when she went down to Tilbury, there was a Lord de Vere, who had seen a good deal of fighting in Flanders, and when she had gone down all the line, she said: "Now, Lord de Vere, what do you think of this array?" "Well," he said, "Madam, I am not thought a coward, but I am the biggest coward here; I am only thinking what foreign troops would do with these men if they came across them"; that is what we fear about the Volunteers—that you will have a number of men on paper, and you will think there are a great many valuable men, but one fine day, when put on the ground, they will not be found of the value they ought to be.

14372. (Sir Frederick Darley.) For want of training?—Yes, what you want is a small army and a good one, and if you make up your mind that you are to reduce the Regulars or to send them abroad, as proposed in the "Times," and you mean to trust to your Volunteers, your Yeomanry, and Militia, then you must use every effort that you can to make them thoroughly efficient and good men, otherwise you may take my word for it you will suffer.

14373. (Sir George Taubman-Goldie.) To turn to another point, you said very truly that only the best men should be selected for certain purposes, and that brings one to the question of selection; there is a natural fear in many minds that selection means favouritism; have you any suggestion to make as to how that could be avoided?—No, I have always thought that selection means men not fit being rejected.

14374. It is rejection rather than selection?—Yes. I think when you come to the question of selection it is so very difficult; but where a man is not quite as good as he should be you reject him.

14375. That is just the answer I wanted from you—rejection rather than selection?—Yes, and it must be thorough.

14376. There is one question about military sketches: In your advance from Belmont to Magersfontein had you at your disposal all the necessary military sketches of the country made previously to the war?—Well, I had rather a funny one at the Modder. I was given a sketch, which I have got at home, showing that the Riet and the Modder were both fordable by the bridge; that was given me just about two days before the fight, and a native had told me the Modder was fordable everywhere. The Riet is fordable nowhere: the

C.M.G.,

Modder is certainly fordable close to the bridge. There was a ford further up the Modder, and there was the ford by which we eventually got over, which was never mentioned in this sketch at all. That sketch was made simply in order to report the Modder Bridge itself, but it was given to me as a report on the river there, and I cannot say that was a happy experience of a sketch.

13 Feb. 1903. 14377. Apart from that sketch had you general sketches of the country on both sides of the line?—Yes; no detailed sketch. Of course, it is so easy now to find fault with our not having had better sketches of the Transvaal and Free State. I happened to be Deputy Adjutant-General in the Cape for some time, and if we had sent anybody up to the Transvaal or Free State sketching promiscuously they would have got back pretty quickly.

14378. I was referring to our own colony?—No, I do not think I had any detailed sketches; I had not any on a big scale.

14379. None sufficient for tactical movements?—None.

14380. Only one other general question: supposing you had beaten the Boers and found your way to Kimberley, and they had massed behind you afterwards on your lines of communication?—Until I reached the Modder River, I did not know it would take eight days making the deviation bridge—the railway bridge was destroyed. Supposing I had beaten the Boers at Spytfontein and found my way to Kimberley, I should have had to wait eight days before a train could cross, and I cannot imagine the enemy would not have massed on my line of communications. Again, supposing when I first came near Modder River I had ignored the enemy, and crossed at Brown's Drift further up the river, and that the enemy had elected to remain on the Modder. I should, no doubt, have reached Kimberley, but I should have had to fight my way back over the Modder with the enemy between my force and my base. My train I should have had to leave south of the river under proper protection.

14381. And your refugees too?—And my refugees; there was always a chance. I was talking to the Boers themselves afterwards, and they expected me to attack when I did, and they always said to me: "If you had got to Kimberley we do not see how you would have got back again."

14382. I wanted to ask you what you thought of it?—If they had destroyed my line of communication and got between me and the Orange River I might have had a second Ladysmith. If I had gone round by Jacobsdal after fighting Graspan, then round by Brown's Drift, and from there pushed on to Kimberley, I had always the Boers on my flank, on my line of communications. I might have packed up the whole of my mule transport with provisions for five days, and hoped that these Boers would not know what I was doing, whereas with spies in my camp they knew everything; all the resistance I received on the Modder they would have had ready for me at Brown's Drift, had they not elected to let me go past them, and cut me off from returning.

14383. On the whole we may congratulate ourselves that you did not get through?—That I leave to you to say. I do not defend myself in any way.

14384. (Sir John Hopkins.) I should like to ask you a question about the horse artillery guns, because we have had it in evidence that the guns were too light to be of real service in many cases—that is, that where the horse artillery guns had not sufficient range and power to dislodge the enemy, when the field guns were called up for that purpose they effectually did so?—I can give you an answer to that. When I went from Rustenburg to Zeerust I took the cavalry brigade, whatever was left of it, for a few days, and Lord Kitchener said: "I want you to send back the cavalry brigade, but you can keep the horse battery if you like," and I said: "I would not thank you for it, because the range is not enough." I had one very good field battery all the last part of my work, and I stripped the horses and guns of whatever was not wanted. I think I took off about 1,400 lbs. from the gun and the horses, and then got an extra team of horses for each gun, and my field gun would have held its own with any horse battery, and it gave me 4,000 instead of 3,000 yards range. What I venture to think is that our artillery harness and the whole equipment of it now errs on the side of weight, and that you can make it much lighter—at any rate, I did so.

14385. In fact, your opinion rather coincides with the

opinion I am referring to, that the horse artillery guns are not of sufficient weight to meet all demands?—Yes. How could it be if the enemy have a gun that can fire like the Creusot, 4,500 or 5,000 yards, and you have your horse artillery guns up to 3,000?

14386. Did you find amongst your field bearers, after actions, and so on, that there was any inefficiency, or were they well up to the mark?—The bearers were all right, except that they had to be taken from the Militia and Regulars; the proper Army Medical Corps were not sufficient for the job, and one would notice bearers walking in step carrying the wounded men, and that was because we had not had time to instruct them properly. With regard to transport, some people say they want bigger ambulances, but the ambulances we had were exceptionally well made, as was all the transport from Woolwich, with the exception of the Bristol wheels, which were not much use. You might have two men perhaps carried arranged in a bed on the outside of the ambulance, or you might have two tiers each with two men in the ambulance, four altogether, but I think it would be a very great mistake if they made a much bigger or much heavier ambulance. The present one is excellent. I do not know if you have had any evidence about it, my Lord?

14387. (Chairman.) We have had some evidence to the effect that the ambulance we have at present might do on the road, but it was no use, as far as the patients were concerned, when it got off the road?—Why, I have taken it over every sort of thing. Colonel Townshend will tell you so, and it has beaten the whole of my buck wagons for lasting.

14388. It was not denied that it would get over, but it was said that the condition of the patients in it would be very bad?—I quite agree with you, but if you get a lighter one it will cause still greater discomfort to the patients. For instance, the American Hospital had the tortoise ambulance, and that was no good at all. The best of all for the patients was an ordinary ox wagon with plenty of mattresses.

14389. What do you say to tongas and two-wheeled wagons?—I had one galloping ambulance, and I am sorry to say the officers used it for their mess, for nobody ever ventured to go into it a second time, it shook them so much.

14390. (Sir John Hopkins.) Did you see any of the Colonial ambulances?—No.

14391. (Sir John Edge.) I understand you are anxious to see Volunteers much more efficient than they are?—Yes.

14392. Do you think it would be possible ever to get that efficiency from the Volunteers, from the amount of time they can devote to training? I only ask for my own information?—I think in the Colonies they have a system of paying the Volunteers so much, but I do not know anything about the Colonies—

(Sir Frederick Darley.) It is so; in Australia they are paid for the days they are out.

14393. (Sir John Edge.) But, speaking of the Volunteers at home, we know something of them here; do you think it would be possible to bring them up to that state of efficiency that you would like to see?—I think so. I put it in the other way; I do not suggest the remedy, and I am only pointing out the evil, but I think unless the Volunteers are brought up to a good state of efficiency we shall make a great mistake in putting great confidence in them. At Manchester, and in other large towns, for instance, and in the case of a large number of corps in London and Liverpool, you get men absolutely reliable in the battalions, but in the country it is not always so.

14394. Are you speaking of efficiency from the point of view of having a force that is capable of manœuvring in the field, or a force capable of being put into a position to hold it?—I am speaking now of men who in the battalion are good shots, who know how to make use of ground and who under their company officers know the work they should know as soldiers. I do not speak of brigade work; I only speak of work which I think Volunteers ought to be able to do. I speak of the work which ought to render a brigade efficient if called on service.

14395. It is the shooting mainly that would be required?—As to the shooting of the Volunteers, there are a certain number of men in every battalion who shoot extremely well, but there is an enormous number who shoot extremely badly.

14396. The same might be said of the Regular Army?—But the whole mass of the Volunteers do not shoot so well as the Regulars. It is a great mistake to imagine that the general shooting of Volunteers is very good, at any rate, it was not so three years ago, and no one would support that statement more than the Volunteer officers themselves.

14397. What remedy would you suggest—more musketry, or what?—More musketry, and more care taken for efficiency, and far stricter rules.

14398. Efficiency in what direction?—For instance, with regard to the officers, that they thoroughly know their work, and efficiency in the case of the men, to see that the training at the ranges is carried out thoroughly and systematically. You get returns as to the Volunteer shooting in the country which I am not clear are always reliable with regard to the scores they have made.

14399. Can you suggest any method to increase the efficiency, outside the question of musketry? You have confined your evidence, so far as I can understand, to musketry?—But surely the last Regulations issued from the War Office, about a year ago, tend towards increasing the efficiency.

14400. Do you consider that it would be possible to bring up the Volunteers as a body to the efficiency you desire?—I think so. I do not see why it should not be; wherever I get a thoroughly good commanding officer of Volunteers and a good body of men—take, for instance, the Post Office Volunteer Corps, under Colonel Du Plat Taylor, I could not wish to see a better battalion. Take the London Scottish and the Artists; they are all well officered, and they are all good battalions.

14401. You confine your appreciation to the corps in the larger centres in the country?—I said Manchester and Liverpool, which are both excellent, and in Glasgow they have their tactical societies and a thoroughly good system.

14402. Apparently the corps you see most deficiency in are the country corps, or what used to be called administrative battalions?—Yes, and there you find good and bad.

14403. You have good material in those corps?—Yes, and what you have to do is to be most careful about the officers, and not to hesitate to turn out an officer if he is not much good. There are certain officers who hold their position as commanding officer more from their local position than anything else; be firm, and take them out at once; have no one in command of Volunteers Corps except thorough efficient men, and do not hesitate to strike hard and strong, if necessary.

14404. I think you will probably agree with me that the working of a scattered corps in a country district is much more expensive than the working of a corps in London, Manchester, or Liverpool?—Yes, but expenses must not be thought of. You say you want a smaller army, and I say, "Very good, have a smaller army: but you must not mind putting your hand in your pocket." With regard to moving companies, I know it is an expense, but if you want efficiency you must have it.

14405. Is not one reason why you have to go to the county gentleman who lives close to the company and to get him as an officer, that you want money?—That is perfectly true, but I want brains.

14406. What would be the use of brains if you had not the money?—What is the good of money without the brains?

14407. We have come to a deadlock. Unless those corps get more allowances than they do it would be a difficult thing to improve them?—Yes, that is what I think.

14408. You could not afford, probably, to get the proper officers?—I quite agree with all that, and I think your rich man in the country, and the country must recollect that, if they want an efficient army of Volunteers they must pay for it, and the first thing they have to do is to come down with a good strong hand on those gentlemen with money and no brains, take them out, and get men into their places in whom every man under them will have confidence.

14409. And then it will be for the Treasury to pay?—To pay the piper.

14410. (*Sir Frederick Darley.*) What course does the infantry soldier go through in the year in musketry?—I cannot answer you now, because I have been away for some time, and they may have altered the musketry

regulations, but I think, roughly speaking, it is about three weeks.

14411. In the whole year?—Yes.

14412. And that is at one period?—Yes, that is where I think the mistake is. I should like to see the infantry soldier shooting at different times of the year as often as he can.

14413. What quantity of ammunition does he have at his disposal during that three weeks?—I cannot answer that.

14414. During what time of the year is the practice?—That depends entirely on when the companies are available; it is from the beginning of March until the end of August or so.

14415. So that a man may for the first three weeks in March have had his training at musketry; firing the ammunition at his disposal, and be called upon to serve 10 or 11 months afterwards, never having fired a shot in the interval?—That is quite true, and during these three weeks in March it would probably be bitterly cold, with a heavy wind blowing, and he would not have the same chance as the man practising all through July.

14416. So that the ordinary infantry soldier would have ample time to forget all his knowledge?—I do not think that. If he once got into the way of shooting it would not go away from him like that, but would probably come back to him at once; but still the man would be better if he could be shooting through the year instead of only for three weeks.

14417. Is there no means of teaching men, and having them trained to shoot thoroughly by practice with the Morris Tube?—It is quite excellent.

14418. Is there any reason why you should not have that?—I would have that in as many barracks as possible, and I think they have it in many now.

14419. Reverting to the Staff College, is there not a great deal done at the Staff College which might be done outside? For instance, as to military rides, might not these be done entirely outside the College?—Yes, I think a man might have a certificate to show that he is qualified in riding when he joins the Staff College.

14420. But I mean military rides when a man makes sketches?—I do not know; as far as I was concerned that was the work that was most valuable and interesting to me—excellent. My idea of the Staff College course is to have as much outdoor work as you possibly can.

14421. Might not an officer be seconded from his regiment for, say, two years, one year actually employed in the Staff College, and the other employed apart from the Staff College outside, so as to enable more men to pass through? For instance, the knowledge of entraining men, and detraining men, on railways, and so forth, might be acquired outside without living in the Staff College, and then requiring an examination at the close of the year?—I would rather not answer that because I do not think I can give you a satisfactory answer.

14422. (*Sir George Taubman-Goldie.*) General Hildyard could answer all those questions?—He could answer them better. His views and mine are really the same, and if I had known you would ask me these questions I would have talked it over with him. It would be much better, therefore, to get it from him at first-hand.

14423. (*Sir Frederick Darley.*) You got a sketch of the Modder River—I do not ask you any name, but was that prepared by a staff officer?—Yes, it was prepared by a very able Engineer officer, and done in perfect good faith. He had to report on the bridge, but by bad luck they did not say to me: "This is only a report on the bridge, do not take it as of any value otherwise," and when it was put into my hands I took it as a sketch of the river.

14424. How would you arm mounted infantry? Would you give them a personal weapon other than a rifle?—Do you mean a revolver?

14425. A sword?—Yes, I would give them a sword, I think. It is very difficult to say, however, because in this last campaign they never even had a chance of using the bayonet, and I think it would be almost a mistake to come to any conclusion as to future wars solely by this one, because the conditions were not normal, and, therefore, I think I should not be inclined to take away either the sword or bayonet from them.

*Lieut.-General
The Lord
Methuen,
G.C.B.,

C.M.G.*

13 Feb. 1903.

Lieut.-
General
The Lord
Methuen
G.C.B.,
K.C.V.O.,
C.M.G.

13 Feb. 1903.

14426. In point of fact the conditions of the past war were very unlike what would be the conditions of a European war?—Yes, and I think it would be a great mistake to make any radical changes like that until we are quite clear of our ground.

14427. You think they ought to have some personal weapon, some weapon of offence?—Yes, a bayonet or an Elcho bayonet, and, at any rate, if it does nothing else it comes in useful for cutting up wood.

14428. (*Sir Henry Norman.*) I think you said that when you were ordered to go to Kimberley it was with the intention of simply throwing in provisions and stores and bringing away non-combatants?—Yes.

14429. And there was no intention of reinforcing Kimberley?—No. I may be wrong, it may be that I had to leave the other half of the battalion of the Lancashires there, and I am not certain.

14430. At first you had no ox transport, but latterly you had?—I had no ox transport until I left Kimberley; I had none on the way there.

14431. But you had good experience of it later on?—Yes.

14432. You prefer mule transport, I suppose, if you could have enough?—Both have their advantages; when I had to go after the Boers with the utmost rapidity, then I used to change. I used to shift all my goods from mule to ox transports, simply taking just what I wanted for my mounted men on mule wagons. Then, lastly, towards the end of the campaign, I said to Lord Kitchener, "I will give you the whole of my ox convoy of 92 wagons, if you will give me 43 more mule wagons," and then I moved entirely with mule, but that is only for a trek of about 10 days or so, because the mule is eating his 8 lbs. of oats every day, which I have to carry, and the consequence is that if I am going for a long trek of 14 or 16 days, of course the ox convoy would pay me better, because they have not to carry any forage.

14433. The ideal transport for a campaign would be a mixture of both?—Yes, but if you have the two together, of course, your ox convoy goes slower than the mule, and cannot travel in the heat, so you must travel at certain hours. As long as you have ox convoy you are so restricted in your hours of moving, whereas with mule I can go whenever I like.

14434. How far do you think ox transport could take you in the day without fatigue, for several days together?—We did very long distances, but for comfort 15 miles.

14435. Without knocking up the animals?—That is so. I used generally to trek from 4 a.m. till 8.30 a.m., and then from about five until nine. That is, of course, where a man like De Wet had an immense pull over one, as he could trek all through the night, but I could not, as he might ambush me at once.

14436. You must have seen a good deal of the reserve men who rejoined regiments for the war?—Yes.

14437. Do you think, generally speaking, they were efficient?—Very.

14438. In marching powers?—They had not very much marching at first up to the Modder; we had only 10 miles a day or so. The difficulty with the reserve is that when you bring them, as I did, up the Orange River, and then launch them against the enemy at once, they have hardly got to know their non-commissioned officers and officers. In the Guards Brigade, where they are all Guardsmen, they knew their officers and non-commissioned officers to a great extent, but in a line battalion this is not quite so much the case, and they have not had time to know their officers and non-commissioned officers. Therefore, I should say that to give a battalion its full chance the reservists ought to be with the battalion a few weeks in the field before they are used.

14439. As far as age goes there is no reason why he should not be perfectly efficient?—He is perfectly efficient, and I should imagine the reservists were about the best men.

14440. He may have been following for all the years he has been out of the Army, a sedentary occupation, and not much accustomed to walking or marching?—I do not think I noticed anything of that sort; I think they were as good as the others.

14441. You saw a great deal of difference in the officers of Militia regiments?—Yes.

14442. Were the Militia regiments inferior in physique, do you think to the line regiments?—You will

find a Militia regiment, as a rule—I had a Division of them at Aldershot some years ago—march even better than the line regiments, because they belong to the country, and come out from the plough. I was quite surprised; I had eight battalions of them, and they marched perfectly, and I found that was the reason.

14443. There has been a good deal of evidence before this Commission as to mounted infantry, and I gather that you are rather in favour of having permanent regiments?—Yes.

14444. Not taken for a war?—That is so. I know there are difficulties in the way, but I am perfectly certain that, as a principle, it is a mistake to draw away at your regiments like we do at present.

14445. Supposing there were mounted infantry regiments for some years, do you think they would be as good men dismounted and acting as infantry as infantry would be?—I do not see why they should not be.

14446. That has been alleged as one of the reasons, and the other is that, of course, they try to ape the cavalry?—That is the strong point.

14447. Particularly if they had swords?—Yes. I suppose the way to keep that down would be to have them officered mostly by infantry officers, but that is a danger, just as the Dragoons have become cavalry. I think you have plenty of experience of that in the American War; there you see so clearly the value of the mounted infantry.

14448. The argument used here, as I understood it, by some of the witnesses, was that the mounted infantry would not be so useful unless they had recently been infantry soldiers and accustomed to infantry, and that in point of fact you might have mounted infantry whom you would not mount on horses at all; you might mount them on bicycles, although there are objections to that, or carts, or anything; but what you want is to use them as mounted infantry so as to get them quickly to a given point?—I look on the use of a horse for a mounted infantryman as simply being the means of getting the man from one point to another, and I do not see in the least why for part of the year you should not be working these men as infantry. Let them be infantry, and put them on a horse when wanted, so as to get them from one point to another.

14449. (*Sir George Taubman-Goldie.*) Only you must train them to horsemanship?—Yes.

14450. (*Sir Henry Norman.*) Did you ever see the mounted infantry use their bayonets?—Never; the Boers never waited for that.

14451. But you think they would not?—I never saw them do it; what the Boers did at Tweefontein when my mounted men fled was to put their rifles under the right arm, pointing straight to the front, and advance, firing shoulder to shoulder, and there is no bayonet in this world could have the effect of that.

14452. Do you think our men could do that?—I think so, in time; it is a terrible weapon naturally. They covered a great extent of ground, holding their rifles straight forward, and coming with a steady canter, firing the whole while.

14453. Were you ever really put to any serious inconvenience from want of good maps during the war? Perhaps at first, but very soon we got Jeppe's map, which is a Dutch map; until then I certainly did not get any value out of the maps, or no great value. When I had Jeppe's map, that was quite sufficient. The maps sent us from headquarters latterly were very much better.

14454. There was something said not only about tongas being used for ambulance purposes, but Scotch carts?—The Scotch cart is a very uncomfortable conveyance. I have only been in it in the olden days going up country with the mail, and wounded I should not go into it.

14455. (*Sir George Taubman-Goldie.*) How did the Boers carry their wounded—in Cape carts?—Yes.

14456. Are the Cape carts good things?—I would rather go in a Cape cart of the two, because it has got pretty good springs, while the Scotch cart has no springs.

14457. (*Sir Frederick Darley.*) Is the Cape cart a long cart?—No, it has two seats, like a buggy; there is a seat in front for the driver, and then behind there is another seat. Where the driver sits you lift up half the seat, so that if I were wounded I should lift up that part of the seat, get into the seat behind, and

then put my legs up, and I should be pretty comfortable.

14458. There is a vehicle used in Australia, made in America, I think, called a buck wagon; that is very long?—We call the buck wagon a mule wagon.

14459. This is a vehicle without sides?—Then it is what we call a trolley. You mean with no sides at all, and very light?

14460. Yes?—That is a trolley, and that I used to carry wounded in sometimes.

14461. (*Sir Henry Norman.*) You were talking about the great necessity of more training for the Volunteers, officers and men, and you alluded to some Regulations issued last year to ensure more training, but you are aware that that was strongly resented by a good many of the Volunteers?—I know, but they must recognise the fact, and so must we, that we must have efficient volunteers; pay for them if you like; if the Volunteers say: "We will not—we cannot do the work," then they cannot be efficient.

14462. Then you think it would be good to adopt the system you refer to in Australia of paying them for training?—I imagine it would, but then again I am not speaking with any great experience.

14463. Perhaps you do not quite understand the way in which they work that; in different parts of Australia there are different systems, but in the place where I was Governor the Volunteers were treated exactly like the Volunteers here, and they got no pay; they had drill, and so on, and were instructed; they were what are called partially paid forces, being civilians who get full pay for so many days in the year—16 or 12?—When they came out?

14464. And the day could be divided into four or five,

so that you could have a man out for Saturday afternoon, and give him a quarter day's pay, and, where financial considerations permitted, they went into camp for a week, and got full pay and rations. Whenever they went out they got 6s. a day, or a fraction of it, and the officers got their pay, and in that way they were kept more or less in touch with drill and military work throughout the year not having simply a month's training like our Militia. Do you think something of that kind would answer?—Certainly. I am always for paying a man his hire, and I think if you could do that you would get more for your money than at present.

14465. It is agreeable to a man, because on an afternoon when he would not be at work he would manage to earn 3s. or 1s. 6d.?—I think so, certainly.

14466. You do not think it would be very easy, however, to have them out constantly, and really to train them so as to be efficient?—No, my feeling is that as long as you can get the individual man well trained, and the company well trained, I should be satisfied. I was asked whether I alluded to brigade drill, but I do not go as far as that. I only want to see the officers of the company and the men efficient, and I think that is what you are wishing too. I think that the system you recommend gives a solution.

14467. I am reminded by Sir Frederick Darley that it has worked very well in Australia?—Yes, it has worked well.

14468. (*Sir Frederick Darley.*) A great number of the men who went from Australia were that class of men?—If you pay men you will always get them to do more work than by absolute volunteering, and getting nothing at all.

14469. (*Chairman.*) Is there anything you would like to add?—Nothing.

Lieut.-General Sir ARCHIBALD HUNTER, K.C.B., D.S.O., called and examined.

14470. (*Chairman.*) You have been good enough to send us some notes (*vide Appendix, page 615 post*), upon which I will ask you questions. Before the outbreak of war were you holding a command in India?—Yes. At the outbreak of the war, on the 11th October, I was in Ladysmith. I went direct from India to Durban.

14471. You went from India to South Africa, on receipt of a telegram to say that you were designated to be Chief of the Staff to Sir Redvers Buller?—That is so.

14472. And you landed at Durban on the 5th October?—Yes.

14473. But as Sir Redvers Buller had not arrived your orders were to join Sir George White?—Yes. Colonel Ian Hamilton came out as Sir George White's Chief of the Staff for duty in Natal, but as I was there beforehand, and was to be Sir Redvers Buller's Chief of the Staff, or was so designated, he thought he would employ the interval between my arrival and his by using me on Sir George White's Staff, and therefore I should be able to go back to the Cape, or round to the Cape from Durban, and tell him exactly how everything was situated in Natal.

14474. Thereupon you took up the position of Sir George White's Chief of the Staff?—Yes.

14475. With the result that you never did join Sir Redvers Buller?—Yes.

14476. You were with Sir George White throughout the siege of Ladysmith?—Yes.

14477. After the relief of Ladysmith you left Natal, I think?—Yes, Sir Redvers Buller gave me the command of the 10th Division. Lord Roberts wired for a Division, and Sir Charles Warren's Division, the 5th Division, was actually sent, part of it embarked, and then they were disembarked. I was sent for, I believe by name, by Lord Roberts to go with my Division, some of it to go to Cape Town to work up the Kimberley line, while I myself had orders to go to Bloemfontein, and see the Commander-in-Chief, and there take his orders, which were the orders to organise the Mafeking relief column.

14478. And that relief was carried out under your superintendence?—Yes.

14479. Of course so far as we are concerned with regard to the operations of the war, we have not the duty of inquiring beyond the occupation of Pretoria, but I may just ask you, after that you were employed in the eastern part of the Orange River Colony, I think?—Yes.

14480. I ask you the question, because in the papers I find a report from yourself dated the 4th of August, 1900, concerning those operations which have certain remarks on general questions which I should like to refer to later on?—I have not prepared a statement, as a matter of fact, exactly of the dates as to how I was employed.

14481. But that is quite sufficient if that is right?—I eventually went into the Brandwater Basin after Prinsloo, where he surrendered to me, and after that my force was broken up; a good deal of it was sent to rejoin Lord Roberts at Pretoria, and after working a good deal in the Orange River Colony I was eventually appointed to the command of the whole of the troops in Orange River Colony in relief of the present Adjutant-General, General Kelly-Kenny. I was there until I came home. I got a touch of malaria, and they sent me home.

14482. You have been good enough to give us a *précis* of the subjects on which you are willing to give evidence. Of course you had nothing to do or say with regard to the preparations for the war?—No, nothing.

14483. Excepting that you were aware of the scheme for sending the contingent from India?—Yes, of course that was prepared in India. I have a copy of it here if you wish to see it, but I suppose you have it.

14484. The scheme for carrying out the details of the force, do you mean?—Yes.

14485. But you have no remarks that you wish to make with regard to that?—Except of course that going with the brigade of British troops from India it must be obvious to everybody that I went with thoroughly seasoned, thoroughly well equipped, well disciplined, and well trained troops. In the earlier part of my experience in South Africa I had no knowledge whatever of the raw material that came out from home—not till a considerable time after the siege of Ladysmith was over.

14486. In Natal you had seasoned troops from India?—Yes.

14487. And as to sea transport you have no remarks to make?—No. It would be a shameful thing of course for us to admit now that we are not perfect in sea transport with the amount of experience—I mean to say that we have over anybody else.

14488. The first point that was raised in the Memorandum which we sent you is the adequacy in point of strength of the forces in the field at different dates.

Lieut.-General The Lord Methuen, G.C.B., K.C.V.O., C.M.G.

13 Feb. 1903

Lieut.-General Sir Archibald Hunter, K.C.B., D.S.O.

Lieut.-
General Sir
Archibald
Hunter,
K.C.B., D.S.O.
13 Feb. 1903.

Would you say what struck you with regard to that point in the Natal position?—When I landed on the 5th October, and went up to Pietermaritzburg, I saw, of course, the General Officer Commanding in Natal, General Penn Symons, and I think it must have been very largely upon his advice that the troops in Natal at that time were distributed as they were, that is to say, practically in two parties, one at Dundee and the other at Ladysmith. I knew that in his opinion either of those forces was quite sufficiently strong to meet and successfully combat any force of the enemy that would come against them, the one by the Transvaal border, Utrecht and Vryheid, and the other through the passes of the Drakensberg into Natal—I mean from the Orange River Colony via Harrismith. I think, myself, it would have been far wiser if he had recommended that every man in South Africa available for the field should have been concentrated somewhere in the neighbourhood of Ladysmith. All the stores were concentrated you see at Ladysmith. That was why it was absolutely necessary to hold and defend Ladysmith, because there was such an accumulation of stores and war material there that the amount of rolling stock and locomotives available was not sufficient in anything like a reasonable time, anything like three weeks or a month, to remove it anywhere else—it was a single line, and the railway, the material, and railway staff were nothing like sufficient to cope with the removal of those stores, which had been accumulating over a considerable period of time.

14489. We have had some evidence about the stores that were at Ladysmith at the time from Sir Edward Ward, and I think his evidence went to this extent, that at the time you speak of on your arrival in Natal, the accumulations in Ladysmith were two months' supply of the normal garrison, which was a smaller garrison based upon the troops which had been in Natal for some years?—Of course I have only got my memory to guide me and to draw upon, but I remember quite well seeing a telegram from the War Office saying that 90 days' rations were to be maintained in Ladysmith for its garrison. I must have seen that the first day I got there.

14490. But then its garrison was based upon the local scheme of defence?—Yes, that is so.

14491. And local schemes of defence, as you are aware, are drawn up under the regulations on the normal garrisons of the positions?—Yes.

14492. That was two months, or ninety days' supplies for that garrison which was in Ladysmith at the time?—Yes.

14493. Not the full supplies for Sir George White's force or the Indian contingent?—No.

14494. As you have referred to the local scheme of defence, did you ever see it?—No, there was nothing done that I know of.

14495. Did you see the document?—No, I did not.

14496. Because there were local schemes of defence?—To the best of my recollection I did not see it; I do not remember it at any rate. It was no guide to us whatever, I know, in drawing up the scheme of defence eventually adopted.

14497. At Ladysmith?—At Ladysmith.

14498. But the local scheme of defence for the colony did provide, under certain circumstances, at all events, for holding both Dundee and Ladysmith?—Yes, but I say events so long ago as that get driven out of your mind by others that follow, and so on.

14499. I want to know only whether you could recollect ever having seen the scheme of defence which did provide for the holding of those two positions?—I thought you were asking me about a scheme of defence for Ladysmith; that I do not remember; but for the colony, though I do not remember it, the chances are that I must have seen it; it is one of the first things one would ask for; but whether I did ever see it I have no recollection.

14500. It does not follow that you saw it, because we have had evidence from other officers that they did not?—I should think, as Sir George White's chief of the staff, and having to go back and tell Sir Redvers Buller all about it I should have seen it, because I did not know until almost the day before that I should not go back. I thought always up to the very last, the 21st October, that Sir George White might have spared me to go back to Sir Redvers Buller when I could have got away when General French and

Colonel Haig got out, or on many a dark night afterwards I could have slipped out.

14501. But you do not remember having seen it?—No, I do not.

14502. (*Viscount Esher.*) It was a printed document, of course?—I cannot recall it.

14503. (*Chairman.*) Sir Penn Symons probably had seen it and, of course, his dispositions may have been influenced thereby?—That is so.

14504. I think it is only just to him to bring that out. Then that being the position in Natal, do you think that the forces even with the Indian contingent, were adequate for the defence of the colony?—I think they were if they had been differently placed geographically in the colony; and I think if a much more active, instead of a purely passive, system of defence had been adopted—I mean to have gone forward to meet the Boers instead of waiting for them to come and find us. For example, if we had met them and faced them in the mouth of the passes into the colony, I think, to begin with, we should have saved what actually happened when they crossed over the border and found nobody—they became cock-a-hoop and jubilant. They thought they had only got to show themselves, and so on, to have it all their own way, and they became distinctly much more confident and aggressive in consequence of our taking up certain positions and merely waiting until they came to find us.

14505. At what period are you speaking of—before or after the fight at Dundee?—Before the fight at Dundee.

14506. But before the fight at Dundee were they in the colony at all?—They crossed over our borders, they invaded the colony, and went to attack General Penn Symons' position at Talana, at Dundee.

14507. Then is it at Talana that they ought to have been met in force?—I should have met them as they crossed the border.

14508. (*Sir George Taubman-Goldie.*) At Laing's Nek, do you mean?—Yes, that is one place, and they came from Vryheid, under Erasmus.

14509. And the Tintwa Pass?—Yes.

14510. (*Viscount Esher.*) Was there transport enough for operations of that kind?—I think so. I never saw the Dundee force until they came in; certainly they came in with enough transport from Dundee, and if it was sufficient to withdraw from Dundee to Ladysmith, it was sufficient to go the other way.

14511. (*Chairman.*) Do you mean that you would have met them at those points with the force at Dundee, or with the force at Dundee supplemented from Ladysmith?—The force at Dundee was supplemented from Ladysmith.

14512. Was the force at Dundee sufficient to do what was being tried?—I think so. They were an excellent body of men; they were beautifully equipped; they were full of pluck and go and enthusiasm; their health was good; their discipline was good; and they were fit to meet anybody you can imagine, in my opinion.

14513. And were they sufficient in numbers to cope with the Boers who came over in that direction?—Yes, I think they were.

14514. (*Sir Frederick Darley.*) Was Dundee a place that could be held?—It proved to be a place that was very bad on account of the water. I never saw the place.

14515. (*Chairman.*) I understood your argument to be that instead of holding Dundee you would have moved the force against the Boers as they crossed the frontier?—Yes. If an enemy is going to invade your country I should lay it down as an axiom that the minute he puts his foot over your border you ought to be able to stamp upon his toe, and not let him come well inside and gather strength as he comes, if not material strength, moral strength; every step he comes inside he is getting more buck into him.

14516. I only wanted to know whether the people at Dundee were big enough to stamp on his toes or whether they wanted some assistance from Ladysmith to make them heavy enough?—About that I think myself they were, because it was practically proved by future events that they were, when they got quite the best of the Talana fight.

14517. You said just now that Ladysmith being full of stores it was necessary to hold it?—Yes.

14518. The withdrawal of any larger strength from Ladysmith would have left it open, would it not, on the Orange Free State side?—Yes, it would.

14519. There might have been that risk in those operations?—Yes. You know (I suppose it is generally well known) that there was a scheme to concentrate the whole of the forces in Natal at a place called Sunday's River Camp. I can tell you the reason why that concentration did not take place. I was present at Pietermaritzburg when Sir George White arrived there on the 6th October, 1899. He stayed there the night of the 6th, and, I think, the night of the 7th. Then he went to live with General Penn Symons, and I think it would be 8th or 9th of October that he came after dinner to Government House, to Sir Walter Hely Hutchinson's House, where I was living. He asked to see the Governor, and he asked that I might be present. He came then to advocate the withdrawal, and the concentration under his own command, of all the troops in Natal, and, undoubtedly, from a military point of view, he was indisputably correct; there is no question about it. But at the time he asked Sir Walter Hely Hutchinson what political effect it would have, and he said: "I have nothing to do with the military disposition of your force, but there are 70,000 Zulus sitting on the border waiting exactly to see which side of the fence to take, which side to jump, and how the cat is going to jump." I think those were his words, or words to that effect. He further said: "If you withdraw now, without a blow having been struck, the Zulus will interpret it and accept it as a sign of your being afraid to meet the Boers, and they will acknowledge the Boers as your masters, and the future effect of that I shudder to contemplate." For that reason the divided distribution of the troops in Natal was maintained.

14520. And you were present at that interview?—I was present at that interview, and perhaps it is somewhat presumptuous to say so, but I was practically asked to give the casting vote.

14521. I know you had been asked for your opinion?—I knew that what had happened that night was a very serious thing. I know Sir Walter Hely Hutchinson intimately well. I was his best man, and I have known him all my life. At that time he slept in his own dressing-room, and had given me his wife's bedroom. So much was I impressed with the seriousness of what happened that night that before I went to bed (and we did not separate until quite 1 o'clock, perhaps later) I sat down and wrote to Sir Evelyn Wood so far as I could remember word for word everything that happened that night—a letter of several sheets of foolscap. In the morning, just after Sir Walter Hely-Hutchinson had had his bath, he came into my room and he saw the papers lying on my table, and said: "Hulloa, whom have you been writing to." I said: "I wish you would run your eye over this and see whether it is a correct description of what took place last night." He sat down and read it, and said: "I sat down and wrote home also" (I presume he wrote to the Colonial Office) "and my version of it practically tallies with what you have said." That really is the inner history of why the forces in Natal remained divided. That has nothing to do with whatever reasons they were divided on, but that is why they continued to be divided. Sir George White, as Military Commander, wanted to have the whole of the troops concentrated at some point in Natal, under his own command, where all could combat any advance either from the Transvaal border on Natal or from the Orange Free State border.

14522. And in that decision you concurred?—I concurred in the decision that he was right from a military point of view, but I remember in summing up I said, "Taking the long and short, the thick and thin, you are far wiser to leave things as they are, and abide by the result." He was very much concerned with what would be said in the future as to his military arrangements, and I told him that at any rate the truth would be told, and it would be known in the future (we could not all die), and it must be known eventually that he wanted to have the troops concentrated under himself, but for the political considerations; and that the political considerations were two-fold: on the one side was this big force of savages waiting to see what we were going to do, and of course the Boers would have

sent their agents amongst them, and have pointed out that we had run before we were hit, which would have had a very disastrous effect—it might have led to the massacre of almost every white man, woman, and child they could get at, and the whole of the eastern part of the colony, in Natal, at the foot of their mountains, would have been absolutely at their mercy, and also it would have had a very exhilarating effect, to say the least of it, upon the Boers themselves.

14523. Which was the point, did you say, at which Sir George White had insisted to concentrate?—I remember his consulting Sir Penn Symons. There was a camp, called Sunday's River Camp, Sunday's River Bridge, a point north of Elandslaagte, about 20 miles north, if my recollection serves me right, of Ladysmith. There was a big bridge there across the Sunday's River, a big iron bridge, and beautiful water, and it was reported as a very defensible camp. I never was beyond Ladysmith myself until after the siege; I never was as far north anyhow.

14524. You never saw that position?—I never saw that position.

14525. But it was north of Ladysmith. Was that with the object of covering Ladysmith?—It would have covered Ladysmith, and you would then have been ready to advance over the Biggarsberg, and to have met, and, I think, successfully contended with any force coming down from Dundee Junction, and also you were, as it were, straddled across the junction in the part of the country where the two forces must join coming from the Transvaal and from the Orange Free State, as it was then.

14526. It has been said that a position on the Tugela was the proper one; what is your opinion as to that?—With regard to any position south of the Tugela, if you look at the map, the Tugela would strike most people as being the best place, but the south bank of the Tugela is dominated altogether by the northern bank; therefore, for a defensive position I think I would have gone north of Ladysmith myself.

14527. It does not follow, when you say south of the Tugela that it need be on the banks; it might have been a defensible position, but south of the river?—But for a big military force like that you would have been confined to the banks on account of the water.

14528. Estcourt has been suggested?—I do not know the country well, except from maps. I only passed up once from Pietermaritzburg, and down again in the dark.

14529. (*Viscount Esher.*) Such a concentration as that would have been still more open to the political objection than the one that was contemplated, would it not?—Do you mean a withdrawal further south?

14530. Yes?—Still more; they would have said they had got you into the sea; that is how the Boers would have translated it—that you were making back to your ships.

14531. (*Chairman.*) But the decision having been taken, it is your opinion that it was necessary to hold Ladysmith?—Yes; absolutely indispensable. I do not see what else you could have done.

14532. You could not in the time have withdrawn the stores which had been accumulated there?—No; I do not mean to say that we could not have marched out. We could have marched away, and left the women and children, and burnt all our stores. Ladysmith is a great locomotive centre. There were large stores of coal for the railway, and everything that is required to feed and maintain an army in the shape of ammunition, food, medical stores, and engineering appliances, and a large amount of railway stuff as well. There was a large Natal Government Railway accumulation of stuff there, sleepers and coal and rails.

14533. Ladysmith itself was not a place easy to defend?—No, it was not; it was the bottom of a teacup. Ladysmith became Ladysmith merely because it was where, in the old days, the roads from three or four different places came down, one from Newcastle in the north, another from Harrismith, and another from the Zulu border, where they all met, and a place where the Klip River was easily forded, which was the reason why the roads all directed themselves to that particular place, to those drifts across the river.

14534. And there had been no preparations for defence in Ladysmith?—None whatever; and the conditions of the life of the garrison there were such with the local farmers, and so on, that you dare not go off the roads. The cavalry officers were supposed to do reconnaissances every year, and to send in sketch

Lieut.
General Sir
Archibald
Hunter,

maps to show what work in this respect they had been doing. But there were simply sketches of the line of the track; they dare not go off it. Every farmer in the neighbourhood was a Boer or a Dutchman with Boer sympathies, and there was not a single man who had been on the top of Bulwana except one, and he is dead now—Captain Vallentin, of the Somersetshire Light Infantry. He had been asked by one of these young farmers to go out for a day's shooting, and in the course of the day he crossed over the top of Bulwana Hill, and went down on the other side, and he was the only man who had ever been on the top; nobody knew whether there was water on the other side or whether there was not.

14535. Do you mean that before the war, in our own colony, a British officer could not sketch the country?—I mean that in our own colony in the neighbourhood of Ladysmith—that is to say, within a girdle of ground that would be naturally occupied in any system of defence for the town, covering its stores and so on—there was not a single officer except this Captain Vallentin who had been on the top of the main feature or any of the features that dominated a position that had to be held—not one.

14536. Because the farmers would have offered violence?—No, they would have summoned them before the magistrate for trespass, and the magistrate would have given a decision against them, and they would have been bound by the magistrate's order.

14537. Did it ever happen?—It was threatened. I have heard a story of young Besters, the son of a man with a very big farm, Besters' Farm, just on the other side of the Wagon Hill position, which was one of the main points of attack on the 6th of January, and this attack was said to have been guided by one of the young Besters. The father was in the neutral camp sending out information of everything he could learn to his sons the whole time.

14538. What did he do?—There were a lot of guinea fowl there, and somebody (an officer) had gone after the guinea fowl, and I was told that young Besters had a gun in his hand and threatened to shoot the officer if he did not go. He said he had no right there, and he would put a charge of lead into him if he did not clear off. But that is the feeling, at any rate, that existed between the land occupiers and the land owners in the neighbourhood and the garrison.

14539. And to that you attribute some of the inefficiency of the reconnaissances?—To that I attribute the total ignorance and the absence of any information that could be procured. If we went anywhere and came to a place like London and wanted to make up a scheme of defence, there would be lots of people in the neighbourhood who could tell us all the important features round about, and would be willing to take us to them and show us how access is to be gained and how to retreat from them; there was not a single officer in Ladysmith who could tell you anything. It was not their fault; I am not blaming them; I merely tell you the attitude of the people in the neighbourhood to the British garrison, and the attitude was such that it was impossible for them to know anything about the neighbouring country.

14540. Then as regards the siege of Ladysmith, you understand, of course, that we do not want to trouble you with a narrative: we can get that from the official records; but if there is anything that you desire to say with regard to the events relating to the siege, or any lesson to be learnt from it, we shall be very glad to have it from you?—I think we learnt practically nothing from the siege of Ladysmith that could not have been learnt out of a text-book. We learnt the very same lessons that were taught by the siege of Plevna. The most difficult defence by far to hold, because it was the most dominated—it lay lowest—was Colonel William Knox's. He with two or three others after the siege of Plevna, visited the place, and to that visit we are indebted for the very fine way in which his defence was first of all entrenched. It was a mass of low-lying hills, frowned upon by the heights of Bulwana and Lombard's Kop, and from their superior position the long-range guns of the enemy could point down upon the top of Colonel William Knox. Colonel Knox used always to say to every officer and man in the defence: "If you do what I tell you there will not be a single man of you killed"; nor would there have occurred a casualty had they done so. He built up enormous stone traverses capable of resisting any shell-fire we have ever seen yet; and it was only from a disregard or carelessness in not obeying his orders that any

casualty did occur in his defence—and there were some very bad ones.

14541. That portion of the defence became impregnable, did it?—Yes, it did.

14542. The perimeter was very large?—Yes, the perimeter was very large and against the besieged. If we had been outside instead of being inside we would have been in, if we had wanted to be. Counting all the zigzags, we had practically 28 miles to defend, and if the Boers had concentrated they ought to have got in. It is always open to the outside attacker to concentrate where he wishes, and the inside man has to be ready everywhere, not knowing which point is going to be attacked.

14543. We have had the opinion expressed that a disciplined enemy would have got in; do you agree with that?—Yes. I would not use the word "disciplined," but the Boer is a man who is very careful of his life, or he was at the beginning of the war very careful indeed of his life. If the enemy had acted on the principle that it is worth incurring a certainty of loss in order to gain the position—in fact, if they had not been so ultra-careful of their own skins, they would have been in.

14544. But they never really did attempt it, except on the 6th January?—They never seriously attempted it.

14545. And that was a serious attempt?—Yes, it was. I have not read much of the history of the war, but one hears, of course, a great deal of talk about it; and the most of—I mean the one on Caesar's Camp and Wagon attack, on the 6th January, is the one that one hears most of—I mean the one on Caesar's Camp and Wagon Hill. But there were two other attacks. On that day I was practically directing the operations, because, I think, on that day Sir George White was in bed—at any rate, he was not at the office; and I went to him at various times during the day and told him how things were going. It was, I suppose, the first instance on record of a fight over a considerable area ever being directed by the telephone. In the house that we had as the Headquarter Staff House a telephone exchange was arranged in the verandah, where a British officer sat day and night, all the seven officers in that house taking it in turns to relieve one another, so that there was always somebody there. In that way they got word from all parts; not only was the telephone connected up with the headquarters of each defence, but the headquarters of each defence were in telephonic communication with their outlying places, and they could be put straight through with one of these; they were just connected with one of them and they could hear the firing quite well on the telephone. There were two very determined attacks on Observation Hill, and against Colonel William Knox that day, which those on the other side altogether—on Caesar's Camp and Wagon Hill could not hear, as it was a frightfully wild day, with rain and wind, and so on, and they all along failed to understand why I was not sending them all the troops they were asking for; of course, they understood it afterwards, but they did not at the time.

14546. Because you wanted them elsewhere?—Yes. There were only 200 men of the Natal Mounted Volunteers, I think the Natal Carbineers, who were not in action, and I kept them as a sort of reserve, if the worst happened, to try and get Sir George White out in the dark, that we might have got him away; that was my object—just as a personal escort to him. I thought they might get through down the river-bed, or something like that at night time, if the place had fallen, because, at one time things were very serious—very shaky on that day. That was the most determined attack they ever made.

14547. That was the scheme of defence, was it not: to have a body of troops that you could send in any direction?—There was a central reserve; all the men were not employed in the defence. And then, also, there was an interior scheme of defence, that is to say, that if the outer parts had fallen there was still a citadel. I had all the ammunition and flour and biscuit reserves moved into this, and we were ready, if we had been driven by force of arms out of the outlying portions, to come into this other place. There was an inner citadel of defence.

14548. Capable of being held?—I think so, limited by the amount of food.

14549. (*Sir Frederick Darley.*) If the Boers had got possession of Wagon Hill or Caesar's Camp on that date,

ould that not have made the rest of the place absolutely untenable?—No, it would not have made Ladysmith untenable, because the tenability of the position as afterwards demonstrated by the long time that the Boers held out before he surrendered to Lord Roberts. He was commanded, surrounded and hammered with an infinitely greater number of guns than the Boers had to hammer Ladysmith, and yet he got to ground and held his position for some days. It would have made it very uncomfortable; it would have been a very hot place to live in, there is no doubt about that, but I think determined men could have held on to it.

14550. (*Chairman.*) Is there anything else you want to say regarding Ladysmith?—Not unless there is anything on which you want to have my opinion, which, of course, I am quite ready to give.

14551. (*Sir George Taubman-Goldie.*) By what date had the stores accumulated in Ladysmith to such an extent that it would have been very difficult to have removed the great bulk of them? We know they went up after Sir George White chiefly?—I have not got copies of these things at all, but I should say by the end of October. I forget what day it was that Captain Hamblton arrived—somewhere about the 29th of October. I have had nothing except my own small private diary to go by: everything else I handed in, and it went away with Sir George White, and will be in the Record Office if it is anywhere.

14552. Just going back to the argument that was used about the 70,000 Zulus sitting on the fence in case we withdrew from the northern apex of Natal; as a matter of fact, nothing did happen when we were driven out of the northern apex by the Boers?—No; but then, of course, we were driven out as the result of a fight. It was not as if we had turned tail before we were hit, and the result of the fight was an acknowledged British success.

14553. But then we were shut up in Ladysmith?—Yes.

14554. And the 70,000 Zulus were aware of that fact?—Yes, they were, and they saw us always holding out. And I think it is an acknowledged thing throughout the whole of South Africa that the fall of Ladysmith was to be accepted as the promised sign. They are very Biblical in their ways of thinking, and so on, and the Cape Colony, and the Zulus, and everybody else, were watching to see who was going to be master, were practically asked whether they would accept the fall of Ladysmith as the sign, and it was generally conceded, I think, by them all that they would accept it as the sign. Therefore, if Ladysmith had fallen, I believe all the Dutch in Cape Colony would have risen to the Zulus and everybody else. They would have lumped then for the Boers as their future masters.

14555. Quite so. But my question was as to the Zulus. I wondered whether the Zulus would not have been quite as much affected by seeing our Dundee brigade compelled to fall back upon Ladysmith, as you say they would have been by our withdrawing to Ladysmith?—No, I do not think so; it was no run-away.

14556. Our men came in in bad condition, did they not?—They came in in bad physical condition from the long hours in which they had performed the march, and the weather, but their morale was excellent.

14557. When they arrived at Ladysmith?—If you had been up for nights and wet through to the skin, and so on, you would feel jaded.

14558. But the morale was good?—Excellent; the same troops were used again afterwards, and they showed no signs of having suffered in their morale.

14559. (*Chairman.*) As you mention that, I may ask what was their condition after the fight outside Ladysmith, on what is called mournful Monday?—I was only concerned with one portion of that. I have not read any of the evidence which has been given before me here, and I do not know quite what the case was. I was sent by Sir George White to see the condition of affairs on that part of the ground that went from Lombard's Kop up to Farquhar's Farm; that is the place that was sent out the night before under an officer, whose name I have forgotten. I went there, and I brought back a report to Sir George White that they could make no headway, they could get no further on, and that there was only one thing to do, and that was to withdraw, and we withdrew, and in a very orderly way. The Artillery covered our withdrawal, and the long lines of Infantry simply marched back; it was like a field day.

72c.

14560. We were told that the troops, as they came in after that fight, were demoralised?—When they got beyond a certain point they were home, as it were. I remained out at the outposts that night, and I did not see them. When they marched so far back that they actually formed fours, they went to their own camps. I do not suppose they were very cheerful, but they were certainly not demoralised; so long as they were with me they were not.

14561. I think, speaking from recollection—and I only speak from recollection—it was said that if the attack had been pressed at that moment, it would have gone very hard with you?—Oh, no. I will tell you where it would have gone hard—that the defences of Ladysmith at that time were not in the condition of perfection that they reached afterwards.

14562. I was taking it up on the morale of the troops. You do not agree that they were demoralised?—No, I do not. I think our men always fight whenever they are cornered. I think they play a far better up-hill game than they play when they are up the hill.

14563. (*Sir George Taubman-Goldie.*) No troops will fight hot when they are beaten. Being in a corner is one thing, being beaten is another?—But Napoleon said that we never know when we are beaten. I do not believe they did know.

14564. (*Chairman.*) We have been speaking all this time on the first head, namely, the adequacy of the strength of the troops at different dates. I will just ask you one question, which you can answer in a sentence, as to the adequacy of the forces in the field for the other operations that you conducted. They, I suppose, were adequate?—Ample. The adequacy of the forces that were sent for the relief of Mafeking was limited by one point only, and that was by transport. They had to have twelve days' food with them, and they had to take a certain amount of food to give to General Baden-Powell, and all that had to be carried with them at the same pace as they were marching. Therefore, the loads of each wagon were limited to the estimated capacity and endurance of the ten mules that were dragging each wagon, and, as the whole force was mounted, this transport had to be made really on the lines of flying transport; that is why the number of men who went with that column was limited, by the number of mules and light wagons, and so on, that were procurable.

14565. But that was a special operation?—Yes; otherwise we had ample.

14566. As it turned out, that was an ample force for the purpose, because it carried out its object?—Yes.

14567. The next point on which you were asked to speak is the quality of the men. Were you satisfied with the quality of the men that you had?—During the first part of the campaign I was, of course, associated with the British Army, the regiments that were in South Africa, and the seasoned troops that came from India. They are the flower of the Army—they are a survival of the fittest.

14568. Then you consider them good troops?—I do.

14569. The seasoned regiments of the Regular Army turned out well?—They did.

14570. And what do you say of the auxiliary forces?—The greater bulk, I should say, of the inhabitants of Natal are Scotch, or of Scotch extraction. I was associated with the Natal Mounted Volunteers; they went by different names—the Border Mounted Rifles, the Natal Carbineers, the Umvoti Rifles, and some rather unpronounceable names—but the one general descriptive name that included them all was the Natal Mounted Rifles. They were all excellent material; they were almost all young farmers and farmers' sons; there were a few men like young doctors, young lawyers, and lawyers' clerks, and there were a few men out of the towns like Durban and Pietermaritzburg, but the vast majority of them were men accustomed to riding and a hard outdoor life—men who had been brought up in raising stock, and all of them accustomed to handle arms, and game shooting and riding.

14571. You are speaking now of the irregular corps raised in Ladysmith?—Yes. Then the other force was the Imperial Light Horse; they were the picked 1,200 men out of about 12,000 refugees from Johannesburg; all the British refugees from Johannesburg were well-to-do men; they were all men getting big wages; they were either mine owners or mine managers, or electrical engineers, experts of one sort or another; many of them were men on the Stock Ex-

Lieut.-General Sir Archibald Hunter,

13 Feb. 1903.

change, lawyers, doctors, solicitors, and very few of them were engaged in trade—shopkeepers and such-like; and they were all men who had either in prospecting, or as contractors, or as wood merchants, or in one form or another, done a lot of transport riding to and fro; they were the pick and the cream of the intelligent men who were going out to South Africa, and naturally, physically, they were very fine. The first time I ever saw them was on the first day I arrived at Pietermaritzburg. It was the first day they had ever been on parade as a regiment; up to that time they had only paraded as squadrons under their squadron leaders; it was the first day that Colonel Chisholme had ever had them under his command. Sir Walter Hely Hutchison drove up on to the ground, as he wanted to see them, and he asked me to go round and look at them. I had not long come from a tour abroad, where I had seen nothing but the picked Guards of Sweden, Denmark, Russia, Prussia, and Saxony, and there was nothing I saw on the Continent then, and nothing I have ever seen here, except the Irish Constabulary, that could put a patch on them. You can tell "men" when you look at them. Every man was a picture of manhood; he was beaming with intelligence. They were a lot of very highly-educated men; there were 10, I should think, or 20 of them with incomes of £10,000 a year; I should think over 100 that had over £1,000 a year of their own; they had been in the enjoyment of that, I mean, in Johannesburg. For a long time I do not suppose there were over 200 or 300 men who ever touched their pay; they all put it back into the regimental funds. Out of those regimental funds Government allowed, I think it was, £35 for a horse; they gave £45 for their horses. If there was anything to be procured for love or money, they got it. They all had Zeiss glasses; not a single British officer had a Zeiss glass unless he got it out of his own pocket. But they had them as a corps, and their physique, their intelligence, their morale, and their knowledge of the country were all excellent. Amongst them were men who talked Dutch, Kaffir, and Basuto, and they had every element of success in them, and they were a great success, a most undoubted success. They were the finest corps I have ever seen anywhere in my life.

14572. We are not confined under these heads to Natal. What is your opinion of the troops that you saw afterwards?—The next lot that I saw, which were not Regular troops, were the Volunteer companies. In my division I had two brigades—one the Fusiliers Brigade and the other called the Union Brigade. All the Volunteers were good. Of course, they were raw and green when they came, but by sandwiching them—putting them on guard with Regulars and the officers doing supernumerary duties before they were detailed to duties of their own—they very soon picked it up; but then, of course, they were the pick of the Volunteer regiments, as you know, from here.

14573. Did you have any Yeomanry with you?—Yes.

14574. What do you say of them?—I "blooded" a great many. By "blooding" I mean that I gave the baptism of fire to a great many Yeoman. All the Scotch Yeomen came under me first. I was their first General, and I "blooded" them all. Well, I am a Scotchman, you see, and I never want anything better myself than that first lot that came out. I saw the second and third contingents too, and they were all good; but I always think the first lot were the best; they were the keenest. They came first, and naturally, I suppose, they were the keenest of the lot.

14575. But a good many of them went home after a year?—Yes. Of course, some went home on one condition and some on another; most of them went home when they were relieved by an equal contingent of their own corps, such as Lovat's Scouts and the Scottish Yeomanry, the Ayrshires and the Berwickshires and the Fife and Forfars; they all sent out an equal number, and that relieved those who had been out.

14576. As you mentioned Lovat's Scouts, I see you referred to them in this report of August, 1900, which I mentioned, as being a very useful corps?—Yes, very. Lovat's Scouts are, of course, quite an exception. You cannot compare Yeomanry with Lovat's Scouts.

14577. I am aware of that?—The nature of their everyday life and the way they earn their livelihood, and so on, qualifies them far better for the work that the soldier has to do in the field than a man who is working on a barge.

14578. But is it not more than that with them; is

it not that from the nature of their employment as stalkers, and so on, they have exceptional value as scouts?—Exceptional.

14579. And that a body of that kind, particularly in a war like that in South Africa, has a special value of its own?—Yes.

14580. In the use of a spyglass, for instance?—Yes. I do not know whether you use a spyglass yourself, but it is a very difficult thing to use.

14581. I have tried?—Some people think you have only to put it up, and you can see everything. There never was a greater mistake. It is a thing that wants just as much knowledge almost as a gun.

14582. What I have been told is that in South Africa it was found that when Lovat's Scouts did use a spyglass they could tell you the movements of the enemy, that a Zeiss glass, for instance, would not have discovered?—Yes, that is so. Their value was recognised because everybody was begging for them afterwards; everybody wanted two or three.

14583. Then, passing from the general quality, as to the shooting of the men, what have you to say about that?—Of course, full advantage of being in Ladysmith to shoot was not taken. The idea gained ground in Ladysmith that you should not fire much; there were days when scarcely a shot was exchanged. If you fire, you attract fire back on you, of course, and it came to be almost an accepted axiom that the more you fired the more you got fired back on, and, therefore, the heavier the losses were likely to be, and the thing was not to fire unless you were fired on. Otherwise I think a great many men might have employed their time very profitably. I always advocated that they should fire. We had ample ammunition; we had nearly 6,000,000 rounds of small-arm ammunition in reserve when we were relieved.

14584. But could they shoot well?—That is very difficult to tell unless you go over the ground afterwards. When I have gone over the ground afterwards, I have never had any reason to be dissatisfied. I am not boastful, but I never wore anything but my proper distinctive uniform, with a gold band on my hat, and so on, which showed exactly who I was—a General. They used to fire at me every time I went round, and they never hit me.

14585. Do you think that the Boer shooting was overrated?—Quite. But I will tell you what there is on the Boer side. There are certain shots who have earned their living as professional hunters, and up to from 200 yards to 300 they are undoubtedly marvellous shots.

14586. At short ranges?—Yes; but at long ranges I think their superiority over us is very mythical myself. In some ways they are better than we are. Their natural eyesight is better. They live in a country where every boy is sent out at night to bring in the cattle, and until the cattle are in he is not allowed to come in. Cattle wander tremendously on a big farm with no fences, and so on, and the more that boy can see, the better he can see where his cattle are, and the less trouble he has to ride round and look for them; therefore he is practising his eyesight—eyesight is merely a matter of practice—from the days of his infancy upwards. Here we are not. How is a boy born in this street to do it? He is rather lucky in having the river to look across to the other side, but if he is born in Stepney or Hackney, in a narrow lane, how is he going to have any eyesight?

14587. Then marching you found good?—Very good.

14588. And horsemanship, too?—Yes.

14589. What do you say about horsemastership?—Horsemastership is very much a question of surroundings. Every country has its own practices, and there are certain things better adapted to one person than another. I think horsemastership which would be eminently successful in the Soudan would not be, perhaps, in rolling plains of grass lands like the Orange Free State or out in the Argentine. I think it depends very much upon where you are. I think our horsemastership, taking it all round, is good. I think our men are brought up to be careful of animals and kind to them, and so on, and horsemastership is so much a matter of attention and care that I think it comes much more natural to us to be good horsemasters than to most people.

14590. We have had some evidence that a good many men who were employed as mounted troops did not know enough about horses to be good horsemasters.

Was that your experience?—In the Mounted Infantry you would find that a man suddenly taken out of the ranks off his feet and put on a horse needed to be taught. You cannot expect anything else.

14591. And then in a campaign like that it was essential they should be good horsemasters?—Yes; but horsemastership indicates previous training, of course, to be a horsemaster. You cannot be a master without learning; but the horsemastership of the Regular Cavalry, and particularly of the Field Artillery, is good. I should give the Field Artillery special praise for their horsemastership.

14592. In that all seem to agree; but could you meet the deficiencies of men taken in an emergency if their officers paid more attention to these matters?—I do not think their officers ever wilfully neglected the thing; it was a case of ignorance on their part as well as on the part of the men. It is a matter that requires training.

14593. Then officers should be trained in horsemastership?—Yes; I think every officer should. I think myself they were a very badly-trained lot of officers as a body.

14594. We are coming to the officers presently. What about the general physique of the men?—Of course, in the men in Ladysmith, as I said before, we had really the survival of the fittest; we had men whom it would do your heart good to look upon. All of them who came out were not that, of course.

14595. Taking the Army as a whole, from what you saw of it in the war, are you satisfied with its physique?—No; taking the Army as a whole, I do not think it fairly represents the manhood of this Empire. The Colonials do, but then the Colonials are the picked men. A man does not emigrate who is a cripple; he (the cripple) remains at home. The Colonials are far better physically equipped than we are, man for man. It is the stir-about, and the adventurous and the physically well developed man who has in him that spirit of adventure that takes him abroad.

14596. Whatever their deficiencies in physique, the morale, you think, was good?—Yes, I think it was as good as you have any right to expect, and it is quite as good as is necessary.

14597. And as regards the intelligence?—I do not think the intelligence is as good as it ought to be. The educated intelligence is not.

14598. And intelligence is what you want in the soldier nowadays?—Yes.

14599. Can you get it in the class from which we now recruit?—The higher pay nowadays, of course, ought theoretically to attract a higher class, but it does not; at least, I do not see any difference.

14600. (*Sir George Taubman-Goldie.*) But they have not begun to get yet a good increase in pay?—The men who have enlisted have got that prospect presumably before them, yet it has made no appreciable difference so far as I can see.

14601. (*Chairman.*) You have been watching it since you took up your command?—Yes, I see the recruits always.

14602. And you do not see any difference?—No, I do not see any difference.

14603. What suggestions have you to offer for the future training of the men?—It is forbidden, of course, to suggest that you should have conscription. I do not think any nation would ever adopt conscription until they had tried everything else. I remember having a long argument years ago with General Wauchope. He had this question very close at heart, and he worked at it. He was an employer of labour, and a friend of everybody—the man spoke straight to him and that kind of thing—and General Wauchope was a man well calculated, if anybody ever was, to get at the truth of anything he was interested in. He worked it out that to put a soldier on the same terms as one of the better class of his own miners you ought to pay him, feed him, house him, give him fuel and light, clothe him, shoe him well, and give him 2s. a day besides, free, not to deduct 2½d. and 3d., and ½d. for hair-cutting and washing—that is, 14s. a week clear for himself, and then he was as well qualified to marry and be happy as if he was working at an ordinary average artisan's employment.

14604. (*Sir John Jackson.*) And with these induce-

ments you would expect to get a very large number of recruits from that very class of good miners?—Yes, I should hope so, because I think in the body of our nation there is quite a sufficiency of adventurous spirited lads to accept such conditions.

14605. They like the idea of being a soldier provided they find they will not receive very much less money than they would receive as respectable labourers?—Yes. Then I think the men ought to be paid according to their value; you ought not to pay everybody a dead level. You do not pay everybody a dead level in any other sphere of life. We give them now good conduct pay, but that is practically the only thing. A man may be a flat-footed wretch, who cannot march five miles, or a man who will swing up a hill in front of everybody, and they are both paid alike. One may be a marksman, and another a duffer third-class shot, and both paid alike.

14606. (*Sir George Taubman-Goldie.*) You know under the new system in 1904 the pay will be 1s. 11d. a day, without stoppages?—But, as you have said before, they have not got to that.

14607. You have not really tested yet what it will bring forth?—No, and, of course, future employment is a matter that affects a man enlisting.

14608. I presume the recruit to-day would not look forward to what he would get two years hence?—No.

14609. The thing must be in force actually, I should imagine, before he can realise that event?—Yes.

14610. (*Chairman.*) You have some notes here in your *précis* about the training of the men in the future; perhaps you will state your views upon that point?—I think every man is capable of being trained, and that training is a matter of degree. Some men you would have to work at for two years to teach them what you could teach other men in a couple of weeks. For instance, you could teach men of intelligence and physique and ability, provided you point out the reason of the thing—you could teach such men as the Imperial Light Horse anything in one teaching, the same as you could any well educated, intelligent, active young man. But if you get a town-bred population, as most of ours are that enlist now, you have to take them out into the country and show them what is what, and try and teach them what is on the other side of a hill.

14611. Therefore, you want large tracts of country?—Yes.

14612. Those are rather difficult to get in this country, are they not?—Yes; they are to be got though.

14613. You think you can get sufficient in this country to train the soldiers on?—Yes, I am sure you can.

14614. (*Sir George Taubman-Goldie.*) In England or Ireland, do you mean?—I am talking of what I know; that is in Scotland. I think there is a system of training and manœuvres that we have never tried them in yet; it was tried, I think, by three Continental nations last year—the Germans, the French, and the Russians. In their scheme of manœuvres they combine embarking and disembarking. That is very suggestive, inasmuch as they have nowhere to embark or disembark except against us; but that is neither here nor there. But it would infuse reality into manœuvres.

14615. (*Sir Frederick Darley.*) You mean embarking on board ship?—Yes. Supposing I am sent to land on the coast of Donegal and take up so many tons of shipping and so many thousand men and be off to wait for the naval escort to come out of the Clyde, and land them on the coast of Donegal, and then let the General Officer Commanding Donegal come and turn me off or prevent my landing; that would be a practical system of manœuvres calculated to train the people in this country to resist invasion at any rate, or to go to the rescue of any of our colonies, say, or to go to the homeland of whoever was invading us. Whatever we do, provided you start from here, or from Australia or Canada, you have to get on board a ship first. Canada has a border with another country, but that is not the question we are talking about. I mean we have very few land borders that we can cross with anybody yet, except with India and with Canada.

14616. (*Chairman.*) And you want to train non-commissioned officers?—Yes, I have seen a battalion in the German Army of non-commissioned officers speci-

13 Feb. 1903.

ally being trained for their duties, and it struck me what a very fine lot of men they were. I think every battalion in the army sends up eight men per annum to it, and they go through a course of two years' training. They are taught really, and when they leave that school I should say they are as efficient as the average British subaltern of, say, five years' service.

14617. We have nothing of that kind in this country?—No, we have not. You have it in good regiments in classes under an officer. You have it in your Artillery, in classes I mean, for the training of specialists; but I think now, for example, in Scotland, we are going to perpetuate Lovat's Scouts. I think it would be a very good thing in the future, for these things can be very easily done. When Lovat comes out for training, he could have any number of these men attached to him. That would be one way, at any rate, of reaping the benefit and practical advantage of the knowledge that such men as Lovat's Scouts possess, that none, or at least very few, of us do possess.

14618. Shall we now pass on to the officers? You have certain views about the officers?—I think it was a great pity that we ever did away with the cadet system for officers for the Army. I was brought up in the Infantry myself. I was destined originally for an Artilleryman, but I never went up for the examination. I happened to go up for the Infantry examination first, and passed it; therefore, I went into the Infantry. I think we ought to enter as cadets, and go through a military school as a boy, and be brought up for this particular profession. We are not turned out as a scientific officer. I am neither acquainted with nor supposed to know anything about the scientific branches, until I become a General, and then how am I to learn if I have not taken the trouble to teach myself before? I am supposed to know nothing of electricity or the breaking strain of a girder, yet it may be very essential that I should know some day—it has been in my career. But I never was given a chance, simply because I was an Infantry officer, of learning that sort of thing. I think if you went back to the cadet system then you would have the men. I was reading a letter in the paper to-day or yesterday, asking why it was we had great scandals in the Army which we never had in the Navy. The reason given was that everything in the Navy was the subject of a judicial inquiry before any decision was arrived at. That is not the reason at all. The reason is because boys in the Navy are entered at thirteen or fourteen years of age, and they are taught and brought up to be what they are; they cannot help it. From the earliest days they are thrown into responsible and difficult positions, and they are made the straight, clean-minded young fellows that they are by their education. I say in the Army it ought to be the same, and we ought to be taught; everyone of us ought to be taught a great deal more than we are by the State to fit us for our positions as officers. In the junior ranks so very much is not required of you, but when you become a General Officer, with other men's lives resting on your shoulders, and so on, it may be a very essential matter that you should know all about gunnery, engineering, explosives, and electricity.

14619. You want to take boys as early as twelve years of age and put them into military schools without any mixture with other boys?—I should revive the cadet system at Sandhurst, and should teach every boy to be a fair linguist. Any boy can learn. We are all sharp enough to learn, particularly if it is the fashion to learn—everybody knows that. It is not that we are fools, we are by no means fools. There are certain languages that every boy in the Army ought to know. Hindustani is one. Then it does not matter a jot how old he is when he goes to India, he can understand, and make himself understood. French and German I would teach him, too.

14620. You do not think you would lose by not having an opportunity of taking a boy at a later age who has proved himself to be a capable fellow, though he may not have gone into a military school at twelve years of age?—I would not altogether confine it to boys taken in that way, because I would still keep open the possibility of a man enlisting and getting a commission. I know it is a very wide subject.

14621. (Sir Frederick Darley.) You would not preclude men rising from the ranks?—I would not exclude it.

14622. (Sir George Taubman-Goldie.) You think that

military questions are technical questions that require special education, like any other profession?—Yes.

14623. And a much bigger one?—You have to be a lawyer, you have to know how to attack a position, how to write a report, and you are supposed to be able to write a dispatch; everyone is supposed to have in his knapsack a scheme of march and battle, and it is only those few who choose to educate themselves to be qualified for a post who should attain it.

14624. But you would not confine it to boys of twelve years old. You approve, I presume, of the system at Woolwich, where they still go in at sixteen and seventeen?—Yes; every boy that goes to Woolwich has an infinite advantage over every boy that goes to Sandhurst, because he is taught better a wider range of subjects; he is taught everything, at least, that he ought to learn, and what it would be an advantage and benefit for him to know.

14625. (Lord Stratheona and Mount Royal.) You would have military schools specially adapted to those young men?—Yes.

14626. Beginning at the age of fourteen or fifteen, as in the Navy?—Yes.

14627. And you would have examinations afterwards as they advanced in position?—Yes. There is a certain class of officer I never would advance beyond. I should make it practically as it is in the Navy. Once a Commander there you go on to Captain, and then go on to be Admiral; but they do not necessarily promote you to be a Commander because you are Senior Lieutenant. The principle of selection is introduced. It is a very difficult one, and interferes with all kinds of other questions, vested interests, whether a man is married, or has a large family, or whether everybody knows who he is, and so on. I do not say those considerations weigh unduly, but they do weigh, and if you want to get the best men to the top you ought only to select of the very best. The matter is bristling with difficulties.

14628. (Sir George Taubman-Goldie.) How can you meet the difficulty of nepotism?—I do not think it prevails to any great extent. I could not quote a case where I know that a man has been given a position because he was so-and-so. I do not think it does prevail, and that is one of the very last of the arguments that I would put forward.

14629. (Chairman.) You want to prevent preference from the lower grades to the higher grades of any man who is not qualified to hold one of the higher grade appointments?—Yes.

14630. There is, of course, a Board of Selection for the higher grades already?—Yes.

14631. You do not consider it adequate?—I have never worked on it; I do not know. I know quite well that the only thing that a board like that could be guided by are the confidential reports upon that officer.

14632. (Lord Stratheona and Mount Royal.) You would have an examination, in the first instance, just as they have in the Navy now?—Yes; and then, unless a man had shown himself to be possessed of qualities that would be the qualities required of him as a General Officer, I would not promote him. I am an enemy of the principle that says he is good enough for a Colonel, but not good enough for anything higher than Colonel. A Colonel might some day, by accident, by the death of others, and so on, find himself in the rank of General in command of a position; I do not think he ought to be open to that.

14633. (Sir George Taubman-Goldie.) He should not be a field officer at all?—Not a field officer at all. That I know again is a matter that bristles with difficulties, vested interests, and considerations of other people.

14634. (Lord Stratheona and Mount Royal.) As a matter of fact, it is the case, is it not, that those wishing to enter the Navy now very often cannot pass the examination?—Yes.

14635. (Sir Henry Norman.) Can you be certain that a man who is a very good Colonel, and has done very well up to that rank, will make a good General, or that a man who has done very well in time of peace will do very well in time of war?—It is very difficult to theorise, really.

14636. I have such people in my own mind's eye?—I have known myself a man who was very slack as a Major, and, when he got command of his own regiment, suddenly transformed and became the keenest and most energetic Colonel that ever was. It is very diffi-

cult to judge of a man in peace time as to what he is likely to be in war. Some men have got no nerve at all, and they fear responsibility, and cannot do anything for themselves without half-a-dozen others to advise them, and so on; but I think if a man's character is closely studied, he ought to have given evidence one way or the other whether he is likely to succeed; it would be impossible, either in the Army or in any other sphere of life, to guarantee that your estimate of a man was absolutely right and the only just one.

14637. (*Sir Frederick Darley.*) The value of some men is never ascertained until responsibility is placed upon them?—That is so, undoubtedly.

14638. (*Chairman.*) There is another very important point you mention in your *précis*—that is, that there are too few officers?—That is very easily remedied, but it is a question of money.

14639. You point out what did happen: that when the line battalions went on service they took the officers from the Militia battalions, and the Militia battalions were left with none?—Yes.

14640. What suggestion have you for meeting that difficulty?—You can do it by an increase in the cadre of corps having more officers in peace time than are required for peace duties; then when war breaks out you have men available on whom you can draw; you have a fund, as it were.

14641. What would you do with the duplicated cadres in peace time?—For one thing, I would give everybody a much greater opportunity, a better chance of studying his profession. For example, so far as I know from my acquaintance with the Army, I only know two officers who know anything of the Japanese Army whatever, or whoever saw them. It would be a very good thing if, say, you sent a hundred officers to Japan. They have not sent their officers over to us in hundreds, but they have sent them over in scores in my recollection.

14642. You mean by having cadres?—You can employ them in all kinds of ways. Nowadays, if an officer attends a class for himself, signalling or musketry, his duties in the regiment devolve upon somebody else, who has his own duties to perform. There is no one available left specially to take over that man's duties. His duties are shared by others, whatever they are. His duties of guards, pickets, parades, clerical work with his company, his accounts, and looking after his men, and so on, all that falls upon somebody else.

14643. So long as you could find other occupation for some of the officers, either in taking classes or in assisting the auxiliaries, and so on, that would not imply an increase of the establishment of the regiment during peace time?—No; it would imply that there was always a normal establishment of officers with the regiment.

14644. But not a greater establishment than the present normal establishment?—Not greater than the present complete establishment.

14645. It was objected to by a high authority that to increase the normal establishment with the regiment would be detrimental?—It would be detrimental if it tended to idleness, of course, but I do not think it need do that at all. It would give you an opportunity for study and so on. I have had an exceptional career in the Army myself. I have been able to keep up my French. I have not spoken a word of German for 20 years; I mean I have not been in Germany to have more than a week at a time since then. If I had had an opposite number, as they are called in the Navy, I should have had three months in Germany to go to the German manoeuvres, or to go to the Austrian manoeuvres, to go out and see the Japanese Army, or to go to West Point and be allowed to study education on the American system. I have had necessarily none of these opportunities, or very few of them. I have been to some of the places, but not many.

14646. You also think that they are badly paid?—Yes; I speak for myself. I am not an extravagant man. I am a bachelor, and I do not keep many horses, but I never found my pay equal to the ordinary requirements that devolve upon me by holding the positions which I have held.

14647. And do you think that tells against the British officer?—A great many men with money, of course, come into the Army, but I do not think it is right, simply because a man chooses the Army as a profession, that he should die poorer than his brother who goes into some other branch of life.

14648. (*Sir Frederick Darley.*) You think he ought to have a living wage?—Yes, I do. Our pay, you see, is practically the same as it was. It is a question on which I have no historical knowledge at all, but I believe it has not been increased for very many years; and in the old days a shilling was worth probably what half a crown is now.

14649. (*Chairman.*) I think, with regard to the next head of our Inquiry, about supplies and transport, you have nothing very special that you wish to say?—No. Of course, I have had a great and varied experience of transport. Transport is a question that depends upon the theatre of operations, and so it is no good anybody studying the transport of the Khartoum Expedition or the South African War if we have war in China; you would learn nothing, except on the River Nile you might. Every country has a transport peculiar to itself. Elephant transport is one thing, camel transport is another; bullock transport, carried on the backs or on wheels dragged by bullocks or wheels dragged by mules, pack-saddles on mules or bullocks or donkeys, they are all different.

14650. But your system of organisation may be the same?—Yes, practically it might.

14651. Are you in favour of the regimental transport or the general transport system?—That is a very big question. If you have regimental transport, of course it means that your animals are, I think, better looked after. You take a much greater pride—that is only human nature—in what is your own, and you give it a greater share of attention than, say, if I have 50 wagons to-day, you have the same 50 wagons to-morrow, and someone else has them the next day. There come sore backs that ought not to be, galls, and a falling off in condition, and it is very difficult to say whether it was I or you, or someone else that was to blame for them. Then again, on the other hand, if I have transport, and you have transport, and someone else has transport, and you are sitting still to-day and I am marching, then your transport is doing nothing, and that is a loss to the Army. Taking it all round, I think the Army system of transport, although I know that is contrary to what was adopted for the South African War, is the right one. We tried it, and threshed it out most thoroughly, in the Egyptian Army for the Dongola Expedition and the Khartoum Expedition, and there we came to the conclusion that transport should be treated as a branch, almost as an arm, of the Service, exactly as you treat artillery. Because artillery happens to go with one division or brigade one day, there is no reason why it should always go with it, and if that brigade is sitting down where it does not want artillery, there is no reason why it should not go somewhere else.

14652. (*Sir George Taubman-Goldie.*) There would always be an Army Service Corps officer in charge, who would have the same pride, I presume, as the regiment in keeping it in order, and have the same responsibility?—Yes.

14653. (*Chairman.*) Of the Medical Services and the Engineer Services you have nothing to say but good, I understand?—No; I have seen a great deal of work with both of them. I do not mean to say there are no faults to be found with the Medical Service, because nothing human is perfect, but I think they have been very harshly criticised in many cases myself.

14654. Then as regards guns, you say that you have some remarks to offer?—Yes. I think one of the chief lessons of the war that the Boers taught us is how to move guns of position about and use them as field artillery. I know when Long Tom, as it was called, fired its first shell into Ladysmith it was a tremendous surprise, and to nobody a greater surprise than to artillery officers, for they did not know how the Boers got the gun there; but they were wheeling it about the country and up and down steep hills as if it was an ordinary 15-pounder gun. Our guns, so far as they went up to the range that they carried were as good as anything, I believe, that ever was made, and our powder was, too—I am talking of black powder. We had two muzzle-loading 6-inch howitzers in Ladysmith. There was a man named Ewart in the Cameron Highlanders, who happened to be at Port Elizabeth or East London—staff officer there—who heard that we were short of artillery in Ladysmith, and he sent them into Ladysmith, forwarding them round by Durban, and everybody laughed. They said they were old, obsolete guns, with a limited range of 3,800 to 4,000 yards. I knew that the powder and fuses were made in this country in 1864, and the powder was as hard as glass, and as good for practical

use in the year 1900 as when it was made in 1864, and there was no greater percentage of misfires amongst the fuses than there is amongst all fuses. That is pretty fair proof that the manufacture of powder, and so on, is satisfactory.

14655. And those howitzers were very useful?—Very; you could judge whether they were useful by the eagerness with which the different commanders used to squabble who should have them; they were almost at daggers drawn over it.

14656. Have you any other remarks to make upon the guns?—I think our guns were, up to their limit of range, very good. Our gun-laying in the Army, judging by comparison, and so on, is infinitely better than the gun-laying in the Navy. I know I am treading on very delicate ground when I criticise naval gunnery, but I say, and I know that it will not be contradicted by a great many men who were in Ladysmith, that the naval gunnery—is it within my province to say this here?

14657. Yes, I think it is?—I ask because what I say will raise a tremendous storm of indignation; but the naval gunnery left everything to be desired. The naval guns were fired from fixed, permanent platforms; there was no motion in the platform to disconcert the gunners, but the practice made with the naval 4.7's was—I do not want to use too harsh a term—well, it was such that I offered to take the girls out of the school to come and serve the guns, and make as good practice. I do not know whether that is not saying a very harsh thing, perhaps.

14658. But was that exceptional?—There were only two of them.

14659. (Sir Frederick Darley.) May the light have had anything to do with that—the clearness of the atmosphere?—But this did not extend over one day, it extended over the whole of the siege; they never profited to-day by the experience of yesterday. And they were firing off a fixed platform at a fixed target, not a moving target, as the Boer guns did.

14660. At a known range?—Yes, at a known fixed range. It was the same, probably, for more than a month—the Boer gun was in position in the same place, it never changed.

14661. (Chairman.) You were not satisfied with the practice?—No, I was not.

14662. (Sir Henry Norman.) Did it not produce a great effect upon the Boer guns and their practice?—It produced a moral effect, but it produced no other effect. I think they hit one gun; they claimed to have hit one gun in the nozzle.

14663. At what distance do you know?—I do not remember. I ought to know.

14664. (Sir George Taubman-Goldie.) Where was the Boer gun—at Bulwana?—Yes, and this was on Cove redoubt.

14665. (Sir Henry Norman.) Can you say approximately what was the distance?—I ought to know it exactly, but I do not remember it. It would be something like 5,000 to 6,000 yards, but I know that the Boer gun was estimated to have been capable of ranging 11,000 and some odd hundred yards—11,600, I think it was. It was seven miles roughly.

14666. The examination has been so very full that I have not really anything left to ask you. You were saying that General Wauchope thought that if a man received everything that he required and 2s. a day you could get the pick of the men, but you went on to say something about his being able to marry. Is not one of the reasons why a man will not enlist that he cannot marry?—If a soldier marries, it implies that he must have married quarters, and then his wife and children are a great expense when you move.

14667. But under the present system they are not allowed to marry?—No.

14668. So that you cannot put the soldier quite on the same footing as a civilian?—Anyhow, he can save up his money against the day when he leaves the Army, and can marry.

14669. I should like to go back to what you were saying about the difficulty of knowing whether an officer in a particular rank, or in particular circumstances, will be efficient in another rank or in other circumstances. Have you never known a man who was a very good commanding officer, and knew his work thoroughly, and commanded his regiment in a station, and so on, entirely fail when he was suddenly put into a position of very great responsibility?—Yes, I have.

14670. It is not so very uncommon is it in great crises, say the Mutiny, where men suddenly fell into a position of enormous responsibility, and, I think, a great many men went down, failed, who had great reputations before?—Yes, that is so, and, of course, there were a great many in South Africa who did so too. You cannot make a certainty, because, of course, very often a man's passing momentary condition may account for it; if a man had dysentery badly, or something of that kind, or if he were over fatigued, that might have a tendency to make him lose his nerve.

14671. That is only temporary?—I think as in a school the master is very well known, and a boy's estimate, as a rule, of his master is a very just one, so in the Army there are men in whom you feel absolute confidence. You would say, "Yes, I will serve under So-and-so," without a moment's hesitation, and there are others of whom you would say, "Well, I hope it will never be my fate to have my destiny as it were decided, or hanging upon that man's decision." It is not only in the Army, it is throughout life that the same thing happens.

14672. But there is such an immense difference between the test of peace and the test of war, and not only war, but very often an enormous responsibility apart from fighting is suddenly thrown on you—will you attack or will you not, where there are very many reasons either for doing a thing or against it; but as you say, of course, in the South African War there were many instances, and, I suppose, in every war there have been and will be to the end, and I do not see, and, I suppose, you do not see how it is to be avoided?—No, I do not see how you are to possibly legislate with absolute certainty when you are selecting a man that he will be fit for the position that you are going to put him into.

14673. But you admit that in a long and continuous war you can begin to know what men you can trust?—That is how Napoleon made his Marshals—by practical test, by seeing them under fire, and also as is well known by favouring those who did not aspire to enter into competition with him.

14674. (Sir Frederick Darley.) I have only one question to ask. You spoke of the moving of these heavy guns by the Boers; was that, do you think, done on their own initiative, or do you think they had instruction from any foreign expert?—Of their own initiative. Every Boer is a past master you see in transport, every Boer can yoke oxen to a span, every Boer can drive a team of oxen, and every Boer knows quite well what a team of mules or a team of oxen can do with a particular weight, because for a long while their only means of transport in that country has been the ox or mule wagon and the Cape cart. That is where they had an immense advantage over us, because transport means mobility, and that is why they were always quicker than we were.

14675. (Sir John Jackson.) To return to getting round this "Long Tom"; how did they manage it—in a way we could not have managed similarly with guns?—We did afterwards. We removed the 5-inch guns afterwards.

14676. Have you ever studied the question as to how far motor carriages might be utilised for moving heavy guns about?—I have seen that traction engines were used.

14677. Steam?—Yes. These present day twentieth century motor cars I know nothing about. But there is one example where, if you had surplus officers you could sensibly employ them, in staff-rides, for example, on motor cars. Take my case for example. If Scotland is invaded, I would be held, I presume, responsible to deal with the invader. If I had motor cars and a surplus of officers, I should be employing them in every Volunteer regiment, every Militia regiment, and every Yeomanry regiment in going about the country in intimately learning, so as to do it in the dark almost, the various parts of the country that would be most liable to be attacked.

14678. You are speaking now, of course, of a country with good roads, as Scotland has?—Yes, but, then, in Austria I know they have been used on awful roads, and I have seen them in France going over the ordinary harvest stubble fields.

14679. There does not appear to be any reason why something in the shape of a motor carriage should not be able to move guns about?—I think it is one of the developments that this century will see brought to a high state of perfection.

See Q. 19124.

14680. You say you have had a great deal of experience of recruiting in Scotland?—Not of actual recruiting, but of judging the recruits. Whenever I go to a regimental district, I specially see these recruits, and see them stripped.

14681. At the present time, from what classes are the recruits mostly got in Scotland? Do they come from the scum of the few big towns?—We get the worst class of recruit, physically, from Dundee.

14682. From the east side?—Yes. I cannot tell you why, because I do not know. I have asked ministers, I have asked missionaries, and I have asked the local medical authorities in Dundee, and all the magistrates, and so on, but whether it is water or not I cannot tell you. Anyhow, the people who live in Warrington in Lancashire (I belonged to a Lancashire regiment, and all our recruits in the regiment were either miners or mill hands), and work in the mills under the same conditions of life exactly as the people that live in Dundee, were of nothing like the inferior quality that these Dundee boys are: whether it is from early marriages, or whether, as some people say, it is because they no longer sup their porridge, but live on bread and butter and the teapot; whether it is the want of milk, or the want of meal, or the want of lime in the water, or what it is, I cannot tell you, but the fact remains that they

are the worst. Then, of other people, we get a very small proportion of the agricultural class, and then the rest are the artisan factory hands, miners in some districts—about Hamilton and Lanark, and so on, they are all miners, of course. In Glasgow you get the casual labourer.

14683. You get a great many Irishmen?—Yes, wharf loafers; yes, a good many Irishmen.

14684. Then, speaking generally, you would rather see the men drawn, at any rate, from a rather higher class, the better class of miners and the agriculturists, than those loafers of the town?—Yes; they are better fed, better developed, and more intelligent. Intellect and physique march side by side; the development of the brain and the development of the body generally go along together.

14685. In point of fact, I take it, to put it this way, that you would rather have your Army 25 per cent. less in numbers if you could have them of a better class?—Yes.

14686. Even if you had to pay them 33 per cent. more money?—Yes.

14687. You would consider that a more efficient service?—Yes.

Lieut.-General Sir Archibald Hunter, K.C.B., D.S.O.
13 Feb. 1903.

THIRTY-FIFTH DAY.

Monday, 16th February 1903.

PRESENT :

The Right Honourable The EARL of ELGIN and KINCARDINE, K.G., G.C.S.I., G.C.I.E. (*Chairman*).

The Right Honourable The Viscount ESHER, K.C.B., K.C.V.O.

The Right Honourable The Lord STRATHCONA and MOUNT-ROYAL, G.C.M.G.

The Right Honourable Sir GEORGE DASHWOOD TAUBMAN-GOLDIE, K.C.M.G.

Field-Marshal Sir HENRY WYLIE NORMAN, G.C.B., G.C.M.G., C.I.E.

The Honourable Sir FREDERICK-MATTHEW DARLEY, G.C.M.G.

Admiral Sir JOHN OMMANNEY HOPKINS, G.C.B.

Sir JOHN EGDE.

Sir JOHN JACKSON.

BERNARD H. HOLLAND, Esq., *Secretary*.

General Sir GEORGE S. WHITE, V.C., G.C.B., G.C.S.I., G.C.M.G., G.C.I.E., G.C.V.O., and Colonel E. A. ALTHAM, C.M.G., called and examined.

(General reference may be made to the Selected Telegrams and Despatches and the Siege Correspondence. Vide Appendices, pages 617 and 631, post.)

14688. (*Chairman.*) (*To Sir George White.*) I think before the outbreak of the war in 1899 you were Quartermaster-General at Headquarters?—Yes.

14689. I ask you that question because in our examination of Sir Charles Clarke he said that before the date of the 16th September you were responsible for any preparations for the war?—Any preparations for the war?

14690. The question was, "Before that date, in any preparations for the war, Sir George White was responsible?" and his answer, "He was responsible for the Branch"?—Yes, for the Quartermaster-General's Branch.

14691. Is there any remark that you would wish to make with regard to the preparations for the war, which is the first head of our reference?—I presume, you wish me to say whether there was anything as to which I think fuller preparations might have been made?

14692. Yes, certainly?—I think we were unnecessarily restricted in the question of expenditure for certain things that we asked for. We were met more than once by their saying that there had been no provision made in the Budget; and there were certain things that the Army Board, as I think we then called ourselves, definitely asked for, that we were told we could not get.

14693. Yes, we have had a good deal of evidence to that effect—and you support that view?—Yes, I do.

14694. Can you say at what date you began to represent that there were deficiencies outside the Budget provision which ought to be met?—No, I cannot.

14695. Was it June or thereabouts?—I would be afraid to say. I have nothing but a defective memory to fall back upon for that.

14696. At any rate, it was probably in the course of that summer?—It was in the course of that summer, undoubtedly.

14697. At that time there were special matters in which the preparations were defective which your Department then put before the Army Board, and the Army Board backed your representations?—Yes.

14698. But you could not get the money to carry them out?—We could not get the money to carry them out. I am quite ready to say that I think it was the Chancellor of the Exchequer who put so heavy a check upon the Secretary of State for War, that it became practically almost impossible for him to get what he wanted.

14699. We have had it in evidence that up to a date in September, I think it was the 22nd September, sanction was refused to their requisitions?—Yes. I remember one specially which was for transport, and which was negatived on account of there having been a good deal of money granted, I think, as an extra for that particular branch, and that there was no further provision; and we did not get it. I remember it specially, because we sent in a protest.

14700. (*Sir George Taubman-Goldie.*) Was it land transport or transport by sea?—Land transport.

14701. (*Chairman.*) In South Africa?—Yes.

14702. And these requisitions that you speak of were brought up because you were apprehensive of an outbreak of war in South Africa?—Undoubtedly. We sat

General Sir George S. White, V.C., G.C.B., G.C.S.I., G.C.M.G., G.C.I.E., G.C.V.O., and Colonel E. A. Altham, C.M.G.

16 Feb. 1903.

General
Sir George
S. White
V.C., G.C.B.,
G.C.S.I.,
G.C.M.G.,
G.C.I.E.,
G.C.V.O., and
Colonel E. A.
Altham,
C.M.G.

16 Feb. 1903.

as an Army Board, under the presidency of Lord Wolseley, with Sir Evelyn Wood as Adjutant-General, myself as Quartermaster-General, and General Brackenbury as responsible for the Ordnance; there were special sittings, so far as I recollect, from day to day for the immediate consideration of what was wanted, as the crisis was imminent.

14703. We have seen the records of those meetings?—I did not know that.

14704. Then, beyond that statement, there is nothing else you would wish to say with regard to the position of the Quartermaster-General's Department before you left it?—No.

14705. Then you were appointed to the command in Natal in September, 1899, I think?—Yes.

14706. And you arrived at Cape Town on the 3rd October, and were in Natal on the 7th?—I think those were the dates.

14707. You have been good enough to give us a statement, and, if you have no objection, we should propose to treat it, as we have other statements, as a part of the evidence?—That will quite meet my views.

The statement is as follows :—

In accordance with the permission conveyed to me in a letter from the Secretary of the Royal Commission on the War in South Africa, dated 7th January, 1903, I have the honour to submit the following summarised account of the military operations directed by me during the period I exercised an independent command in Natal. In the course of this statement I will endeavour to dwell on those events and decisions which have hitherto been looked upon as of the highest public importance, with a view of laying before the Commissioners the circumstances and conditions which surrounded the questions at the time I had to decide them; and the reasons that led me to issue the orders in each case. I embarked at Southampton for South Africa on the 16th September, 1899. I may here mention, as the point has been referred to in the evidence I have been allowed to see, that, previous to starting, I had received no orders, except that I was to assume command of the forces in Natal; and that the General Officer commanding at Cape Town was to exercise his command independently of me. I was not informed of any plan of campaign against the Boers, or asked to operate on any given lines. I therefore considered myself unfettered in meeting the emergencies which I had to face immediately on landing, as I thought best for the preservation of Natal. I arrived at Cape Town on the 3rd October, and had a short interview with Sir Alfred Milner. From what he told me I was convinced that Natal would be the main objective of the Boers, and that war was imminent. I accordingly changed my plan of going by sea to Durban from Cape Town, and proceeded the same evening overland to East London, where the Durban mail steamer had been detained for me. I landed at Durban on the 7th October. Major-General Sir W. Penn Symons met me there. I may, perhaps, here say that at Durban I met Captain Holland of the Indian Marine, who was helping in the transport service, and who had served with me when I was commanding the Field Force during the war in Upper Burma. I asked him about the coal supply, and urged him to get as much as possible from outside sources, as even then I had grave doubts as to my ability to cover the Dundee coalfields in the north of Natal. From Major-General Symons I learned the distribution of the Imperial and Colonial troops then in the Colony. This is given in the second paragraph of my despatch, dated Ladysmith, 2nd November, 1899, which, with my other despatches, is, I presume, before the Commissioners. The troops were distributed between Pietermaritzburg, Estcourt, Colenso, Ladysmith, Glencoe, Eshowe, and Helpmakaar. The information available to me regarding the disposition of the Boer forces is given in paragraph 3 of my despatch above referred to. The Governor of Natal, Sir W. Hely Hutchinson, informed me on the 10th October that the outbreak of the war on the 11th October was certain. On learning the disposition of the troops, I had been much impressed by the exposed position of the force at Glencoe, and had discussed it with Sir W. Penn Symons. He had given the subject great thought, had consulted the Colonial officers and local civil authorities, and was most confident that he had sufficient troops there to hold his own against the Boers. He also dwelt to me on the advantages that the ground round Glencoe offered for the tactics of his trained troops against burgher levies. Notwithstanding his opinion, I considered the Glencoe force should be with-

drawn. Ladysmith appeared to me the most advanced post that could practically be held against the two main divisions of the Boer Army. We knew that both Transvaalers and Freestaters were making every preparation to take the initiative and to assume at once an active offensive. The screen of mountains which separates both the Transvaal and the Orange Free State from Northern Natal gave the enemy exceptional opportunities of manœuvring behind it. He could start from many bases, and yet his forces, acting in combination and aided by the extraordinary mobility of their organisation, could mass suddenly at a selected point of vantage in Natal. If too heavily threatened on any point by the slower-moving British forces, they could fall back to the inaccessible fastnesses of the border land, where, it was apparent to me from the first, it would have been folly to follow them with any force I could hope to attack them with, at so great a distance from the base at Ladysmith. But in addition to the considerations given above, my transport only allowed me two or three days' march from a railway. The facility with which the enemy could cut communications behind me if I had given them a long line to strike at, would have involved me in probable disaster. Feeling that Ladysmith was the most advanced post that I could hold in force to use as a shield to cover the vitals of Natal, I sought an interview with the Governor, Sir W. Hely-Hutchinson, to tell him of my intentions to concentrate there. He has himself given an account of that interview, which took place at Pietermaritzburg on the 9th October, 1899. His account was laid before Parliament in January, 1900, and is no doubt before the Commissioners. It will be seen that Sir W. Hely-Hutchinson gave a most decided opinion that a withdrawal from Glencoe would be disastrous, involving the probability of the Dutch, not only in Natal, but also in the Cape Colony, throwing in their lot openly with the Boers. He further said that the effect on the natives, of whom there are some 750,000 in Natal and Zululand, might be disastrous, and that loyalists would be disgusted and discouraged. He also informed me that the opinions he had expressed were not his only, but were shared by the Prime Minister and by every member of the Natal Government. The dangers described above have since been referred to as mere political considerations, which should not have been allowed to over-ride military principles; but I submit that to dismiss them thus, after the danger is passed, is to deprive them of the weight that was due to them when I had to decide. The issue that appealed to me with greatest force was the rising of 750,000 of perhaps the most warlike and bloodthirsty natives in our Empire. Had it taken place, it would have been as great a disaster in a military sense as in a political. With reference to the probability of these results, I was bound to give the greatest possible weight to the opinions of the Governor and the Ministers. They had all the threads of information, both as regards Dutch and native feeling, coming direct to them, and they had had experience of these races for years. If I had ordered withdrawal, and their anticipations had turned out true, it would have been said, with reason, that after a few hours' experience of a country in which I had never been before, I had acted in direct opposition to the opinions of all my responsible advisers on such a point, who for years had had their fingers on the pulse of native opinion, and that I had thus brought about a most terrible disaster. On the other hand, there was a chance of success, and Sir W. Penn Symons was most sanguine, as were the whole of the local Government. Failing a success, there was the chance of being able to effect a withdrawal from Glencoe later, as was actually accomplished, after the Glencoe force had inflicted a very stopping blow, the after effects of which had far-reaching results. It turned the over-weening confidence with which the Transvaalers crossed the frontier into a hesitancy which not only aided the Glencoe column in getting away, but was of immense value to me in affording me more time to get up reinforcements, which were arriving daily.

I may, perhaps, here be allowed to notice the evidence given by Field-Marshal Earl Roberts, as follows: "The question, then, is, did Sir George White make the best of the situation as he found it? This is a most difficult point to decide, but it has always seemed to me that it was still possible for Sir George White to give effect to the great military principle of meeting the enemy with massed forces while they were still separated. I think the various actions and movements of Sir George White's troops must be

Vid

1900

regarded from that point of view, and that if so regarded they cannot be considered as altogether satisfactory. It seems certain that Talana might have been fought with a much stronger force, although I admit that Ladysmith would have been in some danger of attack by the Orange Free State troops for the space of a few days." In the earlier part of the evidence Earl Roberts gives the strength of the force available in Natal when the crisis came as 13,630 men, including militia, volunteers, and police. His Lordship further says that the task set before these 13,630 men was to hold their own against 50,000 or 60,000 Boers for a period of two months at the least. The method he has now advocated was to meet the enemy with massed forces. He also indicates Talana as an instance in which this massing ought to have been applied. Coming from so high an authority, I feel the conclusion he has arrived at deeply. I, however, beg, with the deference due to his Lordship's great ability and well-merited success, to ask consideration for the following views. To be quite impartial towards my own contention, I must begin by stating that I consider 50,000 to 60,000 Boers too high an estimate of the numbers I had to fight against. In order to argue within my own convictions of the odds against me, I will divide Lord Roberts's estimate by two, and work on the basis of 30,000 Boers. It would perhaps be a fair division to give the Transvaalers 18,000 and the Orange Free State 12,000. As a matter of fact, in a report dated 12th October, 1899, laid before me by my Intelligence Staff officer, it was estimated that on the 10th October the total force of Boers assembled on the northern and western frontiers of Natal amounted to 27,000 men. The enterprise of massing in strength against the enemy while they were still separated divides itself, naturally, into a choice between two objectives: (1) the Transvaalers, generally speaking, to the north; (2) the Orange Free Staters to the west. It must not be taken for granted that I could have advanced the force from Ladysmith, either north or west, without every move being known to the enemy. Ladysmith itself was full of Dutch partisans. It is therefore unreasonable to suppose that I could have taken any of the principal detachments of the advancing enemy by surprise. They would have had certain information of my movements. In case their numerical strength, or the still greater strength they know so well how to take advantage of in the selection of strong positions, had not given them the better of the chances, they would have fallen back on the fastnesses, which everywhere presented themselves in the mountain ranges which screened the advance of both Transvaalers and Free Staters. In any such manœuvring the superior mobility of the Boers would have given them the very greatest advantage. I had positive evidence from an eye-witness that most of the Free Staters had three ponies. A force so equipped could have manœuvred round me. They could cover 30, or even 40, miles with less fatigue than our infantry could march 12 miles. In an advance of any length towards the enemy it would have been necessary to provide for the safety of the base at Ladysmith and the line of communication with it. After making these provisions, the numbers that I could have brought up into fighting line would have been wholly inadequate to meet the Boers in any position in which they were likely to make a stand. It will be readily understood that out of 13,630 men in Natal, or even many more, but a small number could be brought to the fighting front. The Boers had the advantage of being strategically on the offensive, but, tactically, they could at any time assume the defensive. Besides, I should have had to make a long advance under the disadvantage of not being able to move more than two or three days from a railway, as my transport was not adapted for more. The positions the Free Staters could have taken up to the west have been aptly described as a succession of precipices. These are specially adapted for Boer defensive tactics, and all the experiences of the war show the impossibility of defeating Boers so placed without greatly superior numbers. In my case the British would have been actually fewer than the defending force. With special reference to the propriety of massing my troops against the Transvaalers in the north, the arguments I have used above are generally applicable. The nearest point at which I could have hoped to strike at any force would have been more distant from Ladysmith than in a similar operation to the west; they would consequently have had longer notice of my approach, and I do not believe I could have brought 8,000 men into action. According to the data of

strength I have taken, the Boers could have massed some 18,000. The initiative resting with them, they could have awaited my attack without loss or inconvenience in selected positions. Every hour so occupied would have made my position worse. The Free Staters would have been drawing nearer and nearer to Ladysmith, to find it depleted of its garrison, an easy prey and a prize of immense value. I may here state definitely that my ultimate hopes of saving Natal from being overrun by the Boers were centred in holding Ladysmith. Personally, I never underrated the enemy's fighting power. I knew they were fighting for what they knew was national existence and according to their national instincts. I had had letters from officers and men of my own regiment who were engaged at Majuba, and who had fought under me all through the Afghan War, 1879-80, and I knew that the Boers who had forced Ian Hamilton, Hector Macdonald, and others to surrender were no despicable enemies. With special reference to Talana, if the Boers had known—and they would have known—I had massed there it is not likely that Meyer would have made his isolated attack without waiting for the co-operation of Erasmus and the support of Joubert. But I could not foresee the date of Talana. It took General Yule's column, marching for their existence, the 22nd, 23rd, 24th, 25th, and 26th October to reach Ladysmith. I could not depend upon moving a large body of cavalry, artillery, and transport by rail on a single line with very steep gradients. To be present then, and fit to fight on the 20th at Talana, I would have had to quit Ladysmith on the 14th, when many of the troops had not yet arrived there. But it will be remembered that General Koch occupied Elands-laagte on the 19th, and cut the railway communication with Glencoe. The position of the British force massed at Talana would then have been as follows: A superior force with six-inch guns in front of them, an intercepting force at Elands-laagte, and the whole of the Free State Army either at or close to Ladysmith, which would have been unentrenched, and without a garrison capable of defending it. It may fairly be said that under such conditions capitulation would have been a question of days, if not of hours. Let us now consider what was really accomplished under the system of strategy I adopted, and of which the ruling factor was: "Take care of Ladysmith, and use it to cover the capital and south of Natal." I have already shown why, contrary to my strategic instincts, I was induced to leave the force at Glencoe. I was confident that that fine soldier, Sir William Penn Symons would strike with the greatest energy. This he did at Talana, taking immediate advantage of the defective co-operation of the Boers. These latter, from the individuality and independence of their organisation, were incapable of recovering their energy rapidly after such a shock. I therefore think that it was to this bold stroke of Major-General Symons that we owe the facility with which General Yule managed to withdraw his force. But General Koch's force would have barred Yule's line of retreat had there not been a sufficient force at Ladysmith to make a more decisively victorious attack on it than was made at Talana. I may perhaps be pardoned if I here quote from that great strategist and writer, Admiral A. T. Mahan, who reviews this part of the campaign without any personal or political bias, and who expresses my convictions in language more lucid than I can use: "Duly to appreciate the merits and results of these two successful days of fighting at Talana and Elands-laagte, it must be remembered that the British, in a general sense, and at Dundee locally as well, were upon the defensive, and that the Boer movements were each a part of one general plan directed, and most properly, to overwhelm and destroy the detachments—Dundee and Ladysmith—in detail; they together being considered one fraction of the enemy's force present, or hurrying over sea. So regarded, the vigour with which the British took the initiative, assumed the offensive, themselves in turn attacking in detail and severely punishing the separate factors of the enemy's combinations, is worthy of great praise. Sir Penn Symons is perhaps entitled to the greater meed, because to him fell, with the greater burden, the greater opportunity to which he proved not unequal. Such men are worthy of the steady forward gallantry shown by officers and men. Both leaders and led easily carried off the palm from the more phlegmatic opponents, who failed to sweep them away. The result was to save Ladysmith, or

rather—what was more really important—the organised force that was there shut in. The brilliant antecedent campaign, the offensive right and left strokes, the prompt and timely resolve of Yule to retreat just as he did, and the consequent concentration utterly frustrated the Boers' combinations, and shattered antecedently their expectation of subduing the British by the cheaper method of exhaustion."

I will turn now to the opinion expressed in Earl Roberts's evidence, that within 48 hours of Brigadier-General Yule's return to Ladysmith, it would have been possible for me to strike a blow with my whole force either against the Free State troops or those of the Transvaal. With reference to this, I submit the following consideration: The Brigadier-General's force marched into Ladysmith on the 26th October, and the Orange Free State and Transvaal troops joined hands on that very day at Modder Spruit. Even on the 27th and 28th the troops that had returned from Dundee were not fit for work in the field, and needed more rest. I had not lost sight of the importance of massing for an offensive effort. On the contrary, it was a prominent feature in my general plan. There were, however, limitations to the scale on which I could carry this out. The fighting power, the numerical superiority and greater mobility of the enemy working against me from divergent bases, precluded me from assuming the strategical offensive. I could only concentrate and wait till he gave me a chance of acting tactically on the offensive. In the great successes that were obtained later in the war the British had a very great numerical superiority. Lord Roberts must have had four or five times the number of troops that surrendered with Cronje. Towards the end of the war the Boers were estimated at about 20,000; the British had 250,000. In the latter phases of the war, also, the mobility of the British force was greatly increased. When Natal was invaded the relative numbers were all the other way, and the mobility also.

See Qs.
8872, 8903.

In reading over Lord Wolseley's evidence, I find he entirely condemns the holding of Glencoe and Ladysmith, and says that it should not have been even contemplated. I find in my file of telegrams one from Lord Wolseley, dated War Office, 17th October, No. 370: "Is Glencoe rationed for 60 days, as ordered? If not, for how many? Comply with orders, and report action." This conveyed to me the meaning that at that time Lord Wolseley contemplated Glencoe being held, and that he was also anxious that there should be the means of holding it for 60 days after the enemy had cut its line of supply. I received a second telegram from Lord Wolseley, No. 419, dated 23rd October, from which the following is an extract: "I do not wish in any way to hamper your discretion, but, personally, I am anxious about the safety of Colenso Bridge." On the date on which this telegram was despatched, viz., 23rd October, there does not appear to me to have been any suggestion from his Lordship of withdrawal from Ladysmith. I interpreted it as calling my attention to the importance of the bridge as on my line of communication from Ladysmith, and on the 31st October, in attention to Lord Wolseley's telegram, I despatched out of my already too small force in Ladysmith, the 2nd Battalion Royal Dublin Fusiliers and Natal Field Battery by rail to Colenso to assist in the defence of the bridges over the Tugela. In reply to Question 8875, Lord Wolseley says: "No one ever thought that the troops would occupy Ladysmith. The district in front of Ladysmith is called Biggarsberg, a very strong position. Ladysmith is in a hollow. It is no position at all." To this I can only reply that when I arrived in Natal, and I believe before, there was a general opinion that Ladysmith was a point to be held. Its selection as the principal station for troops in Natal received the very high sanction of Lord Wolseley himself. Everything that has since come to light shows that the Boers were confident that it would be held, and laid their plans to concentrate on it accordingly. It was their chief objective, and its fall was to be the guarantee to waverers that the Boers were too strong for the British in the field, and that, therefore, the time had come when it was safe for them to join the Dutch standards. In November, I believe, the Tugela was fordable from the Drakensberg to the Buffalo River. I have, however, given my reasons for holding Ladysmith, at some length, in paragraph 3 of my despatch, dated 23rd March, 1900, which I reproduce here, as it deals more fully with this most important issue: "3. It may be

well to state here shortly the reasons which governed my choice of this position. Ladysmith is the most important town in Northern Natal; and there was reason to believe that the enemy attached very great, and perhaps even undue, importance to gaining possession of it. It was suspected then, and the suspicion has since been confirmed, that the occupation of that town by the Boer forces had been decided on by the disloyal Dutch in both colonies as the signal for a general rising; as in fact, a material guarantee that the power of the combined Republics was really capable of dealing with any force the British Empire was able to place in the field against them. Our withdrawal would, therefore, have brought about an insurrection so widespread as to have very materially increased our difficulties. Strategically, the town was important as being the junction of the railways which enter Natal from the Transvaal and the Orange Free State, and until the Republics could gain possession of that junction their necessarily divergent lines of supply and communication prevented their enjoying to the full the advantages of combined action. Tactically, the place was already partially prepared for defence and offered a natural position of some strength; and although the perimeter which must be occupied was very great for the number of troops available, yet it afforded a possibility of maintaining a protracted defence against superior numbers. On the other hand, the mere fact of a retirement behind the Tugela would have had a moral effect at least equal to a serious defeat, and would have involved the abandonment to the enemy of a large town full of an English population—men, women, and children—and of a mass of stores and munitions of war which had been already collected there before my arrival in South Africa, and had since been increased. The line of the Tugela, from the Drakensberg to the Buffalo River, is some 80 miles long, and in a dry season, such as last November, can be crossed on foot almost anywhere. Against an enemy with more than double my numbers and three times my mobility I could not hope to maintain such a line with my small force, and any attempt to prevent their turning my flanks could only have resulted in such a weakening of my centre as would have led to its being pierced. Once my flank was turned on the line of the river, the enemy would have been nearer Maritzburg than I should have been, and a rapid withdrawal by rail for the defence of the capital would have been inevitable. Even there it would have been impossible to make a prolonged defence without leaving it open to the enemy to occupy the important port of Durban, through which alone supplies and reinforcements could arrive, and for the defence of which another retreat would have become eventually essential, thus abandoning to the enemy the whole colony of Natal from Laing's Nek to the sea. On the other hand, I was confident of holding out at Ladysmith as long as might be necessary, and I saw clearly that as long as I maintained myself there I could occupy the great mass of the Boer armies, and prevent them sending more than small flying columns south of the Tugela, which the British and Colonial forces in my rear, aided by such reinforcements as might be shortly expected, could deal with without much difficulty. Accordingly, I turned my whole attention to preparing Ladysmith to stand a prolonged siege."

To return to Lord Wolseley's evidence: The Biggarsberg was not provisioned, and the main routes and the railway from the Orange Free State entered Natal in rear of it. Had I, therefore, posted my force on the Biggarsberg, Ladysmith—their most coveted possession—would have lain open in my rear. The position Natal would then have been in needs no explanation. But, though the Biggarsberg has been referred to by Lord Wolseley as a strong position, I am not, even now, assured that it would, even judged apart from the considerations with which it was connected in my mind, have been found a suitable position for a division of all arms which had to occupy it for a long period. So far as my information went, the water supply was off the plateau and at its foot. It will be recollected that General Sir Redvers Buller, signalling to me on the 17th December, said: "I find I cannot take Colenso, and I cannot stay in force near, as there is no water" He could not get water in presence of the enemy, even though close to the Tugela. Even if I had looked upon the Biggarsberg as tenable under strategical conditions, the time at my disposal, or that of my staff, would have been too short to thoroughly go into questions so vitally important to its tenability as this and others. Ladysmith had been fixed upon

Vide Blue
Book, Cd.
458, 1901

since 1897, on the highest authority, and had been tested by occupation. The assured water supply for war may have had an influence on its selection. Though the ordinary water supply for peace was cut off by the Boers, the Klip River supplied us, and they could not divert it. When I arrived at Ladysmith the Boers were marching on Natal. It was necessary to accept something that had been gone into and settled by my predecessors in command. Had I made changes which required considerable time to carry out I should have been caught "swopping horses in mid-stream." With regard to Ladysmith being in a hollow, I held the heights around, and took advantage of the hollows, which were screened by the heights from the enemy's observation, for hospitals, ammunition parks, etc. With reference to its being no position at all, I can only urge that I defended it for 119 days against the headquarters and united armies of the South African Republics. Letters in my possession, extending from 30th October, 1899, to 21st February, 1900, prove that all this time the headquarters were north of Ladysmith. They are all dated from "Headquarters, near Ladysmith," and are nearly all signed by "P. I. Joubert," Commandant-General, South African Republic, or by "S. Berger," for him. On the 9th February, 1903, I saw for the first time Lord Wolseley's telegram to Sir R. Buller, dated, apparently, 31st October, in which he tells the latter that he had warned me before I left England of the importance of Colenso. I can only say I have no recollection of this warning. With regard to this, I will quote the last part of paragraph 2 of my despatch, dated Cape Town, 23rd March, 1900. "On the 31st October General Sir Redvers Buller telegraphed to me as follows: 'Can you not entrench and await events, if not at Ladysmith, then behind the Tugela at Colenso?'" On the same date I replied, stating my intention to hold on to Ladysmith, and on 1st November I received Sir Redvers Buller's approval of this course in a telegram which commenced as follows:—"I agree that you do best to remain at Ladysmith, though Colenso and line of the Tugela River look tempting." It will have been observed that Field Marshal Lord Wolseley considers that the proper strategy to resort to before the superior forces of the Boers was to retire behind the Tugela. Field Marshal Earl Roberts, on the contrary, attributes the subsequent difficulty to the neglect in the opening campaign of the great principle of advancing against the enemy's armies with massed forces while they were still separated. When two such very high authorities take views so exactly opposite of what the right course was, it may, at all events, be allowed that strategy is not a very positive or exact science, the study of which leads to uncontentious conclusions.

I will next give some account of the operations I entered into with a view to clearing up doubtful points regarding them, and of removing misconceptions. On the 16th October I had a general scheme prepared for fortifying Ladysmith. On the 19th October I made an inspection of the fortifications, and made some alterations. The actions of Talana and Elandslaagte have been described in my despatch of the 2nd November, 1899. I have nothing to add to these accounts and to what has been written in this paper. On the 22nd October General Yule found he was unable to hold his ground at Dundee, and he notified to me that he was retiring. His notification led me to believe that he meant to retire on Halpmakaar. I accordingly sent him an order to fall back on Ladysmith, and promised that I would, if necessary, fight out to help him in. I have quite lately learned from him that he always intended to retire on Ladysmith. The telegraphic communication lasted long enough to enable me to get an order to him to retire on Ladysmith, and a promise that I would, if necessary, fight out to help him in. In fulfilment of this promise I marched out on the 24th October to ascertain if his route was clear. I found the enemy in a strong position commanding the road from Newcastle. I engaged him, and forced him back, thus clearing the way for Yule's force, which might otherwise have had opposition here. Yule, hearing my guns, sent him in hopes of giving help; but we were further from him than he thought, and his guns returned to his bivouac without effecting a junction. This was the action at Rietfontein, described in paragraphs 1, 2, and 3 of my despatch, dated Ladysmith, 2nd December, 1899. The expenditure of gun ammunition was heavy, and caused me anxiety with regard to the future, as the supply of such ammunition was very short. During this action I had sent orders to the cavalry, who were guarding my right, to make an attempt to turn the enemy's left and get in on his

laagers, or field bases, which I knew to be there. This was found impracticable owing to a position held by the enemy north of Intintanyone, which, though not occupied by large numbers, was naturally so strong that it was impossible to take it without great loss, or to pass it. The reason for describing this incident will appear later. On the 25th October I sent out the 19th Hussars and some squadrons of the Imperial Light Horse to observe the position of Rietfontein and ascertain that it had not been reoccupied. This was to cover the right flank of General Yule's column from attack by the Free Staters as it marched into Ladysmith. I also sent a force, under Lieutenant-Colonel Coxhead, R.A., to meet the Dundee column, and, if necessary, help it in. All help, however, was declined by General Yule, and his column marched into Ladysmith on the 26th, very weary and travel-stained. They had done some 60 miles by forced marches in very bad weather, but without loss in men or material. It was, however, evident that both man and beast of this column must have rest before being fit to answer fully to any fresh call on them for service in the field. The 27th, 28th, and 29th were employed in reconnoitring the enemy, whose approaches from the north and west were simultaneously and carefully carried out. If I had advanced any considerable distance to attack one section, my flank and rear would have been exposed. At that time I was fortunate enough to have the services of General French, to whom I entrusted the duty of reporting to me any favourable opportunity he might be able to detect of striking a blow at the enemy. On the 29th October he located a considerable Boer force, with guns, on Long Hill, north-east of Ladysmith, and near enough for me to attack without uncovering Ladysmith. I was most unwilling to settle down to the secondary position of a besieged force without making an effort in force to defeat the enemy in the field before he had entrenched himself round Ladysmith. A partial victory could do no permanent good. I therefore thought the occasion called for incurring certain risks in order that if I might gain any advantage over the enemy, I might have the means of making it as decisive as possible. My plan then was to attack Long Hill at daybreak. The force I detailed for this was a brigade division of the Royal Artillery, the Natal Field Battery, and five battalions of infantry. The 5th Lancers, 19th Hussars, and the Natal Mounted Volunteers were to cover the right flank of the troops making this attack. These troops moved out to the north-east of Ladysmith, with guides to show them the roads and tracks. In addition to the above, and in order to cover the left flank of this attacking column, I sent another infantry brigade, consisting of five battalions of infantry, under Colonel Ian Hamilton, by a road more directly to the north, to take up a position at Limit Hill. The divisional troops, consisting of a brigade division Royal Artillery, 5th Dragoon Guards, 18th Hussars, Imperial Light Horse, and two companies mounted infantry accompanied this force. This brigade was to wait for the development of the attack on Long Hill, and if it was successful, to attack and carry Pepworth Hill, which was occupied by the enemy. Knowing, however, the facility with which the mounted Boers could get away in case of defeat, or even of anticipated defeat, and remembering how my mounted troops had been prevented in the action at Rietfontein, on the 24th October, by a small force from getting home on the Boer laagers behind Intintanyone, I sought for some way of getting to the west of Pepworth and Intintanyone, where I had information there was open ground, on which mounted troops could move rapidly, and thus ride round the left flank of the enemy if retreating, seize his field bases, and attack him, with a prospect of bringing about a panic such as had been produced after Elandslaagte. Major W. Adye was on my staff in the Intelligence branch. He was an officer who had impressed me by his high courage and great enterprise in reconnaissance. He had personally examined this ground, and told me of the route through Bell's Spruit to Nicholson's Nek. This nek was the pass into the western valley which I wanted to use. He explained to me that the route up to Nicholson's Nek was a defile. I specially inquired from him whether, if the column failed to reach the nek, which was six or seven miles off, there were strong intermediate positions that could be utilised for a short defence. He told me there were many. I am always doubtful of reaching a desired point by a night march through a difficult country, but the result I aimed at seemed to me to justify the risk. War is a balancing of risks against results. In this case the result is known, and was disastrous. I have not, however,

sufficiently authentic information to enable me to say the numbers of Boers who were engaged at this particular point, but it still remains to be proved that, under ordinary calculations of strength, the British might not have been expected to make good their retreat to Ladysmith. The account of the action at Lombard's Kop is given in my despatch dated from Ladysmith, Natal, 2nd December, 1899, paragraphs 6, 7, 8, and 9. (*Vide Blue Book* Cd. 458, 1901.) I will here supplement it by saying that in the night (29th-30th October) the enemy had slipped away from Long Hill. They either got information of my plan or divined it from the news they received from partisans in Ladysmith, that preparations were being made to move out. At all events, Long Hill was found evacuated, and the enemy ready to attack my attacking force in flank, which attack they delivered. There was some confusion in meeting this attack, and I had to divert some of the force at Limit Hill that I had intended for other purposes to restore the balance of the action. It was soon reported to me that by the aid of these reinforcements the enemy was well held; but on coming under rifle and shell fire many of the water and ammunition mules had broken away, and the enemy was too strongly posted to give me a hope of driving him out. There was also a rapid expenditure of gun ammunition, which was very precious to me, as the supply was very limited. I saw that there was no longer any chance of doing anything decisive, and I therefore determined to withdraw into Ladysmith. As soon as I had come to this conclusion I had made careful arrangements to cover the withdrawal, placed batteries so as to check pursuit, occupied ridges that covered the road into Ladysmith with infantry drawn from Limit Hill, and, when all was ready, ordered a retirement in *echelon* from the left. Previously I had dictated a telegram to Lieutenant-Colonel Altham, who was with me all day, directing Lieutenant-Colonel Carleton and the Nicholson's Nek column to retire on Ladysmith. The order was given by me about 8.30 a.m. The reports that the retirement from Lombard's Kop was a rout were untrue. Our troops disengaged easily. There were one or two attempts to follow up. These were easily checked by a few rounds of shrapnel, and the Boers went back to their previous and more sheltered positions. The enemy did not follow up our retirement. I think it necessary to mention these details to controvert reports published at the time, and that have since appeared.

It has often been stated that the fortification of Ladysmith had been neglected until after the withdrawal of the troops on the 30th October which I have just described. I am glad to be able to refute this charge on the high authority of the Commandant-General of the Boers. After the action at Lombard's Kop I had, under flag of truce, called General Joubert's attention to the fact that his guns had been directed on buildings over which the Red Cross flag was flying. I give below an extract from his reply:—"Headquarters, 4th November, 1899. Honoured Sir, In answer to yours of the 3rd instant, just received I beg to reply to the same, and to inform you that I regret that under circumstances over which I had no control certain persons unconnected with the present military operations should have been killed. When on Monday last the attack from Ladysmith was made on my position I found that the whole town was a fortified camp, and it appeared that there was no side to be seen from which my position and men were not fired upon." While on this subject I may say that as early as the 16th October I had a plan of fortifying Ladysmith laid out, and the work was proceeded with as the various other duties would admit of. I also telegraphed to the Admiral asking him to send me some heavy guns with which to arm the defences. It is a matter of history now that owing to the energy of Captain Hedworth Lambton the guns and gun detachments arrived the day before communication with Ladysmith was closed. It was thus that the long-standing neglect to fortify this frontier town or to provide armament for its defence was repaired. The daily incidents of the siege have been given at sufficient length in my despatch dated from Cape Town, 23rd March, 1900. I ought perhaps to call attention to paragraph 30 of that despatch to show the preparation I had made to assist in Sir Redvers Buller's first attempt to cross the Tugela. I have a number of copies of messages that passed between me and officers outside with relation to other incidents of the siege and the relieving operations. The movements in pursuit of the defeated Boers are given in paragraph 36. I shall be prepared to answer any questions that may be put to

me, and to produce any messages or communications that may throw light on the operations.

Before I close this paper I would like to submit to His Majesty's Commissioners that my resolve to hold Ladysmith and its successful accomplishment resulted in the complete overthrow of the Boer plan of campaign. That plan was to overwhelm the British in Natal before their reinforcements could arrive, and by a rapid *coup* conquer that province to the sea. The overthrow of that plan had been accomplished even before the reinforcements landed. During the time the Boers could have carried out their plan they were held at Ladysmith. The holding of Ladysmith, therefore, saved Natal. My task was thus fulfilled. If I could keep the Boers round Ladysmith, and thus preserve the integrity of Natal as a province, its capital city of Maritzburg and its seaport at Durban, during the interval, when the Boer's power of early mobilisation and concentration on Natal enabled them to attack with greatly superior numbers, I had every confidence that after that interval the greater resources of the British Empire would be put forth to help my force. I cannot justly be held responsible for the losses incurred in the relief. When Sir Redvers Buller was actually face to face with the difficulties of the position he was confident of his power to overcome them. On the 7th December, 1899, he signalled to me in cipher:—"I have decided to advance by Potgieter's Drift. Expect to start 12th December, and take five days." On 8th December I signalled in reply:—"Captain Heath reported yesterday from balloon that very large laager of enemy, consisting of about 300 tents, is on this side of the Tugela, in neighbourhood of Potgieter's Drift." On 9th December Sir Redvers Buller rejoined:—"The balloon was correct, but they have not enough men to stop me. I am only waiting for wagons which I am impressing. I still hope to start on 12th, and arrive near Lancer's Kop on 17th, but may be a day or two later, though I hope not. If I have hard fighting near Ladysmith, I shall look to you to feed my force for, perhaps, two days. I can only take three days' supplies across the Tugela river, but that should be enough."

If other schemes of operations are put forward, in the calmer aftertime of to-day, as having carried with them the probabilities of more complete and more rapid success, they must for ever lack the final proof of accomplishment. They must also be weighed as regards their intrinsic probabilities of attaining the object aimed at. They must further be most carefully weighed and considered as regards the consequences they involved in case of failure. In this connection the last is all-important. The most momentous lesson of the late war has been, that any advance against Boers on a line of operations, astride of which lie several good positions for defence, requires great superiority of numbers. Frontal attacks proved most costly. The greater the detour required for a flanking movement the greater the superiority of numbers necessary. Otherwise, the centre must be unduly weakened. Mounted Boers fighting in a defensive position, which secures the advantage of interior lines, could rapidly mass considerable proportions of their forces against the very much slower and wider movement of our infantry flank attack. The intended flank attack thus becomes locally a frontal attack with its attendant dangers. The Boers constantly practised this manœuvre. Watching them from our observation points in Ladysmith position, we could not at first understand why they galloped *ventre à terre*, from one hill to another. It was at first put down to the result of a panic. Later, we recognised that they were practising moving from one alternative position to another, and testing the time required to carry it out. This power practically doubled their numbers, and the manœuvre was effective over a very wide area. The Boers could be in a position facing the British force on the Tugela, and in an hour and a-half later could be attacking Ladysmith. To trust to manœuvring infantry against a force capable of such mobility, is to stake your fortune on the pace and striking power of a stage-coach against those of an express train.

I wish to add, if I may, something which I think will strengthen the statement I have made, on the high authority of Lord Roberts.

14708. If you please. Will you do it now?—Since I wrote the foregoing, a speech made by Lord Roberts on the 12th January last has come under my notice, which being the latest utterance of the highest authority on this subject comes in most appositely in support of the views I have expressed above. "It is no longer possible for foot soldiers, no matter what wonderful marching they may be capable of, to hurriedly re-

Vide Blue Book, 458, 1901.

inforce any particular point that may be hard pressed, or to bring a flanking fire upon a widely extended enemy, or to make a sufficiently sweeping turning movement. For such purposes we must have troops who can travel more rapidly than the fastest infantry." That is all that I care to add to my written statement.

14709. I gather from your statement that your feeling, on making yourself acquainted with the situation in Natal, was that it would be desirable to concentrate your forces?—Certainly.

14710. Was that at Ladysmith, or at a point beyond Ladysmith?—At Ladysmith.

14711. We have had it stated that previous to the interview which you had with the Governor on the 9th October, you had formed the impression that you had better concentrate at Sundays River?—I cannot recollect that. I cannot recollect any like train of thought that would have led me to concentrate at Sundays River. It may have been possible that I discussed it, but I do not recollect it. I knew that the stores were at Ladysmith.

14712. From the first then, it was your opinion that your stand would have to be made at Ladysmith?—I looked upon it that Ladysmith was the most advanced point which I could hold to stop the Boers from invading to the south of it, to act, in fact, as a shield to the rest of Natal.

14713. How far was that opinion derivable from any scheme of defence which had existed before that?—Ladysmith had been pointed out to me as a place regarding which there was a consensus of opinion that it should be the most strongly held in northern Natal, by all the officers who had been in command before me, and by the preparations they had made, and even by the schemes of defence which General Symons talked over with me when I met him at Durban.

14714. When I spoke of schemes of defence I was alluding to certain schemes of local defence which had been drawn up by the General Officers Commanding in Natal at different periods, and I think the last one was drawn up by Sir William Butler in 1899. Had you seen these schemes of defence?—I have asked myself that question before, and I really cannot quite say. But an explanation of that I would like to state to the Commissioners that I think they were so inapposite to the altered conditions that I should only have treated them as a line for my guidance, and in no way considered myself fettered by them.

14715. Quite so, but, of course, it might have forestalled your opinion with regard to Ladysmith?—They, everything I heard, and the preparations made, did confirm my opinion.

14716. (*Sir George Taubman-Goldie.*) And with regard to Dundee?—No, I do not think as regards Dundee in the abstract it fettered me. I had not before me anything to lead me to suppose that there was any position there.

14717. (*Chairman.*) But in the local schemes of defence, I think in all of them, there were provisions for holding Dundee?—Yes. There were provisions, but it was "provisions" in the eating sense.

14718. I mean that there was a provision in the scheme for a force being stationed there?—Yes.

14719. (*Sir Henry Norman.*) It was only a weak detachment, which could not have resisted the Boer army?—I cannot stand cross-examination on that scheme; I do not pretend to have attached any weight to it. I am not certain that I had that scheme in its details before me. I cannot help thinking that any scheme of that sort must have contemplated that the Orange Free State joining the Transvaal was very doubtful.

14720. (*Chairman.*) Had you any instructions before you left home with regard to your proceedings?—None.

14721. I suppose you had conferences with the authorities here in this country?—None that I can recollect. I remember one. Of course I do not know what your Lordship and the Commissioners may have before you; but the only conversation I can recall was when I went to say good bye to Lord Lansdowne, and when I asked him to give every consideration he could to an extra ammunition train that I was very anxious to get. I remember his reply to me being "But your position will be a defensive one." So far as I can recall, my reply was, that it was impossible to say before war commenced what position I might have to take up. In further explanation of that reply, I would like to say,

as regards expenditure of ammunition, that a defensive position often entails the necessity of a greater expenditure than when attacking. If you are an attacking force the initiative rests with you, and you need not attack unless you have sufficient ammunition; but when you are on the defensive you must reply to the guns of the attack.

14722. But written instructions you had none?—Written instructions I had none.

14723. That we were told?—I merely mentioned that conversation with Lord Lansdowne; I do not think he meant in any way to lay down a system of defence; it simply fell out, as I have given it to you, in conversation.

14724. Then was your objection to holding Dundee mainly because you wished to keep your forces massed?—Certainly; and I also looked upon Dundee as a long way out.

14725. Had the nature of the position anything to do with it?—No, not at the time.

14726. The position was not a good one for defence, was it?—I have not seen it. Perhaps in reply I may say that when I sent Sir William Penn Symons to take command at Glencoe I directed him to get a defensible position, to entrench it, and I gave him definite directions to be certain that he had an assured water supply inside it. I had better tell the story out. I sent, I think, Sir Henry Rawlinson up there on some staff mission, and when he came back I asked him about the position, and on getting some facts from him which made me doubt its strength and completeness, I communicated with Sir William Penn Symons that if he had not got an entrenched position, with an assured water supply inside it, he must vacate Glencoe at once.

14727. And there was a difficulty about the water supply, I gather?—His reply to me (I think I have it amongst my telegrams) was: "I cannot give you the assurances you ask for; and, therefore, I must obey your orders." He then went into the details of retiring; he said that he would make a feint towards the front, and that I must send him rolling stock to take away everything that could be taken away. I think women and children were amongst them. I forget the exact date, but it must have been within a couple of days of the action at Talana. I wired in reply: "It is too late to do that," and I asked him whether he personally thought that under the circumstances, and knowing what he had to remove, he had better stand. He said: "I am certain we must remain here." I then wired back to him: "I accept it, and I will support you."

14728. Is it not rather singular that there had not been an examination into the water supply before?—I think it was part of the grand confidence of the man. He had enlarged to me on the advantages of Glencoe as a field in which he could work his trained soldiers (and I may say they were splendidly trained; he was about the finest tactician I have known); he wanted to work them in the open against the advancing enemy, and I think he was carried away more by his own convictions upon that point than upon the precautions I directed him to take. This is the telegram: "Sent at 1.30 a.m., 18th October, to General Symons. I have been in communication with the Governor, and he thinks the political importance of your force remaining at Dundee has already greatly decreased. Maritzburg is now threatened, and I have to reinforce it heavily. If, therefore, you are not absolutely confident of being able to entrench yourself strongly with assured water supply within your position, fall back on Ladysmith. Send reply as quickly as possible." On the same date I sent, a couple of hours afterwards, the following telegram: "From Chief, Natal, to General Symons. With regard to water, are you confident you can supply your camp for an indefinite period? The difficulties and risk of withdrawing civil population and military stores are great. The railway may be cut any day. Do you yourself, after considering these difficulties, think it better to remain at Dundee and prefer it?" General Symons' reply to me is dated 18th October: "Clear the line. We can and must stay here. I have no doubt whatever that this is the proper course. I have cancelled all orders for moving." Then on the 18th October I rejoined to that: "Your 1.34 to 'clear the line.' I fully support you. Make particulars referred to by me as safe as possible. Difficulties and disadvantages of other course have decided me to support your views."

General Sir George S. White,
V.C., G.C.B.
G.C.S.I.,
G.C.M.G.,
G.C.I.E.,
G.C.V.O., and
Colonel E. A. Altham,
C.M.G.
16 Feb. 1903.

General
Sir George
S. White,
V.C., G.C.B.,
G.C.S.I.,
G.C.M.G.,
G.C.I.E.,
G.C.V.O., and
Colonel E. A.
Altham,
C.M.G.

16 Feb. 1903.

14729. (*Sir George Taubman-Goldie.*) Might I ask what influenced your sending a second telegram two hours after the other in a different sense?—It is not in a different sense, is it? It never struck me that I had contradicted myself. You mean the difficulties and risk of withdrawing?

14730. Yes?—I think the telegram has been lost from the file, but he had asked me for carriage for the women and children; and when he came to work out what he would require his demands on me were what I could not possibly have given him; it would have risked the whole of the rolling stock. I must think out that point on the spot now. The line between Ladysmith and Glencoe was cut (this was the 18th October) by General Koch on the 19th at Elandslaagte. Have I answered your question? Was that what you wanted?

(*Sir George Taubman-Goldie.*) Yes, I think generally.

14731. (*Chairman.*) When I asked the question about preparations for a water supply I did not so much mean to refer to General Symons, but to the whole of the schemes of defence of the colony. When Dundee was suggested I should have thought the question of water supply would have been one of the first that was attended to?—I agree.

14732. But apparently it had not been thought out?—Apparently it had not been thought out even by the officer who was in presence of the situation.

14733. Then another consideration which I understand weighed very much with you in acceding to the views of the Governor was the presence of the natives on the frontier?—Yes.

14734. That you considered a serious danger, which you were obliged to take into account?—I thought it a most serious danger. I was probably the only one in South Africa at the time who had been all through the Indian Mutiny, and I felt a very heavy responsibility in acting against the advice of my responsible, I might say, my constitutional, advisers on what the effect of a given order of mine might be upon 750,000 natives. I pressed the Governor with regard to it. I said: "You have put before me terrible risks with regard to the result of my proposed action that I think I would not be justified in facing." He adhered to his view most firmly, and also, as I think I have said in the statement which I have submitted, he told me that it was not only his opinion, but that it was the strongly-held opinion of every member of his local government. I think it is only fair that people judging on that decision of mine should put themselves absolutely in the position that I was in at the time when I had to decide.

14735. (*Sir George Taubman-Goldie.*) Do you think the Governor was aware of the fact that there was a possibility, if our troops did not withdraw from Glencoe, that they might have been beaten at Glencoe?—I think he had overwhelming confidence in their standing.

14736. Because, of course, it is palpable that their being beaten out of Glencoe would have had a worse effect upon the natives than their withdrawing?—Yes; but, of course, there was always the element of hope that they would not be beaten, and there was a chance of getting them back if fighting an enemy on equal terms.

14737. (*Sir John Edge.*) But is that quite so? The Governor may have been aware of the fact that there was a risk of our being defeated, but would not a good fight, even if we had to retreat afterwards, have impressed the natives more with our power than if we had retreated without fighting? The natives might not understand concentration at all; they might think that we were running away; but if we had had a good fight, as we had, and then retreated, and then concentrated, the natives might have looked upon it from a different point of view?—I am not a native, and I cannot say. I may, however, say *à propos* of what Sir John Edge has suggested, that I attach the greatest importance to the blow struck from Glencoe, and I have brought that out in my statement.

14738. (*Chairman.*) That is to say, that although we had to retreat afterwards, still the fight at Glencoe had its effect?—If I am not wasting time I would like to say exactly how it was put to me by a man who knew both the Boers and the Zulus. I was told that the Boers had come over the passes, declaring that one Hollander was worth four Englishmen; that the fool Englishman would be in a red coat and white hat, and stand at the top of the hill, and the wily Boer would

shoot him, not over a rock, but from round the side of a rock. That over-confidence was knocked out of them at Talana.

14739. (*Sir George Taubman-Goldie.*) On the whole you think that the holding of Glencoe had a beneficial effect?—I think it had a very beneficial effect, not only as regards the general question of the relative fighting value, man to man, of Briton and Boer, but it gave us so much more time, and it certainly paralysed the readiness with which the Boers were prepared to advance and fight, and I believe it had a very strong influence in enabling General Yule to get away as he did.

14740. (*Chairman.*) You are speaking there of the effect that it had upon the Boers?—Yes.

14741. Do you think it also had an effect upon the natives—the Zulus?—I really cannot enter into that. I do not know what effect it would have upon the Zulus. I would rather not commit myself to any opinion on that.

14742. (*Viscount Esher.*) Do I rightly understand that in the first instance you say that your military instinct was in favour of retiring from Glencoe?—Concentrating.

14743. But that on retrospect you think it was fortunate that that position was maintained; is that what we are to understand?—No, I will not go so far as that, but I will say that the incident at Talana, which, of course, was contingent on the force being there, and their being attacked, had a very strong stopping effect on the advance of the Boers.

14744. You do not go so far then as to say that you are glad on the whole that we remained at Glencoe and fought at Talana?—I never thought of it in that way.

14745. (*Chairman.*) What has been represented to us is that if you had been concentrated you might have made attacks upon the Boers as they came over the border, and therefore you could have fought the fight at Talana under perhaps more favourable circumstances?—I have tried to argue that point in my statement. I wrote it deliberately. I might perhaps read it.

14746. If you will just refer me to the particular point?—That is in regard to what the Commander-in-Chief said about Talana: "With special reference to the propriety of massing my troops against the Transvaalers in the north, the arguments I have used above are generally applicable. The nearest point at which I could have hoped to strike at any force would have been more distant from Ladysmith than in a similar operation to the West; they would consequently have had longer notice of my approach, and I do not believe I could have brought 8,000 men into action." I may here add that I could not have brought nearly so many into action. With regard to Talana, that engagement was fought on the 20th October; by that date troops were massed at the Drakensberg to the west of Ladysmith.

14747. The Boer troops you mean?—Yes, and they, who, according to the data which I take in my statement in reply to Lord Roberts, were at all events some 10,000 or 12,000 in number, could with their extra mobility have ridden into Ladysmith in a day. Therefore if I had fought with greater strength at Talana I should have opened Ladysmith to an attack from the west.

14748. (*Sir George Taubman-Goldie.*) And a little lower down you say: "To be present, then, and fit to fight on the 20th at Talana, I would have had to quit Ladysmith on the 14th"?—Yes, about that.

14749. Then many of the troops had not arrived?—Quite so. And another point in regard to that, which only a soldier in command can fully realise, is that men coming off board ship and horses coming off board ship, were utterly unfit to be moved up. The colonels used to come to me and say: "The horses are mere rags; give us a rest of a few days to get them fit." I think that will come home to anybody with actual campaigning experience.

14750. (*Chairman.*) Then in the concentration which you did advocate at Ladysmith, what was the particular object which you had in view; was it to resist the Boers at the point of Ladysmith, or had you any intention of attacking them before they got that distance?—As the attack developed I was watching all along for an opportunity to strike without uncovering Ladysmith, and I looked upon Ladysmith as the point from which I could do that with the greatest force and with reasonable safety. I do not know whether I have quite caught the point of your question.

14751. I think perhaps I did not quite make myself

understood. What I wanted to put to you was this: Your plan, with which you went to the Governor on the 9th October, was to withdraw from Dundee and to have all your forces at Ladysmith?—Yes.

14752. I want to know whether at that time, the 9th October, you contemplated after that, if and when the Boers crossed the frontier, attacking them somewhere nearer the frontier than Ladysmith?—Yes, if I could get an opportunity; if I saw a way of doing it. I moved out one day when it was reported to me that the Boers from the Free State were advancing down from the Drakensberg, in the hopes of getting them in some open ground where I could attack them.

14753. That was after the decision had been come to to leave the force at Dundee?—Yes.

14754. What I was putting to you is whether, supposing you had not left your force at Dundee, but had had the whole force at Ladysmith, you had any idea in your mind as to where you would have resisted an invasion of the enemy?—No, I had no intention of moving out far from Ladysmith. That would always have meant the Boers being able to get to Ladysmith on either flank. If I had advanced far to the north, the Boers on the west could rush Ladysmith, and I considered the Drakensberg impregnable.

14755. I asked you the question partly because a good deal has been said about the fact that the railway was not damaged north of Ladysmith?—Damaged by whom?

14756. Damaged by us?—Quite so. I often considered whether I ought to do that, but I had not troops concentrated to strike. My telegrams will show what my mind was full of with regard to that. I had not men concentrated to strike with real force until after the return of the Dundee force. I then hoped that I might be able to do something decisive from Ladysmith itself, and if the railway bridges had been destroyed that would have destroyed my hope of making any success I might gain decisive. I further knew that from the Boers being accustomed to that country and moving so rapidly, they could get twice the draught out of an ox that we could, and it would not have really impeded their advance very much.

14757. But their having the railway no doubt assisted them afterwards?—Yes, but I do not think destroying the railway would have prevented their massing as they did; and at the time the rivers were fairly low. It would not, I think, have prevented their concentrating on Ladysmith.

14758. And you wanted to retain the railway with regard to the possibilities of an advance of your own?—Quite so.

14759. Does that apply even so far north as Laing's Nek?—No, it does not. There again I should think Laing's Nek had gone out of my control really before I got to Ladysmith.

14760. Do you not think it would have been an advantage if something had been done to the culverts at Laing's Nek?—I do not think it would have protected us eventually. It is wonderful how soon the Boers get over a thing of that sort. It might have been a check and an inconvenience, but I do not think it would have stopped their advance.

14761. But was it ever considered?—Colonel Altham, who was Intelligence Officer, tells me that it was considered, and that it would have been necessary to blow up the tunnel. (Colonel Altham.) Before the tunnel was made the construction line ran over the Nek when the railway was being made, and the stations with embankments were still in existence; we had them examined by an officer sent out from the War Office. (Sir George White.) And they could have made a diversion. (Colonel Altham.) Practically so, unless the mountain had been blown up, unless the whole line had gone. We looked at it from the point of view of what we should do if the Boers had blown up the tunnel.

14762. That is the point of view from which most of these things were looked at—from what you could do?—Yes, I think so at the time. (Sir George White.) Undoubtedly it was.

14763. (Sir George Taubman-Goldie.) Supposing you had followed your original plan of withdrawing the forces from Dundee, I suppose in that case they would have destroyed the bridges and culverts as they came back, would they not?—I would be afraid to say. I would have had the same thing in my mind. I would

always have been in hopes of being able to give them a real good push back, and then the bridges would have been important to me.

14764. But supposing they had advanced over them and held them even for a day, they would, when they retreated, have blown them up?—No doubt, unless they had hopes of advancing again.

14765. And you would not have had the railway to go by?—No; no doubt they might have done that; in fact, they did it at Colenso.

14766. And elsewhere?—Yes, but then they had thrown up the game. 16 Feb. 1903.

14767. (Chairman.) I do not want to take you through the statement of your reasons for remaining at Ladysmith; you have given them in your statement, and we have had the views expressed before us by Lord Wolseley and by Lord Roberts. The question I should like to ask you is, do you think that there was any opportunity, supposing it had been advisable, for withdrawing your force from Ladysmith behind the Tugela after you once reached Ladysmith?—No, I did not contemplate that. Of course, I thought of it, but I cast it out as not the better course to pursue. I have also said in that quotation from my despatch that it is very doubtful whether behind the Tugela there was a position.

14768. I quite understand that, and I was not arguing it. I only wanted to know whether in your opinion it would have been a practicable operation. Sir Edward Ward told us that at the time of your arrival in Natal the provisioning of Ladysmith was going on; some of the provisions were still at sea, and therefore the railway was fully occupied taking stores up to Ladysmith?—Yes, I do not think it would have been a practicable operation.

14769. You could not have taken those stores back again?—I think not; there were so many other things to do as well. The troops were all arriving at the time, and I think it would have been impracticable to remove the stores. You would first of all have had to select a position, then you would have had to look out for water, then you would have had to consider many points which certainly, after my arrival, I would not have had time to do; I should have been caught probably "swopping horses in mid-stream," as I have said. But having arrived at the Tugela, I think I should have had to go back again. I have brought out in that extract that Sir Redvers Buller, with three times stronger a force than I had, could not stand on the Tugela in the presence of the enemy, because there was no water. That means that you cannot make full use of water with your cavalry horses and all the transport animals under the direct fire of the guns of the enemy.

14770. By the way, I have omitted one point that I meant to have asked you with regard to your possible movements. You say in your statement that you could not have moved more than two or three days from the railway, as your transport was not adapted for more. What transport did you have?—As far as I recollect we had two and a half days' what was called regimental transport; that is to say, carriage for two and a half days' supplies, and we had a reserve of three or three and a half, that is, five and a half days' or six. Let point A (describing) be rail head. You move out three days, three days' provisions are used, three days more in returning without a halt.

14771. But was that amount of transport the regular amount to be allotted to a force of your description?—That was the line on which it was organised for the Natal campaign; I mean that that was the decision of the highest authority with regard to it; that is what we got money to buy.

14772. What I ask is, was it in your opinion a deficient amount of transport?—I think it was.

14773. You thought so when you arrived?—Yes, when I arrived.

14774. (Sir George Taubman-Goldie.) And if you had had more you could have done much better?—I could have got further. I cannot say more. I think that was too short a supply.

14775. (Viscount Esher.) Who were the highest authorities who fixed the amount?—I presume the Commander-in-Chief was the man who did it.

14776. The Commander-in-Chief in England or in South Africa?—In England.

14777. (Chairman.) If you had had a larger amount of

transport would your force have been a more effective instrument?—I cannot say that I have in my mind at the present time any occasion upon which I was restricted in my operations for want of transport.

14778. But still *à priori*, before you used your force, your force would have been a more effective instrument if you had had a larger transport?—Undoubtedly, because I could have struck further; but at the same time more transport means more escort; it would have used up a good many more men.

14779. (Sir George Taubman-Goldie.) Would the Commander-in-Chief have the control of that department?—I really cannot say exactly where that ruling came from.

14780. (Viscount Esher.) But I suppose what you mean is that the military authorities in Pall Mall, whoever they were, were responsible?—Yes.

14781. (Sir Frederick Darley.) Regimental transport is a fixed quantity?—Two and a half days' supply, if I remember right.

14782. (Chairman.) But I think you said at the beginning of your evidence, when speaking of the Quartermaster-General's Department, that transport was one of the things for which you asked additional money, and you could not get it?—I think what we asked for on the occasion to which I referred was that amount of transport for certain battalions which was refused to us.

14783. (Sir John Edge.) Anyhow, it was the transport you found there, whoever was responsible?—Yes. I hope I am quite clear upon that point. I do not think we were refused any increase over that, but that for certain regiments for which we applied for that amount of transport we did not get it.

14784. (Chairman.) Then the regiments had not got their full regimental transport?—No.

14785. Were these regiments actually at the Cape?—Yes, in South Africa; so far as I recollect, at the Cape.

14786. (Sir Henry Norman.) Did the Indian troops of your force bring transport with them?—No, I think the transport was provided in the country.

14787. (Viscount Esher.) You see, Lord Roberts has rather criticised your action for neglecting in the opening of the campaign the great military principle of advancing against the enemy with massed forces while they were still separated. Supposing you wished to do that, had you the transport to enable you to do it?—One of the reasons, as I have already shown, which would have made an advance in massed forces against a position where it was absolutely in the power of the enemy to move back to at any time unwise, was that it would have been paralysed by my want of transport.

14788. (Sir George Taubman-Goldie.) With regard to Sir Henry Norman's question, you may remember that in India they found mule transport for regiments, ammunition, entrenching tools, signalling equipment, and medical panniers, and the War Office was responsible for all other transport?—I forget exactly how it was shared.

14789. (Sir John Edge.) I suppose that with regimental transport you could only advance a certain distance from your base?—Yes.

14790. You might have advanced two days or two and a half days?—Quite so, from the railway or even three.

14791. In the comment of Lord Roberts he does not explain where you might have advanced your massed forces to. Of course, you were limited to your base at Ladysmith?—Our base was Ladysmith. There was provision also at Glencoe, but not for so large a force. But in advancing like that it would have been incumbent on me to go on until I got in contact with the enemy. As the enemy would have been drawing me further and further from Ladysmith, he would probably have made a feint of standing at, say, point A, and would then have withdrawn further northward to B. Every march they forced me to make northward would have made Ladysmith a greater certainty for the Free Staters, who would have found it denuded of its garrison—unfortified, in fact, their most coveted possession lying open to them.

14792. Anyhow, even if you had elected to attack them with massed forces, you would have been limited in your point of attack by the distance from your base?—Yes.

14793. (Chairman.) Then, as you have just said, Ladysmith was unfortified when you reached it?—Yes.

14794. But you at once set to work to draw up fortifications?—I at once told off the strongest committee I could. So far as I recollect, it was presided over by Sir Archibald Hunter. I put the Commanding Royal Engineer, the officer commanding the Royal Artillery, Sir Ian Hamilton, and other officers in whom I had great confidence, to lay out a plan of fortifying it. I altered the plan myself afterwards on some points; and we set to work, so far as other work would allow, to fortify. If later I read the telegrams of the day to day occurrences, or if you follow the account given in my despatches, you will see that I was trying to carry out an offensive defensive all along, and I went out constantly wherever I could see anything I could strike at. These operations interfered with the progress of the entrenchments.

14795. But the plan was formed and the defences were carried out. They involved a very large perimeter?—A very large one—14 miles.

14796. And it took you all the men you had with you to hold that perimeter?—All the men I had with me. In point of fact, the perimeter was too big for any school rule to hold, with the men I had. I had to play to a certain extent a game of brag with regard to the positions I held. Knowing the great range of their guns, and also from my early experience, I took up positions not because I thought they were advisable abstractedly in the defensive, but to deny them as artillery positions to the enemy; if he had occupied them he would have made Ladysmith untenable.

14797. Some complaint has been made as to your retention of cavalry; do you wish to make any remarks upon that point?—Yes. Sir Redvers Buller asked me to send one regiment of cavalry out, I think it was to the east, to prevent Ladysmith being turned, and Maritzburg, and later, perhaps, Durban being attacked. I resisted any of the cavalry going; my object in keeping the cavalry being the question upon which you have just examined me; it was a question of the enormous perimeter. The cavalry was the only mobilised reserve I had to gallop from point to point for the ready reinforcement of any threatened point. As regards the positive proof of that, it was the cavalry that saved Ladysmith on the 6th January. I could not have moved infantry from the central point where my reserves lay to the top of Wagon Hill or Caesar's Camp in time to have prevented a disaster.

14798. You consider that the cavalry were an essential part of your defence?—I do. And with regard to that my Chief of the Staff (Sir Archibald Hunter) did not agree, and I told him that I considered it would take away the whole of my powers of reinforcing any point in this very long perimeter to lose the cavalry.

14799. Sir Archibald Hunter did not agree with you?—He yielded in deference to my opinion, but I may say that he was consulted independently of me by Sir Redvers Buller.

14800. Did Sir Archibald Hunter suggest as an alternative a restriction of the perimeter?—No, he did not, but I would not have accepted it if he had, for this reason, that you could not restrict the perimeter without leaving unoccupied posts that the enemy would have had his guns on the next morning.

14801. I entirely understand your position. I only wanted to know whether Sir Archibald Hunter when he suggested that the cavalry should be sent, also suggested that the perimeter should be reduced; because you could not have done it probably?—I could not have done it. I would not have done it, at any rate. This is the heliogram to which I refer. It is dated the 31st of October, when things had pretty far advanced: "From Sir Redvers Buller to Sir George White. I agree that you do best to remain at Ladysmith, though Colenso and line of the Tugela River look tempting; but I would suggest for consideration whether if you can reduce the perimeter of defence you might not send one battalion and one regiment of cavalry to a position in the direction of Albert or Howick, or even Greytown, or somewhere covering Maritzburg from a raid from the north-east. You have a large force of mounted troops now on left of Tugela River; some of them might be better were they on the right of that river. It will be at least three solid weeks before I can attempt to reinforce you, and at present I fancy the best help I can give you will be to take Bloemfontein. Good luck to you. You must

have had some merry fights." On the 31st I also said I did not think at that date that the cavalry could get through without terrible loss. I had better read the words themselves: "I think the cavalry could not get through without heavy loss, so I have countermanded them. If roads clear will send one cavalry regiment across Tugela. I cannot reduce perimeter without yielding artillery positions that would make Ladysmith untenable. Their guns are better than our field guns. Do not ask me to detach another battalion. The enemy are in great force."

14802. (*Sir John Edge.*) What is the date of that?—The 1st of November.

14803. To Sir Redvers Buller?—Yes.

14804. (*Sir Henry Norman.*) And you had despatched a regiment and a battery the day before?—I forget how long it was—about the 30th—I sent the Dublin Fusiliers and Natal Field Battery to Colenso to try and give some confidence to the Governor and the people at Pietermaritzburg, and in attention to Lord Wolseley's call to me to "take care of Colenso Bridge."

14805. And they were not able to remain there?—They had to fall back when the enemy came in force. They did not stay for a fight, I think. As regards that the lines of communication at that time were under the command of a very good officer, and I know that Sir Redvers Buller approved of his withdrawing the troops.

14806. (*Chairman.*) But if you had a difficulty in sending out the one regiment of cavalry you would have had still greater difficulty in doing, as it has been stated you might have done, letting your whole force of cavalry go out?—I considered this a direct order, and that I no longer had an option. It was dead against my views of what was right.

14807. (*Viscount Esher.*) Even to send the one regiment?—Even to send the one. I looked upon it all along in that light. You see here I say: "Do not ask me to detach another battalion." That shows the spirit in which I viewed the order he gave me. This will be readily understood with a perimeter of 14 miles, and when you consider the topography; that Caesar's Camp and Wagon Hill were great mountains. It would have taken infantry a very long time to get from the centre of a position, the outposts of which are so far distant, and which at the same time entail such very heavy gradients to get at them. The action would have been lost before they got there, and my men were pretty heavily worked and played out; they had had a good deal of fighting.

14808. (*Sir Frederick Darley.*) What was the distance from the centre of Ladysmith to Caesar's Camp, and again to Wagon Hill?—From three to four miles, but that scarcely conveys an idea of the time. It will perhaps come home to you what a long time it would take infantry to get there laden, as they would have been, with all the ammunition. In the absence of mounted infantry the cavalry was, as I said before, the only mobilised reserve I had.

14809. (*Chairman.*) If you had had a larger number of infantry, I suppose it could have been done?—I would then have had posts very much more strongly held, but with regard to that I might mention that the perimeter of Caesar's Camp and Wagon Hill alone was $4\frac{1}{4}$ miles. You see, to occupy a position of that perimeter, according to any school rule, would have entailed an enormous force, whereas I had to hold them with a mere handful.

14810. (*Sir Frederick Darley.*) Do you mean that Caesar's Camp and Wagon Hill were $4\frac{1}{2}$ miles apart?—No, I mean to say that Caesar's Camp and Wagon Hill joined in one group with a neck between them, but that the perimeter round them alone was $4\frac{1}{4}$ miles. Another point which I know has been discussed very much, and for which we have been abused, was not fortifying it. But you can imagine what fortifying $4\frac{1}{4}$ miles of the edge of a very big plateau would have been. The work would have been enormous, and having fortifications of that extent for which you have only got enough force to man a very small part, hands over the advantages of the fortifications to the enemy; they get behind it and fire into you.

14811. Were these wooded hills—covered with wood?—No, they were not wooded; if there had been wood there we would have cut it down at once; they were bare, rocky, stony hills.

14812. (*Chairman.*) And, therefore, with the numbers

of the garrison that you had, the cavalry was an essential part of your defence?—I consider most essential.

14813. And they, as a matter of fact, did assist you throughout the siege?—Enormously. I made mounted infantry of one regiment—the 5th Dragoon Guards, and I gave them Lee-Metford rifles.

14814. There is one question I would like to ask you about the naval guns. They arrived just at the last moment?—When I was in action it was reported to me that the naval guns had arrived and were in action; this was on the 30th of October.

14815. And, as you say in your statement, they were of great assistance to you throughout the siege?—Very great assistance. They were a great assistance to me in this way, that they could reply to the fire of the enemy's guns, and I have no doubt kept the enemy's guns at a greater distance from us than they otherwise would have been.

14816. We have had in evidence some doubt expressed about the accuracy of the shooting. Have you any observation to make on that point?—No, some of the naval guns were outranged in trying to reach the 6-inch Creusots, but we could not expect them to be accurate beyond their effective range. But as regards the 4·7 naval quick-firers, I think their fire was accurate and well maintained all through by the sailors.

14817. (*Sir Henry Norman.*) Did they shut up any of the enemy's guns?—Not to my knowledge. I do not think they did. It has been a lesson to me that in modern warfare it is pretty hard to dismount an enemy's guns.

14818. (*Chairman.*) But that was not from any deficiencies on the part of the people who worked the guns?—I think not.

14819. You had full opportunities of observing them. I suppose?—I was constantly in the batteries. Of course our platforms were not like what we have at Gibraltar and such places, which ensure far greater accuracy; they were temporary makeshift platforms, and I think were wonderfully good considering the circumstances in which they were made.

14820. (*Sir Henry Norman.*) The enemy's guns did not shut up our guns, did they?—I cannot recollect their dismounting a single gun. Colonel Altham, my Intelligence Officer, says that they did not.

14821. (*Sir George Taubman-Goldie.*) Then where does the superiority of the enemy's artillery come in of which we have heard so much?—Because their shells, although they did not dismount the guns, were falling all about the place, and one shell caused 22 casualties.

14822. Your total losses were not great?—No; the total losses from projectiles from either shell fire or anything else in the whole of the war were not great.

14823. (*Chairman.*) But the enemy's guns were superior to ours?—Undoubtedly they were; they fired over 10,000 yards into my position with Creusots.

14824. That was because they brought into use larger guns than the Army possessed at that time?—Yes, than the Army possessed, mobilised as the Boers mobilise. If I had not telegraphed for those naval guns the moment I came up I should have had to fight the Boer guns with our field gun, which was a 15-pounder, the effective range of which was 3,500 yards, and when directed at an objective 4,000 yards off began to fall off rapidly.

14825. (*Viscount Esher.*) Do you think that those naval guns produced any great effect upon the enemy?—I think they kept the enemy's batteries a good way further off me than they otherwise would have been. Of course, the Boer batteries would have been brought up as close as they could with immunity. These 4·7 and the 12-pounder guns of the Navy outranged my soldier guns by 100 per cent.

14826. (*Sir John Edge.*) The ranges of the guns show exactly what would have happened?—Yes, it was extraordinary the way in which the Boers could put a 6-inch Creusot gun into a wagon and go off with it as if it was a sack of wheat.

14827. (*Sir John Jackson.*) Why should the Boers be able to do that quicker than our men?—My belief is that our transport drivers were largely corner men; the transport drivers of the Boers were men who had been driving oxen all their lives; they knew every ox in their team by name, and could get the last pound out of each. Our drivers would never have got those guns up to the top of Bulwana.

16 Feb. 1903.

General
Sir George
S. White,
V.C., G.C.B.,
G.C.S.I.,
G.C.M.G.,
G.C.I.E.,
and
G.C.V.O., and
Colonel E. A.
Altham,
C.M.G.

16 Feb. 1903.

14828. (Chairman.) I do not want to ask you questions in detail about your operations, but there is one question with regard to the fight outside of Ladysmith which I should like to ask, because of the evidence which has been given to us in reference to that. You say that the reports that the retirement from Lombard's Kop was a rout are untrue?—Absolutely.

14829. We have had some evidence to the effect that the troops retired into the town on that occasion in so demoralised a condition that if the attack had been pushed the consequences might have been serious?—It is impossible to say whether they might not have been serious, but I can only say that we disengaged from the enemy perfectly easily. Before I gave the order to retire I came to the conclusion that the object I had aimed at, viz., a rapid stroke that would have made the enemy retreat, was no longer at all likely to succeed; and, having determined not to use up any more ammunition, which was gold to me, I made the calmest preparations for retirement before I ordered the withdrawal. I placed batteries to cover the retirement. I got a regiment from Limit Hill, from a brigade I had intended for another purpose. When that purpose fell through, this brigade became a reserve, and I posted regiments from that reserve in successive positions covering the line of retreat into Ladysmith. When I ordered the retirement I ordered it in echelon from the left; the left was where the 60th Rifles were, who had had some hard knocks at Talana, and they disengaged from the enemy absolutely easily. I was watching it with intense interest myself and a certain amount of anxiety. There was one attempt to follow up the left of the 60th, and I said to the officer commanding the battery: "Give them some rounds to stop them," and a few rounds of shrapnel not only stopped them, but sent them back to the position they had occupied before. They came out a little way over their ridge as if pursuing, and went back again when they got a round or two of shrapnel.

14830. The batteries were pretty hard pushed, some of them, were they not?—Of course, the enemy's guns, particularly that 6-inch gun on the top of Pepworth Hill, did a great deal of harm, but I do not think that there was any considerable loss in the artillery. They had a hard fight undoubtedly; they had to fight on two fronts to begin with; they had to keep under the fire from Pepworth Hill, which was at that angle (describing) from our front, and they had to answer the fire from the direct front, and help the advancing infantry with shrapnel fire as far as they could. So far as I recollect, two batteries were facing different ways, forming an angle like that (describing the same).

14831. They did make a great reputation, did they not?—I think they did splendidly; it was quite pleasant to see them. I saw a shell bursting under the bellies of one team; the horses naturally got into a canter; they pulled up in the grandest way when they got the word "Trot," and they trotted calmly on. I never saw them go out of a trot afterwards.

14832. At any rate, you do not think that it took two or three days for the troops to recover their morale on that occasion?—I think that the troops' morale was a little bit shaken before that. I think the 60th particularly. A regiment cannot be brought up into the fighting line time after time without being a little bit shaken, and I think some of those regiments were not what they would have been if it had been their first fight.

14833. There have been also statements made with regard to the cavalry retirement on that occasion?—I remember seeing that statement. So far as I observed I saw nothing whatsoever that would justify the slightest imputation of bad behaviour on the part of the cavalry. I do not know whether your Lordship is going to examine Sir John French about it, but he was in command of the cavalry who are supposed to have behaved badly, the cavalry that I sent out in the early morning to cover my right.

14834. Sir John French will come here later?—I would like it if that question could be put to him. I know it has been stated. I think, in Mr. Amery's history—"The Times" History of the War in South Africa. I must say I fail to recognise the accuracy of that account.

14835. "A seething mass of clumsy, broken cavalry charged down the narrow neck on the west of Lombard's Kop"—that I did not see. The Intelligence officer who had to collect every report is here. Did he ever hear it from an authentic source? (Colonel

Altham.) I never heard it all the time I was in Ladysmith.

14836. (Sir Frederick Darley.) (To Sir George White.) I was just going to ask you, did you ever hear it in Ladysmith at the time?—I walked about the room using strong language when I read it; I never heard it before.

14837. (Chairman.) Then passing on to the time when the siege was progressing, and when efforts were being made for your relief, were you forming plans for co-operating from Ladysmith?—Yes, in every case. Perhaps you would give me an opportunity of reading the history of the siege so far as I can answer for it, and show vouchers for what I say; it is contained in this series of heliograms which I have here, and which I should like to have an opportunity of reading.

14838. If you please—we shall be quite willing to hear it?—They will be very long. Would you like them from the very beginning? I do not know how far you have had these already before you, but will your Lordship stop me if I am simply repeating? Most of them will, I think, treat of points that your Lordship either has put to me or would be likely to put to me.

This is a telegram:—"From Governor" (Maritzburg) "to General, Ladysmith, 12th October, No. 4. The High Commissioner has wired me copy of telegraphic correspondence with the President of the Orange Free State, from which I gather that the Orange Free State has quite decided to throw in its lot with the Transvaal, but it is not quite clear to me that they will attack if we do not move further up country. Am sending you copy of correspondence by post." I put that in my list to show that there was a certain pressure on me on the 12th October not to go too boldly north or west.

"From Governor to Chief, Natal. No. 1, 25th October. Your cipher telegram of yesterday—what is word between 'view' and 'sending'? Undecipherable, please repeat it. I am communicating with Admiral. Do I understand you have determined to keep all the troops at Ladysmith? If you have I ought to be informed at once, as there seems no doubt now that part of General Joubert's force will come in by Greytown, and we are practically defenceless here and in Durban." I think that has a bearing, my Lord, on the situation as showing the drag-back which was constantly being applied to me, and which would have been one factor with which I would have had to deal if I had massed my troops and gone to the north.

"From Governor to Chief, Natal. No. 5, of 26th October. Urgent. Clear the line. When I telegraphed to you I certainly expected to keep Rifle Brigade or Border Regiment. Both Maritzburg and Durban are now practically undefended, and offer actual temptation for raid even on a small scale, which would do great damage and produce very bad moral effect. If you leave me one battalion we can, with the 'Powerful's' guns, Naval Brigade, and corps now being raised, at all events check raids unsupported by guns; and I think we ought at least to try this. We might be raided here within next three or four days, and I should like to complete arrangements at once. Therefore I should like to keep Rifle Brigade here." That has the same tendency, my Lord.

"From General Sir George White to the Secretary of State for War. No. 2 of 11th October, 1899. Boer ultimatum finds us short of 5th Dragoon Guards, Gloucesters, Borders, and Royal Irish Fusiliers. I therefore considered it sounder in a military sense to withdraw from Glencoe and concentrate at Ladysmith. The Governor, however, considers withdrawal from Glencoe would be disastrous politically, involving great risk of native rising and Dutch rebellion in Colony. I have, therefore, determined to hold on to both places." This shows what very little law I had, as those regiments had not even arrived on the 11th of October.

"From General Sir George White to the Governor, Maritzburg. No. 3 of 12th October, 1899. Four thousand Boers with 18 guns have invaded Natal from Free State via Tintwa Pass. They are probably encamped to-night ten miles west of Acton Homes. I move out to meet them at 3 a.m. to-morrow with 5th Lancers, three Field Batteries, one Mountain Battery, Liverpools, Gordons, Manchesters, and one other battalion, which comes from Glencoe by train to-night. Also with 250 Natal Carabineers and a Colonial Battery." That shows that I had every wish to take the offensive if I could.

General Sir George S. White, V.C., G.C.B., G.C.S.I., G.C.M.G., G.C.I.E., G.C.V.O., and Colonel E. A. Altham, C.M.G.

16 Feb. 1903.

"From General Sir George White to Secretary of State for War. Governor, Maritzburg. O.C.'s Glencoe, Estcourt, and Colenso. No. 13 of 13th October, 11.15 a.m. Moved out this morning with strong flying column, and occupied position covering Ladysmith. Reconnoitred for enemy. He shows no disposition to come on, and is reported to be inside Berg at foot of Tintwa Pass in force, with a second commando at Oliviers Hoek. Troops return to quarters." That shows that those Boer troops were really posted in the fastnesses of the Drakensberg, where it would have been madness to attack them.

"From G.O.C. Ladysmith to G.O.C. Communications, and General, Cape Town. No. 15 of 14th October. Movement of flying column yesterday was satisfactory. The Dublin Fusiliers left Glencoe Junction at 4 a.m., 13th instant, joined flying column west of Ladysmith, and started back for Glencoe at 5 p.m. Their arrival there has been reported by telegram. A dye ascertained personally that Boer commando is no longer at eastern issue of Tintwa Pass." They had gone back, I presume.

"From Chief, Natal, to Governor, Natal. No. 16 of 14th October. Ladysmith is full of the enemy's spies. Can you expel persons known to belong to the Republics?" (At this time, although it was 14th October, there was no Martial Law.) "It is impossible to carry on operations on equal terms when every move is known to the enemy. Runners are said to be despatched constantly—vide High Commissioner's Proclamation of 11th October. I have ordered my outposts to stop and arrest all persons against whom there is reasonable suspicion."

"From General Sir George White to the Governor, Maritzburg. No. 18 of 14th October. I have heard from the stationmaster sent in from Harrismith what I consider the most valuable news I have had with regard to Boer intentions. They are in greater numbers than I expected. They speak openly of concentrating all their columns on Ladysmith." (That is important evidence.) "I think it right to give Symons another battalion, and purpose to keep Imperial Light Horse here. With the big town and railway station to defend, and the forces in front and on my flank to defeat, I am too weak. Would you now consent to give me half King's Royal Rifles, issuing the arms you have in store to your best Volunteers? If so, I would put King's Royal Rifles in the town where the most valuable stores are, and contend the position here so as to throw every possible man into the fighting line."

"From Chief, Ladysmith, to G.O.C. Glencoe Junction." (That was General Symons.) "No. 26 of 17th October, 1899. Helpmakaar, reported threatened by large commando. The Carabineers there have retired on Pomeroy. Railway to Glencoe is likely to be interrupted. You must entrench. It will help you even on the offensive. I am entrenching here."

"From General, Natal, to Wolseley, War Office. Sent at 9.30 p.m. 17th October, 1899. Your number 370. Glencoe Junction has over 60 days' rations."

"From General Sir George White to Secretary of State for War" (and others). "No. 36 of 19th October. Boers commenced descending western passes on Tuesday, and came in contact with my patrols. Yesterday they continued their advance, halting for the night with their left at Bester's Station, centre at Blaauwbank, and right more retired at Acton Homes. Lieut. Gallwey, Natal Carabineers is missing. Trooper Spencer, same corps, slightly wounded. I moved my camp into a position I have selected with a view to covering town of Ladysmith, and hoped that to-day Boers might have been sufficiently near for me to strike a blow. To-day, however, enemy seem to have retired westward, patrols getting touch nowhere except with comparatively small body at Bester's Station. Railway communication with Glencoe was cut to-day at Elands-laagte, where a goods train was captured by a Boer force advancing over Biggarsberg Nek. Telegraphic communication is still open via Greytown. With consent Governor, Natal, I am bringing Imperial Light Horse back here to augment my mounted troops. Rifle Brigade will be sent on to Cape Town as directed." This shows that even some of the troops that came into Natal I got orders to send on to Cape Town.

"From General Officer Commanding, Natal, to the Secretary of State for War, London. No. 60 of 21st October. Though victorious, troops at Glencoe heavily hit yesterday. Cannot expect equal efforts a second

time, and without Symons. Effect on attitude of Boers not yet ascertained. One squadron, 18th Hussars, still missing. Ladysmith troops are now engaged at Elands-laagte with Boer force from Botha's Pass. Situation in Natal not yet assured. Consider Rifle Brigade should be landed Durban. Please approve."

"From General Sir George White to Governor, Maritzburg. No. 46a of 22nd October. The situation of Glencoe very critical. Give me 60th and Liverpools, take Rifle Brigade, and I will hold Ladysmith, and try to save Glencoe. Trust to my military judgment in this matter, and run smaller and undefined risks to save certainty of heavy disaster."

"From G.O.C., Natal, to G.O.C., Glencoe Camp, via Dundee. 22nd October. If you must retire, make careful arrangements for move beforehand, and, if possible, signal to me the word 'Act' and the date you propose to move. I will do what I can to meet you. Move via Meran. Try to send messengers through to me."

"From General Sir George White to Secretary of State for War. Ladysmith, 22nd October. Your No. 409 of to-day. Two Boer guns captured yesterday, when Boers lost heavily. Official report from Dundee says Boers lost 200. No mention of guns. Private reports say loss more heavy, and Boers' guns taken. Boer columns at Dundee were Lucas Meyer's, and some of Joubert's. Yesterday we fought Viljoen's column with Hollander and German corps. Besides these, there is a large Orange Free State force west of Ladysmith. Estimated strength: Joubert, 10,000, with twelve guns; Lucas Meyer, 4,000, with five guns; Viljoen's column, 1,800; Free State force, 9,000, with thirteen guns. Yesterday Yule wired that Boers were shelling camp with guns of position, and that he had moved south of railway. The following message, dated midnight 21st-22nd October, received from General Yule, begins:—I am marching on Glencoe. Have been obliged to evacuate Dundee, leaving stores and wounded. This causes me gravest anxiety. With consent of Governor, I have called up reinforcements, ordered the Rifle Brigade to land at Durban, and will watch an opportunity to advance towards Glencoe, at the same time holding Ladysmith with sufficient force."

"From G.O.C., Natal, to Secretary of State, London. 23rd October. Yule wired from Dundee last night that wounded doing well. Following received from him, dated 8.30 a.m. to-day, begins: Propose camping at Beith to-night, and march to Sunday's River on Beith-Ladysmith Road to-morrow, starting at 2 a.m. Ends. I go out to-morrow to give him a hand." You will stop me, my Lord, if you think these are too tedious.

"From General, Ladysmith, to Governor, Maritzburg. No. 99 of 25th October, 1899. Yours, 25th October. I most earnestly request that pressure may not be put on me to reduce force here. The report of threat on Maritzburg via Greytown may be misleading. All the enemy's efforts so far have been directed against the Army. If I am strong here, and can strike out, the country is unconquered. If I am shut in here the Colony is at the mercy of the enemy, and will have to be reconquered from the sea. While I have sufficient force to strike out they dare not do more than raid. If I am reduced in force I cannot go on striking out. Enemy's guns range further than ours. Our men cannot be expected to face heavy loss day after day fighting superior numbers in strong positions. I consider Rifle Brigade and Borderers could best be used here in the interests of the Colony, but will not press for them. The effects of dissemination of force at Dundee, even on victorious troops, is a lesson. A small force cannot save you if the troops here are shut in, though it may help me to deal a decisive blow." That shows the light in which I viewed the military situation at the time, and events have since verified my forecast.

"From General Sir George White to Secretary of State for War. No. 110 of 26th October. Your No. 473, Secret. I have no trustworthy information that Boers intend attacking Durban or Maritzburg." (The Secretary of State had asked me.) "These places, so far, are not threatened by Joubert's force. While I am strong enough to keep the field here, I do not anticipate they will be attacked. While I hold Ladysmith enemy cannot move heavy guns south of it" (I am sorry to say they did) "as they move them by railway. It is very difficult to secure reliable information about movements of Boer force. General Yule's column

General
Sir George
S. White,
V.C., G.C.B.,
G.C.S.I.,
G.C.M.G.,
G.C.I.E.,
G.C.V.O., and
Colonel E. A.
Altham,
C.M.G.

16 Feb. 1903.

has marched in. When they have had a couple of days' rest I will move against any enemy that offers me a fair chance. The true policy is to concentrate all possible force here. If I am beaten or shut up, one or two battalions will not save either Maritzburg or Durban, and they might enable me to strike decisive blow. I now have a fine force, and will use it."

"From General Sir George White, Natal, to Secretary of State for War. No. 375, 29th October. Hope I have located a sufficiently strong force of the enemy with guns to make a good objective. Move out to-night with view to attacking early to-morrow."

"From General, Ladysmith, to Governor, Maritzburg. 30th October, 1899. I have ordered the Dublin Fusiliers to Colenso, with six guns, Natal Volunteer Artillery, as the best measure that can be taken for the preservation of the Colony."

"From General Sir George White to General Sir Redvers Buller. No. 109a of 31.10.99. The Boers have established themselves in very strong positions in the hills west, north, and east of Ladysmith. Each man has one or two ponies. They resent intrusion so much that it is impossible to ascertain their numbers. They live on the country, and their mobility gives them great advantages. They say themselves they will attack. Ladysmith is strongly entrenched, but the lines are not continuous, and the perimeter is so large that Boers could exercise their usual tactics. Our men want rest from fighting, but I have the greatest confidence in holding Ladysmith for as long as necessary. I could not now withdraw from it. I think it would be politic to send some of the Fleet to Durban, to keep up public confidence there. I will put off answering Joubert about exchange prisoners. Hitherto I have considered the interests of the Colony south of this required me to hit out. Yesterday's fighting showed me there were risks and limits to this. I wired Governor yesterday that I would send Dublin Fusiliers to guard bridge at Colenso as best step I could take for protection of Colony. I intend to contain as many Boers as possible round Ladysmith, and I believe they will not go south without making an attempt on Ladysmith."

"From General, Ladysmith, to the Governor, Maritzburg, 31st October. My intention is to hold Ladysmith, make attacks on the enemy's position whenever possible, and retain the greatest number of the enemy here."

"From General Sir George White to General Sir Redvers Buller, Capetown. (No date.) "Welcome. Have a very strong force in front of me, with many guns. Natal Colony requires earliest reinforcement possible. Troops here very heavily worked, especially cavalry. I will do all my means admit to conquer enemy. Very short of staff and officers. Hunter indispensable to me."

"From General, Natal, to General Buller. No. 191a of 1st November. Your No. 3z. I have information that a commando estimated at 2,000 men, Free State, with guns, have arrived within a few miles Colenso. I had ordered French with two cavalry regiments and 400 mounted volunteers to try and help, but later information shows that all the roads are strongly held by enemy. I think the cavalry could not get through without heavy loss, so I have countermanded them. If road clears will send one cavalry regiment across Tugela. I cannot reduce perimeter without yielding artillery positions that would make Ladysmith untenable. Their guns are better than our field guns. Don't ask me to detach another battalion. The enemy are in great force."

"To G.O.C. Communications. No. 7r, 10th November, 1899. To Buller (in cypher), 'Repeat G.O.C. Communications. Enemy entrenched all round us, but I believe we contain the whole force. They are bringing more guns into position against us. We can count 22 already. These guns outrange ours, and we have only our naval guns to reply with, while our necessarily very extended position prevents great concentration for counter-attacks. We have repulsed all attacks so far. Clery should advance to Colenso as early as possible, and I will help to open road for him via Onderbroek on learning his dates."

"From General Sir George White to General Clery or Hildyard. (Without date.) "Do not risk advance until you are very strong; I cannot go out far to meet you. Do not waste force south of Tugela; throw all into fighting line. Try to advise me of your plan before you advance. No danger to Ladysmith while you occupy large force of enemy on Tugela, but try not to lose touch of him. Bring plenty gun ammunition; mine running

low. I could feed three extra brigades and my own force for a month; also provide forage. Arrange earliest repair of railway."

"From General White to General Clery. Maritzburg. Repeat Buller, Capetown. No. 17r of 24th November. Your message of 20th November received. Reliable native scouts saw, 20th November, large force of enemy proceeding past Los Kop on Little Tugela towards Tabamhlope. They were informed by local natives that a large commando had preceded this force. State of road confirmed this. This force is said to be making for Hlatikulu, with intention of cutting railway about Nottingham road. A large force of enemy is concentrated behind flat-topped hill six miles south of Ladysmith. Enemy is reported to have only patrol between Estcourt and Colenso. Large wagon convoys have gone south during last few days from Free State railhead at Smith's Crossing. General situation here unchanged, but enemy is mounting more guns, and bombards town with increasing effect. Please send me information as to general situation in South Africa and Europe. Many alarmist rumours from Dutch sources current here. Should be glad to be in a position to contradict them authoritatively. Tell me of any change in date you expect to advance."

"From General White, Ladysmith, to Buller. No. 28r, of 11th December. Last night Lieut.-Colonel Metcalfe, 2nd Rifle Brigade, with 500 men of his battalion, made a sortie to capture Surprise Hill and destroy the 47 howitzer mounted there; they reached the crest of the hill undiscovered, and drove off the enemy, the gun being destroyed with gun-cotton successfully by Digby Jones, R.E. When returning they found their retirement barred by Boers, but forced their way through, using the bayonet freely. Boer losses considerable." I do not think I need go into the list of killed and wounded. These messages show we were not idle.

14839. (Sir George Taubman-Goldie.) You telegraphed to General Clery or General Hildyard on 10th November, "I could feed three extra brigades and my own force for a month"?—Yes.

14840. If that fell afterwards into General Buller's hands, would not that give him an idea that you would be short of provisions about the end of December?—It hangs on this—that that, I think, was a reply to a telegram from him, asking me if I could do that.

(After a short adjournment.)

(Sir George White.) During the interval I have made a search with regard to the question put to me by Sir George Goldie, but I cannot find the telegram to which the one just read to me was a reply; so that, as far as I can say, the remark must stand in the abstract. That is the point you wanted to make in justice to Sir Redvers Buller, Sir George?

14841. (Sir George Taubman-Goldie.) You do see that that, perhaps, might lead him to imagine that towards the end of December you would be hard up for provisions?—Yes, that might be so. Of course, upon my own side of the question those returns were as to the period during which I could feed my men on full rations, but the moment I found we were in difficulty my 10 days' rations would feed my force for 20 days.

14842. I quite follow that?—And also, with regard to that question, an impression might be formed which would be misleading, and that is what I want to avoid. The later telegrams from me gave the rations and the rounds of ammunition almost to a pound of meat and a rifle cartridge.

14843. That was about the 30th November?—Yes; absolutely the 30th November.

14844. (Chairman.) Will you resume your statement, Sir George?—The next telegram which I think of importance to read is one "From Secretary of State, War Office, to G.O.C. Ladysmith. War Office, London, 16th October, 1899. Her Majesty has signed a warrant empowering Secretary of State to raise local forces in South Africa. A number may be enrolled not exceeding 1,000 in Natal, with a rate of pay, etc., the same as for British troops. The terms of the men's enlistment should be for service in South African Colonies and neighbouring territories, and for such period as their services may be required." I think with regard to that I might remark that later in the year those men who were to be paid at the rate British soldiers receive were paid 7s. 6d. and more a day.

14845. We had some evidence from Colonel Thorneycroft about the raising of his regiment?—His regiment was a part of the thousand men; he had 500, and Major Bethune had the other.

14846. He told us that a difficulty arose at the beginning because of that restriction to the pay of British troops, and he said that he did not know how it was got over, but he supposed you would be able to tell us?—My idea is that it was got over by the patriotism shown by the men in Natal, who would have served for nothing.

14847. But you did make representations to the Secretary of State about the rate of pay?—I do not recollect having done that.

14848. Would it have been through the Governor?—It probably was through the Governor; very likely my telegram may have been repeated, but I find a telegram in one of my files of telegrams in which I said, "The pay is too little, but some men may serve from a feeling of patriotism."

14849. But it was changed very shortly to 5s. a day?—That I do not know.

14850. (*Sir Henry Norman.*) It was stated as one of the reasons that in former wars the local troops raised in the Colony had been paid at the rate of 5s. a day?—That is not before me; you see, I was shut up very soon, and I was not in communication with the outer world. I do not think I knew of that.

14851. (*Sir Frederick Darley.*) There is a telegram from you—I daresay you have it there—from Ladysmith, dated 17th October, in answer to that telegram you have just read?—I have not got it in my file; please read it out.

14852. "Ladysmith Camp, 17th October, 1899, 2.25 p.m. Referring to your telegram of 15th October, I have selected Major Bethune, 16th Lancers, and Major Thorneycroft, 2nd Battalion Scots Fusiliers, to raise a regiment of 500 mounted rifles each. Having regard to rates of pay given to Imperial Light Horse, I think those now offered too small. I urge that new regiments be granted terms allowed to Baden-Powell's regiments, and thus place them on same footing in this respect as Imperial Light Horse here. I request that local rank of lieutenant-colonel be conferred on Bethune and Thorneycroft"?—I am very glad you have turned that up. I do not know that I have it. I am glad to have that on record, because in the Colonial papers they have declared that I said I did not want Colonial troops at all, which was absolutely untrue.

14853. (*Chairman.*) There is an answer to you, Sir George, dated from the War Office, 25th October, 1899, 5.55 p.m.: "Referring to your telegram of 17th October, Bethune, 16th Lancers, and Thorneycroft, 2nd Battalion Royal Scots Fusiliers, granted local rank of lieutenant-colonel, with status of assistant adjutant-general." But it does not say anything about the rate of pay?—I have not got that on my file; my telegrams were put together under difficulties.

14854. You do not know how the rate of pay question settled itself?—No.

14855. But it did settle itself?—It did, and according to my recommendation, which I am glad to have on record.

14856. (*Sir George Taubman-Goldie.*) You sent another telegram on the 25th October, 1899, 12.30 p.m. to the Secretary of State for War on that subject, in the course of which you say: "They should all be on the same rates as Baden-Powell's corps"?—That is the one that has just been read by Sir Frederick Darley.

14857. No; this is a later one. It is in continuation evidently?—I have not got that, either.

14858. The War Office do not seem to have replied to your earlier telegram on that point, and you reiterate the thing?—That I have not a record of, and my memory would not carry it.

14859. The full telegram is from the G.O.C., Natal, to the Secretary of State for War, dated 25th October, 1899, 12.30 p.m.: "Referring to your telegram, No. 410, I have issued notice calling for volunteers for two mounted corps. I cannot urge too strongly that there be no change in this, as men of the right stamp will not come forward as infantry. To ask them is useless, and only creates dissatisfaction in the colony. They should all be on the same rates as Baden-Powell's corps. The position in Natal is critical, and it is real economy to raise funds for good Colonial corps, and maintain public confidence"?—That is from me?

14860. Yes?—I am delighted I sent it; I am very much obliged to you for unearthing it.

14861. Again, the Secretary of State for War answers you on the 27th October, 1899, in which he says he has received no reply; that is dated two days later, and I cannot understand it, you having sent the telegram on the 25th?—It could not have been intercepted, as everything was open at that time.

14862. Then there is a telegram from "The G.O.C. Lines of Communication, Natal," dated 28th October. Is that General Hildyard or General Clery?—Neither; it was Wolfe Murray.

14863. He telegraphs to the Secretary of State for War to say: "General Officer Commanding Natal directs me to inform you that he has placed the two new corps on same footing of equality as Imperial Light Horse in every respect, considering this action absolutely necessary to allay dissatisfaction at the unsettled state of the question, and to enable enlistment and formation of corps to proceed." And there is a reply on the 28th October: "From the Secretary of State for War to the General Officer Commanding Natal. In reply to your telegram of to-day's date, No. L. 182, action is approved with regard to rates of pay, two new corps, but rates sanctioned only for six weeks"?—The next telegram I would like to read is: "From G.O.C., Lines of Communication, to G.O.C., Ladysmith, Maritzburg, 16th October, No. 1129. Following received from War Office, begins: Referring to your telegram 27 of 11th of October. After consultation with Chief and Buller, it does not appear advisable to send out battery Horse Artillery from India."

"From General of Communications to Chief Staff Officer, Headquarters, Maritzburg, 16th October, No. L. 3. Your 24 to day. Thorneycroft accepts, and can be spared. Bethune also accepts, and can be spared, but he is serious loss to me. I am making following arrangements:—Lawson, who arrived to-day, will be my Staff Officer; Gaisford, now at Durban, will be Commandant here; Toogood, now assisting at Durban, to be Disembarking Officer there. I beg most earnestly that no more officers be taken away from line of communication, and particularly that my Staff Officer may not be changed again. Continuity very important, and number of officers on the line is too few already. Am about to confer with Governor."

"From the Secretary of State for War to the G.O.C., Ladysmith, War Office, 18th October. Your telegram, No. 101, Commander-in-Chief considers the exigencies of Cape Colony are at present greater than those of Natal. Unless, therefore, you have strongest reasons against, send 'Jelunga' on arrival, with the 2nd Rifle Brigade, to Cape Town, for which port Border Regiment is also destined."

"From General Yule to General White, Ladysmith, Glencoe Camp, 9.50 p.m., 20th October. Post quite clear. Impati Mountain not occupied. Navigation Colliery still probably occupied in force. Return of casualties now being made out; approximately, eight officers killed, 24 wounded; non-commissioned officers and men: 30 killed, 153 wounded, and 33 missing. One squadron 18th Hussars and one section Mounted Infantry not returned."

14864. (*Sir Frederick Darley.*) There were two telegrams before that. From Lord Wolseley to the General Officer Commanding Cape, and they must have been repeated to you, I suppose, the first being dated the 17th October, 12.55 p.m.: "Has Glencoe rations for 60 days, as ordered; if not, for how many? Comply with that order at once, and report what you have done"?—I have brought that out, Sir Frederick, in my written address.

14865. Then, on the same date: "From Sir George White to Lord Wolseley. Ladysmith.—Your number 370. Glencoe Junction has over 60 days' rations"?—Yes; that is in my statement.

"From General Yule to Chief of Staff, Ladysmith. Glencoe Camp, 21st October, 7.30 a.m. Am all quiet here this morning. B Squadron, 18th Hussars, with Colonel Moller, not yet returned. Last seen going in the direction of Navigation Colliery."

14866. The telegram you wrote about the 2nd Rifle Brigade was answered on the 18th October?—I think I have read that it was considered that their services would be more needed at the Cape. The next I should like to put on record is this: "From General, Cape Town, to General, Ladysmith. Cape Town, 22nd October, No. 9574. If you consider it necessary to

General Sir George S. White,
V.C., G.C.B.,
G.C.S.I.,
G.C.M.G.,
G.C.I.E., and
G.C.V.O., and
Colonel E. A. Altham,
C.M.G.
16 Feb. 1903.

General
Sir George
S. White,
V.C., G.C.B.,
G.C.S.I.,
G.C.M.G.,
G.C.I.E.,
G.C.V.O., and
Colonel E. A.
Altham,
C.M.G.

16 Feb. 1903.

retain 2nd Rifle Brigade in Natal I shall not raise objection." That was from General Sir Forestier-Walker, and I want to put it on record, as I think, under the circumstances, it was a most magnanimous act of his.

I think this also is of great interest to be put on record, for it is "From Commandant-General Joubert to General Sir George White, Ladysmith. Glencoe, 10.50 a.m., 26th October. In answer to your telegram of this date, with reference to General Symons, I must express my sympathy, and inform you that he was unfortunately badly wounded and died yesterday, and was buried. I trust, the good God will speedily bring to a close this unfortunate state of affairs, brought about by unscrupulous speculators and capitalists, who went to the Transvaal to obtain wealth, and in order to further their own interests misled others, and brought about this shameful state of warfare over all South Africa, in which so many valuable lives have been, and are being, sacrificed; as, for instance, that of General Symons and others. I express my sympathy to Lady Symons in the loss of her husband."

I think this also should be put in: "From Secretary of State for War to General, Ladysmith. No. 494, dated 27th October. Please understand that we expect you to act strictly in accordance with military requirements of the situation. Governor is within his rights in directing your attention to political consequences of your arrangements, but responsibility for the decision rests entirely with you. You may find steps necessary which may run counter to public opinion here and in the Colony, but we shall unhesitatingly support you in adhering to arrangements which seem to you, from military point of view, sound."

"From Sir Redvers Buller to G.O.C. Natal. Clear the line. No. 200z. Your telegram of 30th October, regarding exchange of prisoners—as the prisoners we took have already left Natal, I think it would cause a bad impression here to send them back at once. Cannot you temporise a while? In addition to your telegram to me, one has come to High Commissioner from Governor, Natal, in which he says you are sending Dublin Fusiliers to Colenso as the only course to save the Colony. Please telegraph me accurate description of your views of the situation. I doubt if Boers will ever attack you if entrenched. Hitherto you have gone out to attack them; can you not entrench and wait for events, if not at Ladysmith, then behind Tugela, at Colenso? No reinforcements can reach you for at least 14 days. Why not try and play the game now played by the Boers? The only thing I can do is to send some of the fleet to Durban to protect our base. Let me know if you wish that done. Please telegraph to me as explicitly as possible."

"From General Clery to General Sir George White. No. M. 5, November 21st, 5 p.m. No material change in situation. Enemy appears to be moving south, leaving containing force round Ladysmith. Hope you will keep him occupied, particularly on south side. His parties reported on both sides of railway, Colenso to Nottingham Road. A strong force near Ulundi, reported three to four thousand strong. Tactics appear to be raiding and injury to railway in our rear, avoiding engagements with our troops. I hold Estcourt and Mooi River in force, but am tied to railway for want of mounted troops. Reinforcements arriving daily. We hear guns firing. Many unofficial reports of your successes. Good luck. All quiet at home. Ministers speak with confidence, and advocate firm measures."

The next one is from a different series, which I have headed "Siege Correspondence."* "From General Sir George White to General Clery. No. 18p. 26th November. My supply of hay will only last at reduced ration till about 20th December. Other supplies ample, but gun ammunition running low. When you are ready to cross Tugela I propose to create diversion by fighting towards Onderbrook Hotel. Enemy has entrenched positions commanding this route, and we should attack on same date. What force can you advance with? Give details. May I reckon on 12th or 13th from Colenso, or other point on Tugela? Report Buller's movements and situation, Kimberley, and Mafeking."

"From General Sir G. White to General Clery. No. 19p, 27th November. Received your No. 5m, 21st November, and Campbell's, 25th November. Runners report, verbally, successful action Mooi River and advance to Frere. Best congratulations. Two or three thousand Boers moved past Ladysmith to-day from south, believed returning Orange Free State, part by Drakensberg, part by rail through Transvaal. Propose

to try and break gap in investment line through which my mounted troops can harass these movements, and shall be glad of your early co-operation. Natives report Commandant South African Republic, returned here yesterday. To avoid loss, officers should dress like men and carry rifles. Repeat General Buller."

"From General Sir R. Buller to General Sir G. White. Maritzburg, 29th November, No. 47, cipher. I am organising relief force, and only waiting for artillery. Have driven enemy north of Tugela River. Small force at Weenen; they have destroyed bridges at Colenso. Look out at night in two or three days' time for searchlight about Highlands. Methuen is at Modder River, en route for Kimberley, having defeated enemy in three battles, in last of which they were 8,000 strong and entrenched, under command of Cronje. Advertising to affairs in Europe, no chance of intervention. If you hear me attacking, join in if you can. I do not yet know which way I will come. How much longer could you hold out?"

"From General Sir G. White to General Sir R. Buller. No. 20p, 30th November. Flashing signals, clouds seen last night for first time. Following portion only read: 'I do not yet know which way I will come. How much longer could you hold out? From Maritzburg, from Buller.' Commencement of message and date not read. Situation here unchanged; but enemy still mounting additional guns against some of our essential positions. I have provisions for 70 days, and believe I can defend Ladysmith while they last. Hay or grazing is a difficulty; I have 35 days' supply of this at reduced ration. Small arm ammunition, 5½ million; 15-pounder guns, 250 rounds per gun; 4·7-inch naval guns, 170 rounds per gun; 12-pounder naval guns, 270 rounds per gun; 6·3-inch howitzer, 430 rounds per gun. Enemy learns every plan of operations I form, and I cannot discover source. I have locked up or banished every suspect, but still have undoubted evidence of betrayal. Native deserters from enemy and our native scouts report enemy much disheartened by news of advance on Free State, victory on Mooi River, and consequent retirement north of Tugela River. With regard to road of advance towards Ladysmith, I could give most help to a force coming via Onderbrook Hotel or Springfield; but enemy is making his positions on that side stronger daily. If force south of Tugela can effect junction with me, I believe effect will be immediate and decisive. At present cannot go large, as I am completely invested, and must reserve myself for one or two big efforts to co-operate with relief force. It will be the greatest help to Ladysmith if relief force maintains closest possible touch with enemy. Hospital return—wounded, 225; dysentery, 71; enteric, 15; other fevers, 12; other diseases, 109. Additional portion of message deciphered: 'If you hear me attacking, join in if you can.' Please repeat entire message. I will keep a good lookout, and do all I can. Repeat General Clery." As to this telegram, I should like to say that I here give specifically the provisions, and when I mentioned that I had full provisions for 70 days I meant full rations. You will see that, in reply to his question, I give in detail exactly the provisions that I had, and that telegram also shows that I had every intention of co-operating with him if I got the opportunity. The telegram speaks for itself, and I need not enlarge upon it.

14867. (*Viscount Esher*.) When you say, in that telegram you have just read, "With regard to road of advance towards Ladysmith, I could give most help," is that the only suggestion you ever made to Sir Redvers Buller as to the best road of advance from the Tugela to Ladysmith?—Yes, I think it is. I did not suggest to him which way; Sir Redvers is not altogether a man to interfere with, and I did not like laying down the way he was to come, but I felt myself justified in saying which way I thought I could render most help. (*Colonel Altham*.) By Sir George White's direction, I sent a message to the Intelligence Officer with the force south of the Tugela suggesting that a reconnaissance should be made of the country near Potgieter's Drift, with a view to the possible advance of the relieving force in that direction.

14868. Colonel Altham, did you ever suggest to the Intelligence Officer what you thought would be the easiest way of approaching Ladysmith?—That was the only telegram of that nature sent from me. (*Sir George White*.) You were the man who suggested that; the road I suggested by Onderbrook Hotel was suggested in consequence of a consultation between my Intelli-

* This series as supplied to the Royal Commission by the War Office, is printed as an Appendix to this Volume, page 631, post.

gence Officer and myself with his intelligence before him.

14869. (*Sir John Edge.*) Colonel Altham, you have not given us the approximate date of the telegram about Potgieter's Drift?—To the best of my recollection, it was about the middle of November, but that is only speaking without the book. If I can find the telegram I will put in the date afterwards.

14870. (*Chairman.*) Colonel Altham, just to make it clear, you sent that telegram because the Intelligence Officer was then under your direction?—He was, in this way my Lord, that I was at that time head of the Intelligence Department in Natal, and I had been informed by telegram that I was to be Assistant Adjutant General of Intelligence under Sir Redvers Buller, so that to a certain extent I had general responsibility for the intelligence work throughout the country. I obtained Sir George White's authority to send anything that conveyed an order in any way.

(*Sir George White.*) To proceed with the siege correspondence. The next is "from General Clery, Frere," to General Sir G. White. 3rd December. Your questions by heliograph to Weenen received, and yours by runner to-day. The bulk of my troops are here, and, I hope, will be able to move about 11th. Demoralised Boers were seen to have retreated north of Tugela River. Buller is still at Maritzburg. There has not been much fighting on this side yet. Hildyard made a night attack on the Boers south of Estcourt on 22nd and 23rd, and drove them out of their positions. The next day they commenced retreating. Kimberley and Mafeking are still all right, former probably practically relieved by now. Lord Methuen was slightly wounded at Modder River, but has returned to duty. The German Emperor has been well received in England, where present war creates greatest enthusiasm. Will inform you as to my exact plans later. We are using flashing signals nightly."

"From General Sir R. Buller to General Sir G. White. No. 58, 4th December. Your No. 20P, 30th November, received. I shall have concentrated four brigades of infantry, five batteries of artillery, one regiment of cavalry, 1,000 mounted Volunteers, by 6th December, and shall attack. I cannot yet say which route, but will communicate with you in several cipher messages before I advance. I shall also send by searchlight messages in clear, but they will be false ones sent in order to deceive the enemy."

"Received without address, signature or date by runner, on 6th December. No. H. 59, cipher. The dispatch to Natal of cavalry and artillery has been somewhat delayed; but I still hope to commence my general advance, 12th December, possibly sooner. Will try to let you know again. Sir Redvers Buller is now at Maritzburg. Very anxious to know strength and position of Boer force north of Colenso."

"From General Clery to General Sir G. White. No. H. 63, 5th December, Highlands. Buller says he will send you all sorts of messages by heliograph and flashing signals, in clear, but you are not to believe them. You are only to believe messages sent in cipher or in Hindustani."

"From General Sir G. White to General Sir R. Buller. No. 21P, 6th December. Have strong evidence that Orange Free State Boers are proceeding in large numbers to Orange Free State, both via Drakensberg and by rail through Transvaal. My cavalry is now shut in, and, as regards arrival relieving force, it is too early for me to take and occupy more extended positions, so as to free mounted troops to harass Free State withdrawal. Perhaps you can hurry advance, or, if you think it necessary, I will try to harass Free State Boers at once. I believe large portion of enemy's force now faces Tugela."

"From General Sir G. White to General Clery. No. 21P, 7th December. Your No. H. 63, 5th December, received. Do not use Hindustani for true messages. Boers would have no difficulty in getting them translated. Inform Buller."

The next is an important one, which I should like to call attention to specially: "From General Sir R. Buller to General Sir G. White. No. 65, 7th December. I have decided to advance by Potgieter's Drift. Expect to start 12th December and take five days."

14871. (*Viscount Esher.*) Do you want to comment upon that?—My object in reading that is to show that that intimation was that he would come within reach of me about the 17th; he really attacked on the 15th.

(*Colonel Altham.*) I now find that it was on the 17th of November that I suggested Potgieter's Drift.

(*Sir George White.*) "From General Sir G. White to General Sir R. Buller. No. 24P, 8th December. This morning I made a demonstration with cavalry to the north and east to draw enemy back from Tugela direction. Cavalry could not get far as enemy still in force to north and east. About twenty casualties." My object in laying stress upon that telegram is to show that I was working hard to keep the enemy around me.

14872. That was in view of his telegram of the 7th December, the telegram you have just read about the date he told you he was likely to advance?—Yes; it was with a view to try and show the enemy that I had power of striking out, so that they might not deplete the forces in front of Ladysmith and mass against him.

Then "From General Sir G. White to General Sir R. Buller. No. 23P, 8th December. Last night I sent out General Hunter with 500 Natal Volunteers under Royston, and 100 Imperial Light Horse under Edwards, to surprise Gun Hill. The enterprise was admirably carried out, and was entirely successful, the hill being captured and a six-inch gun and a 4.7-inch howitzer destroyed with gun cotton by Captain Fowke and Lieutenant Turner, Royal Engineers, while a Maxim was captured and brought into camp." I lay stress upon that, as showing again that I was as active as I could be, with a view to lightening the task in front of Buller.

14873. (*Sir Frederick Darley.*) That telegram goes on further?—Yes, but as it is on record already, I did not read it; that is the only part I wanted to make a remark upon. The balance of the telegram is: "Our loss—one killed; Major Henderson, Argyll and Sutherland Highlanders, and two men slightly wounded." It will be on record *in extenso*, but I wish to call attention to the part I have read.

14874. There is the last part beginning "At the same time"?—Yes; "At the same time Colonel Knox seized Limit Hill, and one squadron 19th Hussars rode round Pepworth Hill, burning kraals and cutting Boer telegraph line. No casualties." That was done with the absolute intention of holding the Boers around me.

"From General Sir G. White to General Sir R. Buller. No. 25P, 8th December. Captain Heath reported yesterday from balloon that very large laager of enemy, consisting of about 300 tents, is on this side Tugela, in neighbourhood of Potgieter's Drift. Boers usually yield to heavy shelling."

"From General Sir G. White to General Sir R. Buller. No. 26P, 8th December. Your message No. 65, 7th December. I cannot make sense of eight groups which come between 66130 and 00852, although I have had them several times repeated. Please have ciphering checked, and heliograph this part of message again."

"From General Sir R. Buller to General Sir G. White. No. 69, 9th December. The balloon was correct, but they have not enough men at Potgieter's Drift to stop me. I am only waiting for wagons, which I am impressing. I still hope to start on the 12th, and arrive near Lancer's Kop on 17th, but may be a day or two later, though I hope not. If I have hard fighting near Ladysmith, I shall look to you to feed my force for perhaps two days. I can only take three days' supplies across Tugela River, but that should be enough."

"From General Sir G. White to General Sir R. Buller. No. 27P, 10th December. Your No. 65 of 7th December received and understood. Am I right in supposing you will force crossing of Potgieter's Drift morning 15th? If so, I will move out night 14th-15th, and work towards you as far as I can. As time is all-important factor in co-operation, you will, I am sure, inform me of any change." I call attention to that as another instance in which I show my determination to go out and help him. The next telegram from Sir George White to Sir Redvers Buller, dated 11th December, is already on record, and that is another instance of an attack, when we destroyed some of their guns.

There is another telegram which I should like to call attention to, from the General Officer Commanding-in-Chief to Sir George White: "Clear line. No. 72, cypher, 11th December. Your No. 27P. I sent Barton's Brigade and six naval guns this evening to a point beyond Chieveley, whence during next two days they will bombard defences of Colenso. I propose to march with three brigades, two regiments of cavalry, 1,000 Volunteers, five batteries

field artillery, and six naval guns to Springfield on night of 13th, force the passage of Pogieter's a.m. 15th, advance to water near Dewdrop 16th, attack Lancer's Hill 17th. But my actual movement depends on arrival of impressed transport. I may be disappointed, so cannot fix dates accurately without risking undue delay. Consequently, I think you had better not look forward to helping me before my attack on Lancer's Hill unless you feel certain of where I am. Heavy rain before 15th may also delay me." He did not reach Lancer's Hill; so that you see I had not the opportunity of helping him. He tells me not to help him; he says: "I think you had better not look forward to helping me before my attack on Lancer's Hill."

14875. (*Viscount Esher*.) "Unless you feel certain of where I am"?—"Unless you feel certain of where I am."

14876. What means had you of knowing where he was?—By his guns, and I was actually looking on at some of his fights.

14877. And heliograph?—Yes.

14878. Was he not able to communicate to you exactly where he was by heliograph?—No, he could not. For instance, after he had told me he had got Spion Kop, he was beaten off again, and he did not at any time say to me, "I have arrived at the point when you can help me."

14879. Did he communicate with you by heliograph in the course of these fights while they were going on?—(*Colonel Altham*.) During Spion Kop, which lasted seven or eight days, he did.

14880. During the earlier ones did he?—On the contrary, he never told us the date of the attack on Colenso.

(*Sir George White*.) The next telegram is:—

"From General Sir G. White to General Sir R. Buller. Clear line. No. 29P, 12th December. Your No. 72, 11th December, received and understood. Shall look out for heliograph on hills south of Potgieters, and act according to circumstances."

"From General Clery to Sir G. White. No. 65H, 11th December. We think it possible that the Boers have flashing signals, and may use it to interfere and confuse our messages."

This is an important one:—

"From General Sir R. Buller to General Sir G. White. No. 78, cipher, 13th December. I have been forced to change my plans. Am coming through via Colenso and Onderbrook Spruit."

Then:—

"From General Sir G. White to General Sir R. Buller. No. 30P, 13th December. Your No. 78 of to-day received and understood. Shall be very glad if you will let me know your probable dates."

"From General Sir G. White to General Clery. No. 31P, 13th December. Your No. H65 of 11th. Boers use searchlight to hinder cloud signals, but not successfully."

"From General Sir R. Buller to General Sir G. White. No. 80, 13th December. Three brigades concentrate at Chieveley to-day. Fourth brigade go there to-morrow. Actual date of attack depends on difficulties met with; probably 17th December."

14881. Have you any idea why he changed his plan?—I have not an idea. I do not know whether the first was a ruse or not, and I have never known. I might here state that I published a "Special Natal Field Force Order" on the 14th of December, 1899, in anticipation of having the opportunity of helping Sir Redvers Buller's force, and perhaps Colonel Altham will read it.

(*Colonel Altham*.) "Organisation.—(1) In order that a force may be ready organised to move out from Ladysmith for offensive operations at short notice, the following arrangements will be made by officers commanding sections and others concerned for the defence of Ladysmith during the absence of the flying column:—(2) The flying column, which will be under the personal command of the Lieut.-General Commanding, will take with it three days' supplies for men and animals in the wagons, one day's preserved meat, in addition, being carried on pack mules. (3) Colonel W. G. Knox, C.B., will command the garrison, and the detachment Royal Navy, under Captain the Honourable Hedworth Lambton, will co-operate in the defence of Ladysmith. (4) The troops will be divided as follows, and arrangements will be made forthwith by officers commanding sections of the defence for the troops remaining at Ladysmith to take over their defensive duties immediately the flying column leaves:—

UNDER COMMAND OF THE LIEUTENANT-GENERAL COMMANDING.

Troops for the Flying Column.		Troops for the Defence of Ladysmith, under Colonel Knox.	
Commander.	Unit.	Section.	Unit.
Cavalry Brigade under Brigadier-General Brocklehurst.	5th Dragoon Guards. 5th Lancers. 18th Hussars. Imperial Light Horse. Supply Column.	Reserve	19th Hussars. Dismounted portion of Cavalry of Flying Column.
7th Brigade under Colonel Hamilton.	1st Battalion Devonshire Regiment. 2nd Battalion Gordon Highlanders. 2 Companies 1st Battalion Royal Irish Fusiliers. Supply Column.	"C" Section under Officer Commanding 1st Battalion Manchester Regiment.	2 guns 42nd Battery Royal Field Artillery. Natal Naval Volunteers. 1st Battalion Manchester Regiment. 3 Companies 1st Battalion King's Royal Rifle Corps.
8th Brigade under Major-General Howard.	5 Companies 1st Battalion Liverpool Regiment. 6 Companies 1st Battalion Leicestershire Regiment. 2nd Battalion Rifle Brigade. Supply Column.	"B" Section under Officer Commanding 2nd Battalion King's Royal Rifle Corps.	4 guns 42nd Battery Royal Field Artillery. Two 15-pounder Royal Field Artillery Guns under Lieut. Belcher, R.A. 4 Companies 1st Battalion King's Royal Rifle Corps. 2nd Battalion King's Royal Rifle Corps. 2 Companies 1st Battalion Leicestershire Regiment.
Divisional Troops.	13th Battery Royal Field Artillery. 21st " " 53rd " " 67th " " 69th " " 2 guns No. 10 Mountain Battery Royal Garrison Artillery. 1st Brigade Division Ammunition Column. 2nd Brigade Division Ammunition Column. 23rd Company Royal Engineers, and Details Telegraph Section. Natal Carabineers. Border Mounted Rifles.	"A" Section under Senior Officer.	Howitzer and Nordenfelt Details. Balloon and Telegraph Sections, Royal Engineers. 3 Companies 1st Battalion Liverpool Regiment. Details 1st Battalion Gloucester Regiment. Details 2nd Battalion Royal Dublin Fusiliers.
		The Flats.	Natal Mounted Rifles.

Mounted Infantry companies will accompany their respective battalions, except the Mounted Infantry company of the Manchester Regiment, which will accompany the 7th Brigade on flying column.

"All details not mentioned above, and capable of bearing arms, will be available for the defence of Ladysmith under Colonel Knox's orders. The principal medical officer will make the necessary medical arrangements.

"By order,

"A. HUNTER, Major-General,
"Chief of the Staff, Natal Field Force."

(Sir George White.) I dwell upon this to show that I had before me intelligence which led me to believe that an attack would take place on the 17th December, that I got that information on the 13th December, and that I immediately, on the 14th December, issued that order which you have heard read, with a view of having everything in readiness, when I got the opportunity of moving out, to assist as far as my means would admit of the advance of Sir Redvers Buller's force. These are directed towards the attacks which have been made upon me for not co-operating.

Then the next telegram is:—

"From General Sir R. Buller to General Sir G. White. Clear line. No. 88, 16th December. I tried Colenso yesterday, but failed; the enemy is too strong for my force, except with siege operations, and those would take one full month to prepare. Can you last so long? If not, how many days can you give me in which to take up defensive position? After which I suggest your firing away as much ammunition as you can and making best terms you can. I can remain here if you have alternative suggestion, but unaided I cannot break in. I find my infantry cannot fight more than 10 miles from camp, and then only if water can be got, and it is scarce here." I must supplement this by saying that when I got that I said to my staff officers, "The Boers have got hold of the cipher; ask Sir Redvers Buller to repeat that telegram." Then there is a note: "In his No. 92 of 17th Buller said above message had been signalled correctly, but asked us to make following corrections:—'Strike out from "if not, how many," down to "after which," inclusive, and substitute, "how many days can you hold out?" Add to end of message, "Whatever happens, recollect to burn your cipher, decipher, and code books, and all deciphered messages."'"

14882. How did you interpret that "except with siege operations"; what did you think he meant by that?—I thought he meant sapping up to the position, which I thought would be a very tedious process in the rocky hills.

14883. It struck you, at any rate, as rather a curious proceeding, did it not, the idea of siege operations before Colenso? Did you know the position?—No; I could not say I knew it.

14884. I suppose you formed an idea of it in your own mind?—Yes; I had only passed through rapidly in the train. You see, he again asks how many days I could hold out, and my reply is pretty well known:—

"General Sir George White to General Sir Redvers Buller. No. 32, 16th December. Your No. 88 of to-day received and understood. My suggestion is that you take up strongest available position that will enable you to keep touch of the enemy and harass him constantly with artillery fire, and in other ways as much as possible. I can make food last for much longer than a month, and will not think of making terms till I am forced to. You may have hit enemy harder than you think. All our native spies report that your artillery fire made considerable impression on enemy. Have your losses been very heavy? If you lose touch of enemy it will immensely increase his opportunities of crushing me, and have worse effect elsewhere. While you are in touch with him, and in communication with me, he has both of our forces to reckon with. Make every effort to get reinforcements as early as possible, including India, and enlist every man in both Colonies who will serve and can ride. Things may look brighter. The loss of 12,000 men here would be a heavy blow to England. We must not yet think of it. I fear I could not cut my way to you. Enteric fever is increasing alarmingly here. There are now 180 cases, all within the last month. Answer fully. I am keeping everything secret for the present till I know your plans." With regard to the passage there, "and enlist every man in both Colonies who will

serve and can ride," that was given in another list of telegrams as, "and enlist jungle men in both Colonies," or something of that sort, and Sir Redvers Buller's remark upon it was that he did not know what I meant by "jungle men."

14885. Your first impression, when you got that telegram of the 16th, was that the cipher had fallen into the hands of the Boers?—Yes.

14886. You mean by that that it was incredible to you that such a telegram could have emanated from the General; is that what you mean?—Yes, that is what I mean.

14887. What you did was to send this telegram of encouragement, because that is really what it amounts to?—No; it was to make certain that it was a genuine telegram, and came from Sir Redvers Buller himself, because it had a most important bearing upon our position, and I considered it the proper thing to do, as soon as I had it confirmed by repetition, to call the attention of some of the senior officers about me to it.

14888. (Sir John Jackson.) Then No. 28 appears to be in reply to that telegram?—"From General Sir Redvers Buller to General Sir George White. Clear line. No. 93, 17th December. I find I cannot take Colenso, and I cannot stay in force near there, as there is no water; but I am leaving there as large a force as I can to help you; but recollect that in this weather my infantry cannot be depended on to march more than 10 miles a day. Can you suggest anything for me to do? I think in about three weeks from now I could take Colenso, but I can never get to Onderbroek."

14889. (Viscount Esher.) He asks you there to suggest what he should do?—He says also: "I am leaving there as large a force as I can to help you. . . . Can you suggest anything for me to do?" My reply to that was: "Clear line. No. 33P, 18th December. Your No. 93, 17th December, received and understood. It is difficult for me to make suggestions, as I do not know situation outside or whether you have made serious attempt to take Colenso, and with what loss. Your messages were previously confident, and I had made preparations to fight towards Onderbroek, and could still do so if you had Colenso. I cannot advise leaving small force in advance of main body. It would probably be invested, and be no real threat to enemy. Your front line should be held in full strength. Abandonment of this garrison seems to me most disastrous alternative on public grounds. Enemy will be doubly strong on Tugela if Ladysmith falls. I can only suggest getting every available reinforcement in men and guns, and attacking again in full force as early as possible. Meantime, I will do all I can to maintain an active defence, and will co-operate with you to the extent of my power if you advance again. How are you getting on in the Free State? We know nothing. Detailed news desirable, to contradict mischievous rumours here." I also advised him against sending a small force in advance of the main body, but I do not think there is anything for me to dwell upon in that. I think it tells its own story, unless somebody would like to ask me any question about it.

14890. You tell him in that telegram that you have "made preparations to fight towards Onderbroek"?—I think it is almost a dull reiteration my going on with that; I told him so often.

14891. (Sir John Jackson.) In that telegram, No. 93, of 17th December, General Buller said he could "never get to Onderbroek"?—Yes; and I think I replied to that that I could even now fight out towards Onderbroek if he had Colenso.

14892. "Your messages were previously confident, and I had made preparations to fight towards Onderbroek, and could still do so if you had Colenso"?—That has again the same tendency; it shows I was quite ready and only too willing to get the chance of attacking, but it was no use attacking without co-operation at the other end, and that co-operation required to be very carefully timed. It would be apparent to anybody that if I had gone out on the 17th I should have met the victorious Boer forces, after having beaten Buller's force back on the 15th.

14893. (Viscount Esher.) When you got those two telegrams what was your final impression—that he was to leave you in the lurch?—I would rather not say my impression unless you press me to do it.

13 Feb. 1903.

14894. What did you think you would then have to do?—I thought then that the time was approaching when it would be my duty to try to cut my way out.

14895. That was, in the end, what you determined to do if you were left?—It is on record. I did telegraph to him, and ask him to send it on to the highest authority, that my men were becoming non-effective from starvation and illness, and that I thought that the time had arrived when it was my duty to propose that he should attack in the first instance, and I should try to cut my way out to join him.

14896. Anyhow, the idea of making the best terms you could never entered your mind?—No. I said I would certainly not do it. I preferred to try to get some survivors through, and to give others the chance of going elsewhere than Pretoria.

Then the next is:—"From General Sir R. Buller to General Sir G. White. Dated, Headquarters, Frere, No. 97, 17th December. 6th Division just arrived at the Cape; have telegraphed for it to come on at once. It will make me strong enough to try Potgieter's. How long can you hold out?"

"From General Sir George White to General Sir Redvers Buller. Clear line. No. 34P, 18th December. Your No. 97 of yesterday received and understood. Delighted to get it. I have provisions for men for six weeks, and have confidence in holding this place for that time. But bombardment may become more trying. I had 22 casualties this morning from one shell. Enteric and dysentery increasing very rapidly. I can get on well for three weeks, keeping even horses moderately fit, if you wish to wait for siege train. It is worth waiting a little to dominate and overwhelm enemy's guns. Bring every heavy gun, naval and other, you can get. Water will be a difficulty as regards occupying a position near Tugela River, from which you can maintain continuous attack. Could you arrange pipes, pumping station, or reservoirs?"

"From General Sir G. White to General Sir R. Buller. No. 35P, 18th December. Following from Lambton, R.N., to Officer Commanding Naval Brigade:—"At long ranges I consider common and lyddite shell much preferable to shrapnel for clearing entrenchments."

"From General Sir R. Buller to General Sir G. White. No. 98, 18th December. Your No. 32P of yesterday received. My No. 97 of yesterday gives situation. I am shelling Colenso and keeping all troops I can at Chieveley, but water is scarce. Boil all your water. We hear Boers are putting dead horses in Klip River. I will tell you immediately I know when Warren is coming."

"From General Sir G. White to General Sir R. Buller. No. 36P, 19th December. All our scouts report marked diminution in usual number of Boer horses round here to-day. This may mean movement in strength towards you."

"From General Sir Redvers Buller to General Sir George White. No. 119, 19th December. I was confident of taking Colenso, and think I ought to have done it had not my guns gone in to within 1,200 yards of Fort Wylie, where they were put out of action, and I only extricated two guns out of 12. I lost about 1,000, all told. Heard enemy lost 600 to 800, but I cannot say. Methuen defeated Boers at Belmont, at Graspan, and at Modder River. He again attacked them at Speyfontein, but failed to get home. He is now encamped at Modder River, in front of Cronje, who has about 15,000 men very strongly entrenched. The 5th Division is just arriving, and the 6th and 7th Divisions are embarking in England. Dutch in Cape Colony are giving a good deal of trouble. That, I think, is about all the news."

"From General Sir R. Buller to General Sir G. White. No. 112, 21st December. Your message, 19th December, received. I expect that reinforcements will be concentrated here by 5th January."

"From General Sir R. Buller to General Sir G. White. No. 131, 30th December, Frere. My intention is to start from here 6th January, by which time I hope the 5th Division will have arrived. My point of attack will be Lancer's Kop. It will take me about six days to get there from the date I start from here. I will inform you later of my exact date of departure from here, and will endeavour to keep you informed of my movements, but my telegraph line may be cut."

"From General Sir G. White to General Sir R. Buller. No. 38P, 1st January. Your No. 131, 30th December, received to-day. If you will trust me with further details of your plan, I hope to be able to assist you in the later stages of your advance on Ladysmith; but to do this effectually, I should require to know on which line or lines you intend to force passage of Tugela."

"From General Sir R. Buller to General Sir G. White. No. 1333, 2nd January. Your No. 38P, 1st January. See my No. 97, 17th December. I adhere to the plan therein referred to of crossing Tugela River at Potgieter's. I expect a stiff fight when crossing the river, possibly a fight at the place I camp, between river and Lancer's Kop, and another fight there. If you can recommend me any better point of attack than Lancer's Kop, please do so. As troops are not arriving up to time, I doubt if I can start until the 8th January. I calculate it will take me seven days to reach Lancer's Kop."

"From General Sir G. White to General Sir R. Buller. No. 39P, 2nd January. Your No. 133 of to-day. As you intend crossing Tugela River at Potgieter's, Lancer's Hill becomes an essential point on your line of advance. If you can keep me informed of your progress, I can help you by attacking Lancer's Hill from north, when you attack it from south-west. Communication by signalling from hill above Potgieter's should be easy. Do not hurry on date of starting on our account if recently arrived troops need rest, as I am quite confident of holding my own here."

"[Note.—On 6th January, about 7 a.m., a telegram was sent to General Buller, informing him that we were being attacked. It was not numbered, and no copy was kept.]"

"From General Sir G. White to General Sir R. Buller. No. 41P, 6th January, 9.30 a.m. Attack continues, and enemy been reinforced from south. All my reserves are in action. I think enemy must have weakened his force in front of you."

"From General Sir G. White to General Sir R. Buller. No. 42P, 6th January, 12.45 p.m. We now have definite information that considerable numbers of enemy left Colenso yesterday, intending to take Ladysmith before fighting you. Have beaten them off at present, but they are still round me in great numbers, especially to south, and I think renewed attack very probable."

"From General Sir G. White to General Sir R. Buller. No. 43P, 6th January, 3.15 p.m. Attack renewed. Very hard pressed."

"From General Sir G. White to General Sir R. Buller. No. 43P, 7th January. Yesterday morning, 2.45 a.m., an attack was commenced on my position, but chiefly against Caesar's Camp and Wagon Hill. The enemy were in great strength, and pushed their attack with the greatest courage and persistency. Some of our entrenchments on Wagon Hill were three times taken by the enemy, and re-taken by us. The attack continued till 7.30 p.m. One point within our position was occupied by the enemy the whole day. In a very heavy storm of rain at dusk the enemy were turned out of this position at the point of the bayonet, in the most gallant manner, by the Devonshire Regiment, led by Major Park. Colonel Ian Hamilton commanded at Wagon Hill, and rendered invaluable service. The troops have had a very trying time, behaved excellently, and are elated at the service they have rendered to the Queen. The enemy were repulsed everywhere with heavy loss, which greatly exceeds our own. Details will be sent as soon as lists are completed."

"From General Sir G. White to General Sir R. Buller. No. 44P, 7th January. Our losses yesterday heavy. Officers killed, 14; wounded, 23. Men killed, about 100; wounded, about 230. Nominal list later. Most of the wounds were in the head. Troops here much played out, and a very large proportion of my officers have, up to date, been killed or wounded, or are sick. I would rather not call upon them to move out from Ladysmith to co-operate with you; but I am confident enemy have been very severely hit. Please do not allow our losses to be published in local papers, as they thus reach and encourage the enemy."

"From General Sir R. Buller to General Sir G. White. No. 136, 5th January. Your No. 39P, 2nd

January. I shall certainly try and communicate with you, and am taking limelight for that reason. I expect to start night of 9th-10th, and to have a fight to cross the river about the 15th. The enemy have entrenched themselves, but the position is not naturally as strong as at Colenso. Do you wish me to leave a signaller at Weenen when I start? It would be more convenient to remove him."

"From General Sir G. White to General Sir R. Buller. No. 45P, 8th January. Your No. 136, 5th January. Of course, you must decide; but uninterrupted communication would be double value to me while you are en route for here."

"From General Sir R. Buller to General Sir G. White. No. 144, 8th January. After stating that his No. 139, which we could not decipher, referred to operations of 6th January, and might now be cancelled, and after making one or two unimportant corrections in his No. 136, 5th January, goes on as follows:—"I start from here to-morrow, and expect it will be six or seven days from then before I shall be able to leave Potgieter's, but I may be quicker. I shall try to keep up signal communication with you, and I am taking a balloon, which I hope you will see."

"From General Sir R. Buller to General Sir G. White. No. 145, 8th January. Sorry to hear of your severe list of casualties. Congratulate all the men, and say we shall strain every nerve to be with them soon."

"From General Sir R. Buller to General Sir G. White. No. 148, 8th January. Your No. 45P. Signal station will be left at Weenen; but keep a good look-out for signals to westward on the 11th and afterwards."

"From General Sir R. Buller to General Sir G. White. No. 157, 8th January. There is an idea here that the enemy may attack you again shortly, and at night. We commence to move to-morrow, Tuesday night."

"From Her Majesty the Queen to General Sir George White. Warmly congratulate you and all under your command for your brilliant success. Greatly admire conduct of the Devonshire Regiment."

"From General Sir G. White to General Sir R. Buller. No. 46P, 10th January. Your reassuring telegram, No. 145, 8th January, much appreciated by troops. My sick list now amounts to 2,000, including 615 cases of typhoid."

"From General Sir G. White to Private Secretary to Her Majesty the Queen. 10th January. The garrison of Ladysmith are deeply grateful for the Queen's most gracious message, and beg to express their loyal duty."

"From General Sir G. White to Governor, Natal, 10th January. I thank you for your appreciative telegram. It has gratified the garrison of Ladysmith much, and they are rejoiced to think they have rendered good service to Natal, a province that has shown such devotion to Imperial interests, and given this garrison so splendid a contingent, with whom it is an honour to fight as comrades."

"From General Sir R. Buller to General Sir G. White. No. 156, 14th January. I find the enemy's position covering Potgieter's Drift so strong that I shall have to turn it, and I expect it will be four or five days from now before I shall be able to advance towards Ladysmith. I shall keep you constantly informed on my progress."

"From General Sir G. White to General Sir R. Buller. No. 47P, 15th January. Your No. 156 of yesterday just received. I can wait. Wish you best of luck."

"From General Sir G. White to General Sir R. Buller. No. 48P, 16th January, reference your No. 156, 14th January. If you have considerable doubt of being able to get through to Ladysmith, would you put case to Roberts, and ask more troops. If you are repulsed now, Ladysmith will be in a bad way. If you are undefeated and ready to attack on any withdrawal of enemy's strength from your front, I think I could maintain this place till 15th February; but the sick would suffer badly. My force is much played out. I have 2,400 in hospital, and many very weakly men at duty.

Sickness increasing daily. I have lost services of 230 officers in last three months, including killed, still non-effective from wounds, prisoners, and sick."

"From General Sir R. Buller to General Sir G. White. No. 159, of 17th January. Your No. 48P, 16th January. I crossed one bridge at Potgieter's to-day, and am bombarding their position. Warren, with three brigades and six batteries, has crossed by pontoon bridge at Trichard's Drift, and will move to the north to try and outflank Boer position. I somehow think we are going to be successful this time. We could not get reinforced in time to relieve you if we waited. Every man in this force is doing his level best to relieve you. It is quite pleasant to see how keen the men are. I hope to be knocking at Lancer's Hill in six days from now."

"From General Sir R. Buller to General Sir G. White. No. 0354, code, 19th January. Following message received from General Warren last night:—"Colonel Lord Dundonald, with about 1,200 mounted troops, came into action this afternoon with a force of Beers to the west of Acton Homes. At 7 p.m. I reinforced him with 300 1st Royal Dragoons. He has occupied the kopjes, after a fight, and is now holding the position. Field Cornet Heilbron, 20 Boers killed and wounded, 15 prisoners. Lieutenant Shaw, Imperial Light Horse, severely wounded; two privates, King's Royal Rifle Corps, killed; and one private, Imperial Light Horse, wounded."

"From General Sir G. White to General Sir R. Buller. No. 49, 19th January. Your No. 159 and No. 161. Congratulate you and ourselves on your successful progress, and have greatest confidence in seeing you soon."

"From General Sir R. Buller to General Sir G. White. No. 0352, code, 15th January. Have you formed an estimate of the enemy's losses on 6th January? If so, please inform me."

"From General Sir G. White to General Sir R. Buller. 15th January. I returned bodies of 79 dead, killed within my position. Of course, this cannot include all dead, but I have no means of verifying their losses, and dislike making estimates based on uncertain details. Native reports place Boer loss at 500 to 600 killed and wounded."

"From General Sir G. White to General Sir R. Buller. 19th January. A force of 1,500 to 2,000 Boers moved from Clydesdale towards Acton Homes, 5 p.m. to-day, by main road."

"From General Sir R. Buller to General Sir G. White. No. 162, 20th January. Thanks for telegram respecting observations, movements of enemy. Can you see when enemy relieves garrison of trenches east of Spion Kop? The trenches are nearly always full of men, but we cannot see enemy go in or come out of them. Warren is meeting with great difficulties regarding roads, and his progress is very slow. I am sending him three more days' supplies."

"From General Sir G. White to General Sir R. Buller. 20th January. Your No. 162 of to-day. Relief of trenches east of Spion Kop not been seen from here. Will watch and report if relief observed."

"From General Sir G. White to General Sir R. Buller. No. 51P. 21st January. If you can let me know when you intend decisive attack on Boer position, I will demonstrate here to draw as many as possible away from you. Experience leads me to think I can draw away a considerable number."

"From General Sir R. Buller to General Sir G. White. No. 166, 21st January. Your No. 51P, 21st January. We are slowly fighting our way up the hill. I will let you know when help from you will be of most assistance. Reports received from all prisoners put the number of enemy in front of me at 10,000, and the number surrounding you at 5,000. I do not know if this correct."

"From General Sir G. White to General Sir R. Buller. No. 52P, 22nd January. Your No. 166, 21st January. I think 15,000 is too low an estimate of enemy's numbers round Ladysmith and facing Tugela. You are probably right about Ladysmith, but I believe there are more than 10,000 facing you, or in position to face you rapidly. Deserters report a movement on

General
Sir George
S. White,
V.C., G.C.B.,
G.C.S.I.,
G.C.M.G.,
G.C.I.E.,
G.C.V.O., and
Colonel E. A.
Altham
C.M.G.

16 Feb. 1903.

Saturday of detached force towards Drakensberg to try and turn the left flank."

"From General Sir G. White to General Sir R. Buller. No. 53P, 22nd January. Considerable activity in Boer camps to-day. Towards sunset about 500 Boers from here reinforced main Boer camp near Clydesdale. Shall open artillery fire at daybreak to call them back.

"From General Sir R. Buller to General Sir G. White. No. 167, 23rd January. Warren holds the position he gained two days ago. In front of him, at about 1,400 yards, is the enemy's position west of Spion Kop. It is on higher ground than Warren's position, so it is impossible to see into it properly; it can only be approached over bare open slopes. The ridges, held by Warren, are so steep, that guns cannot be placed on them, but we are shelling the enemy's position with howitzer and field artillery placed on the lower features behind the infantry; enemy reply with Creusot and other artillery. In this duel the advantage rests with us, as we appear to be searching his trenches, and his artillery fire is not causing us much loss. An attempt will be made to-morrow to seize Spion Kop, the salient which forms the left of the enemy's position facing Trichard's Drift, and (it must be done) from the position facing Potgieter's, it has considerable command over all the enemy's entrenchments."

"From General Sir G. White to General Sir R. Buller. No. 54P. 24th January. Many thanks for efforts you are making. We await news of result with utmost anxiety."

"From General Sir R. Buller to General Sir G. White. No. 170, 25th January. Warren took Spion Kop the 24th, and held it all day, but suffered very heavily; General Woodgate, dangerously wounded, 200 killed, and 300 badly wounded, and his garrison abandoned it in great disorder at night. I am withdrawing to Potgieter's, and mean to have one fair square try to get with you, but my force is not strong enough, I fear. I shall send particulars to-morrow."

I should like to call your Lordship's attention to the next telegram, because it is in answer to your question; it is my telegram to Sir Redvers Buller of the 27th January. "No. 55P, 27th January. Your No. 170, of 25th, only received to-day. We must expect to lose heavily in this campaign, and be prepared to face it. If you try again and fail, Ladysmith is doomed. Is not 7th Division available to reinforce you? I could feed the men another month, but not all the horses, and without guns my force could do nothing outside. My medical supplies are nearly out" (I was very weak in these), "and the mortality is eight to ten daily already. I put it to you and the Government whether I ought not to abandon Ladysmith and try to join you. I could, I think, throw 7,000 men" (that, I ascertained afterwards, was too sanguine a view) "and 36 guns into the fight. If you would commence preparing an attack and draw off the enemy, say, in the afternoon of a day to be settled between us, I would attack that night and do my best to join you. The attack from here ought to have great effect, but I fear my men are weak, and, in some instances, morally played out. The fall of Ladysmith would have a terrible effect, especially in India." (I may say, in explanation of that "especially in India," that a great portion of our force came to us from India, and they had Indian establishments, and, in some instances, Indian soldiers as hospital orderlies, and so forth, and it struck me that the report of a late Commander-in-Chief in India having been taken prisoner to Pretoria would have had a specially prejudicial effect in India.) "I am deeply impressed with the gravity of the situation, and trust you will repeat this to the highest authorities. Deserters report Boers lost severely on 24th, and were quite disheartened by your artillery fire. If we stick to them we may effect a junction, but my proposal is a desperate one, and involves abandoning my sick and wounded, naval guns, and railway rolling stock. I could not keep the field more than two or three days. I would hold on to the last here if political considerations demand it, or if there is a prospect of sufficient reinforcement to relieve us." I may say that in reply to that, Lord Roberts ordered me to hold on, and said that he hoped that his operations through the Orange Free State would put such pressure on the Boers, and so far relieve Natal, that the situation would be more hopeful, and he hoped to attain this result by the end of February—a promise which he kept to the hour, as 28th February was the day I was relieved.

"From General Sir R. Buller to General Sir G. White. No. 173, 28th January. We had awful luck on the 24th; I had got two naval guns and a mountain battery half-way up Spion Kop, when the troops came down. If we had had the luck, out of all the Colonels up there, to have found a really good fighting man, we should have been in Ladysmith in four days. As it is, we are no better off, and some regiments here have had a severe shake. On the other hand, the Boers themselves admit very heavy casualties, and that they are tired out. We have held them in their trenches at a distance of from 1,000 to 1,400 yards for a week, and our artillery fire has been very good. We have lost, say, 1,400. I cannot think their casualties less than 1,000. The question is, Can I get within a day's fight of you? At the present time they have the position at Potgieter's. I think I can certainly take that, but it will leave them on my left at the Acton Homes—Spion Kop position. They may not remain there, but if they do, I doubt if I can get forward to the Rooodepoort position, which is, I hear heavily entrenched. I propose, about Wednesday, to attack Potgieter's. If I get through, I shall be able to arrange with you for a simultaneous attack, you on Lancer's Hill, and me on Rooodepoort, and that, I think, offers the best chance of success. Believe me, I will leave nothing untried. Your No. 55P, received since above was written. I agree with you that breaking out is only a final desperate resort. I shall try to force this position, and then we shall see. Some old Boers, who were very civil to our doctors on Spion Kop, told them that there were 16,000 of them in front of us, and not more than 4,000 left at Ladysmith. I have no means of knowing how true this is, but deserters say that most of the men are here. Lord Roberts says he cannot reinforce me, but that if you will wait till the end of February, he will by then be in Bloemfontein, and will have relieved Kimberley, which will, he says, reduce the pressure on Ladysmith. I doubt Roberts's forecasts coming off, and think I had better play my hand alone, and as soon as I can. What do you think?"

May I direct attention to telegram No. 83, from Sir Redvers Buller to Sir George White, sending the terms of a telegram from Lord Roberts, the purport of which I have given, and which appears to me to be an extraordinary instance of prescience, for it was the last day of February that I was relieved:—

"From General Sir R. Buller to General Sir G. White. No. 174, 28th January. Following telegram just received for you from Lord Roberts:—'Please communicate following to White: "I beg you will yourself accept and offer all those serving under command my warmest congratulations on heroic, splendid, defence you have made. It is a matter of the deepest regret to me that the relief of Ladysmith should be delayed, but I trust you will be able to hold out later than the date named in your recent message to Buller. I fear your sick and wounded must suffer, but you will realise how important it is that Ladysmith should not fall into the enemy's hands. I am doing all that is possible to hurry on my movement, and shall be greatly disappointed if by the end of February I have not been able to carry out such operations as will compel the enemy to materially reduce his strength in Natal."'"

"From General Sir G. White to General Sir R. Buller. No. 56 P, 28th January. Thanks for your No. 173 of to-day. It is most provoking about losing Spion Kop. I think it would be better if you stick to bombardment and slow progress by something like sap rather than commit yourself to another definite attack. Information, which I believe correct, says Boers are discouraged by superiority of your armament, and say they cannot stand it. Keep them, therefore, in their trenches, and bombard them as heavily as you can. I don't think they will stand it long. I trust to your preventing them from throwing their strength on me. I will hold on six weeks more by sacrificing many of my horses, and that period of bombardment, coupled with Roberts's advance, will make Orange Free State men, at all events, clear off. I believe your estimate of enemy's numbers here and before you may be correct, but his guns here are protected by wire entanglements and mines. Boers can, however, come here from Potgieters in 90 minutes. In this lies their great strength. You must not let them leave you and throw their strength on me."

"From General Sir G. White to General R. Buller. No. 57 P, 28th January. Your No. 174 of to-day. Please communicate following reply to Lord Roberts:—

General
Sir George
S. White,
V.C., G.C.B.,
G.C.S.I.,
G.C.M.G.,
G.C.I.E.,
G.C.V.O., and
Colonel E.A.
Altham,
C.M.G.

16 Feb. 1903.

"Many thanks from self and force for message and congratulation. By sacrificing rest of my horses I can hold out for six weeks, keeping my guns efficiently horsed and 1,000 men mounted on moderately efficient horses. I should like to publish your intention to advance via Orange Free State as early as you can permit me to do so. It will encourage my garrison, and will be certain to reach and discourage Orange Free State men."

"From General Sir R. Buller to General Sir G. White. No. 121, 31st January. Consul, Delagoa Bay, reports Boers intend to flood Ladysmith by damming Klip River; German engineer in charge. Native deserter says dam is being made one mile north of Nelthorpe Station. What effect would this have on you?"

"From General Sir G. White to General Sir R. Buller. No. 28 P, 31st January. Your No. 121 of to-day. Consider enterprise impossible, and could have no effect."

"From General Sir G. White to General Sir R. Buller. Clear line. No. 60 P, 2nd February. Information here that another serious attack will be made on Ladysmith very soon. Kruger, Steyn, and Joubert have met, and have arranged this. If made I will signal to you, if possible, and at night, one rocket first, to call attention, and then, after interval of one minute, three rockets fired at fifteen seconds interval, all from Wagon Hill, will mean I am seriously attacked. Will you acknowledge by two rockets in rapid succession from Spearman's Kop?"

"From General Sir R. Buller to General Sir G. White. No. 184, 2nd February. Your No. 60 P received and noted. I expect to be in position to try and force my way through on to the plain on Monday; at any rate, I expect to attack that morning. Unless I get to the plain I do not see how I can help you, but I shall do all I can. Do you think there is any chance of your being attacked before Monday, as, if so, I shall concentrate to-morrow my force, which is now scattered for want of water?"

"From General Sir G. White to General Sir R. Buller. No. 61 P, 2nd February. I have what I believe reliable information that Steyn, Joubert, and younger brother of latter have held meetings near here, and determined to attack Ladysmith again. Kruger expected daily, when plan will be settled. Majority of Boers are for fighting on here to the last. At conference a field cornet favoured peace. Steyn threatened to dismiss him, on which whole commando threatened to go home. Steyn told officers attending meeting that they had to fight it out here, as that was what they came to Ladysmith for. Boer losses, 20th to 24th, described as very great; probably 1,200. Effect of lyddite shell described as making great impression, not only killing Boers, but burying them, leaving a hand sticking out here or a leg there. Your 184 just received. Do not expect attack before Monday. Attack to-morrow not very likely, but if made shall hope to give good account of ourselves. Attack on Sunday most improbable."

"From General Sir R. Buller to General Sir G. White. No. 185, 2nd February. Your No. 60 P. We have no rockets, but your signals will be acknowledged by two fires which would be lighted on Spearman's Kop."

"From General Sir R. Buller to General Sir G. White. No. 188, 3rd February. Acknowledge receipt of this telegram. Bar accidents, I attack the position in front of me Monday morning, and hope to establish myself on the flats before nightfall. I shall try my best. Please note that the Boers removed the helmets and arms of our dead on Spion Kop. They may intend to try and deceive the sentries if they attack you."

"From General Sir G. White to General Sir R. Buller. No. 62 P, 4th February. Your No. 188 of yesterday received and noted. We are all most grateful for your efforts on our account, and wish you all success. Precautions taken against use of disguise by enemy."

"From General Sir G. White to General Sir R. Buller. No. 63 P, 4th February. One green warning rocket, then interval of one minute, followed by red, blue, red rockets at fifteen seconds interval."

"From General Sir R. Buller to General Sir G. White. 4th February. Your No. 63 P of to-day. Received and noted."

"From General Sir R. Buller to General Sir G. White. No. 190, 7th February. The enemy is too strong for me

here, and though I could force the position, it would be at great loss. The Bulwana big gun is here, and a large force. My plan is to slip back to Chieveley, take Hlangwane, the Boer position south of the Tugela and east of Colenso, and the next night try and take Bulwana Hill from the south. Can you think of anything better? I find I cannot get my guns and trains through those mountains. I hope to be at Hlangwane on Saturday. Keep it dark."

"From General Sir G. White to General Sir R. Buller. No. 64 P, 8th February. Your No. 191 of yesterday. Gun opposite you was formerly on Telegraph Hill. Bulwana gun still in position here. Cannot offer suggestions, as do not know country or where you propose to cross Tugela. I could help at Bulwana. The closer to Ladysmith you can establish yourself, the better chance we shall have here."

"From General Sir R. Buller to General Sir G. White. No. 191, 8th February. My No. 190 of to-day. For 'Saturday' read 'Monday.'"

"From General Sir G. White to General Sir R. Buller. No. 66 P, 13th February. Considerable movement yesterday among Boer camps. All those north of Potgieter's moved, some towards Potgieter's Drift and some eastward. We anxiously await news from you."

"From General Sir R. Buller to General Sir G. White. No. 1,780 (received without date on 13th February). Field-Marshal desires me to communicate the following to you:—'Your telegram, 28th January. I have entered Orange Free State with a large force, specially strong in Cavalry, Artillery, and Mounted Infantry. Inform your troops of this, and tell them from me I hope the result of next few days may lead to pressure on Ladysmith being materially lessened.'"

"From General Sir G. White to General Sir R. Buller. No. 67 P, 14th February. Two civil residents, H. J. Ladd and J. R. Gorton, have escaped from hospital camp I was allowed by Joubert to form for protection of sick and non-combatants out of fire. In doing this I consider they have made use of camp in a manner that violates guarantee I gave to Joubert, and that he would be justified in cancelling the immunity he has most considerably allowed to civilians, women, children, and sick. He has already threatened to do this, and I ask that Ladd and Gorton, who are reported to have arrived at Mooi River, may be arrested and handed over as prisoners to the nearest Boer officer."

"From General Sir G. White to General Sir R. Buller. No. 68P, 15th February. Following movements of enemy observed to-day:—About 50 wagons and 600 Boers from Roodepoort to Surprise Hill; 55 wagons and about 400 Boers from Dewdrop to Onder brook."

"From General Sir G. White to General Sir R. Buller. No. 69P, 15th February. Reference my No. 60, 2nd February, and No. 63P, 4th February. Rocket station changed from Wagon Hill to Caesar's Camp, east end."

"From General Sir G. White to General Sir R. Buller. No. 70P, 16th February. Considerable move northward took place yesterday afternoon and evening. Not less than 2,000 men, with large proportion of wagons, moving north up valley of Klip River towards Candyleugh (see page 33 of Report on Communications in Natal). Boers still working hard at dam in Klip River. When moving off, Boers set fire to several farms in Dewdrop Valley."

"From General Sir R. Buller to General Sir G. White. No. 0415, code, 16th February. Your No. 67, 14th February. Have given instructions for the two men you mention to be arrested if they can be found."

"From General Sir R. Buller to General Sir G. White. No. 202, 16th February. Your No. 66P, 13th February. I am engaged in trying to turn the enemy out of the position he holds south of Tugela River and east of Colenso. It can best be described as Monte Christo Farm, and consists of west slopes of Cingolo Mountain and east slopes of Hlangwane Hill."

"From General Sir R. Buller to General Sir G. White. Clear line. No. 203, 16th February. I hear that 300 Germans have joined the Boers round Ladysmith, and that you will be attacked before 26th February, and that I shall be attacked at the same time."

"From General Sir G. White to General Sir R. Buller. No. 71P, 16th February. Your No. 203 of to-

General
Sir George
S. White,
V.C., G.C.B.,
G.C.S.I.,
G.C.M.G.,
G.C.I.E.,
G.C.V.O., and
Colonel E. A.
Altham
C.M.G.

16 Feb. 1903

day. I think another attack here quite possible. Have strengthened defences, and will try to give good account of ourselves, but men are on very short rations, and are consequently very weak. We are eating our horses. Have no grain left for animals, and grass is very scarce."

"From General Sir G. White to General Sir R. Buller. No. 72P, 19th February, 10 a.m. Sandbach's message to Hunter received. I congratulate you on your important success. We have observed 160 wagons coming from Tugela direction and moving north. Let me know when you intend attacking position north of Tugela, and whether you will come via Bulwana or Colenso road, and I will try and co-operate."

"From General Sir G. White to General Sir R. Buller. No. 73P, 21st February. We have observed reinforcements for enemy disembarking at Modder Spruit Station, and about 750 mounted men have been seen during last two days moving south via Bulwana."

"From General Sir R. Buller to General Sir G. White. No. 207, 21st February. I am now engaged in pushing my way through by Pieter's. I think there is only a rearguard in front of me. The large Boer laager under Bulwana was removed last night. I hope to be with you to-morrow night. You might help by working north and stopping some of the enemy getting away. A large camp has been moved to-day from the hill between the station and Cæsar's Camp."

"From General Sir G. White to General Sir R. Buller. No. 74P, 21st February. Your No. 207 of to-day. We can detect no signs of enemy retreating; all indications point the other way."

"From General Sir R. Buller to General Sir G. White. No. 208, 22nd February. I find I was premature in fixing actual date of my entry into Ladysmith, as I am meeting with more opposition than I expected, but I am progressing."

"From General Sir G. White to General Sir R. Buller. No. 75P, 22nd February. Reliable native scout reports all Free State Boers gone. Transvaal Boers chiefly collected at Woodhouse's Farm, two miles west of Pieter's. Three guns on Table Hill, two miles west of Woodhouse's. Effect of your guns described as very great."

"From General Sir G. White to General Sir R. Buller. No. 76P, 22nd February. Your No. 208 of to-day. I know you are beating the enemy, stick to them. I carried out a small operation this morning; but my men are so weak from insufficient and inferior food that they are unfit for the field, horses more so."

"From General Sir R. Buller to General Sir G. White. (Without number or date.) Received 22nd February. Can only hold Monte Christo temporarily. Shall endeavour to open communication with you further on."

"From General Sir G. White to General Sir R. Buller. No. 77, 26th February. I have mounted a 4-7-inch gun and a naval 12-pounder on Cæsar's Camp. Table Hill is within range of the latter, and both Table Hill and Grobelaar's Kloof of the former. Can I help your operations by using them? I have only 80 rounds for 4-7-inch."

"From General Sir R. Buller to General Sir G. White. No. 211, 27th February. Your 77P, 26th February. I think you will be able to help me, but I am not close enough to you yet. I shall communicate with you later on."

"From General Sir G. White to General Sir R. Buller. No. 78P, 28th February. I am now issuing only $\frac{1}{2}$ lb. bread stuff daily. It is of very inferior mealie meal. At this rate, I can hold on till 1st April; not longer. Report to Roberts if you think necessary. I have 21,000 mouths to feed, counting children half rations."

"From General Sir G. White to General Sir R. Buller. No. 79P, 28th February. Following Boer movements observed between dawn and noon to-day:—From direction of Pieter's to behind Bulwana, five guns, 20 wagons, 300 men; from Onderbrook to Roodeport, and on to north-west, 5 guns, 140 wagons, 350 men."

14896*. (Sir John Jackson.) What is your opinion on General Buller's telegram of 28th January: "We had

awful luck on the 24th; I had got two naval guns and a mountain battery halfway up Spion Kop, when the troops came down. If we had had the luck out of all the Colonels up there to have found a really good fighting man, we should have been in Ladysmith in four days"?—You will have an opportunity of asking Sir Redvers Buller himself what he meant by that; I do not know.

14897. You would rather not offer an opinion?—I could not give any opinion, because it would be simply an interpretation of another man's mind; as a rule, you can get the best evidence from the man himself. In one of the messages which I dispatched on the 6th January, 1900, I find it recorded "Attack continues, and enemy been reinforced from south. All my reserves are in action. I think enemy must have weakened his force in front of you." We afterwards knew that he did—in fact, we saw the men galloping up from the south.

14897*. (Viscount Esher.) What number of men do you think you had then in front of you?—That is a very hard question, and I have dealt with it to a certain degree in my written statement. I have tried to show, at the very end, that the men who were actually facing him on the Tugela could be attacking me in Ladysmith in an hour and a half at the pace they moved, and on that occasion, on the 6th January, undoubtedly very large numbers of the men, who had been the previous day on the Tugela, joined in the attack on me. I always accepted anything he said regarding relative numbers in front of him and me, but there was nothing more difficult than to find the number of men occupying any Boer position.

14898. Supposing it was said that at that particular time "I miscalculated the retentive power of Sir George White's force. I thought he would hold at least 10,000 off me. I doubt if he keeps 2,000." What do you say to that statement?—I do not agree in that at all, and I did not know there was such a telegram in existence.

14899. It is not a telegram I am reading from, but I wanted to know your opinion of that statement?—I think it is a gross exaggeration.

14900. You think your retaining power was much larger?—Yes, I do. I do not know that I have anything else to say. All these telegrams are on record, and they really tell the story of my operations. There is no point in the telegrams which I think needs any further explanation from me.

14901. (Sir Frederick Darley.) I see, on the 8th February you again state, when it was suggested that they were coming by Bulwana, "I could help at Bulwana"?—Yes. There is an important point as to which perhaps a question could be put to me with regard to the pursuit, and that is part of it which you have just mentioned.

14902. You say, "The closer to Ladysmith you can establish yourself, the better chance we shall have here"?—Yes. When I saw that the enemy were in flight, I kept giving Sir Redvers Buller information as to what was going on within my ken all round, and when I saw the troops were actually fleeing before him I organised a pursuing column; I sent round to the officers commanding my regiments to know how many men could do a six miles march, and perhaps have to fight at the end of it, and the return I got was something extraordinarily meagre—I think somewhere about 100 to 120 being the biggest return I got from any regiment. I ordered them to go out, and I sent wagons with them to carry them. I said, "As long as they go through the form of marching every now and then turning their guns against the enemy, a force demoralised as his now is will abandon his material and will break up, and I shall be playing the game." I remembered using that expression. When Sir Redvers Buller came into Ladysmith he found some portion of his force, which had preceded him, some part of the Royal Dragoons who were getting a feed for the horses, which I was able then to give them, as I was practically relieved with a view to these squadrons going out to help my pursuing column, which had been detailed under orders of General Knox. When Sir Redvers Buller came in he asked me: "What are those men?" I told him what they were, and he discouraged the pursuit. As far as I recollect, he said that he did not think that it was judicious to pursue running Boers.

General
Sir George
S. White,
V.C., G.C.B.,
G.C.S.I.,
G.C.M.G.,
G.C.I.E.,
G.C.V.O., and
Colonel E. A.
Altham,
C.M.G.

16 Feb. 1903.

14903. (*Chairman.*) Then were your men recalled?—When I got that order, my Lord, I sent out and recalled my column; Sir Redvers Buller was in command.

14904. (*Sir Henry Norman.*) How far had they gone?—They had gone to Modder Spruit, I think. It is in my despatch of the 23rd March.

14905. Had you been able to send provisions with them?—I had no intention of their staying out very long; I forget how they were equipped with regard to that, but I think I sent provisions with them. This is an extract from my despatch of 23rd March:—“On the 1st March, I sent Colonel W. G. Knox with the 1st Battalion Liverpool Regiment, 1st Battalion Devonshire Regiment, 2nd Battalion Gordon Highlanders, 5th Dragoon Guards, and the 53rd and 67th Batteries Royal Field Artillery to move out along the Newcastle Road, and to harass as much as possible the enemy, whom we could see retiring before the successful advance of Sir Redvers Buller's force. Colonel Knox carried Long Hill and Pepworth Hill, and opened fire with his guns on Modder Spruit Railway Station and the large Boer camp there, which the enemy at once evacuated. Both men and horses were too weak for rapid or prolonged operations; but several of the enemy's camps were captured, and the force returned after having very successfully carried out their object to as great a distance as their weakness permitted them to pursue. Our casualties were two officers and six non-commissioned officers and men wounded.” That is a summary which was written at the time; it is a long time ago, and I could not quite recall all the incidents of it. I have given you the circumstances under which they were recalled.

14906. And they returned under orders from you?—They returned under orders from me in consequence of Sir Redvers Buller's expression of disapproval of the pursuit.

14907. You called them regiments; but they were merely skeleton regiments?—They were skeleton regiments.

14908. Do you remember a telegram from Sir Redvers Buller dated 21st February, in which he said to you: “I am now engaged in pushing my way through by Pieters. I think there is only a rearguard in front of me. The large Boer laager, under Balwana, was removed last night. I hope to be with you to-morrow night. You might help by working north and stopping some of the enemy getting away”?—Yes, I remember that.

14909. And no doubt you took that as a sort of encouragement to pursue?—What was the date of that?

14910. It was dated 21st February?—I clearly recollect warning him that he was wrong; I recollect that from watching every indication I was sure that he was wrong, and that he would not get through. My telegram was to this effect: “Your No. 207 of to-day. We can detect no signs of enemy retreating” (this was on the 21st) “all indications point the other way.” My points of observation, which were very carefully organised under my very best staff officers, showed that there were as many men going down south as there were moving off at that time. He, thinking that he had nothing but a rearguard before him, I rather think went back to Colenso after that.

14911. He says: “I find I was premature in fixing actual date of my entry into Ladysmith, as I am meeting with more opposition than I expected, but I am progressing”?—I think, after that, he went back to Colenso. You will see by that, Sir Henry, that the reason of the delay was owing to my having taken a more correct view of the position than he had—that he had many more before him.

14912. You telegraphed again on the 22nd February: “Reliable native scout reports all Free State Boers gone. Transvaal Boers chiefly collected at Woodhouse's Farm, two miles west of Pieters. Three guns on Table Hill, two miles west of Woodhouse's. Effect of your guns described as very great.” Then you, on the same date, said: “Your No. 208 of to-day. I know you are beating the enemy; stick to them. I carried out a small operation this morning; but my men are so weak from insufficient and inferior food that they are unfit for the field; horses more so”?—Quite so; really, the operation I tried was to get towards Bulwana, for I was most anxious to take that gun that had killed so

many of my people before they could take it away; but every officer I consulted said: “The men cannot crawl half-way up Bulwana, much less get to the top and fight on the top of it.”

14913. Then Sir Redvers Buller on the 27th, which was six days afterwards, said: “I think you will be able to help me, but I am not close enough to you yet. I shall communicate with you later on”?—That was the day before Dundonald rode in.

14914. On the 28th you telegraphed to him: “I am now issuing only $\frac{1}{2}$ lb. bread stuff daily. It is of very inferior mealie meal. At this rate I can hold on till 1st April; not longer. Report to Roberts if you think necessary. I have 21,000 mouths to feed, counting children half-rations,” but apparently before he had relieved you, you had sent out troops to pursue the enemy?—On the 1st of March I sent them out, and I was really relieved on the 28th February, when Dundonald came over a hill, and some of the enemy were actually in rear of him; the place over which he came, close under Caesar's Camp, was not the exact line of retreat of the Boers.

14915. Then Buller came in the next day?—Buller came in in the middle of the day.

14916. Had you, before he arrived, sent your troops away?—Yes, I was in full pursuit before he came in.

14917. Then did he push on any troops when your troops were coming back?—No, he recalled them.

14918. He recalled your troops?—Yes. He spoke to the officer commanding that detachment of the Royals, and I do not know what he said to him. He said very little to me, except what I have told you.

14919. (*Chairman.*) The Royals did not go out?—I do not think they did; I am not quite sure of that, my Lord.

14920. (*Sir Henry Norman.*) But you are quite certain that no other body of troops from his force went out in pursuit?—Yes; I am perfectly certain. In answer to Lord Esher's previous question, I have a statement here, showing that there were 10,000 Transvaalers and 9,000 Free Staters in front of Ladysmith.

14921. (*Viscount Esher.*) Did you form in your own mind any idea as to which way Sir Redvers Buller was likely to come to your relief?—Simply as a question of my own idea; naturally, an event of such very great importance was fully talked over by us, and I remember that I and one or two of my most confidential Staff officers agreed that the probability was that he would come by the place called Blunt's Farm. There was a position which the Boers held on the right bank of the Tugela, the only place where they kept on the right bank, and as he was coming on we expected that he would clear that right bank, that southern bank, first.

14922. That is what he did ultimately?—That is what he did ultimately, somewhere near Hlangwane.

14923. When was it that it occurred to you that he would clear that bank? Was it before Colenso?—I could not absolutely say that; it was simply as a matter of conversation that I did it, and I did not advise Sir Redvers on any point of that sort.

14924. I quite understand that; and it did occur to so many people at the time, and it has occurred to so many people since?—The way I argued was this: he has got a force of the enemy on the right bank, and he will not cross the river and leave those behind him. There is also the reasonable presumption that a force left like that on one side of the river must be more or less detached, and there must be some strong reason for leaving it. When he took it he found the reason; it turned a good deal of Colenso.

14925. But all those considerations occurred to you and those officers with whom you were privately discussing it in Ladysmith?—Yes. I did not know anything about the turning.

14926. But, in point of fact, that particular operation was the fourth of his series of attempts?—Yes. We only went on the fact that our spies told us that the Boers were on the right bank, and we said: “Oh! he will smash those first, at all events, and clear the bank he is going to leave behind him.” I hope that in the recording of that you will take it that that is simply a question of conversation between us inside.

General
Sir George
S. White,
V.C., G.C.B.,
G.C.S.I.,
G.C.M.G.,
G.C.I.E.,
G.C.V.O., and
Colonel E. A.
Altham,
C.M.G.

16 Feb. 1903.

General Sir George S. White, V.C., G.C.B., G.C.S.I., G.C.M.G., G.C.I.E., and G.C.V.O., and Colonel E. A. Altham, C.M.G.

14927. Did you have the selection of your Staff before you left England?—I got the officers I asked for personally.

14928. Your personal Staff?—Yes. I asked for certain officers. I asked for Sir Ian Hamilton, then Colonel Hamilton. I asked for Colonel Duff, my military secretary; and I named my own aides-de-camp. I do not think I asked personally for anybody else.

14929. Did the Commander-in-Chief discuss with you before you left England the officers he intended to appoint on your Staff—not your personal Staff?—No, I do not think he did. I think if anybody had done that it would probably have been Sir Redvers Buller. I do not recollect being refused anybody or having myself named anybody else, except those I have mentioned to you.

16 Feb. 1903.

14930. (Sir John Hopkins.) This is an extract from one of your despatches, which I think it interesting to have on record:—"The Naval Brigade of H.M.S. Powerful, under Captain the Hon. Hedworth Lambton, rivalled the best of our troops in gallantry and endurance; their long-range guns, although hampered by the most serious want of ammunition, have played a most important part in the defence, and have been most successful in keeping the enemy from bringing his guns to the ranges at which they would have been most efficient. . . . Captain the Hon. Hedworth Lambton, R.N., commanding the Naval Brigade, reached Ladysmith in the nick of time, when it became evident that I was not strong enough to meet the enemy in the open field. He brought with him his two 4.7 and four 12-pounder guns, which proved to be the only ordnance in my possession capable of equalling in range the enemy's heavy guns. Although the ammunition available was very limited, Captain Lambton so economised it that it lasted out to the end of the siege. and under his directions the naval guns succeeded in keeping at a distance the enemy's siege guns, a service which was of the utmost importance. Captain Lambton, personally, has been the life of the garrison throughout the siege." I think I may ask, on that, Sir George, and on the evidence you have personally given, whether your attention at any time was called to any inaccurate shooting on the part of the 4.7 guns?—No.

14931. Or the 12-pounders?—I have said, with regard to the 12-pounders, that they were guns of shorter range, and they were sometimes outranged. It is a shorter and a much less powerful gun, and I have seen the shot fall very much short.

14932. But you are speaking of the naval 12-pounders?—Yes.

14933. (Sir George Taubman-Goldie.) You sat on the Army Board, the Commander-in-Chief's Confidential Committee?—Yes.

14934. And that committee only used to begin sitting in a time of crisis or emergency. We have it in evidence that once before it sat, in 1898?—Yes; I think I mentioned something of that sort.

14935. In times of emergency, when war is in sight, or war is going on, the Army Board is found very useful as a committee?—I think most useful.

14936. Would it not be equally desirable that that Army Board should be used in times of peace also, to get together in one body the military opinion of the War Office, which could then be impressed upon the Secretary of State as the whole military opinion of the War Office?—I think you have struck absolutely at one of the greatest wants in our military administration. I think that under other conditions, when I have been in a responsible military position, political negotiations could scarcely have outrun military preparations to the extent that they did before the late war.

14937. And, just as the Army should be prepared in time of peace for war, so the Army Board might in time of peace carry on the functions that it is found necessary it should carry on in time of war?—I think so: and I would also advocate that when a crisis comes, as it did, the views of the soldier who is principally responsible should be heard by the members of the Cabinet themselves. I do not for one moment suppose that such a thing is practicable under our Constitution as having the Commander-in-Chief as a member of the Cabinet, nor do I much know what their procedure is, but it would appear to me to be of the greatest advantage for the Cabinet to be face to face with the most im-

portant witness they can call in the country. I borrow my ideas from the position which I had the honour to occupy as Commander-in-Chief in India under his Lordship, your Chairman. I sat in Council as a member of the Government of India and heard what was going on politically, and I have no hesitation in saying that if I had thought the political ultimatum would have come before military preparation, I should have received the greatest attention from His Excellency the Viceroy and other members of the Government of India with regard to some method of temporising for a bit, until I was more in a position to strike when they wanted me.

14938. There is one other question I wish to ask. Did you see the Director of Military Intelligence before you sailed?—I really forget. There was no interview of mine with the Director of Military Intelligence of sufficient importance to impress itself deeply on my memory.

14939. The Intelligence Department, as they were then—the Intelligence and Mobilisation, as they are now—have the preparation of schemes of defence, have they not, under the Order in Council?—Yes. Do you mean the late Order in Council?

14940. They had under the Order in Council of 1895. Does not that rather point to the fact that the Intelligence Department had not a sufficient standing in the War Office, that they had not sufficient weight, that the brain of the Army was put in a subordinate position, and never actually came into contact with the General who was being sent out to take command in the field?—I had a very intelligent representative of the Intelligence Department with me, who brought with him every reference that he thought would be useful to me.

14941. That might be; but at the same time, that might not always be the case. What I suggest is that, as the Intelligence Department of the Army is charged with the preparation of offensive and defensive schemes, it seems of the highest importance that the head of that Department should be an officer of such standing and weight in the counsels of the War Office, and more or less in an independent position there, that it would enable him to discuss with authority all such matters with the Generals going out to take charge of campaigns?—Well, I can see advantages and disadvantages in that. To begin with, I think it is a little bit too much to say that the Intelligence Department holds the brains of the Army, and I think the Commander-in-Chief and the Adjutant-General should be quite as capable men as the man at the head of the Intelligence.

14942. I mean the thinking part, the brain in the singular, which means something quite different?—I say I am perfectly certain it is a false move to have any co-ordinate authority with the Commander-in-Chief. I can quite imagine in a case of that sort the Intelligence officer at the head of the Intelligence being likely to have a scheme of his own that he would give more force to than the Commander-in-Chief.

14943. And in some cases, perhaps, with advantage?—Yes; but then there are other cases in which it would be a disadvantage.

14944. We may not always have a Commander-in-Chief of the ability of Lord Wolseley and Lord Roberts?—We have the British Army to choose from. You might make the man at the head of the Intelligence Department Commander-in-Chief.

14945. I put the question in this way: As one department of the Army is told off—whether it is called Intelligence, or Intelligence, and Mobilisation, or General Staff, or any other name, I care not—and is told off specially?—I quite see what you are tending towards, but I cannot give an altogether unqualified assent to what you wish to convey. I think that it would be a terrible millstone to tie round the neck of a General officer to go out loaded with advice from a department which was organised and recognised as his military advisers on certain points of strategy. Let me instance the case in point of Natal: There were certain schemes which I know now, at all events, were laid down, and I think that probably the Director-General of Intelligence would have laid undue stress upon them, which would have been very hard, and would have handicapped the General going out if he found conditions so far altered.

14946. You quite understand I am not suggesting that the hands of the General in the field should be fettered in any way whatever: it is simply schemes put

before him, that he may discuss them?—I think that might be done, but I think you would incline to put the head of the Intelligence Department too high.

14947. I put him in the position that Von Moltke was in?—Von Moltke was the Chief of the Staff of the Emperor.

14948. And the discipline of the Army was under a different department entirely; that is the Commander-in-Chief's Department?—But in the German Army the Emperor occupies a position as head of the Army which prevents anything like co-ordinate authority.

14949. I was proceeding rather on the lines of the Hartington Commission, and I asked you these questions because you have served in these departments in the War Office?—I was not long in the War Office.

14950. How long were you in the War Office?—About a year.

14951. (*Viscount Esher.*) Who was Adjutant-General when you left England?—Sir Evelyn Wood.

14952. I suppose you had interviews with him, had you not?—I had interviews with Sir Evelyn Wood; I do not think I had any official interview with Sir Evelyn Wood with a view to anything concerning Natal.

14953. I suppose you talked over things?—I remember talking over with him Sir Redvers Buller as our chief.

14954. You did not see Sir John Ardagh?—I do not remember ever seeing Sir John Ardagh.

14955. (*Lord Strathcona and Mount Royal.*) You point

out the great advantage the Boers as mounted infantry had over you with your infantry. Do you know, or have you any idea, how it was that in the early part of the war the Colonial Governments were discouraged from sending mounted men to South Africa?—I have no information on the point, my Lord.

14956. (*Sir Henry Norman.*) Your force was mainly composed of the troops from India and the troops that had been some time in the Cape on foreign service?—Yes.

14957. And therefore, I presume, you consider they were a particularly seasoned body of troops to have under your orders; they were not raw troops?—No; they were good troops.

14958. And there was not an undue proportion of recruits at all?—No, by no means.

14959. Something has been said about raw troops, and so on, at the Cape; that would not apply to them?—No.

14960. And we must suppose that no troops that you were ever likely to have under your orders would have been better able to sustain privation such as you sustained without breaking down?—I agree.

14961. Therefore we may assume that however seasoned the troops might be, under the circumstances your garrison underwent in Ladysmith, they would in the same way have broken down, and been unfit for active movement?—I think so.

14962. (*Chairman.*) Is there any other point you would like to mention, Sir George?—I do not think so.

General Sir George S. White, V.C., G.C.E., G.C.S.I., G.C.M.G., G.C.I.E., G.C.V.O., and Colonel E. A. Altham, C.M.G.

16 Feb. 1903.

THIRTY-SIXTH DAY.

Tuesday, 17th February, 1903.

PRESENT :

The Right Honourable The Earl of ELGIN and KINCARDINE, K.G., G.C.S.I., G.C.I.E. (*Chairman*).

The Right Honourable The Viscount ESHER, K.C.B., K.C.V.O.

The Right Honourable The Lord STRATHCONA and MOUNT-ROYAL, G.C.M.G.

The Right Honourable Sir GEORGE DASHWOOD TAUBMAN-GOLDIE, K.C.M.G.

Field-Marshal Sir HENRY WYLIE NORMAN, G.C.B., G.C.M.G., C.I.E.

The Honourable Sir FREDERICK MATTHEW DARLEY, G.C.M.G.

Admiral Sir JOHN OMMANNEY HOPKINS, G.C.B.

Sir JOHN EDGE.

Sir JOHN JACKSON.

BERNARD H. HOLLAND, Esq., *Secretary*.

General The Rt. Hon. Sir REDVERS BULLER, V.C., G.C.B., G.C.M.G., called and examined.

(Colonel the Hon. Sir F. W. STOFFORD, K.C.M.G., C.B., Military Secretary to the General Officer Commanding-in-Chief, South Africa, (Sir Redvers Buller) was also in attendance.)

(*General Reference may be made to the Selected Telegrams and Despatches and the Siege Correspondence in Appendices pages 617 and 631, post.*)

14963. (*Chairman.*) You have been good enough to prepare for us a summary of evidence as to your operations, and, if you have no objection, we will take that as the answer to the first question in your evidence, and then proceed to ask any questions which we may have, or to hear any comments you may desire to submit with regard to any part of it as we go through it; will that suit you?—Quite so.

PREPARATION FOR WAR—INTERVIEW WITH LORD LANSDOWNE, JUNE.

In June, 1899, I was summoned from Aldershot by Lord Lansdowne, who told me that, in the event of the war in South Africa, I had been selected to hold the command-in-chief. After submitting to him what seemed to me a preferable arrangement, I accepted the command, and we proceeded to discuss the question of the military policy to be pursued. I maintained that the only practicable route was that through the Orange Free State. He declined even to discuss

this. Ultimately, we agreed that one Army Corps, a Cavalry Division, and seven battalions for the lines of communication would be a sufficient force, if the object of the Government were merely to attack the Transvaal; but I added that to leave the Orange Free State out of account was, to my mind, impossible. After leaving Lord Lansdowne, I saw the Commander-in-Chief at the War Office, gave him a summary of my remarks, and received from him a promise of every assistance that he could afford. I begged both Lord Lansdowne and Lord Wolseley to recollect that I was not in the same position as Lord Wolseley when he organised the Egyptian Expedition of 1882, for he was then the Adjutant-General, and had the whole of the War Office at his back, whereas I was fully employed with my work at Aldershot.

INTERVIEW WITH LORD LANSDOWNE, JULY.—MINUTE 6TH JULY.

I heard no more of warlike preparations till the 3rd

General The Right Hon. Sir Redvers Buller, V.C., G.C.B., G.C.M.G.

of July, when I was summoned by telegram from Devonshire to London. There Lord Lansdowne informed me that he had under consideration a proposal to send out to South Africa one Division of infantry and one Brigade of cavalry. I asked whether these troops were to be sent, and with what object. I found there was no definite object, but that it was considered desirable to send some troops to some part of South Africa. After discussing the matter with him at some length, I went to the War Office to see Lord Wolseley; but, finding that he had left the office, I sent him a memorandum, now dated 6th July 1899, summarising the views which I had expressed to Lord Lansdowne. Herein I summed up my conclusions in the following words:

"My view is that any operations against Pretoria should be commenced in the following sequence:

1. "Strengthen the Cape Colony and Natal garrisons to the extent that local authority now think sufficient to protect these colonies."

2. "Make up your mind as to the route, and definitely as to the attitude to be adopted towards the Orange Free State."

3. "Commence the formation of magazines on the intended line of route, and the mobilization of the active force."

4. "Send out this fighting force."

The proposal to send out these 10,000 men came to nothing. I pressed hard at this time, and afterwards, that our Colonies might be garrisoned in accordance with a proper scheme of defence. I urged this again and again, but without success.

INTERVAL OF APPARENT INACTION.

From that date to the 15th August affairs went on but slowly at the War Office. No Council of War was held; no plan of campaign was adopted; no regular military preparations were undertaken. In the middle of August I heard that all preparations for war in South Africa, entailing expenditure had been stopped, and that the Secretary of State for War had gone to Ireland. Mr. Balfour, during his absence, came to the War Office and had an interview with Mr. Wyndham and Lord Wolseley. I also heard that it was believed that an Ultimatum was to be sent to the Transvaal on the 11th September.

MINUTES TO LORD SALISBURY, 5TH SEPTEMBER.

The condition of affairs seemed to me to be alarming, for the intelligence given in the newspapers made it impossible to believe that war could be avoided. Not knowing what else to do, I approached the private secretary to Lord Salisbury. He came down next day to Aldershot, when I presented my views to him in such a light that he thought it his duty to lay them before Lord Salisbury on the following morning. I drew up a short unofficial memorandum, dated the 3rd September, arguing to the conclusion that the time had come for the diplomatic authorities to consult the military authorities. On the 5th, I heard that Lord Salisbury desired my views on the military situation. These I set forth in a memorandum addressed to the Commander-in-Chief of 5th September, 1899.

As a result of this memorandum, the Cabinet decided to send to India for a force of 5,500 men, which was the only organised body of troops that we could put in the field at the moment, without dislocating the whole of our mobilization arrangements. On learning this, I at once wrote to the Secretary of State for War, pointing out that a Commander would be wanted in Natal when those reinforcements should arrive, and adding that, from the military point of view, it would be wise to make provision at once for a further force in Natal. He replied by return of post, saying that he did not see how, in the face of the decision of the Cabinet, the War Office could be expected to do more at that moment. Matters again drifted, and, apparently, the Government received news that the military situation was becoming less acute, for, on the 14th September, on learning that the Officer Commanding at Cape Town had made contracts for 1000 mules more than were immediately required, the War Office directed that the contract for the excess number should be cancelled, and compensation paid to the contractor.

MINUTE OF 24TH SEPTEMBER, REGARDING ROUTE TO BE ADOPTED.

From the first moment of my appointment in the

middle of June, I had on every possible occasion urged upon the Secretary of State for War that it was mere self-deception to imagine that we could undertake an expedition against the Transvaal alone, leaving the Orange Free State out of account. On the 23rd September, Lord Lansdowne asked me to place upon paper my reasons for attaching so much importance to the adoption of the route through the Orange Free State for invasion of the Transvaal. Accordingly I sent him a memorandum on the subject, dated 24th September. Herein I set forth, among other matters, that, owing to the configuration of the Natal frontier, an advance upon Pretoria by Natal would mean a flank march of 200 miles across the front of a doubtful friend, and, possibly, a concealed enemy. I added that the Orange Free State was open country, containing a good quantity of supplies, and that an advance through it would give us every chance of disposing of the Orange Free State first and settling with the Transvaal alone afterwards.

DETERMINATION TO START IN ADVANCE OF TROOPS.

The Cabinet met on the 29th September; and I was afterwards told by Lord Lansdowne that at this meeting the Government had decided to adopt the route by the Orange Free State, and to proceed with all military preparations excepting the mobilization of the men. On the 30th therefore I wrote to Lord Lansdowne that further delay in the provision of troops would be to incur a very dangerous risk, and pressed for the immediate despatch of the reinforcements by the best ships that could be obtained. "I think," I said, "that if they delay the despatch of troops the Government will be incurring a very grave responsibility." In reply Lord Lansdowne professed himself unable to call out the Reserves, or in other words to mobilise, before the 7th of October. I reckoned from this date that the earliest embarkation of troops would take place about the 22nd October, and that the Army Corps would be assembled at Cape Colony by 22nd December. I therefore urged that I should start for South Africa by the first steamer on the 7th October; but eventually the 14th was fixed as the date of my departure, and on the 9th I was gazetted Commander-in-Chief of the expedition. Before sailing I received two telegrams. One from Sir George White, of 3rd October, deprecated any weakening of the force in Natal and further hinted that a strong cavalry force sent through Van Reenan's Pass could threaten both the Orange Free State and the Transvaal. In reply the Commander-in-Chief informed him, at my request, that any advance of cavalry through Van Reenan's Pass until it should be strongly held by our infantry would be unwise, adding that any misfortune to our arms now would be peculiarly unfortunate, and that the Glencoe position was not a very safe one with the force of infantry at that time in Natal. I had from the very first protested as strongly as possible against the occupation of Glencoe. Another telegram of 4th October, from the General Officer Commanding at Cape Town, reported that he had stationed a half battalion at each of the following places: Kimberley, Orange River, De Aar, Naauwpoort, and Molteno. On the 9th October the two Republics presented an ultimatum, and on the 11th invaded British territory.

GENERAL CONSIDERATION AFFECTING PLAN OF CAMPAIGN.

On the 14th October I sailed with my staff from Southampton; and at this point I think I may most conveniently set forth the broad principles upon which I proposed to base my conduct of the war. In the first place, it was evident that the war would be of the kind which is described by General Jomini as a national war. In such wars it may be remarked, he predicts in a striking passage the failure of the invader as inevitable. Secondly it would be a war against a civilised enemy, in an uncivilised country—in a country, that is to say, where civilised man had so far done little to subdue Nature to himself, and could undo that little with small difficulty. Thirdly, we had to deal with young communities, planted in an enormous territory. The characteristics of such communities are always the same. The population is widely scattered. The man who makes his home in the wilderness claims to do that which is right in his own eyes; and though the law may be obeyed, it cannot be enforced. Redress of injury is sought, not in legal process, but in retaliation. There is no highly organised machinery of administration, and the influence and authority of the central Government are of narrow range and of trifling weight. Moreover, time

Note.—With regard to the minutes mentioned on this page, general reference may be made to Appendix D. Report Vol., and Lord Lansdowne's evidence, Question 21202, &c.

has not yet glorified the seat of Government with a halo of sentiment. To every man his own home is the capital. Hence there is no commanding centre by the occupation of which the whole country or even a whole district can be brought into subjection; no vital spot at which a single blow can be struck that will paralyse every member of the body. There are living organisms which can be divided into a multitude of fragments without destroying the individual life of each fragment. As a whole, the organism has ceased to be, but as a multitude of parts its vitality is unimpaired; and if its life is to be wholly extinguished, every fragment must be separately destroyed. With such organisms these communities have much in common. This lesson is written large in our past military history. The experience of the American War of Independence shows that the mere occupation of provincial capitals in such a country is of little furtherance to the work of conquest. General Howe's capture of New York and its outworks, after several successful actions and severe loss inflicted on the enemy, gained him no territory outside the line of his outposts; his capture of Philadelphia effected little more; General Clinton's capture of Charlestown, together with the whole of its garrison, little more. Experience of the same war goes also to show that the neutrality of the inhabitants in such circumstances can only be secured by protecting them against the intimidation of their countrymen. New Jersey abounded in oaths and professions of loyalty, when General Howe pursued Washington through the province, and while his line of posts stood safe on the Delaware; but the whole population turned against the British when that line was broken by a sudden attack of Washington. So, too, the very men who had been armed by Lord Cornwallis for the protection of South Carolina, turned against him directly that he moved his troops to meet the advance of an American army from North Carolina.

In the face of such lessons, it was plain to me that the war could only be carried to a successful conclusion by the actual conquest of every armed man in the field; and this task promised to be doubly difficult owing to the extreme mobility of the enemy. It seemed to me, therefore, that the best chance of success, until our troops should have been trained to a novel style of warfare, was to allow the Boers, if possible, to take up some tactical position, and strive to crush them by sheer weight of numbers. But in any case, I was convinced that my true objective was the enemy's force in the field, wherever it might be, and that any purely strategical movement undertaken, except in obedience to this guiding principle, would be a mere flourish in the air.

One advantage we did indeed possess, namely, that the Boers were divided into two distinct and independent States, which in the past had not lived together on the most friendly terms. This division it seemed to me politic to widen to the utmost; and to this end I designed (see Memorandum of 24th September) to crush the Orange Free State completely before dealing with the Transvaal. I was the more powerfully impelled towards this course by the example of Lord Cornwallis's campaign in the Carolinas; when, though he did indeed fight his way successfully from Charlestown into Virginia, he merely squandered his troops in unprofitable victories, and accomplished less than nothing. In fact, he was like a man who tries to arrest the flow of a river by walking through it. Such a man may, indeed, stem its force where he stands, but let him move where he will, the waters always close before and behind and around him.

There existed another internal division within the Transvaal itself. A line drawn (roughly speaking) north and south through Pretoria marks a line of cleavage between the inhabitants. To the east of that line the people were pastoralists by occupation and followers of Joubert in politics. To the west of that line they were agriculturists by occupation and followers of Kruger in politics. Thus there was between the two a conflict of interests and a conflict of political opinion; and the gulf between them was widened by the fact that the eastern inhabitants, being far superior in wealth, enlightenment, and education, regarded those of the west with no little contempt. Of this division also I hoped to take advantage.

On the 17th October I arrived at Madeira, where I received telegrams from Sir George White and General Walker to the effect that the forces of the two Republics were converging towards Dundee and Ladysmith. General Forestier-Walker also reported from Cape Town that Mafeking and Kimberley were isolated, and that he was taking steps to strengthen the garrison at Orange

River Bridge. While approving General Walker's dispositions, I urged him not to risk much at Naauwpoort or Molteno until he felt himself to be in sufficient strength.

ARRIVAL AT CAPE TOWN.—THE SITUATION.

At 9.15 on the evening of the 30th October, I arrived at Cape Town. I then learned that the Boers had utilised to the utmost the advantages given to them by their greater readiness for war. The small garrisons of Mafeking and Kimberley were beleaguered, though not apparently surrounded. All the bridges over the Orange River, except that known as Orange River Bridge on the Western Railway, were in the hands of the enemy. Further, the Boers had already occupied the northern border of Cape Colony with some 3,000 men, while reports from the Dutch districts in Cape Colony pointed to considerable disaffection to British rule. In Natal Sir George White had had several encounters with the enemy, but, though he had on one or two occasions obtained a small advantage, it was evident that he had failed to check their advance. He reported that General Hunter, my Chief of the Staff, whom I had told to join me, was indispensable to him. I was fain to consent, though the loss of his services to me at the moment was very serious.

On the morning of the 31st October, I received three telegrams from Sir George White. The first, dated the 28th October, told me that Natal required the earliest reinforcements possible. The second and third, dated the 30th, reported to me the action fought upon that day, and its unsatisfactory issue. I landed, and met the Governor and the Admiral. The Governor pressed me to make the defence of the Cape Peninsula my first care. I lost no time, however, in ordering a brigade-division of artillery, which had just arrived, to strengthen the defences of Orange River Bridge and De Aar. I begged the Admiral to take immediate steps for the protection of Durban, and to prepare it for defence by landing guns and men from the fleet, as I had not at the moment a single soldier that I could send there.

In the afternoon I saw Mr. Schreiner, the Prime Minister, who undertook to use his influence with President Steyn, to prevent an invasion of the Colony by a force of the Orange Free State. I need hardly say that his efforts were fruitless. In the course of the next few days Mr. Schreiner, at my request, sounded the magistrates of the Dutch districts as to the effect of calling out the local Volunteers. The answer in every case was to the purport that this step would only enlist recruits for the ranks of the enemy. I also pressed Sir Alfred Milner to proclaim martial law; and, since he felt unable to do so, I arranged with the police that the principal Boer agents and spies should be "shadowed." I made every arrangement to arrest them simultaneously, place them on board a transport in the harbour, and send them to Lourenço Marques the captain of the ship being ordered to make the voyage last at least a month. The time for the arrests was fixed, and the transport was lying at anchor with steam up, when at the last moment Sir Alfred Milner decided that the project had better be abandoned.

Meanwhile the only military operations possible with the force at my disposal were to secure Orange River Bridge, and to cover the English-speaking districts south and east of Queenstown during the distribution of arms to every loyal subject in them. I withdrew the two small posts at Naauwpoort and Stormberg as being dangerously exposed and too far advanced to be of value for defence.

On the 1st November, while still imperfectly informed as to Sir George White's situation, I telegraphed to the Commander-in-Chief that in the circumstances I thought I ought to strike straight at Bloemfontein, as the best chance of relieving the pressure on Kimberley and Ladysmith. A few hours later I received a further telegram from Sir George White, saying that he could not withdraw from Ladysmith, and that he had sent a single battalion to guard the bridge at Colenso, as the best step that he could take for the protection of Natal. This was followed by a series of telegrams from Mr. Rhodes and others at Kimberley, all crying out loudly for relief, and one of them hinting at surrender if relief were withheld.

The military situation on the 1st November was as follows:—On the side of Cape Colony the enemy had invested Mafeking and Kimberley. They had occupied Colesberg and Norvals Pont bridges. They were in force at Bethulie, had crossed the bridge with about 3,000 men, had destroyed the line, and were marching

17 Feb. 1903.

on Colesberg; 3,000 Orange Free State Boers were reported to be on the Basuto border. To meet the invasion I had $3\frac{1}{2}$ battalions of infantry, one regiment of cavalry, and three batteries of artillery, which were distributed as follows:—

Kimberley:—Four companies Loyal North Lancashire.

Orange River Bridge:—9th Lancers, 62nd and half 75th Batteries Royal Field Artillery, four companies Loyal North Lancashire, four companies Royal Munster Fusiliers.

De Aar:—18th and half 75th Batteries Royal Field Artillery, 2nd King's Own Yorkshire Light Infantry, four companies 2nd Royal Berkshire.

Queenstown:—Four companies 2nd Royal Berkshire.

Stellenbosch:—Two companies Royal Munster.

Excluding Army Service Corps and Departmental Corps, there were, therefore, in Cape Colony, of Regulars:—

One regiment cavalry, three batteries Royal Field Artillery, and three battalions and six companies infantry, extended along 340 miles of frontier.

On the side of Natal 12,000 men, with two months supplies, were concentrated at Ladysmith, but unable to withdraw from it. For the protection of Natal I had one mounted battery, one battalion at Colenso, and one at Durban. No reinforcements could arrive from England for a fortnight.

By the 4th November I had formed a sufficiently clear idea of the situation to make my plans and report to the War Office.

On the 8th November, General French arrived from Natal, bearing a letter to me from Sir George White. I had hoped that General White would have been able to send all the cavalry out of Ladysmith, but, though I gave way on this point to his representations, I insisted that General French should be sent out even though the cavalry remained. After perusal of this letter, and several conversations with General French, I was more than ever satisfied that Sir George White's force was powerless to protect Natal, and I began to think that it would be essential for me to go there myself. As I had foreseen (*see my memorandum 24th September*), the Boers had advanced upon Natal in force—had, in fact, made it the principal objective of their operations. The whole of the Transvaal army that could be collected at the time, together with the best of the forces of the Orange Free State, had been directed upon it. Already the entire area of the Colony north of the Tugela (excepting the few square miles held by the Ladysmith garrison), had passed into their hands, and had been practically annexed to their dominion. Computing their forces at lowest at 20,000 men, I calculated that not less than one half, 10,000 men, could be spared for the conquest of Natal south of the Tugela. To meet these I had, including local levies, but 2,200 men, and these sadly deficient in mounted men and artillery. Nothing more could be done than to concentrate them at Estcourt, for the position at Colenso would never have been tenable; and I instructed the Commander not to risk prolonged defence either of the place or of Pietermaritzburg, but to make sure, at all sacrifice, of Durban, and to destroy the railway as he retired.

The Government of Natal now of their own motion prepared to evacuate Maritzburg by removing the records, and so forth; and it seemed most probable that the enemy's advance would only be checked by the sea. My private information led me to believe that if they did reach the sea they would receive aid from some European Power, and that they counted upon such aid. In any case, unless they were met and repelled by our forces, they would enjoy undisputed possession of the Garden Colony, the most English province of South Africa, for at least two months; for, even supposing that an advance upon Bloemfontein would cause them to withdraw, I could not hope to move in force from the frontier of Cape Colony before 22nd December, and while I was certain of the gravest political disadvantage from allowing Natal to pass into the hands of the Boers, I was extremely sceptical as to any strategical profit that might be gained from it. In fact, from the moment when I knew that the main army of the Transvaal had moved into Natal I felt convinced that something more than an advance on Bloemfontein would be needed to compel it to retire. A new theatre of operations, 1,000 miles distant from that contemplated by the autho-

rities at home, had been opened by the Boer invasion of South Natal, and there was no escaping from the fact. I therefore decided upon every ground that the deliverance of South Natal must be my first object, combined if possible with the rescue of Sir George White's force for active operations. I should have preferred to have devoted every possible man of my forces to Natal, for in Natal lay my true objective—the principal force of the enemy. Further, since the bulk of the Transvaal Army in that quarter consisted of Easterners of Joubert's party, and under his command, it was possible that a severe blow struck at them might dishearten them and set them at variance with Kruger's party.

But at the same time I felt it impossible to ignore Kimberley. That town represented to the native the symbol of British power and property in South Africa, and I feared the effect of its fall upon the native mind in general and upon the Basutos in particular. Moreover, though I felt the fullest confidence in the military commandant, Colonel Kekewich, I did not trust the other powers within the city.

PLAN OF OPERATIONS.

Very reluctantly, therefore, I decided to divide my forces. By the 10th November I had definitely determined upon my plans. These were to send Lord Methuen with one full division to advance along the western railway to Kimberley, throw into it a few naval guns of long range, which the Admiral had kindly placed at my disposal, together with their crews and a reinforcement of a battalion and a half. This done, he was to return immediately to the Orange River, bringing with him such of the natives and non-combatants as Colonel Kekewich might wish to send out of the town. I considered that Kimberley, thus strengthened, would be perfectly safe against any attack, and would be, so to speak, off my hands until the time should come for the general advance. My information was that Cronje was in the neighbourhood of Mafeking, and that the largest force by which Lord Methuen was likely to be opposed did not exceed 4,000 men. I gave him a supply-column sufficient to carry five days' supplies. Five days' supplies can always be made to last for seven, and men can always carry one extra day's rations. Hence I hoped that on arrival at the Modder Lord Methuen would be able to leave the railway and approach Kimberley by whatever route might seem to him most advantageous. A sufficient force of mounted men I could not give him, for I had none to give.

So much for the Western Railway and for Kimberley. As to the Midland Railway, the hostility of the Dutch districts of Graaf Reinet and Cradock was such that I abandoned the idea of using it for the time, and withdrew from it most of the rolling stock. But to hinder the advance of the Boers then at Colesberg upon these districts I placed General French in command at Naauwpoort, with orders further to train the Cavalry Division, as it should arrive, in the work required of it. He was not to attempt an engagement, but to teach his men to manoeuvre, and by harassing tactics to worry the Boers, if possible, out of Colesberg. The Eastern Railway I held as far north as Queenstown, where I placed General Gatacre in command to cover East London and the English settlers in King Williamstown and the adjacent districts. His instructions were to run no risks, to raise as many Volunteers as he could, and to worry and obstruct the enemy as much as possible. On Lord Methuen's return from Kimberley it was my design that he should clear the northern districts of Cape Colony by working from Orange River eastward, and seize the bridges for the ultimate advance. I arranged accordingly for the accumulation of supplies for him at Orange River, De Aar, Port Elizabeth, and East London, so that he should open new lines of supply as he moved eastward. The work of clearing accomplished, he was to concentrate at Bethulie for an advance on Bloemfontein.

For the work in Natal I appointed General Clery with three brigades.

It will be observed that these operations, if successful, would have restored the situation to that which existed before the opening of the war, and upon which the whole plan of the campaign, as formulated in England, had been based. Had the two colonies been garrisoned according to a systematic scheme of defence, as I recommended in July, 1899, no such operations would have been necessary. I need hardly add that if the enemy had chosen to press their advantages, and to advance boldly both in Natal and Cape Colony during the fortnight that followed the 30th October, it would have been extremely difficult for me to have prevented them, from

sheer lack of troops. As it was, I could only hold the all-important crossing at Orange River Bridge, and make a show of protection on the Eastern Railway by leaving my bases in Cape Colony unguarded.

GENERAL SITUATION 22ND. NOVEMBER—DEPARTURE FOR DURBAN.

On the 9th November the first troops arrived from England, and by the 20th a sufficient number had disembarked to ward off the peril that had hitherto hung over us. On that day Lord Methuen was almost ready to proceed on his march upon Kimberley; Naauwpoort had been occupied just in time on the 18th; and General French was at De Aar organising a flying column to operate against the Boer commando at Colesburg. Queenstown was held by General Gatacre with a battalion and a half, besides Volunteers. In Natal, where General Clery had assumed command, General Hildyard with his whole brigade had reached Estcourt, and Lyttelton's and Barton's brigades had either arrived at Durban or were on their way thither from Cape Town. One and all of these forces were sadly deficient in mounted men, but that I could not help. On the 22nd, after leaving an appreciation of the situation with General Forestier-Walker for his guidance, I embarked for Natal, where the Generals had from the first urgently requested my presence.

The situation in Natal was, indeed, far from comfortable. The Boers had passed south of the Tugela as early as the 1st November, and had now about 3,000 men in a strong position about 15 miles west of Estcourt, some 800 at Weenen, who were threatening the railway between Weston and Estcourt, and about 1,000 on the Blaaukrantz River north of Frere. On the 21st General Clery had reported that Estcourt was seriously threatened, and that he was apprehensive that the railway might be cut behind him. Our want of mounted men made it impossible to deal with so mobile an enemy as the Boers, and it was not until one party encamped on General Hildyard's communications at Highlands that it was possible to strike at them. He seized his opportunity with great promptitude, and attacked them on the night of the 22nd-23rd. Tactically the attack was not wholly successful, but General Hildyard gained his object, for the enemy at once evacuated the position and retreated in two bodies through Weenen and Ulundi to the North of the Tugela.

ARRIVAL AT DURBAN, 25TH NOVEMBER—PREPARATIONS AND PLANS.

I was met by this welcome news when I landed at Durban at 7 p.m. November 25th, and on the 26th I reported it in a letter of that date. My original intention had been to send the Colonial troops (which from the moment of my arrival in South Africa I had been raising in Natal and Cape Colony) through Zululand to occupy a position near Helpmakaar, while I attacked on the line of the Tugela, and I had hoped by this operation to relieve Ladysmith without difficulty. I was encouraged in this design by the result of General Hildyard's action, which showed that a force of Boers, even though commanded by their Commandant-General in person, would not, even after a tactical success, hold their positions with our troops on both sides of them.

On arriving at Maritzburg I found this plan would be impossible. First, the number of Colonials raised was less than I expected. Next, owing to the effects of the rinderpest, it was practically impossible to obtain sufficient ox-wagons for such a supply column as the advance through Zululand would have required. As it was, I was obliged in the Dutch districts to use my powers of impressment under martial law to obtain the wagons absolutely necessary even for a direct advance along the railway. In Natal the entire staff equipment of an army had to be created. The whole of the local staff, except the Ordnance officer, was with Sir George White in Ladysmith. My own staff had been dispersed for urgent duties in Cape Colony. It seemed, from such scanty information as I could get, that the garrison of Ladysmith could be maintained on full rations till the end of the year, and for an uncertain time longer in a state of increasing starvation.

On the 30th November Sir George White caught my flashing signals, and, having deciphered a fragment of a message from me sent me his message numbered P 20. This I received on the 4th December. I interpreted it to signify that he was unable to take the field, and could make no plans. I therefore inferred that it was inadvisable for me to communicate my plans to him, but noted that he specially recommended me to advance either

through Colenso or through Springfield. On the 7th December I succeeded in opening heliographic communication with Ladysmith, and I repeated my former telegram announcing the formation of the relieving force, but elicited no satisfactory answer.

On the 1st December I had written to General Clery that I inclined more and more to the project of crossing the Tugela at Potgieter's Drift, but that we must first worry the Boers by bombardment and by (very possible form of) annoyance. But already a new element of danger had shown itself in the organisation of a Boer force, of uncertain strength, to attack Tugela Ferry from Helpmakaar. By the 4th December we had arranged for base hospitals, collected sufficient transport, established an intelligence department, formed a corps of guides, and compiled and printed a map. On that day I left Maritzburg for Frere (letter of December 2nd to War Office).

SITUATION IN CAPE COLONY.

I now revert to Cape Colony, where during my stay at Maritzburg the situation had defined itself more clearly, and revealed increasing complications.

The western districts were passing under Boer control.

Barkly East was reported to be in open rebellion. Methuen, after two successes at Belmont and Enslin, had fought at Modder River an action by which he seemed to have been staggered. He had been wounded, but not severely. Reinforcements were reaching him, but he was not pushing on. Cronje appeared to have got to the south of Kimberley from Mafeking, but I thought that Methuen exaggerated the numbers opposed to him. He asked for howitzers, but none had arrived.

On the 1st December General Forestier-Walker reported that the Burghersdorp commando had occupied Steynsburg, and were creeping south, and that Sir Alfred Milner was apprehensive of their occupying the Dutch districts. I replied by ordering French on the west and Gatacre on the east, each of them to close inward upon Middleburg and Henning Station respectively, so as to threaten the enemy upon both flanks.

On the 2nd December the enemy occupied Dordrecht, which naturally made Gatacre, who was then at Putter's Kraal, apprehensive for his right flank.

On the 5th Methuen reported 8,000 to 10,000 men in front of him.

On the 7th General Forestier-Walker reported that Methuen's communications had been interfered with, and that the security of Gatacre's right was more closely threatened.

On the 8th he reported that the enemy on Gatacre's front and flank was increasing, but that French was holding his own and something more, and that Methuen had been reinforced and his communications restored.

On the 9th I telegraphed to General Forestier-Walker that I wished the bulk of the 5th Division, when it arrived, to land at Port Elizabeth, and proceed thence to Rosmead; but that one brigade and one battery should land at East London and proceed thence to such point as General Gatacre should direct.

On the 10th General Gatacre failed in an attempt to surprise Stormberg, and fell back, with some loss, to Bushman's Hoek. I therefore changed my orders with regard to the 5th Division. On the same day I reported to the Secretary of State my views as to the arrival of a 6th Division. I also received from General Forestier-Walker a message to the effect that Mr. Rhodes had signified, through the High Commissioner, his objections to my design for clearing non-combatants out of Kimberley. I replied that it was a question of keeping the flag flying in South Africa, and not of showing favour to any set of capitalists.

On the 12th Lord Methuen fought his unsuccessful action at Magersfontein.

On the 13th there came disquieting news that the disaffection in the eastern border of Cape Colony was spreading to the native territories. If the natives became seriously restless, it was certain that the overland line of telegraph between Cape Colony and Natal would be intercepted.

DELAGOA BAY.

Such, briefly, was the course of events in Cape Colony while I was preparing for my advance in Natal. I must premise, before entering upon the narrative of my operations, that I had, on the 3rd of November, urged upon the Secretary of State that the blockade of Delagoa Bay would be of essential service to me. I now pressed this suggestion again upon him on the

General The Right Hon. Sir Redvers Buller.

1st, and yet again on the 8th December, adding that the advantage would be cheaply bought, whatever the cost of pecuniary compensation to Portugal. The ends which I reckoned to attain by the blockade were these. The isolation of the Transvaal and the hopelessness of foreign intervention would be brought home to that State; its supplies of war material and of foodstuffs would be cut off; uneasiness and distrust would certainly ensue, and all the more, if I should succeed in inflicting a sharp blow on the fighting men of the Eastern Transvaal who lay before me; and thus, by the time that I had disposed of the Orange Free State, the Transvaal's powers of resistance, both moral and physical, would have been so much impaired as to promise some hope of ending the war without a fight to extermination. Reverting now to Natal, I had definitely decided to move to the relief of Sir George White by way of Potgieter's Drift. On the 7th I established proper heliographic communication with him, and told him that I expected to start with that object on the 12th, and that I should take five days. I repeated this message on the 9th, and, in reply to an inquiry from him on the 10th, I gave him, on the 11th, a forecast of my movements in detail, but warned him that I might meet with unexpected delay. On the 10th, Waschbank bridge, on the line of the Boers' railway communications, was successfully blown up by my directions. On the 12th, I moved General Barton's Brigade two miles beyond Chieveley, together with some Naval guns, in the hope that the latter might be able to shell the Colenso position. On the same day, I wrote to the Secretary of State that I had determined to leave this brigade in position before Colenso, and march, on the night of the 13th, with the remainder of my force, upon Potgieter's Drift, some twenty-five miles distant.

ACTION OF MAGERSFONTEIN—CHANGE OF PLANS.

Later on the same day, I received the intelligence of Lord Methuen's failure at Magersfontein. I at once telegraphed that he must either attack Cronje or fall back to Orange River, since it would be better to lose Kimberley than to hazard the isolation of his force. I also telegraphed to General Forestier-Walker that, if Lord Methuen did retire, I regarded the first phase of the campaign as closed, and that both Methuen and Gatacre must take up tactical posts and prepare movable columns to operate around them. "Through no fault of ours," I said, "the enemy had the initiative, and has used it well. We have staying power, and must now use that." The fact was that on landing I found a desperate situation. I endeavoured to retrieve it by desperate measures. If these measures failed, we must fall back upon our staying power.

Lord Methuen's misfortune, however, following, as it did, upon that of General Gatacre, sensibly affected my position. With an enemy disheartened by failure, I thought myself warranted, in the peculiar circumstances, in risking a flank march of fifty miles with an enormous wagon train, even though it might involve the uncovering of my communications. With an enemy elated by success, this was no longer justifiable. I, therefore, determined to try to force the direct road to Ladysmith, and reported as much by telegram to the Secretary of State on the 13th. In a letter to the Secretary of State of the same day, I added that, whether I succeeded or failed, the time had come, both in Natal and Cape Colony, to stand on the defensive until the winter, and to organise and train mobile troops. "From my point of view," I wrote—and I would respectfully call the attention of the Commission to the date on which these words were written—"it will be better to lose Ladysmith altogether than to throw open Natal to the enemy."

Holding such views, whether rightly or wrongly, I felt that my first duty was to keep Southern Natal clear of the enemy, and that, consequently, I must keep at least 10,000 men, or one-half of the force at my disposal, in Natal, in a fit state to defend the Colony. Necessarily, my powers were circumscribed by this condition; but I conceived that, with the active co-operation of Sir George White, I was still strong enough to extricate his force from its position at Ladysmith. His sick and wounded were safe, his men were inured to war, and, when once he started, his only care would be to force his way to the river, 16 miles down hill. My troops, on the other hand, were without experience of war; I had the whole care of protecting Natal upon my shoulders, and I should have to fight the whole way from the Tugela to Ladysmith uphill, and that a hill which offered

extraordinary natural advantages to the defence. I decided, therefore, to effect a lodgment, if possible, on the other side of the Tugela, and, if I succeeded in doing this, to direct Hunter to take command of the Ladysmith garrison, and march along the watershed to Onderbroek, while I myself marched simultaneously upon the same point. From my knowledge of the Boers, I felt assured that, if attacked at one and the same time by Hunter from the north and by myself from the south, they would never maintain their position. But until I had secured my lodgment on the other side of the river, I did not feel justified in calling upon the Ladysmith garrison to move. The risk to them would, I felt, be too great.

Careful reconnaissance had convinced me (and my judgment was borne out in my final advance) that a little to the west of the Colenso position, and on the north bank of the Tugela, there was a space large enough for me to bivouac my force in shelter from any fire from the north and west. This space I resolved to seize for my lodgment. For actual attack on the Colenso position Hlangwane Hill offered the best advantage, but the utilisation of Hlangwane involved bush-fighting and a previous occupation of Monte Christo, or, in other words, an extension of my front along a line of five miles, and also involved a departure from the only roads along which Sir George White expected to be able to render me any assistance. I did not think that my men, raw as they were, were ready for bush-fighting, nor that I had troops sufficient for so extended and so isolated a movement. But the moment that I had effected my lodgment, my design was to attack and occupy the west side of the Hlangwane, so as to shelter my chosen position from fire from that side. This done, I should have summoned Hunter to me, and we should have attacked the Boers simultaneously, as I have already explained.

On the 14th I received a telegram from the Secretary of State that General Warren had been directed, upon landing, to take command of Lord Methuen's force, and that it was considered advisable for both Lord Methuen and General Gatacre to be employed on the lines of communication in future. I was not consulted as to this order, and it was directly at variance with an opinion I had given on the 6th. I could only construe it as an order for General Warren's division, as well as its commander, to join Lord Methuen's force, and I altered my instructions to that division accordingly, though I demurred to the supersession of Lord Methuen. On the same day I received a telegram from Lord Methuen to the effect that he would require more than a complete division to make a successful attack, and that he therefore elected to retire. But he evidently was confident of his ability to hold his own and maintain his communications; and I readily consented to General Forestier-Walker's suggestion, received on the same day, that he should stand his ground and be reinforced by the 10th Brigade as soon as it arrived. On this same day I received welcome news of a successful little action fought by French's force, and in congratulating him and his officers, I urged him above all to worry the Boers.

On that evening I assembled my commanders, and in the presence of them all explained to each his part in the dispositions for the morrow. Each commander with his troops was to occupy a specified place, and to await the result of a general bombardment before leaving it.

EVENTS OF 15TH DECEMBER.

On the morning of the 15th December the troops moved into their appointed positions. My intention was that they should remain there, out of fire and at ease, while from Gun Hill I ascertained by practice the accurate range of all the points from which opposition could be offered to our advance. As the guns were getting into position I noticed that the 5th Brigade were advancing beyond the position that I had allotted to them, and sent at once to stop them. My messenger was delayed by bad ground, and the brigade, continuing to advance, came under fire. Very shortly afterwards they received from me an order by a second messenger to withdraw at once out of range. This they complied with; but as they were doing so I saw a very considerable body of Boers moving to a position from whence I thought they intended to make a flank attack upon the now retreating 5th Brigade. I therefore directed General Lyttelton, who was in reserve, to move to his left, and cover the withdrawal of the 5th Brigade, supporting him by Colonel Parsons's brigade division.

While this was passing I had observed that Colonel

Long, with Hunt's brigade division and the Naval 12-pounder guns, had also advanced beyond their allotted position. He had come into action, and was firing so rapidly as to satisfy me at once that he was too close to the enemy. I immediately dispatched an officer, whom I directed to ascertain if the batteries were suffering from the enemy's fire, and if so, to order them to withdraw immediately. He went, returned, and told me that the batteries were all right. Very shortly afterwards they ceased firing. Surmising that something must be wrong, I at once galloped off to my right, meeting as I went two officers who had been with Colonel Long. Each of them informed me that the guns had been abandoned, having fired away all their ammunition—one of them said, "Very nearly all"—and lost every officer and man of the detachments killed or wounded. Colonel Long himself was described as dangerously wounded.

I at once went to General Hildyard, and told him that the guns had got into trouble, and that I was going to try and extricate them, that I thought it would be impossible for me to attack at all that day, and that for the present I certainly could not. I directed him to advance two of his battalions, and open as much fire as he could from a position which I pointed out on the left of the guns, but charged him on no account to commit his men to an engagement. Proceeding to a point behind the guns, I made an endeavour to withdraw them, sending out four limbers for that purpose. Of these two were successful, and withdrew two guns; the horses and men of the other two limbers were shot down. I then moved to my right, and saw Colonel Lord Dundonald and General Barton. Dundonald's men were engaged with the Boers, who were attacking from Hlangwane. General Barton had only two battalions left in hand, having at Colonel Long's request supported him with one battalion and a half, while the remaining half battalion was in charge of the parked transport and baggage. Returning to my former place behind the guns, I withdrew all the wagons, and made another but unsuccessful attempt to withdraw some guns. I consulted on the spot with General Clerly as to the possibility of devising some means to save the guns without a sacrifice of lives absolutely disproportionate to their value. As we neither of us could conceive of any means by which they could be extricated, I, with his concurrence, decided that they must be abandoned. I have only to add that, in my own belief, their withdrawal on that day or night was a physical impossibility, and that it was equally impossible to prevent their withdrawal by the enemy; and if required, I shall be glad to give my reasons in full detail. I then ordered the retirement of the whole force to their bivouac, which was effected without the least trouble.

CONSIDERATIONS AS TO FUTURE POLICY.

On retiring to camp the following situation presented itself to me:—The Boers had displayed considerable strength on all the surrounding hills. I was evidently not strong enough to get into Ladysmith by the Colenso route unless I received help from General White. I was satisfied that another division added to Methuen's force would accomplish the relief of Kimberley, and the same addition to my own force the relief of Ladysmith. But this meant a reinforcement in all of two divisions, and I had but one to hand. The question was whether I could make one division do the work of two, and in that case in which of the two services it should be first employed. I should have preferred to have relieved Kimberley first, assuming that Ladysmith could have held out until my return, had I not feared that my departure from Natal might encourage the Boers to make a more resolute attack upon Ladysmith than the garrison could resist. I knew that the Boers were afraid of me—I will not pause to discuss whether I deserved the compliment, but I knew it—and I should have failed in my duty if I had neglected to take the fact into account. This consideration determined me to give priority to Ladysmith. But, on the other hand, the Government had already ordered the 5th Division to Modder River. I could only assume that this order had been given in deference to the representations of the High Commissioner. He, not I, had been the adviser of the Government. I therefore embodied in the following telegram to the Secretary of State the opinions which I had already expressed on the 13th in my letter to him and in my telegram to General Forestier-Walker:—"No. 87, cipher, 15th December. My failure to-day raises a serious question. I do not think I am now strong enough to relieve White. Colenso is a fortress which I think if not taken on a rush could only be taken by

a siege. There is no water within eight miles of the point of attack, and in this weather that exhausts infantry. The place is fully entrenched. I do not think either a Boer or a gun was seen by us all day, yet the fire brought to bear was very heavy. Our infantry was quite ready to fight, but were absolutely exhausted by the intense heat. My view is that I ought to let Ladysmith go, and occupy good positions for the defence of South Natal, and let time help us. But that is a step on which I ought to consult you. I consider that we were in face of 20,000 men to-day. They had the advantage, both in arms and in position. They admit they suffered severely, but my men have not seen a dead Boer, and that dispirits them. My losses have not been very heavy. I could have made them much heavier, but the result would have been the same. The moment I failed to get in on the run I was beat. I now feel that I cannot say I can't relieve Ladysmith with my available force, and the best thing I can suggest is that I should occupy defensive positions and fight it out in a country better suited to our tactics.—BULLER."

I hoped hereby to elicit from the Government a definite opinion as to the course which they judged it expedient for me to pursue. They had committed themselves to a preference for the relief of Kimberley; on what ground I could only conjecture. I therefore laid before them my opinion, from a military standpoint, as to the measures best fitted to meet the situation as it stood in consequence of their interposition. It was for them to decide how far military should be modified by political considerations, or the reverse.

On this same day (16th), I received information from Cape Colony, which pointed to the fact that the enemy were pressing their attack upon Gatacre.

EVENTS OF THE 16th to 18th DECEMBER.

My proceedings of the three following days, 16th to 18th December, I shall ask permission to enumerate in order as they occurred.

16th December.—First, I sent the following heliogram, No. 88, to Sir George White, informing him of my failure on the previous day, and that it would be impossible for me to undertake further operations for his relief for a month. I further suggested that if he could not hold out for so long, he might fire away his ammunition and make the best terms he could.

To Sir George White. No. 88 Cipher, 16th December. "I tried Colenso yesterday, but failed; the enemy is too strong for my force, except with siege operations, and those will take one full month to prepare. Can you last so long? If not, how many days can you give me in which to take up defensive positions? After which I suggest your firing away as much ammunition as you can, and making best terms you can. I can remain here if you have alternative suggestion, but, unaided, I cannot break in. I find my infantry cannot fight more than ten miles from camp, and then only if water can be got, and it is scarce here—BULLER."

I was not wholly without hope that, with the situation thus crudely laid before him, Sir George White would contrive to form plans for assisting in his own relief, which, heretofore, he had declared to be impossible. It will presently be seen that one month exceeded the period for which he could keep his men on full rations or his horses in even moderate condition. It will presently be seen also that I lost no time in informing him, as soon as I ascertained it, that I could reduce the one month mentioned in the telegram to three weeks.

Next, I sent a telegram, protesting against the super-session of Methuen and Gatacre.

Next I received a telegram from the Secretary of State, informing me that the embarkation of the 6th Division and the mobilisation of a 7th had begun.

This I answered at once by asking for both Divisions, also for 8,000 irregulars, equipped as mounted infantry; also for Maxim-Nordenfolt guns, and for mobile guns with a range of 8,000 yards.

Next I telegraphed to Methuen, suggesting that he should lay a few miles of railway to his right flank, so as to make good his lack of mobility by an extension of his front.

Next I received from General Forestier-Walker the report of the arrival of the first ships of the Fifth Division, and an account of the positions of Generals French and Gatacre.

*General The
Right Hon.
Sir Redvers
Buller,
V.C., G.C.B.,
G.C.M.G.*

17 Feb. 1903.

Next, I ordered the following message to be sent to Sir George White, amending my former heliogram by the question, "How many days can you hold out?" and adding instructions for the destruction of his cipher in any event. No. 92 Cipher, 16th December: "My message, No. 88 Cipher. Groups 31 to 43 were correctly sent, but in place of them, and first number of 44 group, read as follows:—'How many days can you hold out?' Also add to the end of message: 'Whatever happens, recollect to burn your cipher and decipher and code books, and any deciphered messages'—BULLER." I should explain that I had information that the Boers had got hold of certain code or cipher telegrams of ours, in which the decoding or deciphering words had been interlineated. This message was sent down at night for transmission on the following morning.

I may add that I spent every leisure moment of this day in the saddle, searching in vain for a site for a healthy camp with a sufficient supply of water. During the night I superintended the movement of the force into new positions.

17 December.—I sent a heliogram to Sir George White the first thing in the morning, saying that want of water prevented me from remaining in force near Colenso, but that I thought I could attack it again in three weeks instead of in a month, the time fixed in my message of the previous day. The reason for this alteration was that I now reckoned that I ought to obtain the guns necessary for a second attack within three weeks.

It is well-known that, by an error in ciphering, the sense of my last telegram of the 16th to Sir George White was slightly altered; but in view of the fact that this first telegram of the 17th was sent at the same time, and followed immediately upon it, the error could not, and, in fact, did not, lead to any mistake.

Next, I received two telegrams from the Secretary of State. The first gave a very decided opinion in favour of the relief of Ladysmith, and authorised me to use the Fifth Division for this purpose.

From Proemial, London. 16th December, No. 53 Cipher: "Her Majesty's Government (? consider) abandonment, and, consequently (? loss) of White's force, as a national disaster of the greatest magnitude. We should urge you to devise another attempt to relieve it, not necessarily by way of Colenso, making use, if you think well, of additional troops now arriving in South Africa."

The second was a private telegram, for which I thanked him, adding: "Do not consider me in any way. When Milner pressed me not to go to Natal, I told him that the relief of White was a forlorn hope, and that the failure, if any, ought to rest on my shoulders."

I then at once telegraphed to Cape Town for the Fifth Division, ordered General Clery to reconnoitre the route to Springfield, and sent a heliogram to Sir George White that I had summoned the Fifth Division, and should attempt the route by Potgieter's Drift.

Directly afterwards I received a heliogram from Sir George White, in answer to mine of the 16th, No. 88. To me its chief significance was that he could give no assistance towards his own relief, and that he relied upon me to keep the pressure of the enemy from him.

From Sir George White, 16th of December, 1899: "Your No. 88 of to-day received and understood. My suggestion is that you take up strongest available position that will enable you to keep touch of the enemy and harass him constantly with artillery fire, and in other ways as much as possible. I can make food last for much longer than a month, and will not think of making terms until I am forced to. You may have hit enemy harder than you think. All our native spies report that your artillery fire made considerable impression on enemy. Have your losses been very heavy? If you lose touch of enemy, it will immensely increase his opportunities of crushing me, and have worst effect elsewhere. While you are in touch with him and communication with me, he has both of our forces to reckon with. Make every effort to get reinforcements as early as possible, including India, and enlist every man in both Colonies who will serve and can ride. Things may look brighter. The loss of 12,000 men here would be a heavy blow to England. We must not think of it. I fear I could not cut my way to you. Enteric fever is increasing alarmingly here. There are now 180 cases, all within last month. Answer fully;

I am keeping everything secret for the present till I know your plans."

I replied that I was shelling Colenso, and would keep as large a force as possible before it.

Reports from Cape Town showed the Boers in front of French to be displaying increased activity; and, as Boer sympathisers were spreading reports that we were short of troops, I allowed two battalions of the Fifth Division, which had been sent to De Aar, to remain there instead of joining me in Natal.

On the 18th, I thanked the Secretary of State for his permission to use the Fifth Division for the relief of Ladysmith. My words were: "Much obliged by your No. 53, exactly what I wanted. I was in doubt as to weight I should attach to financial considerations at Kimberley."

On the same day, I received two heliograms from Sir George White, the second of which informed me that he had provisions for six weeks, and could get on well (by which I understood him to mean on full or slightly reduced rations) for three weeks, keeping even his horses moderately fit. This would make his provisions last on full allowance till the 8th January, and on reduced allowance for three additional weeks, that is to say, till the 29th January. Though this tallied pretty accurately with my own estimate, it did not agree with Sir George White's former report of the 30th November, wherein he reported that he had provisions for 70 days, that is to say, to the 8th of February.

On the same day, the Secretary of State telegraphed to me that Lord Roberts had been appointed to the chief command in South Africa, and that my own command was restricted to Natal. In a letter, dated the 20th, I replied that I had long felt convinced that it was impossible for any one man to direct active military operations in two places 1,000 miles apart.

At this time there were signs that the enemy was plotting mischief in Zululand, and the Natal Government became anxious as to the loyalty of the Pondos and East Griquas, who were being tampered with by emissaries from the Free State. I therefore arranged with the Prime Minister to raise a force of Colonists, who, under officers of their own election, should be employed in Zululand and on the Pondoland border. The Boers did move into Zululand, but their advance was checked; and this Colonial corps was shortly afterwards disbanded, it being admitted on all hands that a corps of Colonists independent of Imperial officers was not successful.

POLICY PROJECTED FOR CAPE COLONY.

During these days disaffection was spreading in the Dutch districts, and the High Commissioner was evidently growing more and more nervous over the situation in Cape Colony. On the 23rd of December he became very anxious as to Methuen's situation, and urged upon me that no disadvantage ensuing upon his retreat could compare with the disaster that might follow upon his isolation. I replied that I attached greater importance to Kimberley than to Ladysmith; that Kimberley was safe so long as Methuen stood fast, but would probably fall if he retired; and that, consequently, I would not allow him to retire. I added that the true policy was to leave Methuen in position, commence a railway to Jacobsdaal, and after the relief of Kimberley continue the advance on Bloemfontein from Jacobsdaal.

On the 24th December I received a telegram from Lord Roberts. He anticipated that I should turn the enemy's position on the Tugela with comparative ease, and desired that when I relieved Ladysmith I should evacuate the place and hold the line of the Tugela. Methuen, likewise, if he relieved Kimberley, was to fall back upon Orange River, with the view of the concentration in Cape Colony of the whole available force, preliminary to an advance upon Bloemfontein, according to the original plan of campaign.

This telegram crossed a telegram of mine to the Secretary of State, wherein I had developed the plan already foreshadowed in the message above quoted to the High Commissioner. Herein I recommended that a branch line should be constructed from north of Honey Nest Kloof to Jacobsdaal, Methuen covering the construction from the rail head at Modder River. At Jacobsdaal he would cut Cronje's communications, probably frighten him out of Spytfontein, and also seriously menace Bloemfontein itself. On the arrival of the Sixth Division the line should be continued from Jacobsdaal, as a base, to

See
Q 14881.

Bloemfontein. Such a line would be cheap to build and of great strategical value, since it would react upon Cape Colony and the disloyal Dutch even more quickly than a direct attack upon Burgersdorp. I added, however, that since Lord Roberts, and not I, was in command the plan should be subject to his approval.

This was, of course, practically a new plan of campaign, with which I designed to meet the new situation which had developed itself during the past two months. The first germ of it appears in my telegram to Methuen of the 16th December. I intended to expand it as follows: A line drawn from Orange River Station along the railway to Jacobsdal or Kimberley, from thence eastward on my proposed railway to Bloemfontein, from thence southward along the railway to Bethulie and Norval's Pont, and thence westward along the Orange River to Orange River Station, would enclose a quadrilateral, roughly speaking, 100 miles square. This area I designed to subjugate completely, and to convert the whole into a large base of operations, with a strongly-held and fully-supplied post at each angle, from which, as from subsidiary bases, mobile columns could operate in any direction. I conceived that this, the southern portion of the Free State, could have been reduced with little difficulty, the northern frontier of Cape Colony practically covered, and the western provinces threatened. Meanwhile, a force from Natal should advance through Van Reenen's Pass to Harrismith, and, having established a subsidiary base, should be in a position to deal with any trouble to the south, north, and west. In fact, I thought that I saw in this plan all the advantages which the Austrians enjoyed from the celebrated quadrilateral in Italy. It would, moreover, have been invaluable in the event of a guerilla war; and this, as I had on the 10th November warned the Government, was not improbable.

By the 24th December Gatacre's dispositions began apparently to take effect, and he seemed to be gradually forcing back the disloyal Dutch and the enemy before him.

On the 25th the High Commissioner, on hearing that I was moving three squadrons of the South African Light Horse to Natal, again urged upon me the danger of Cape Colony and the weakness of Methuen's communications. I could only reply that I did not share his views; and I instructed General Forestier-Walker that he must not yield to the influence of the High Commissioner, for that we must hold on to Modder River.

On the 27th I received a telegram from Lord Roberts at Gibraltar, in acknowledgment of mine of 23rd December, No. 115. He signified no opinion as to the plan therein broached, but he expressed apprehension that the construction of the proposed railway would interfere with the working of the present line, and asked me to consult Colonel Girouard before coming to any decision. I did so, and Colonel Girouard answered that he could construct the line at the probable rate of one mile a day without interference with the supply-traffic. The proposal, however, was not adopted.

On the same day I was able to report that 6,700 Colonials were in the field in Natal, and 6,900 in the field at the Cape, and that Natal could probably furnish 700 and the Cape 4,000 more.

On the 28th December I wrote, in compliance with a request in Lord Roberts's telegram of the 23rd, a letter to be delivered to him on his arrival in Cape Town. I pointed out that there was no question of turning the Boer position in front of me, and that it must be forced; if I succeeded in forcing it, I should certainly be able to spare him a full division. I referred him to my instructions to General Forestier-Walker of the 20th November and my telegrams No. 114 and No. 119. I advocated an advance from Modder River by way of Jacobsdal to Bloemfontein as easier and quicker than up the main railway. On the same day I directed General Marshall, Commander Royal Artillery, and a Royal Engineer officer to proceed to the Modder to consider whether Cronje's position could be affected by use of the siege train, which was then being landed.

On the same day I received from Lord Roberts at Madeira a telegram, in which he said that he thought the *status quo*, if it could be maintained, was not undesirable until the Sixth Division should have arrived. Acting on the spirit of this message, I instructed Forestier-Walker to concentrate in Cape Colony all troops as they arrived.

On the 31st I instructed Methuen that Boers would not attack troops in position which had artillery, and that by distributing his guns he should be strong enough

to act defensively at all points and to keep the enemy tied to his position. This message was sent in the expectation that he might be required to extend his position so as cover the construction of the new railway.

By the 2nd January, 1900, the situation in front of French was improving, the Boers having retired to Colesberg, from which he hoped, by manoeuvring to oust them. I consented to reinforce him, but instructed him to manoeuvre only, and not to risk a general attack.

On the 3rd January, as the best means of indicating my mind, I sent to Cape Town the following information, as more or less trustworthy, for Lord Roberts's use, viz.:—

"Cronje has 8,000 to 9,000 men on Scholtzer's Nek; he hopes the British will attack, as his position is very strong.

"An advance on Bloemfontein up right bank of Riet River, by Kaalspruit, would draw off main Boer forces towards Bloemfontein. President Orange Free State is stated in district to have said he could not cope with such a movement.

"There is open, level country between east and west lines Modder River Station—Kaalspruit and Graspan. Best line of advance up right bank of Riet River.

"Bloemfontein undefended, except by two forts, the guns of which have been removed to Kimberley.

"There is a large magazine east of forts connected by railway with main line, from which large stores of ammunition would be sent back to Pretoria by rail if British succeeded in approaching Bloemfontein.

"There are 5,000 Boers from Naauwpoort to Stormberg, under Grobelaar, divided into commandoes of about 1,500; 2,000 of these are Transvaal Boers.

"Colonial Dutch have since Stormberg fight joined Boers there in large numbers, and are supplied with ammunition by Orange Free State."

About this time a scheme was started for a rising of the British prisoners of Pretoria. I discouraged it as much as possible, saying that it was probably a trap; if we were within reach of Pretoria it might be useful, but at the moment it would be dangerous and foolish.

On the 6th January the Boers attacked Wagon Hill and Caesar's Camp, Ladysmith. The attack being unsupported, was unsuccessful, though the enemy obtained a footing temporarily in some of our defences; and had it not been for a very heavy thunderstorm not a man of the attacking party would have escaped. I sent every available man to make a demonstration at Colenso, in order to keep as many of the enemy occupied as possible; but their trenches were fully manned. From this day forward I entertained no further hope of assistance from the Ladysmith garrison. (White's 44P.)

MOVEMENT TO SPRINGFIELD, NATAL.

The 5th Division had arrived at Estcourt early in January, and on the 2nd I sent a heliogram to Sir George White that I adhered to my plan for crossing the Tugela at Potgieter's Drift, and hoped to start on the 8th. I visited Sir Charles Warren at Estcourt, and discussed the plan with him. He moved on the 7th; but heavy rain on the 6th and 7th brought all the rivers up to flood level, and delayed his march.

On the 9th he arrived at Frere, and on that day I reported (No. 149) that I had received from two distinct sources a statement of the number which the State Secretary had relied on putting into the field, and that there were probably 120,000 men then in the field against us, of whom about 46,000 were then in Natal and on its borders. In reply (No. 81), the Secretary of State said that my numbers must be incorrect, but that he recognised the difficulty of the situation. Subsequent history has shown that my numbers were more nearly correct than was supposed.

On the 10th the column moved from Frere on Springfield. I issued a memorandum urging, among other things, upon the men that, if surprised by a sudden volley they should not turn from it, but rush at it.

By the 11th we had seized the south bank of the Tugela at Potgieter's. The only road by which I could advance north of the river from that drift led into a re-entering angle of the enemy's defences. After a careful reconnaissance I discovered a far better crossing by Trichard's Drift, five miles to westward.

Having thoroughly discussed my plans with Sir Charles Warren, and ascertained his entire concurrence with them, I reported them to the Secretary of State, No. 154, and to Lord Roberts, who had just arrived at Cape Town. In reply, Lord Roberts, in his No. 5, said, "Now that you have gone so far to help.

General The

General The
Right Hon.
Sir Redvers
Buller,
V.C., G.C.F.,
G.C.M.G.

17 Feb. 1900.*

White, I hope he will be able to help you by making a strong sortie as soon as Warren is engaged with the enemy." I replied, No. 157: "White has told me to expect very little help from him, so I think it probable I shall be unaided from Ladysmith in carrying out operations for its relief." He replied, 16th January No. 6: "Am concerned to hear you can expect very little help from White, as that is the sole chance of Ladysmith being relieved; surely he must make an effort to co-operate with Warren as he approaches Ladysmith."

On the same day Sir George White requested me (48P, 16th January), if I had any doubt of being able to get through to Ladysmith, to put the case to Roberts and ask for more troops. He reported that his force was much played out, that he had 2,400 sick, and that if I were repulsed Ladysmith would be in a bad way. On the 17th, in my No. 58, I repeated Sir George White's telegram to Lord Roberts, saying that the relief of Ladysmith from my then position was doubtful, but that I questioned if I could do better with a larger force, as the difficulty of supply where I was was enormous, and that Warren agreed with me that it was better to go on as I was, and to risk it.

EVENTS OF 17th TO 27th JANUARY, 1900.*

Accordingly, on this same day (17th January) General Warren crossed at Trichard's Drift by a pontoon bridge and the drift. He met with very slight opposition, but remained during that day and the 18th passing over his baggage. I reconnoitred the position in front of Potgieter's in force, so as to be prepared with a point of attack as soon as Warren's advance should have made any impression upon the right of that position. On the 19th Lord Dundonald, with Warren's cavalry, moving northward, had taken the right flank of the Boer position, whereas General Warren had advanced to the westward and was crossing Venters Spruit. I was dissatisfied with Warren's operations, which seemed to me aimless and irresolute. Dundonald's movement was a decided success, and should have been supported by artillery, while Warren's infantry should have attacked the salient, which Dundonald's success had left exposed.

On that evening I debated with myself whether or not I should relieve Warren of his command; but the question was less simple than it appears at first sight. Had he been sent out to me on the same footing as any other officer I should not have hesitated—or, rather, I should never have entrusted him with this command at all. But he had been sent out to me as my appointed second in command, and with orders from the Government that he should supersede Methuen; and though I had successfully combated this order as to Methuen, another equally precise had been substituted for it, namely, that wherever employed, General Warren should hold the position to which his rank entitled him. It is true that I disapproved of his first two days' work in the first command that he had ever held under me, but I did not think that this was sufficient justification for his removal, in the face of the direct instructions which I had received from the Secretary of State for War.

On the 20th I went over and saw Warren. He had that day attacked the salient and taken it, but instead of supporting Lord Dundonald, he had induced him to fall back from the position which he had occupied on the 19th. Again the same difficult question confronted me. General Warren was evidently not carrying out the orders which he had received from me, and in which he had signified his full concurrence. I saw, for my own part, that the advantages for which I had hoped from his crossing had been let slip, and that my own plan of operations had been hopelessly wrecked. It was open to me to take over his command myself, but in that case I should not be able to direct the most important and the most critical part of the whole movement, namely, the flank attack from Potgieter's. This, if it were to be successful with the few troops at my disposal, must be watched for and timed to the minute. It was possible that Warren might work more kindly for a plan of his own than he had worked for mine. His force was in good position, and might yet be successful. In any event, whether successful or not, the troops would spend some little time under fire in fairly close contact with the enemy, and would thus gain comparatively cheaply that battle training in which I knew them most deficient. I concluded to leave Warren to pursue his work, merely suggesting to him certain changes in the posting of his troops for the greater security of his position. I then returned to my former station to watch for my chance.

On the 21st and 22nd I sent General Warren reinforcements for which he had asked, and urged him to attack. On the 23rd I walked round General Warren's firing line. I afterwards pointed out to him that his troops were getting stale, and that his positions were insecure, and told him that unless he could attack he must withdraw. He represented the disadvantages of an attack, but proposed the occupation of Spion Kop. This, he said, he had intended to effect on the previous night without reference to me; but General Coke, to whom he had given the order, had refused to occupy the hill, because he had never reconnoitred the approach. I did not like the proposal, saying that I always dreaded mountains, but after considerable discussion I agreed to his suggestion. Spion Kop was occupied by his troops that night.

The next morning opened unfortunately for us, as the mountain at daybreak was clouded by a dense fog, rendering it impossible to place the troops effectively on the summit, which they had gained with practically no loss. As the mist drifted away they were exposed to a severe fire. General Woodgate was put out of action by a wound, and considerable disorder ensued. On the previous evening General Warren had placed General Talbot Coke in command of the right attack, including Spion Kop. A telegram for reinforcements from the top of the hill reached General Warren. Thereupon he appealed, not to me, but to the nearest Brigadier, who at once made arrangements which committed beyond recall all the mounted men, as well as two out of four battalions, which I had kept in hand. In these circumstances I had not sufficient troops to make a counter-attack, and could do nothing but wait till nightfall. Had the troops held Spion Kop during the night the operation might, I think, possibly have proved successful. The officer who was placed in command at the top of the hill made several efforts to communicate his situation to General Warren, but received no reply. General Coke went up the hill, but made no dispositions to improve the defence, and returned to consult with General Warren. General Warren had meanwhile changed his camp, and could not be found till late. Finally, when instructions were at length sent up the hill, the garrison had quitted it. I left my camp before daylight on the 25th. As I approached Warren's headquarters a messenger met me with the intelligence that the hill had been evacuated. I at once resumed command, and proceeded to withdraw the troops, which I did during the following night, without loss.

I was not altogether dissatisfied with the results, as a whole, of Spion Kop. My men had gained immensely in knowledge of war and in confidence in themselves and their officers. They had fought well, and I was certain that they had inflicted on the enemy not only an immense loss in moral, but actually a greater loss than they had themselves sustained in men. Events proved my opinion to be correct. None of the commandoes with which we were engaged at Spion Kop came again into action against us (so far as I could learn) for at least a year.

On the 25th January, No. 169, I reported to Lord Roberts and General White my withdrawal across the Tugela, and said I meant to have one more try at Ladysmith. Lord Roberts, on the 26th, in his No. 26, expressed his regret that Spion Kop had been abandoned, adding: "Unless you feel fairly confident of being able to relieve Ladysmith from Potgieter's Drift, would it not be better to postpone the attempt until I am in Orange Free State? I am hopeful to move about 5th February, and my force on north of Orange River should cause enemy to lessen their hold in Natal." On the following day he again telegraphed, saying that by the 28th February he expected to be near Bloemfontein, having relieved Kimberley, and that his threatening Bloemfontein would relieve the hostile pressure in Natal.

The War Office at this time proposed that White should attempt to cut his way out of Ladysmith and join me. In reply, No. 171, I informed both War Office and Lord Roberts that I thought White could not break out—that he had eaten his horses or starved them. I added: "It wants two set battles to relieve White. I could always make a certainty of the first, but the necessity for the second stops me. If, for example, I succeed here, and then fail at Roodepoort, I shall be left with, perhaps, 3,000 wounded, a demoralised force, short of water, and sixteen miles from anywhere."

On the 27th Sir George White informed me that if I tried again and failed, Ladysmith was doomed. He could feed the men for another month, but not the

* See also as to these events a statement put in by Lieut.-General Sir Charles Warren, *Appendix, page 642, post*

horses, and without guns his force could do nothing. He asked if I did not think he ought to abandon Ladysmith, and try to join me, though he did not conceal that his numbers were reduced to 7,000 men, and they weak and morally played out. On the same day the War Office withdrew their suggestion that White should break out.

FRESH ATTEMPT.—MOVEMENT TO VAAL KRANTZ.—
CORRESPONDENCE WITH LORD ROBERTS.

On the 28th, Lord Roberts telegraphed again, No. 35, asking exactly what my plans for my next attempt to relieve Ladysmith, and the date on which I should commence the operations, adding: "Unless you consider that you have a reasonable prospect of success, it would, I think, be infinitely better for many reasons for you to remain on the defensive behind the Tugela until the operations I am about to undertake have produced the effect which I hope for." On the same day, General White telegraphed: "The Boers can come here (Ladysmith) from Potgieter's in ninety minutes; in this lies their great strength; you must not let them leave you and throw their strength on me."

The following was my appreciation of the situation at the moment:—

It appeared to me that Lord Roberts intended to abandon the original design of advancing on Bloemfontein by Bethulie, and to adopt my plan of an advance through Jacobsdaal. Thereby, the relief of Kimberley would be automatically accomplished; for I was satisfied that Cronje would never stand his ground at Spytfontein when once Jacobsdaal was occupied by our forces. In this case the larger the number of the enemy that could be retained about Ladysmith and Colenso, the greater the chances of Lord Roberts' success; and it was reasonable to suppose that, as long as my forces remained upon the Tugela, even in the state of quiescence suggested by Lord Roberts, the enemy would not withdraw a man from that quarter. I quite appreciated the soundness of Lord Roberts' policy herein, and I fully recognised that, for the ultimate purposes of the war, my operations were of less importance than his, and should certainly be subordinate to them.

But, on the other hand, I could not accept Lord Roberts' calculation of time, for I reckoned the 7th of March to be the earliest day on which he could possibly reach Bloemfontein. Nor could I believe that his arrival at Bloemfontein would produce the slightest effect upon the Transvaal army, which was waiting hungrily for the fall of Ladysmith, though it might draw away some of their comrades of the Free State. I felt perfectly confident in my own mind that the only chance for the salvation of Ladysmith lay in my "pegging away" (as I put it), until I should either wear the enemy out, or bring on an engagement in which I could defeat them. At the same time, it was difficult for me, after two failures, to press such views upon Lord Roberts. He knew nothing of the country; he evidently did not understand the nature of the difficulties by which I was beset; and, assuming the correctness of his theory as to the reaction of his operations upon the enemy in Natal, he might reasonably think that further offensive movements on my part would but waste, to no purpose, the lives of my men.

None the less, I considered it my duty to say what I thought. I, therefore, on the 28th of January, replied, No. 178, to Lord Roberts, gave particulars of my next attempt, and added: "Delay is objectionable; I feel fairly confident of success this time; one can never safely attempt to prophesy, but, so far as my exertions can, humanly speaking, conduce to the desired end, I think I can promise you that I shall in no case compromise my force." I thought, after much consideration, that it was but right and fair to make the above promise, though I felt from the first how it handicapped me.

At this time Lord Roberts telegraphed, on behalf of the War Office, asking whether there was any position in Natal that could be made virtually impregnable by a force of 10,000 men, and suggesting that the line of the Tugela might be such a position. In reply, No. 180, I said that 16,000 men would be wanted, besides a strong force of artillery, but that I could not advocate the policy indicated by the question. On the 31st January, No. 182, I informed Lord Roberts that, owing to difficulties of weather, I had postponed my attack. He replied, No. 49 C, that my postponement suited him, as he himself was delayed, and the longer the enemy was kept in Natal the less difficult his task would be. This showed me that Lord Roberts counted

on my retaining the enemy in Natal during his advance.

On the 4th February, I received from Lord Roberts, by special messenger, the letter dated 27th January, which he referred to in his evidence. After complaining of his difficulties with transport, he said: "You will now know from my telegram of to-day that if you are not confident of forcing your way to Ladysmith, it would, in my opinion, be better you should abandon the attempt until I am in the Orange Free State." I replied on the same day, discussing my own difficulties with transport, but saying that they were surmountable. I added: "Ladysmith is in a bad way; White keeps a stiff upper lip, but some of those under him are despondent; he calculates that he has now 7,000 effectives; his men are dying about eight to ten per day, and when he last gave me a statement he had 2,400 in hospital; they are eating their horses, and have very little else. He expects to be attacked in force this week, and, though he affects to be confident, I doubt if he really is. He has begged me to keep the enemy off him as much as I can, and I can only do this by pegging away. I am going to have a try and get through the mountains here to-morrow. The men are keen, and most of the officers, when I was explaining my plans last night, seemed to think that we ought to succeed. I hope we may. If I get through I get on to the plain; it is about four miles broad and ten miles long; the enemy will be in possession of the hills on each side, and holding a strong position at the end, and I shall have great difficulty about water. Such is the position. I do not think a move into the Free State will much affect our position here. So far as I can make out, the Transvaalers will not go into the Free State, and they are our main opponents. You ask me how you can help me. The only help you could give me would be another Division, and that I know you cannot spare." I now resume the narrative of my operations.

EVENTS OF 6TH TO 8TH FEBRUARY.

Every attempt which I had made to force the Boers' positions during my operations for the relief of Ladysmith had been confronted by one great and commanding difficulty. We could never be sure that, after taking from the enemy the position immediately before us, we should find there a secondary artillery-position to aid us in forcing the enemy's second line of defence, which we knew, though we could not see it, must lie behind. The position west of Spion Kop would have been very easy of capture could we, after taking the crest lines of the hills, have found further artillery positions. This we could not do, and our infantry were consequently contained in the positions which they had first captured.

The position which I now decided to attack offered a hill, Vaal Krantz, which (so far as was ascertainable by reconnaissance) seemed likely, when captured, to afford a most eligible secondary artillery position. I had ascended a hill (Swart Kop) immediately opposite to it on the south side of the Tugela, and had been assured by an English farmer (Mr. Harding), who passed under Vaal Krantz every time he went into Ladysmith, that I should find that hill to be an exact duplicate of Swart Kop.

Before attacking Vaal Krantz the two best artillery officers with me had drawn up a scheme for the placing of our guns, with a particular eye to the command of those positions from which the enemy might bring enfilade or raking fire to bear upon us. But in a mountainous country an advance often discloses positions which more distant reconnaissance could not possibly have appreciated. Thus, during the fighting at Vaal Krantz the enemy, contrary to our expectation, was able to enfilade us with one gun so placed as to be defiladed from our fire and hidden from our sight. Vaal Krantz was attacked and carried on the 5th February. That evening I made preparations for further advance and for occupying the hill with artillery. The position itself had been captured by General Lyttelton's Brigade, and, in consultation with him, I learned that I had been deceived as to the configuration of Vaal Krantz, and that, though I had been able without much difficulty to get guns on to its counterpart, Swart Kop, on the south side of the river, it would be impossible to get guns on to Vaal Krantz. To make a further advance I should, therefore, have had to use my infantry alone without the support of the artillery.

Having regard to my promise that I would not compromise my force, I thought it my duty to consult Lord Roberts, and early on the 6th I sent the following

General The
Right Hon.
Sir Redvers
Buller,
V.C., G.C.B.,
G.C.M.G.

17 Feb. 1903.

General The
Right Hon.
Sir Redvers
Buller,
v.c., g.c.b.,
g.c.m.g.

17 Feb. 1903.

telegram:—"After fighting all day yesterday, though with but small loss, I have pierced the enemy's line, and hold a hill which divides their position, and will, if I can advance, give me access to the Ladysmith plain, when I should be 10 miles from White, with but one place for an enemy to stand between us. But to get my artillery and supplies on to the plain, I must drive back the enemy either on my right or on my left. It is an operation which will cost from 2,000 to 3,000 men, and I am not confident, though hopeful, I can do it. The question is how would such a loss affect your plans, and do you think the chance of the relief of Ladysmith worth the risk? It is the only possible way to relieve White; if I give up this chance I know no other."

Lord Roberts replied, C 73, that Ladysmith must be relieved at any cost. "Tell your troops," he said, "that the honour of the Empire is in their hands, and that I have no possible doubt of their being successful." I confess that I was puzzled by this telegram. In all his communications to me Lord Roberts had, from the first, advocated the *status quo* as a general principle. Only eight days before the date of this telegram he had telegraphed that, unless I saw a reasonable prospect of success, he thought it better for me to remain on the defensive until the effect of his advance should have been seen. Only seven days before he had shown me that he had counted upon me to retain the enemy's force in Natal. Only on the previous day I had received from him a letter saying that if I were not confident of forcing my way to Ladysmith it would be better for me to abandon the attempt until he was in the Orange Free State. I was, therefore, at a loss to account for this sudden exhortation to sacrifice two or three thousand men in a venture wherein, as I had told him, I was not confident of success.

On the 6th I proceeded with my preparations for attack, but about the middle of the day I learned from General Hildyard (who had relieved General Lyttelton) that, owing to the great difficulties of the ground, he also was doubtful of success. The enemy were able to place guns in positions where my fire could not molest them, and from whence they could render useless any pontoon bridges that I might lay for facilitating my advance. In these circumstances I assembled all my Generals in Council of War, placed the facts of the case and Lord Roberts' telegram before them, and asked them whether they advocated persistence in an attack from our present position. With one exception, they advised a withdrawal, Sir Charles Warren recommending withdrawal only on the condition that I knew of some other point where I could attack. I answered that I thought we should stand a better chance now if we attacked Hlangwane and tried to cross the Tugela from that position, afterwards attacking Bulwana, and that I believed this to be preferable to any attack from our present position. I added that in December I had carefully studied that line of advance, that it would involve fighting in bush and in very difficult ground, but that the men had advanced so extraordinarily in their training for war, that I now judged it safe to entrust them with the enterprise. The Council, one and all, expressed themselves as ignorant of the line of approach which I indicated, but as perfectly satisfied to trust my opinion; and they thought that, so long as we should fight somewhere, there was hardly a place which might not offer better promise of success than that wherein we now found ourselves engaged.

On the 7th February I sent the following telegram, No. 189, to the Secretary of State and to Lord Roberts: "I found the Boer positions on my right and left so superior to mine, and I was so outclassed by their big guns, which I could not silence, that I have decided that it would be useless waste of life to try and force a passage which, when forced, would not leave me a free road to Ladysmith. I propose to try by a forced march to get back east of Colenso, and to seize the Boer position south of the Tugela River, whence I mean to make a desperate effort to take Bulwana Hill, the garrison of which has been much weakened, at least so my information says. My view is that I have a forlorn hope chance at both places, but if I get through here I am not at Ladysmith by a long way, while if I get through there I relieve the place."

NECESSITY FOR CONTINUING ACTIVE OPERATIONS.— CORRESPONDENCE WITH LORD ROBERTS.

On the 9th I reached Chieveley. I then sent to Lord Roberts the following telegram, No. 193: "The operations of the past three weeks have borne in upon me the fact that I had seriously miscalculated the

retentive power of the Ladysmith garrison. I now find the enemy practically neglect that, and turn their whole force upon me; I am not, consequently, strong enough to relieve Ladysmith. If you can send me reinforcements, and if White can hold out till they arrive, I think it might be done; but with a single column I believe it to be almost an impossibility. I shall continue attacking, as it keeps the enemy off Ladysmith, but I think the prospects of success are very small." I followed this on the same day by No. 195, also to Lord Roberts: "It is right that you should know that in my opinion the fate of Ladysmith is only a question of days, unless I am very considerably reinforced. Wherever I go the enemy can anticipate me in superior force. I turned yesterday from Vaal Krantz and am moving towards Colenso. The enemy have left Vaal Krantz, and are now at Colenso; they do in six hours and seven miles what takes me three days and twenty-six miles. When I said I would try and save Ladysmith, the Fifth Division had arrived at the Cape, and the Sixth and Seventh were likely shortly to be at my disposal; but two days after you were appointed, and directed that all troops arriving after that date were to be kept at the Cape."

"I understand from you that you expect to occupy Bloemfontein by the end of February, and so relieve the pressure on Ladysmith. I hope the forecast will prove correct, but I cannot help feeling that to leave Ladysmith as it is for such a chance is a great risk, and it is right I should say so."

"As for myself, I am doing all I can, and certainly have reason to think that I retain the confidence of this force, who know my difficulties, but if it is thought anyone else can do better I would far rather be sacrificed than run the risk of losing Ladysmith."

Lord Roberts, on the 10th, in his No. 141, replied to my Nos. 193 and 195. He summarised the telegrams which had passed between us, and drew his conclusion as follows:—"It will be seen that from date of my assuming chief command until yesterday I have had no reason to suppose that you considered reinforcements necessary for the relief of Ladysmith. To send you large reinforcements now would entail abandonment of plan of operations." He then went on to say:—"I must therefore request that, while maintaining bold front, you will act strictly on the defensive until I have time to see whether operations I am undertaking will produce effect I hope for. The repeated loss of men on Tugela River without satisfactory results is that which our small Army cannot afford."

On the 12th February I replied in my No. 198. I said that but for the omission of his answer of the 16th of January to my telegram on the 15th (which latter he had quoted), his resumé was quite correct. I continued thus:—"Pray do not think I wish to lay my troubles on you. I quite admit that I miscalculated the retentive power of Sir George White's force. I thought he would hold at least 10,000 off me. I doubt if he keeps 2,000, and I underrated the difficulties of the country. I don't know your plan or where your troops are, and the last thing I wish to do is to involve your plans in confusion. I merely state the fact that I think Ladysmith is in danger, and that I find myself too weak to relieve it. But as you value the safety of Ladysmith, do not tell me to remain on the defensive. To do that means to leave the whole Boer force free to attack Ladysmith. Sir George White has repeatedly telegraphed: 'I trust to you preventing them throwing their strength on me.' And again: 'The closer to Ladysmith you can establish yourself, the better chance we shall have.' I feel sure this is the right policy, and I hope you will not say I am to rest supine and leave Ladysmith alone. During the late operations I am confident the Boer force has been reduced by two men to every one I have lost, and for three weeks our operations have practically caused the cessation of the bombardment of Ladysmith. As I have said, I will do all I can, and you may rely that I will not compromise my force."

This telegram crossed one of the 11th, No. 93, from Lord Roberts, in which he said:—"I should like to have the view of your second in command on this question, which is one of such urgent importance to our position in South Africa that it is very necessary I should know whether Sir Charles Warren shares your views. Show him all your and my telegrams on this subject, also White's telegram of 28th January to me, in which he stated he could hold out until the middle of March. I wish, also, to know why, as stated in your telegram No. 169 of 25th January, you considered it necessary to take command of operations which resulted in withdrawal from Spion Kop."

Sir Charles Warren being absent, I replied at once, No. 199, to the second issue raised in this message:—"Warren comes in to-morrow, and shall send you his opinion after having read all the telegrams. My report of operations west of Spion Kop was posted to you 30th January, and should reach you before this, so I will only say that I was not in command of the operations which resulted in withdrawal from Spion Kop. During these operations I had gradually, at Warren's request, reinforced him until he practically had with him my entire force, except the, as I thought, too weak garrison of Spearman's. After he reported the abandonment of Spion Kop I decided that we had lost our chance, and took command. His whole division was there; one of his brigades had no commander, and I thought, in the circumstances, his presence with his division was essential."

Warren came in that evening. I gave him all the telegrams, including my No. 199, and he wrote a long telegram, which I sent to Lord Roberts in my No. 200. One sentence of the telegram summarises it. Warren said, addressing me: "The matter involves an immense number of considerations and innumerable details, on which I may or may not share your views; but on the main and important subjects I think that my views closely coincide with yours."

MOVEMENT TO HUSSAR HILL.—EVENTS OF 14TH TO 28TH FEBRUARY.

On the 14th I moved to Hussar Hill, and commenced the occupation of positions for attack on Cingolo, Monte Christo and Hlangwane Mountains. During the 13th and 15th Sir George White reported continual and increasing concentrations of the enemy in front of me. On the 15th Lord Roberts replied, No. 156, to my telegrams, Nos. 199 and 200, that he had no wish that I should adhere to a passive defence, and left it to me to do whatever I thought best, relying on my assurance that I would not compromise my force.

On the 12th February Lord Roberts informed me that he had entered the Orange Free State with a large force.

On the same day I reconnoitred the approaches to Hlangwane. I found, as I thought, not more than 1,500 men, with two or three guns in the position, but the ground was fearfully rugged, covered for the most part with dense bush, and would evidently be very difficult to approach.

On the 13th the day was so intensely hot that I did not allow the infantry to move.

On the 14th we occupied Hussar Hill, and on the 15th I threw my right forward to turn the enemy's left. But the heat was so great and so trying to the men in the waterless bush that I halted the troops when the movement was about half completed, and ordered them to bivouac where they stood.

The 16th being again a blazing hot day, we did not leave our positions. Intelligence came that Lord Roberts had occupied Jacobsdaal and that French had entered Kimberley. Sir George White also reported (70 P) that the enemy had begun to retire northward with wagons, and that not fewer than 2,000 men were moving towards Cundycleugh, having first set fire to several farms in Dewdrop Valley. This was great news, and I felt certain that we were going to be successful. On the same day (No. 71) he reported: "I think another attack here quite possible. Have strengthened defences, and will try to give good account of ourselves; but men are on very short allowance, and are consequently very weak. We are eating our horses. We have no grain left for animals, and grass is very scarce."

On the 17th I occupied Cingolo Hill, and threw my mounted men well to the right, sweeping the country between the Blaauwkrantz and Tugela Rivers. On the 17th I reported to Lord Roberts (No. 205) that I had been engaged all this week in trying to force my way nearer to Ladysmith, that my losses were very small, but that I expected a heavier engagement on the morrow.

On the 18th I assaulted and took Monte Christo and manœuvred the enemy out of the Hlangwane position.

On the 19th Lord Roberts informed me (No. 170) that the moment was favourable for an attempt to relieve White, as Cronjé was almost surrounded by his troops. He added some information as to the withdrawal of Lucas Meyer, with 3,000 men, from Ladysmith to help Cronjé. This did not accord with my own intelligence. On this day we cleared the Boers from the south bank of the Tugela, and I advanced my left from Chieveley

to Colenso. General White reported more wagons trekking north.

On the 20th I ascended Monte Christo, and made careful reconnaissance for a route for my further advance. It was clear that I must occupy Colenso, and, attacking from there, take a hill on the north bank of the Tugela between Onderbrook and Langewacht Spruits before any further advance in the direction of Bulwana Hill would be possible. It also appeared to me that certainly one-half, if not the whole, of the enemy's main fortified position on the north side of the Tugela was vulnerable only to attack from the south-west, or, in other words, from Colenso; for the nature of the ground about the bank of the river forbade any attempt to force its passage from the south.

During the night of the 20th-21st the whole of the immense Boer laagers between us and Ladysmith, as well as those visible from Monte Christo to the north of Ladysmith, were broken up and removed.

On the 21st I threw a bridge across the Tugela west of Hlangwane, and occupied the position which I had intended to have taken on the 15th December, if I had delivered my attack on that day. I was pleased to find that my reconnaissance made at that time proved to be accurate. Though the Boers had guns on the hills all round us, we were perfectly safe in that position, and I was able to establish there a supply dépôt and hospital. I also ordered a force which I had stationed at Greytown to advance by Tugela Drift (which is the first practicable road that crosses the Tugela east of Colenso) upon Helpmakaar.

On this day Lord Roberts informed me that "lots of special trains" were running from Natal with strong reinforcements to offer determined opposition to his advance. This information was in part confirmed on this same day by intelligence of my own (which I at once reported to Lord Roberts, No. 206) to the effect that the Bethlehem, Heilbron, and Senekal commandoes had returned by train from Spion Kop to the Orange Free State in the previous week. These were the men who had borne the brunt of the fighting at Spion Kop, and I had reason to believe that they had no eagerness for more. When I moved from Spearman's I had left a considerable force at Springfield, partly to cover my left from any possible raid by way of Hungerspoort, but chiefly to retain as many Boers as possible in the Spion Kop and Brakfontein position. I was now able to withdraw my detachments from Springfield, but I did not lack employment for them, for my information from Sir George White did not agree with that of Lord Roberts. On the same day he (Sir George White) reported first (73 P) that reinforcements for the enemy had been seen disembarking at Modder River Station, and that others had been observed moving south by way of Bulwana; and secondly (74 P), "We can detect no sign of enemy retreating; all indications point the other way."

On the 22nd I attacked and took the hills between Onderbrook and Langewacht Spruits, but the high mountains on my immediate left front and the fire from thence prevented the occupation from being so complete as I had hoped. We maintained, however, the positions that we had captured, though the enemy were so close to our defences that we could only supply or relieve our firing line during the night. On this day, Sir George White reported, No. 75, "All Orange Free State Boers gone; South African Republic Boers collected two miles west of Pieters." This exactly coincided with my information.

On the 23rd I pushed a brigade forward to seize the position east of Langewacht Spruit. The advance was very difficult. The troops had to creep up along the railway, which in two places was swept by the fire of Boer pom-poms invisible to us; but between their courage and a liberal use of sandbags they managed to get along. Their advance was, however, very slow, and it was late before even two battalions of the five that I intended to employ were concentrated in the position from whence the assault was to be made. Not liking to lose the day, the General in command directed these two battalions to assault the position. They failed to take the whole of it, but they took and held enough ground to render possible an attempt to cross the Tugela to the east. General White reported, No. 76: "I know you are beating the enemy. Stick to them. I carried out a small operation this morning, but my men are so weak from insufficient and inferior food that they are unfit for the field; horses more so." Bethune, who commanded the force at Greytown, reported that he had begun his advance from Tugela Drift on the 22nd. Late on this day

General The
Right Hon.
Sir Redvers
Buller,
V.C., G.C.B.
G.C.M.G.

17 Feb. 1903.

General The Right Hon. Sir Redvers Buller, V.C., G.C.B., G.C.M.G.

17 Feb. 1903.

General White reported movements of the enemy towards Bulwana, towards Onderbrook, towards Potgieter's, and of 1,500 men east towards Helpmakaar.

After nightfall the enemy vigorously attacked all our positions. There was heavy firing, with some bayonet fighting, all the night, and much firing the following day (24th), but in the evening we held everything that we had won, and had, perhaps, gained something in addition. I reconnoitred the Tugela carefully from Colenso to Manxa Nest, selected a point for another crossing, commenced the formation of a road to reach it, chose gun-positions for all the artillery for the main assault, and began the movement of troops necessary to that end. The river was high, and having only one pontoon bridge, I was obliged to withdraw from Colenso the troops and guns required before transferring the bridge to its new position.

On the 25th, being Sunday, at the instance of the enemy an armistice till sunset was agreed upon, in order to collect the dead and wounded of the last two days' fighting, who had been lying out between the lines. We had just heard that Cronje was surrounded, and I caused this news to be communicated as publicly and as often as possible to all the Boers with whom we conversed. As one man they absolutely refused to credit the possibility of Cronje's surrender, retorting that Cronje had captured hundreds of wagons containing the whole of our supplies, that Lord Roberts had ordered a retirement, and that he would probably retire. We refused to believe their story as absolutely as they to believe ours. During the day the road to the bridge was made, and movements of troops towards our right flank steadily continued. The enemy, having no particular reason for keeping quiet, stretched their legs after the irksome enforced concealment of the last six days. Hundreds of Boers appeared like magic, as it were, from the ground. This was of immense advantage to us, since we were able to locate every sangar and entrenchment that bore upon the line of our intended attack. These were all noted and named, and their exact range from our different gun positions was calculated.

I received a telegram from Lord Roberts, No. 175, saying that as soon as I relieved Ladysmith he hoped I would be able to send him a Division of Infantry; one would afford him material assistance. In reply, No. 210, I said, "I will send every man I can spare as soon as I can get to Ladysmith. I think I shall get there, but the enemy has called up his outlying detachments to replace those sent to the Orange Free State, and is making stubborn resistance, while the country is extraordinarily difficult. We have been fighting continuously for 72 hours, have been repulsed in one attack, and have repulsed three made on us. To-day I am making a new road to get our artillery forward, and if I succeed we shall be in a distinctly more favourable position. The strain on the troops is very great, but they are equal to everything, and I think they feel as I do, that though it is hard work we ought to succeed this time."

On the night of the 26th-27th the pontoon bridge between Hlangwane and Colenso was taken up and relaid between the cataract. During the 26th a slow fire was kept up all day, in which the gunners obtained the exact ranges to the different sangars from their positions. All gun positions were connected by telegraph and signallers.

On the 27th we assaulted the Boer position with complete success. From my station on the south of the river I sent an order to General Lyttelton, who commanded the left of my line on the other side, to advance the moment that the assault was successful. Unfortunately, the order miscarried, and he maintained his position, keeping up a tremendous fire on the retreating enemy as they crossed his front. It was late in the afternoon before I could attempt to push forward our cavalry and artillery; and the moment that I crossed the river to direct their advance I found that the fire proceeding from our left was so severe that it was impossible for them to move through it. The rearguard of the retreating enemy was also firing heavily. The troops bivouacked in the positions which they had won.

At daylight on the 28th we began to improve the road, and the cavalry, and horse, and field artillery commenced their passage of the river. The operation was not a rapid one, the north bank being so steep that it required two or three teams and a hundred men on the drag-ropes to get the guns and wagons up. By eleven o'clock the cavalry were advancing. In the early morning I received the following message from Sir George White (No. 78):—"I am now issuing only

half pound of breadstuff daily; it is a very inferior meal. At this rate I can hold out till 1st April, not longer. Report to Roberts if you think necessary. I have 21,000 mouths to feed, counting children half rations." I replied at once: "I have 74 wagons of supplies for you, the arrival of which I can promise very shortly." And immediately afterwards I telegraphed, "I beat the enemy thoroughly yesterday, and am sending my cavalry as fast as my bad road will admit of, to ascertain where they have gone to. I believe the enemy to be in full retreat." On the same day General White reported (No. 79):—"Following Boer movements observed between dawn and noon to-day:—From direction of Pieters to behind Bulwana 5 guns and 20 wagons, 300 men. From Onderbrook to Roopepoort and on the north-west, 5 guns, 120 wagons, 500 men."

I had no doubt from what I saw, and from General White's information, that the enemy were in full retreat, and retreating Boers are very difficult to catch, especially when they have 24 hours' start of you. I divided my mounted men into two bodies, the Irregulars to go north and west, the Regulars to go north and east; and with the Regulars I sent the only horse artillery guns that I had. I thought it was possible they might come up about Modder River with such of the enemy's guns as had been left in action to the last, and seeing that all the laagers had been moved clear away on the 20th, I considered that if they failed to catch the enemy at Acton Homes, on the Cundycleugh Road, or at Modder River, pursuit would be useless. Parthian tactics are those which long experience in native wars has made almost a second nature to the Boers. All that I know worth knowing about rearguards I learned from the Boers whom I commanded in 1879; and I was, and am still, deeply impressed with the belief that unless there is some paramount object to be gained, an attempt to force a Boer rearguard is merely a waste of men. Moreover, in the face of White's telegram, the reprovisioning of Ladysmith became a matter of supreme importance. The river was high. The drifts were impassable. I had only one bridge, a pontoon-bridge, leaky, crazy, and worn out. The roads were execrable. Every gun and every vehicle, other than a provision-wagon, brought over that bridge meant nearly three-quarters of an hour's delay in the reprovisioning of Ladysmith. The left division of the cavalry reached Ladysmith during the night, and reported that the whole of my left front was clear of the enemy. The right division crossed the Klip River, and were checked under the south-east corner of Bulwana by a very strongly posted rearguard of the enemy, who disclosed three guns and considerable rifle power. The country was covered with bush and much intersected with dongas. This rearguard stopped Burn Murdoch, who commanded the cavalry on the right; but watching the action, I felt certain that the Boers would retire at dark. I was satisfied, too, that if I supported him with infantry I should lose many men and gain nothing, because any pursuit to be effective ought to have been by the west and not by the east side of Bulwana. About midday General Lyttelton's Division came into line from the Colenso position.

OCCUPATION OF LADYSMITH.

On the 1st March I intended to advance to attack Bulwana; but some of Burn-Murdoch's scouts, who had got up the mountain in the night, reported at daybreak that it was evacuated, and that no enemy was visible on our right. Heavy rain had fallen in the night. I ordered an advance on Nelthorpe, where was the drift over the Klip River, though at the time it was impassable. Colonel Rawlinson and a correspondent had ridden into our camp from Ladysmith during the night and I at once rode back with them into that town. On meeting General White I learnt that he had sent a force out to the Newcastle Road, where he said there was a large Boer laager and Boers in force. Calling up Major Williams, 13th Hussars, whose squadron formed the left of the right pursuing brigade, I told him to proceed at once with it to the place where General White's troops were said to be in action, to get round and beyond them if possible, and to send to me in Ladysmith as soon as possible a report as to whether any enemy worth pursuing were within reach or in sight. Before I left Ladysmith that afternoon I received a report from Lord Dundonald that he was pressing forward to Van Reenen's Pass with no enemy in front of him. He sent in two ambulances which he had taken beyond Dewdrop. I received reports also from Major Williams that there was no one but a very small rearguard among

the mills on the Cundycleugh Road in front, and from General Burn-Murdoch that all was clear to Modder River. I then returned to Nelthorpe.

Passing through Ladysmith, on my way I met Colonel Stoneman, and asked him for how much longer he could really have kept the garrison. He replied: "The garrison, sir, could have lived for three weeks longer, but the natives and sick in hospital would have been starved to death a fortnight earlier." On my return to my camp I was glad to be able to telegraph to England that 73 wagons, the first nine of which contained hospital supplies, were then entering Ladysmith.

CORRESPONDENCE WITH LORD ROBERTS AS TO FUTURE POLICY.

Early on the 2nd March I ascended Bulwana Hill. It was an extraordinary good day for seeing. Van Reenen's Pass was perfectly clear with the exception of some wagons at the extreme top, and there was not a soul to be seen in the direction of Sunday River on the enemy's line of retreat to Dundee and Newcastle. I moved my camp that evening to Ladysmith, and on the morning of the 3rd sent the following telegram (No. 214) to Lord Roberts:—"I find that the defeat of the Boers is more complete than I had dared to anticipate. This whole district is completely clear of them, and except at the top of Van Reenen's Pass, where several wagons are visible, I can find no trace of them. Their last train left Modder Spruit about one o'clock yesterday (Note.—This telegram was written on the 2nd), and they then blew up the bridge. They packed their wagons six days ago, and moved them north of Ladysmith, so I had no chance of intercepting them, but they have left vast quantities of ammunition of all sorts, entrenching tools, camp and individual necessities. They have got away all their guns but two. My troops want a week's rest, boots and clothes. The Ladysmith garrison wants a fortnight's food and exercise. I do not think there is any chance of the enemy making a stand this side of Laing's Nek. Most authorities here consider that it will be impossible for the enemy to collect more than one-half of the force that is now dispersed from here. Will you advise me what course you wish pursued? My own view would be that we should send three brigades to occupy Northern Natal, to restore order and repair the railway, and with two divisions attack the three passes, Tintwa, Van Reenen's, and Bezeidenhout, and pass through one of them the division you wish sent to your side; or, in the alternative of your not wanting a division, that the force here should reoccupy Northern Natal and the Wakkerstroom-Vryheid district of the Transvaal. The latter is the alternative I incline to as likely to be most objectionable to the enemy."

Lord Roberts replied on the same day (No. 315): "I do not think it would be wise now to embark on extensive operations in Natal, which is evidently extremely suitable for the enemy's tactics and very difficult for our troops. To force Passes of Drakensberg would be undoubtedly a very hazardous operation, and would probably enable Boers with small force to hold up very much larger number of our men for some considerable time. Force in Natal three months ago consisted of four divisions of infantry and two brigades of cavalry. It is probably now not of greater strength than three divisions infantry and one brigade cavalry, besides local mounted troops. Two of these divisions with brigade of cavalry should, I imagine, suffice for protection of such portion of Natal as would insure safety of railway towards Van Reenen's Pass, on the understanding that the Natal Field Force is to act strictly on the defensive until such time as operations of this column have caused enemy to withdraw altogether from or considerably reduce their numbers in Drakensberg Passes. Remaining division should be despatched at once to East London—this portion of Cape Colony has from the first been left dangerously weak. It is most desirable that it should be strengthened sufficiently to drive enemy beyond Orange River, for until this is done and railway communication opened to the position I propose to take up on the line a little to south of Bloemfontein, my force will be in a somewhat risky situation, cut off from its base, and with main Boer army collected in its immediate front. Be good enough therefore to despatch one of your divisions with least possible delay to East London. I should like it to be accompanied by its brigade of artillery if this will leave you with sufficient proportion of guns, but if you consider you cannot spare any guns, you can keep brigade of artillery. Any mounted troops you can send will be

most acceptable. There are very few with Gatacre at present."

On the 3rd March my troops moved through Ladysmith, and took up positions beyond, the Ladysmith garrison lining the streets. I was shocked to see how attenuated the men were, and I perceived that they were very much weaker than I had been led to expect. I ordered a medical inspection. The past fortnight's fighting and the relief of Ladysmith had added to my hospital population some 3,500 sick and wounded. Fortunately we had prepared hospital ships, and to a considerable extent evacuated our hospitals in anticipation, but the strain was very great: for well as the Intombi Hospital had been kept it was evident that immediate removal from that foul ground was the only hope of life for most of its starved and fever-stricken inhabitants.

On the 4th I was able to send the following report to Lord Roberts (No. 0436): "All the enemy who left by Van Reenen's Pass have now crossed into the Free State, principally men of the Harrismith and Kroonstad commandoes, and some of the Rustenburg one. These last had lost their way. Prinsloo is in command on the Berg (Drakensberg), and some at any rate of the passes have been put into a state of defence. My scouts are on the Berg, and the whole of Natal between Ladysmith and the Orange Free State boundary at Van Reenen's, and to the south of that line, is reported clear of the enemy. My scouts that have gone towards Dundee and Helpmakaar have not yet reported. None of the Transvaalers are now south of the Biggarsberg. Their commanders are scattered and mixed, and the men have told natives that as all their commanders and field cornets have galloped off, they do not know where they are going. All that are left are a few ambulances with sick and wounded, from which the mules have been taken to draw baggage wagons. One commando is on its way to Cundycleugh, and small parties of the enemy are reported to have retreated by all the Drakensberg passes. We cannot hear of any formed body anywhere, and it is not anticipated they will hold any position on the Biggarsberg."

On the 5th March (No. 217) I acknowledged Lord Roberts' telegram (315), saying: "I note your wishes. I will send at once the Fifth Division and 14th Hussars, as both units have detachments at the Cape. I wish to keep the artillery and Royal Engineers of the division. Of the Ladysmith force the infantry will not be fit for some time; their cavalry and infantry will require, I think, six weeks—they say three months—before they can move." I continued, "The Boers are in full retreat, and it is highly desirable to reoccupy Dundee, and if possible Newcastle, and repair the line. I am now through the mountains, and can get round the Biggarsberg through a fairly open country. I hold Wessel's Nek and Acton Homes, and expect to hear to-day my scouts have occupied the Pass of Glencoe. I propose to move forward as soon as I have got boots for the men to reoccupy Dundee. This is the best defensive measure I can take."

Lord Roberts replied on the 6th (No. 349) directing me to send the Fifth Division and 14th Hussars to East London. As the Boer force seemed to be broken up he approved of my occupying Dundee, and, if possible, Newcastle, but forbade any attempt on the Drakensberg.

On the 7th we heard that Joubert had come in person and stopped the flight of the Transvaalers. It was really Kruger. I telegraphed on that day (No. 219) to Lord Roberts: "Position now definitely ascertained. Large commando under Prinsloo at top of Van Reenen's Pass entrenching and mounting guns on the line One Tree the Tintwa, other passes not yet defended. Joubert turned retreating Transvaalers back from Ingagane. Now at least four commandoes, probably 7,000 in all, entrenching and mounting guns; small commando on Hill—Hlatikulu—Glencoe; Dundee and Helpmakaar are also occupied. My cavalry are at Besters, on Sunday River, and at Meran, and 500 men are advancing from Greytown on Pomeroy. In my opinion Drakensberg Passes easier to attack than Biggarsberg. To take Harrismith would help my operations in the west, and would probably cause enemy to evacuate Biggarsberg. I shall not though be able to attack either Berg, for three weeks, till Ladysmith garrison are fit for the field."

By the 9th I began to feel the pressure of the returning enemy, and I telegraphed to Lord Roberts, whose troops had by this time occupied Burgersdorp, that I thought the Fifth Division would be of more value to him if left with me than if sent to East London. I said: "I fear that if I remain sedentary the Boers will commence raiding, and I think I ought to repair the line to Elandslaagte, and strike at Dundee through Stith. The

-17 Feb. 1903.

would turn enemy's position, and probably save the railway line to Newcastle."

On the 10th Lord Roberts (No. 403) authorised me to delay the departure of the Fifth Division, adding, "There is no objection to active operation in Natal, but no attempt should be made to force the Drakensberg until I am able to act on this side of the passes." He added on the 11th (No. 421) that the Boer forces in Natal were evidently stronger than I thought after the relief of Ladysmith, and that he had heard that Kruger and Joubert were still hopeful of obtaining a seaport (?) in that direction. I at once recalled the Fifth Division, some of whom were already on board ship. On the 12th Lord Roberts (No. 432) again warned me against any operations in the Drakensberg, adding that it was doubtful whether he could leave Bloemfontein for three weeks or a month.

On the 13th I telegraphed (No. 221) to Lord Roberts that I intended to complete the railway to Elandslaagte and to force the enemy to evacuate Helpmakaar and the Glencoe defile, my great object being to drive the enemy back from the railway, to which they were doing immense damage. I told him that he might rely on me that no operations of mine should risk danger to Southern Natal.

On the 19th March (No. 223) I reported that the enemy in front of me had considerably increased, that the Ladysmith garrison were still unfit for the field, and that I regretted the loss of the 14th Hussars, which on the 17th had again been ordered away to Cape Colony.

On the 23rd March, Lord Roberts (No. 613) telegraphed that he did not think I had more than from 8,000 to 10,000 Boers in front of me, as Joubert was collecting all the forces that he could near Kroonstad to check his advance, that he had great difficulties, and was short of supplies, remounts, and clothing. He added, "I shall be surprised if the passes are not practically clear, as we are near Kroonstad."

On the 24th I replied (No. 226), "Could I be of any use to help you with supply? In five days from the start I would get up Oliver's Hoek, in four days more I should have turned Van Reenen's, and if my information as to the state of the railway is correct, in eight days more it should be opened to Harrismith, say, 17 days, or perhaps three weeks from the start. When the line is opened I ought to be able to put up daily 400 tons, say, two days supply for 70,000 men, and 10,000 into Harrismith." I added that I thought 14,000 Transvaalers had been in my front, but there were indications that they were thinking of moving.

On the 24th March Lord Roberts asked me if I had sufficient transport to move two divisions of infantry, with a proportion of artillery, and 1,000 cavalry, into the Free State, if called upon. I replied on the 25th (No. 227), saying that before answering as to "sufficient transport" I must ask him how many days' supply I should have to take with me, in what direction I was to move, and whether I was to continue to supply myself from Natal, or could draw from some advanced post in the Orange Free State.

A telegram (No. 654) from Lord Roberts crossed my No. 227, and in reply to my No. 226 approved my proposition of opening a supply dépôt at Harrismith. In reply (No. 229) I said that I would try what I could do, but that I could not start for a week, being compelled to wait for remounts, because Warren, who was to hold Natal, was dissatisfied, and perhaps rightly, with the number of mounted men that I proposed to leave with him. The crux of the situation at this moment was an uncertainty as to the actual date on which the Volunteers and Irregulars, who had gone south to refit, would rejoin me.

This telegram again crossed a message from Lord Roberts (No. 669). He said that any force coming from Natal would have to make its own arrangements for its supplies as far as Kroonstad should it go west, or to the Vaal River if it went north. He added that looking to the difficulty of supplies, I was to send only one division over the passes, since Natal must be occupied, and the lines of railway leading to the Transvaal repaired and guarded. I replied on the 27th (No. 230), showing why I thought his proposal was impracticable. At that moment Lord Roberts could hardly hold his own at any distance outside Bloemfontein, and I thought that it would be a most hazardous operation for me to march a single division, insufficiently equipped with mounted men, and encumbered with a large supply train, for 100 miles through the enemy's country; while to follow it with a supply column would be certainly impossible. In reply (No. 692) Lord Roberts withdrew his proposition, being apparently under the impression that it was through my fault that he had made it. I regret that

my suggestions herein should have been misunderstood. I had at the moment no idea of Lord Robert's intentions; but I took it for granted that his first care would be to clear his flanks and communications. To assist him in this I offered to provision Harrismith. So much I could have done with safety, and, as I hoped, to the furtherance of the general scheme of operations; but until Lord Roberts was in a position to advance from Bloemfontein it would have been dangerous for me to have undertaken more.

When I proposed to him to send the division for which he asked me through the passes, I assumed that it would join hands with the right of Lord Roberts' line. But to send a division, isolated and unsupported into the middle of the Free State would have been, in my view, to court disaster.

On the 31st March (No. 234) I telegraphed to Lord Roberts proposing to start on the 6th April. I told him that I expected to clear the country south of Newcastle in ten days from the start, and that as soon as I had accomplished this I should be able to attack the Drakensberg Passes with two divisions.

On the 1st April (C 789) Lord Roberts approved of this plan. On the 2nd April (C 798), he withdrew this approval, ordered me to give up my intention of advancing towards Newcastle, and directed me to advance from Natal with all speed on Harrismith for the enemy's position at Ladybrand must be shaken at any cost.

I replied on the 2nd (No. 235) that I would do as he directed, and move on the 6th or 7th, but that I did not like the operation, and that it would be better, and take very little more time, for me to swing round by Newcastle, and so clear my front before attacking the passes. (The situation had materially changed since I sent No. 219 on the 17th March.) On the 3rd April Lord Roberts discussed the military aspects of my position in his 821; and on the 4th in my 236, I replied that I adhered to my opinion, but was ready to follow his instructions, and I asked for a definite expression of opinion as to what course I was to pursue.

In reply, on the 4th April, Lord Roberts said the situation had changed, that he desired I would send Hunter's Division and the Imperial Light Horse to East London with least possible delay, and that I was to act purely on the defensive for some time to come.

I replied on the 5th (238) that I would send the troops at once, except the field hospital, which should follow as soon as I could possibly clear it.

On the 7th April, at the instance of General Hunter, I sent to Lord Roberts (No. 240), saying that in seven days from the start I could clear the Biggarsberg; and in 14 days from the start ought to be in possession of the Drakensberg.

The division and the Imperial Light Horse were sent off at once, and, drawn on I think by their removal, the enemy attacked my right flank in considerable force.

ADVANCE ON NEWCASTLE.

During the three following weeks I remained on the defensive, in compliance with my instructions. On the 2nd May Lord Roberts telegraphed (No. 1,419) that he was advancing, and that he wished me to occupy the enemy's attention in the Biggarsberg. I replied (No. 252) that I would start on the 7th, which I did, but I turned northward on the 8th, and on the 9th halted to await an expected attack from the enemy. They came in some force, but did not attack. On the 10th we had concentrated at Sunday River; on the 11th we reached Waschbank; on the 12th Vermaak's Kraal. On the 13th, with the assistance of a force which joined us from Greytown, we assaulted and took the Helpmakaar position, and drove the enemy's force to Dundee. We halted there on the 15th, and moved on the 16th to Glencoe, on the 17th to Dannhauser, and on the 18th to Newcastle. We were just coming up with the flying enemy at Laing's Nek, when we were stopped by some commandoes which had been hurriedly brought up by train from the west.

My advance on Newcastle was made in echelon from the right. Simultaneously with the advance of the main column through Helpmakaar, Dundee, and Dannhauser to Newcastle, General Hildyard pushed up the railway and pass of Glencoe, while General Lyttelton, with the reorganised garrison of Ladysmith, moved up on Hildyard's left, along the old Ladysmith-Newcastle road, through the passes of Biggarsberg. On arrival at Dundee, on the 14th, I received Lord Roberts' telegram (O 18) of the 11th May, informing me that the Drakensberg Passes must in his opinion be very weakly held; while there could not be any large force in the Biggarsberg, and directing me to push on to

the Transvaal. In reply, I informed him that I ought to reach Newcastle by the 19th at latest.

CORRESPONDENCE WITH LORD ROBERTS AS TO FUTURE POLICY.

Acknowledging this, he telegraphed (1915) on the 15th May, saying that he imagined that an advance by Laing's Nek would be out of the question, and asking me if I could force my way through the passes west of Newcastle, and march through Vrede on Standerton. I replied on the 16th that my movements after Newcastle must depend upon the time that would be needed to repair the railway to that place. I asked him for how many days he would require me to supply myself after I left my railhead before I drew from his magazines. I added that, as my only route into the Free State was by Botha's Pass, I thought it would be a much simpler operation to move by that pass and turn Laing's Nek than to advance on Vrede.

Lord Roberts replied on the 17th by a telegram (No. 1,660), with which I could not agree. I replied on the 18th that I thought it would be far easier for me to force Laing's Nek than to send a detached force by Botha's Pass, and that I hoped in any event to be in a position threatening Standerton by the 30th. On the 20th I informed Lord Roberts that this would be impossible on account of the great damage done to the railway.

On the 23rd May Lord Roberts directed me to defer any attack on Laing's Nek until he reached Johannesburg. At this time it seemed to me that Lord Roberts was entirely misinformed as to the nature of the country in which I was operating, and had no idea of the difficulties of the Drakensberg Passes.

On the 25th May we heard of the relief of Mafeking.

On the 26th Lord Roberts informed me that it was quite unnecessary that I should run any undue risk, and that he was arranging to occupy all the principal places in the north-east Orange Free State, including Vrede.

On the 28th, as there was no hurry for an advance, I moved two columns, under General Hildyard and General Lyttelton, across the Buffalo in the direction of Utrecht. My object was to clear my right flank, drive back the few scattered Boers, who were threatening the Natal border, ascertain the feelings of the inhabitants of Utrecht, and mislead the defenders of Laing's Nek. These columns met with no opposition, and during their absence I occupied the old Mount Prospect position with General Clery's division.

On the 30th May, hearing from Lord Roberts that he had occupied Elandsfontein, thus cutting the Pretoria and Laing's Nek railway, I sent a message to the Boer commandant at Laing's Nek. I suggested to him that as Lord Roberts was now at Johannesburg, and the occupation of Pretoria was only a matter of days, while his own railway communication with that town was permanently interrupted, it would be better for him to quit Laing's Nek and cease to prolong a useless combat. When passing Dundee I had detached a column to Zululand, with orders to hold an indaba of natives, and inform them that the Boers had been driven out of Natal. The commander performed his duty satisfactorily, but while trying a short cut on his way back was ambushed, and lost the greater portion of one squadron.

On the 30th May Lord Roberts instructed me to push on to Ermelo and Belfast as soon as I had obtained possession of Laing's Nek. On the 2nd June I was invited by Chris Botha, the Boer commandant, to meet him under Laing's Nek to discuss the possibility of peace. He wished for terms, but finding that Lord Roberts insisted on unconditional surrender, he declined to negotiate further.

PASSING OF THE DRAKENSBERG—ADVANCE ON STANDERTON.

On the 4th June I reported that I should be ready on the 6th to try to take Laing's Nek. Lord Roberts replied on the 5th that it was scarcely necessary to take it, as he was in possession of Pretoria, but that I might see what sort of opposition I was likely to meet with. On the 6th I moved, captured Botha's Pass on the 8th, Gansvlei on the 10th, and forced Alleman's Nek after a smart action on the 11th, cutting the Laing's Nek-Standerton road about four miles north-west of Volksrust.

On the 12th I received a telegram (No. 2019) from Lord Roberts, dated the 10th, saying that he now learnt that Laing's Nek was to be held in strength. He suggested, that as his communications were cut, I should

leave Laing's Nek in the possession of the enemy, and move towards Standerton. In a second telegram of the same date he said that his communications were occupied by the enemy and asked me what I could do. In reply, I informed him that Laing's Nek was in my possession, and that the enemy who had occupied it had fled out of touch. I added that I proposed to move forward as soon as I could get my supplies up the pass. On the 14th June the Landrost formally surrendered to General Lyttelton the town and district of Wakkers-trom, and on that day I informed Lord Roberts that I expected to be at Standerton on the 23rd. I actually occupied it on the 22nd June.

14964. It was in June, I understand, that you first were selected to hold the Command-in-Chief in South Africa?—About the middle of June. I was told I should treat the appointment confidentially, but I was told if there was a war I should be Commander-in-Chief.

14965. So that there was at any rate an apprehension that a war might take place at that time?—Yes.

14966. Did you form an opinion that a war was likely?—I said that in my opinion the war was inevitable, but on the question of bringing it on, that I doubted that the Boers would bring it on unless we did.

14967. We have had a good deal of evidence to the effect that although there was that general apprehension of war, no distinct preparations were made at that time?—I know nothing about the preparations for war, except by hearsay. I was commanding at Aldershot at the time, and had a good deal to do, and was very little in London, and whenever I came to London I saw the Commander-in-Chief, and I gathered from him that preparations for war were not being made on the scale that he thought necessary.

14968. All that had been done, as far as you were concerned, was the agreement you mentioned that your force if it was sent out should be an Army Corps and Cavalry Division, and so on?—I was told that it was the intention of the Government to send that force, and I accepted it.

14969. You accepted it as sufficient?—Well, I did not actually accept it as sufficient; I accepted it as a basis on which we should mobilise. At that time I was perfectly ignorant of whether I was going to fight with that force the Transvaal alone or the Transvaal and Orange Free State, and the only information I got from the Secretary of State was that the Orange Free State was out of account.

14970. But in July you heard of a different project?—Yes.

14971. And to that proposal to send out a division of infantry, you had some objections, I think?—I did object to it very strongly. I objected to sending out any portion of what was intended to be our fighting force before we had a plan of campaign, and before we had, at any rate, come to a decision as to in what portion of the very large country, South Africa, the fighting force was really intended to be employed.

14972. Was not the object of sending out the 10,000 men then proposed simply to strengthen the existing garrisons in Cape Colony and Natal?—No, it was not; it was a definite force.

14973. But you were aware of the state of the garrisons in the Colonies at the time?—Yes, I was, and I pressed that those garrisons should be completed on a scale which could be made, as I put it, a safe ground for the fighting force to be based on, but that was not done.

14974. You were aware that there were local schemes of defence for the Colonies?—I cannot say that I was. I imagined that there were such schemes, and I knew there had been the year before a question of preparing a large scheme of defence for both Colonies, and that to a certain degree it was in the hands, I understood, of Sir William Butler at the time, but I certainly was not aware of any perfected scheme of defence.

14975. Did you ever see the schemes of defence?—Never to my knowledge; originally I saw General Good-enough's, and did not approve of it at all, but it was to be changed, and I left office as Adjutant-General and I did not after 1897 see any schemes of defence.

14976. They were not brought to your notice when you went to South Africa?—Oh, no.

14977. The circumstances had so much altered?—The circumstances had entirely changed then.

14978. Of course those local schemes of defence were drawn up, as the Regulations provide, simply for the

G.C.M.G.

17 Feb. 1903.

existing garrisons?—Yes, for the existing garrisons. The garrison was changing the whole of that year, and they were to a certain degree increasing it. I know Lord Wolseley was continually urging to increase the garrisons, and they were being increased.

14979. What I was alluding to was that you did not consider the garrisons as they had been placed in the Colonies sufficient?—I did not, and I go further than that; the conditions we were obliged to look at at the moment were the conditions of an actual war with, possibly, the Free State, but certainly the Transvaal, and no scheme of defence, according to my belief, had ever been prepared for those conditions, and therefore practically there was no scheme of defence.

14980. Did you form any idea in your own mind what would have been an adequate garrison—independently of an expeditionary force—for the two Colonies for the purposes of defence?—I did. My own idea at the time—I only mentioned it in conversation, and very vaguely, to Lord Wolseley—was that I thought about 15,000 men in Natal, just in front of Estcourt, somewhere about Frere, behind the Tugela, in fact, would have been sufficient to have protected Natal. The apex of the triangle which Natal forms is mostly a Dutch district, and that I should have given up and massed the troops in position where they would be mutually supporting, covering the ground south of the Tugela, and, with regard to Cape Colony, I had several conversations with Lord Wolseley, who was rather anxious to fortify the bridges over the Orange River, but personally I was very much against that. I did not wish to push any troops forward into places where they could be surrounded by the enemy on the outbreak of war, and I would rather keep as many troops as possible in hand further back in the Colony, but I never thought there would be any serious invasion of the Cape Colony until there had been a great success of the enemy in Natal. That was my idea always.

14981. You thought they would attack, if they did attack, in Natal?—Yes.

14982. You gave us the number of 15,000 for Natal; had you any number in your mind for Cape Colony?—No; the question of Cape Colony really was much more a political than a military one, and I thought the General Officer at the time would probably have done very much what I did the moment I got out there—that is, held the western and eastern lines, and left the midland line to the Dutch.

14983. Could he have done that with the normal garrison?—Well, it was done with the normal garrison in the three very critical weeks; he could have done it, I think. I should not have increased the garrison in Cape Colony, and for political reasons I think it would have been better not to do anything to irritate the Dutch in Cape Colony.

14984. Then that 15,000 men in Natal includes the normal garrison; that is, the total you wanted?—Yes.

14985. Was not that very much an increase of about 10,000 men in South Africa?—Yes, I have not the actual figures in my head, but I think it would have been rather more. I think we had about 9,000 men in Natal in June; that is my impression.

14986. I mean there was not so very much difference then with regard to the number of men between your proposals and the proposals which the Government were discussing in July, 1899?—No, but then you come to my Minute of the 6th July. My first objection was the main objection. I did not like the idea of commencing operations in South Africa by sending out four Generals and a force of 10,000 men. It was a complete force that it was proposed to send out. If they had been merely going to send 10,000 men to reinforce the garrison of South Africa, I should have jumped at it, but this was a force to be sent out as a complete consolidated fighting force—one division of infantry and one brigade of cavalry—and I thought they would simply be lost; I thought the Boers would surround them, and that it would be rather like putting a bait out. That was my opinion, and I was against it. I was never asked any question as to sending out 10,000 men to reinforce the garrisons.

14987. I have got here the numbers: there were 4,462 in Cape Colony and 5,827 in Natal, or a total of 10,289 effectives of all ranks in June?—Somewhere about 10,000, perhaps more.

14988. So that as regards numbers, you and the Government were pretty well agreed, but, as you explain, the purpose of the force was different?—The employment of those numbers would have been totally different. The proposal to send 10,000 men was not to send the 10,000

men to Natal; again, if it had been there I should have jumped at it, but it was to send it to Cape Colony.

14989. But I think you say in your paper that you were not able to find out where exactly the Government were to send it?—No, I was not able to find out where, but I did gather that the idea was that it would be somewhere about the bridges.

14900. (*Viscount Esher.*) Did not the Commander-in-Chief, Lord Wolseley, know?—This proposal was submitted to me by Lord Lansdowne. I had not seen the Commander-in-Chief at the time. I was visiting in Devonshire when summoned, and I had no opportunity of conversation with the Commander-in-Chief before I saw Lord Lansdowne.

14991. (*Chairman.*) Is there anything else you would like to say about the position in July?—No; I have put in the narrative the summary of what I wrote to the Commander-in-Chief, and it was really a summary of my observations to Lord Lansdowne. He wrote a minute on that paper which I have never seen to this day. I do not know what he said or whether he agreed with me or not. I gathered he more or less agreed.

14992. Who wrote the minute—the Commander-in-Chief?—Yes. I sent him my minute of the 6th July as being merely a reproduction of what I had said to Lord Lansdowne, and I understood he wrote a minute on it, but I have never seen that minute.

14993. You heard nothing more for some time after that, but you became anxious as to the situation?—Yes, mobilisation requires a preliminary expenditure at the moment, and I gathered that that expenditure was not being carried out, so that we were not ready to mobilise.

14994. We had a good deal of evidence about the position at that time, and that is the case; there were certain preparations which the military authorities considered necessary, and which were not taken because of the absence of money; that appears from the evidence, and that is your position about it?—Yes, that was all I knew.

14995. You thought that, considering your position as being designated for commanding the force in the field, it was your duty to put your views forward, and you did so in the beginning of September?—Yes, I thought I was going to find myself in a hornet's nest, and that I ought to do what I could to protect myself.

14996. You put it forward in a memorandum which you addressed to the Commander-in-Chief?—Yes.

14997. Would you say shortly what your view of the position was at that time?—My view was that we were moving, I thought, rather rapidly towards war, and that our preparations were not keeping up with the situation.

14998. And you had an apprehension that if the negotiations, or any failure of negotiations, led to war, that absence of preparation would be of very serious consequence?—Yes, I was impressed with the fact that it was not my duty as a soldier to take any measures to make peace impossible or even difficult, but there were ordinary measures of preparation that could have been done privately and could not really have affected any peace negotiations, and those were not being taken, and, in my opinion, we had not enough time to spare to make it wise to delay them.

14999. Did you base that upon considerations of how long it would take to reinforce the forces in South Africa?—I based that upon considerations of the difference of time that it would take between the moment at which we could put our force in the field and the moment at which the enemy could put their force in the field.

15000. Did you work that out in figures?—I came to the conclusion that practically whatever we did they would have six weeks' start of us. I thought that the negotiations were tending rapidly towards war, and that we were not ready for war. I thought that we ought at once to decide as to the line of policy which would be adopted if we were forced into war, and that we ought to begin a regular and effective preparation, with a view of carrying out that policy at the very moment we found it was impossible to avoid war, and I thought that to do that we ought to protect our Colonies, and to have a force in our Colonies that would be sufficient to deter the enemy from invading them before we were ready.

15001. And, therefore, you advocated measures to be taken to delay any outbreak?—Yes, I advocated

that the diplomatic proceedings should be conducted with a view to gaining time, and that the military preparations should be hurried.

15002. I suppose there is another way of putting that matter, that you would be of opinion that if there had been any means of forecasting the future earlier, and as soon as it became evident that there was a danger of war, the preparations ought then to have commenced?—Yes, to put it quite plainly, I thought the future was not being forecast—that we were drifting.

15003. In the memorandum, of which you have spoken, to the Commander-in-Chief, you elaborated that?—I elaborated that theory in the memorandum which I addressed to the Commander-in-Chief on the 5th September, and in which I said I knew he had represented those facts more fully, and, probably, better than I could, but I merely wanted to support the recommendations I knew he had put forward.

15004. Have you anything else to say about the position at the beginning of September?—Not beyond that my recommendations did not meet with the result that I had hoped they would; I still considered we were not in the beginning of September making sufficient preparation.

15005. Towards the end of September the Secretary of State asked you for your reasons with regard to the route, did he not?—Yes, he knew that from June up to that date I had always tried to impress upon him that, in my opinion, we could not leave the Orange Free State out of account, and that they would in the end be found to side with the Transvaal. I had always told him my experience in 1881, when they were a very harassing friend, at any rate, and he asked me on that date to put my views on paper, and I did so.

15006. You put in the memorandum dated 24th September which you have, and naturally the only way to let us understand the question is that you should read it to us?—Yes. "Now that money has been granted to make purchases in anticipation of the despatch of an expeditionary force to South Africa, it is essential that the base should be selected from which that force is to start. Durban, the base for an advance through Natal, is some 730 miles from Cape Town, the principal base of an advance through the Orange Free State. From Durban to Pretoria is, say, 500 miles. The average distance of Pretoria from the three ports in Cape Colony is, say, 1,000 miles. From the Natal frontier to Pretoria is 200 miles, and from the Cape frontier to Pretoria is 400 miles. It is probable that the railway authorities in Natal will do all they can to help an expedition. It is doubtful if in Cape Colony we should be at all certain of the same willing assistance, if, indeed, we can count on not being obstructed. So far, then, everything points to the Natal route being the best, and so it undoubtedly would be, were it not for two great drawbacks—the port of Durban and the position of the Orange Free State. I have not been able to obtain any reliable information as to the facilities Durban now offers for the disembarkation of an expedition. I am told that the utmost speed would be three ships a day. An Army Corps will require close on 100 ships for its transport. If they can only discharge at the rate of three a day, disembarkation will occupy one whole month, and bad weather would make it still longer. This is a serious outlook. The Orange Free State flanks the line of advance by Natal for some 200 miles, viz., from Ladysmith to Standerton, or even farther. Now the Orange Free State may adopt three courses. I. They may declare themselves neutral, and evince a benevolent neutrality to England. II. They may declare themselves neutral, with the determination of secretly helping the Transvaal as much as possible, and with the idea that the moment may come when it will be opportune to declare themselves on the side of the Transvaal. III. They may openly side with the Transvaal. A glance at the map will show that in the second case they will be dangerous, and in the third case it would be unwise to offer them the advantages an advance by Natal—which would mean a flank march of 200 miles across their front—would offer them. In my opinion, an advance by Natal in either of the second or third cases would be a greater risk than ought to be incurred. It must be recollected that neither Natal nor the Transvaal will provide food for the force that advances on Pretoria. All it eats will have to be brought up from behind it. To advance on Pretoria and leave a hostile Free State to take its own time and opportunity for cutting the communications and stop-

ping the flow of supplies, would, I think, be running an unnecessary and most dangerous risk. I would, in such a case, far rather face the double distance and the possible hostility of the Cape Railway directorate, than risk a march of 200 miles round a concealed enemy. An advance through the Orange Free State would give three seaports as bases instead of one, and at the commencement enormously simplify disembarkation, concentration on the frontier and supply when there. The Orange Free State is open, the advance would be through its centre, the country contains a good quantity of supplies. It would be almost impossible for an advance through the Free State to be opposed by all the Free State troops and all the Transvaal troops—while such a combination is quite possible against a force advancing by Natal. On the other hand an advance through the Free State would have every chance of disposing of that State first, and settling with the Transvaal alone afterwards. Consequently I would most strongly urge that as soon as H.M.'s Government decides upon an expedition they should force the Free State to declare for one side or the other. If they declare for the other side, our route to Pretoria should be *via* Bloemfontein; if they declare for neutrality, they should be forced to give sureties that they preserve that neutrality—failing to do so they should be treated as hostile. A decision in the matter is urgently required, as it is essential the stores we are now ordering should be collected at ports that serve the route which may be selected." That, I believe, was read or communicated to the Cabinet, and Lord Lansdowne told me on the 30th, that the Cabinet had given orders for the expenditure—that was the expenditure for mobilisation—and I then pressed him to at once call out the Reserves, and I pointed out to him in a letter that he would incur a very dangerous military risk if that were not done, but he did not do so. He put it off until the 7th October.

15007. That was a week?—Yes, the 7th October was the earliest date he said that it could be done, and I said: 'The crisis will come before the troops get out to South Africa; may I go out at once?' and it was definitely arranged that I should start on the 14th, and I did so.

15008. As we know, on the 9th the ultimatum came from the other side?—Yes.

15009. That completes the period before the outbreak of the war; is there anything else with regard to the preparations for the war, which is the first head of our reference that you would like to say at this point?—Well, we were late; the preparations were not so well advanced as they should have been, and we were short of hospital equipment, harness and wagons, and those sort of things, and of supplies.

15010. You were short at what point?—At the time I arrived at Cape Town; the troops came out faster than they could be properly equipped, or than we could collect food for them.

15011. The troops were surely not short of food at Cape Town?—No, but if you are sending troops up country by rail you must have magazines somewhere, and, of course, it was desirable to get your magazines as far forward as you could beforehand, and this had not been done.

15012. In Cape Colony or Natal?—In Cape Colony; *See Q. 15294* in Natal it had been done. In Natal, Ladysmith was as far forward as we were holding, and Ladysmith was full up with supplies to the end of the year; they had about 60 days' supplies, that I had arranged for. I had asked for that to be done before I left England; in fact early in September I had suggested Ladysmith should be filled up with supplies.

15013. Do you represent that any of your movements in Cape Colony were delayed in consequence of the absence of supplies?—No, I do not, but I do represent that one of the anxieties I had at first in Cape Colony, and one of the difficulties I had, was, that assuming that I had sent a larger portion of the force as it arrived to Natal, I should have been rather handicapped by want of supplies.

15014. More from the fact that they had not been sent away from Cape Town than from the fact that they were not in existence?—From the fact that they were not at that time in the Colony.

15015. In the Colony at all?—Yes. I was told before I left England that I should start with two months' reserve of supplies, which would not have been a very large amount, but when the preparations were made

17 Feb. 1903.

that reserve of supply included the rations that are loaded with all troops in each ship; it was not a real reserve in fact, it was a distributed reserve. We got it before there was any real reason to move many troops in Cape Colony, but assuming that the original programme had held good, and that the troops on landing had been moved up at once to form an Army Corps on the Orange River, and then it had been intended to commence an advance, the preparations were insufficient.

15016. As it turned out it was not so?—As it turned out it did not matter.

15017. Does that remark also apply to transport?—Yes, all the wagons had not arrived, and the harness was short. At the moment we were not able to get on at the Cape when I got there as much with the preparation of transport as I should have liked, because a good deal of the material instead of having been provided beforehand and being ready, came out with the troops, and when you have to equip an entirely new transport, of which your men know nothing, you want a certain amount of time to do it. In the minutes that I wrote urging better preparation, I always pointed out that the transport would be a strange transport.

15018. And I suppose there again you mean that if you had had to make your advance in the way you contemplated, this deficiency of transport would have been serious?—Yes, there would have been a great deal of trouble, and there was some trouble as it was.

See Q. 21247;
21406.

15019. (*Viscount Esher.*) One of the points you mention in your statement is that no council of war was held; do you wish to suggest that one should have been held?—Well, I do suggest to the Commission that I was placed in an uncomfortable position—I made no complaint myself—but one which I do not think in future a General Officer ought to be placed in. I think there should have been a consideration of the intended expedition at which the Commander-in-Chief designate should have expressed his views before the Army Board or the Defence Committee of the Cabinet, or before some Board who would have heard what he had to say, and he would have had an opportunity of raising a large number of questions that I should have liked many times during the three months to raise, but I never had any opportunity.

15020. You were never called before the Defence Committee of the Cabinet at all?—No, I was never called before anything.

15021. And you were not present at any meeting of the Army Board at the War Office?—Not one—practically at not one. I was President of a Committee which sat at that time in the War Office which had nothing to do with the war, and occasionally Lord Wolseley, if he heard I was in the Office, and there was any question going to be considered in the Secretary of State's room, sent down for me and asked me to come in; but that was a casual matter, and I was never consulted on anything, nor was I ever given any question to consider and answer by anybody.

15022. You had some interviews with Lord Lansdowne, of course?—Yes; Lord Lansdowne's instructions to me were: "Come in to see me if you come to town."

15023. But you did not see the Prime Minister or the Colonial Secretary, or any other member of the Government?—No, nor did I see any of the correspondence that was passing at the time between the Cape and the Colonial Office.

*Vide
page 170.*

15024. In the summary of your evidence there is a heading which begins: "General considerations affecting the plan of the campaign." Did you lay those considerations before Lord Lansdowne or any other member of the Government?—No, I was never asked for my opinion on anything of the sort. I did indirectly discuss them with Lord Wolseley on several occasions, and we differed on an important point—namely, that he attached strategic importance to Bloemfontein which I did not.

15025. But that was a discussion between you and the Commander-in-Chief?—A private discussion.

15026. And these general considerations were not laid before the Government, because you were never asked to state your opinion to any Minister of the Crown?—Never; I was asked for nothing.

15027. I see you say that when you arrived at Madeira you received telegrams from Sir George White and General Forestier-Walker, and you say that you approve of General Forestier-Walker's dispositions with certain exceptions; did you send any reply to Sir George White's

telegram?—I think I acknowledged it. I do not know that I did more, as I had nothing to say to him.

15028. He informed you that the forces of the two Republics were converging towards Dundee and Ladysmith, but you did not upon that send any reply to him, did you?—No, I did not certainly send any reply, because whatever he mentioned in the telegram he had done probably before I got it. I found it waiting for me at Madeira.

15029. You say, "While approving General Forestier-Walker's dispositions." I suppose you telegraphed to him saying that you approved his dispositions generally?—I did. Sir George White's telegram was received at Madeira, and he had sent it on the 15th October, so that it had been waiting two days when I got there: "Transvaal and Orange Free State forces are converging towards Dundee and Ladysmith, and are in strength inside Natal border. Hunter's loss here would be heavily felt. I propose keeping him for the present." That was my chief of the staff that he kept; that was all he said, and there was nothing to answer. My answer to General Forestier-Walker was: "I fully concur in your dispositions. Orange River Bridge most important at this moment. Do not risk much at Naauwpoort or Molteno until you feel strong enough. If sailors go to Molteno, send on good Engineer officer with them, as they are inclined to select points exposed to long range fire. Good luck to you."

15030. (*Sir Henry Norman.*) Do I understand, Sir Redvers, that before your departure for South Africa you received no letter of general instructions as to what the Government wished to be done?—None.

15031. Nor on your arrival there?—None.

15032. Or after your arrival?—None—the usual letter of service.

15033. But that is a mere letter of appointment?—Yes.

15034. (*Sir Frederick Darley.*) Speaking broadly, your opinion is that the Commander of a force such as you had under you at that time should be taken into the confidence of the Government?—I think so. I think I suffered myself a tremendous disadvantage by not having the smallest idea when I arrived at Cape Town of the course which negotiations had been taking, and the attitude of mind in which I should find Lord Milner.

15035. And you further think that such a Commander ought to have an opportunity of expressing his views upon the state of military affairs to the Government?—I certainly think so. I think any man is better for having been forced to explain his views, and the very fact of explaining a man's views very often calls attention to various things he might otherwise overlook, and I think that to send a man out on that sort of expedition without having caused him first of all to give some notion of his policy is really placing him at a disadvantage. There were matters I should very much have liked myself to have brought forward and discussed. I was told to treat my appointment as confidential, and I was not able to discuss them very much, and it would have been an advantage for me to go before a body of gentlemen and say "I think so and so."

15036. (*Sir John Edge.*) When did you first know that it might be assumed that the Orange Free State would join the Transvaal?—I knew it in 1881, and I never altered my opinion.

15037. I know that was your opinion all through, but when were you first informed by anyone in connection with the Government?—By nobody. I believe, if you recollect, in November, 1899, Mr. Balfour made a speech at Dewsbury, and he there said that on the 28th September (the figures worked out to that) if he had been asked whether the Orange Free State were likely to be at war with us he would have replied we were more likely to be at war with Switzerland, and that was the attitude certainly up to the day of my minute of September, with which I was met by Lord Lansdowne on every occasion when I mentioned the Orange Free State.

15038. That in any consideration of the war and how you would conduct it in South Africa you were to leave the Orange Free State out of account altogether?—Out of account; that was Lord Lansdowne's expression, to leave the Orange Free State out of account; and that was really my difficulty, because in my own mind every plan I had and every theory I had about the war was based on the certainty that I should have to fight the Orange Free State, and practically when I was talking beforehand I was always having rather to

argue on the supposition that I should not have to fight the Orange Free State.

15039. (*Chairman.*) Do you not say here that on the 30th September you were told the Government had decided to adopt the route by the Orange Free State?—Yes, on the 30th September; my minute was on the 24th September.

15040. Your remarks apply not up to the time you left the country, but only up to the time of that minute?—That is so. I read in the paper that they had made a treaty; I knew that from the newspapers. I forget the date of the treaty, but it was some considerable time before that—a treaty as to an offensive and defensive alliance.

15041. (*Sir John Edge.*) If you had been allowed to take the Orange Free State into account from the first as a certain opponent, what line would you have taken? Would you have suggested an advance through Natal, or an advance through Bloemfontein?—In all cases on Pretoria I should have advanced through the Free State, and I should have endeavoured not to advance through Natal. I may say that as long ago as 1895 the question was submitted to me, and I gave the opinion then very strongly against any advance through Natal. The difficulties in Natal are enormous, and nobody who has not seen the country can appreciate them.

15042. I think you said you formed the opinion in 1881 that in a war with the Transvaal we should have the Free State against us?—Yes, President Brand told me so then.

15043. And you had never seen anything to make you alter that opinion?—Never.

15044. (*Sir John Jackson.*) Is it within your knowledge whether in the past on recent occasions Generals in chief command have been sent out without some plan of campaign having been discussed by the authorities at the War Office?—Well, I should say not; I should say that usually the plan of campaign has been rather fully thought out, and I imagine known to the War Office, at any rate, known to the General.

15045. It was in the past have been discussed between the General going out and the Commander-in-Chief?—Yes. I went out in 1878 with the General who was then sent to the Cape, but it was more the case of a rebellion, and therefore he was dependent almost entirely when he arrived at the Cape on what the Governor said, so that there was no plan of campaign at the moment, but the whole conditions of the case had been explained to him.

15046. But in this case I understand you had not really any formal discussions with the Commander-in-Chief?—I had no formal discussion with anybody.

15047. (*Sir John Hopkins.*) Were you put in touch or were you in touch with the Intelligence Department before you went out? Could you feel yourself in a position to go to them for any information that they might be able to give you?—Yes, they did give me everything that they had, but I considered I was not in a position to direct them to get anything without going to Lord Wolseley and asking him to do it. It was outside the Office.

15048. Did you take out an Intelligence Officer with you on your staff?—No. There were such officers out there.

15049. Of course you could have had any papers from them that they had or any information that they had before you started?—I had all their information before, and they had been preparing information for a considerable time I believe, but the information they obtained, and the action they took, was not directed in any way by me.

15050. (*Sir George Taubman-Goldie.*) Do you say that you had all the information the Intelligence Department had furnished to the Government?—I do not know about the Government; they gave me all the books.

15051. And the documents, I suppose?—Yes, I should say everything they furnished the Government with.

15052. Early in August you were aware of the practical certainty in their minds that the Free State would officially join hands with the Transvaal?—Yes, I was aware of it in the minds of the Intelligence Department, but it was not accepted by the Government. So late as the 16th August certainly, at any rate, one member of the Government would not have anything to do with the Free State.

15053. Did you discuss this document of the Intelligence Division with Lord Lansdowne?—No, I do not

think I had any Intelligence Department documents given to me until I was appointed Commander-in-Chief.

15054. That is the point I wish to get at?—I do not think I had, and I was appointed Commander-in-Chief on the 9th of October.

15055. When you told Sir John Hopkins that you had the Intelligence Division information, that was only when you were appointed Commander-in-Chief?—Yes. If I had gone to the Intelligence Department I have no doubt Sir John Ardagh, who was a very old friend of mine, would have given me anything I had asked him for, and I got from the Intelligence Department the information I used in the minute about the port of Durban.

15056. But the Secretary of State for War did not suggest to you at your early interview that you ought to see the Director of Military Intelligence and discuss the matter with him?—No, he told me to keep my appointment strictly confidential.

15057. And consequently he did not discuss with you any documents he had received from the Intelligence Division, giving reasons at great length?—He discussed with me the numbers, which he quoted from an Intelligence Department paper, that he said the Transvaal could put into the field.

15058. But in addition to that, reasons showing fairly clearly the certainty that the Orange Free State would join with the South African Republic?—No; as I say, whenever I urged that I was confident of it myself—and I urged it to him several times, as often as I consistently could—in each case the answer always was that the Orange Free State was to be left out of account.

15059. There was a document on the 8th of August, 1899, giving at great length the reasons for believing certainly that the Orange Free State would join with the South African Republic in war. Were you given a copy of that document at the time in August?—I really could not say; I doubt it. I have seen the document, but my impression is that I got it considerably after that date.

15060. And you say that in any case you would not have paid much attention to it, as your mind was already made up that the Orange Free State would join the South African Republic?—Yes, I was confident.

15061. (*Viscount Esher.*) Did Lord Lansdowne never draw your attention to the treaty of July, 1897, between the Orange Free State and the Transvaal—there are only three clauses to it?—Never. I was aware of that treaty.

15062. But Lord Lansdowne never discussed that treaty with you or mentioned it or referred to it?—Never; I can state that most confidently, because it was a point on which I was always grumbling to Lord Wolseley when we were talking of this war, that they would eventually have to go through the Free State, and I thought it should be settled, and that until we could make a plan of campaign we could not get on. It was absurd my making proposals for what I hoped not to have to do.

15063. Did you see that treaty?—I read it certainly.

15064. Had you seen it?—Yes, I had; I think I had seen it in 1897.

15065. Did it not satisfy you that practically the Orange Free State were bound to assist the Transvaal?—I never doubted it; my point always was that I remembered so well in 1881, as I said, the shameful behaviour of the Orange Free State, and when Mr. Brand was expostulated with he said he could not help himself—that blood was thicker than water, and I said, "Do not let the Government deceive themselves; this same thing will happen, and the Orange Free State men will fight on the side of the Transvaal whatever happens." That was my conviction throughout.

15066. (*Sir George Taubman-Goldie.*) And you were aware that besides the treaty of July, 1897, there was a Military Convention of July, 1897?—Yes, an offensive and defensive alliance.

15067. There was a Military Convention as well, agreeing as to the command of the two forces, when the two States were acting together, providing for their discipline, supplies, and so forth?—Yes, I knew of that.

15068. But Lord Lansdowne never discussed that matter with you; he never brought that forward?—Never at all; he declined to discuss the question of the Orange Free State with me practically until the 23rd September, when he suddenly told me I might put my views forward as to the route.

General The Right Hon. Sir Redvers Buller,
V.C., G.C.B.,
G.C.M.G.

17 Feb. 1903.

*General The
Right Hon.
Sir Redvers
Butler,
V.C., G.C.B.,
G.C.M.G.*

15069. (*Chairman.*) There was a doubt, though, in spite of all these treaties and conventions, as to the attitude of the Orange Free State, was there not?—I believe that is so, but I had no doubt in my mind as to what the attitude of the Free State young men would be; that was the point.

17 Feb. 1903.

15070. But there might be political reasons for not bringing forward the fact of the convention and treaty?—Yes, that was one of the reasons which influenced me when I said in my minute that I did not wish to do anything which would prevent negotiations or impede negotiations.

15071. (*Sir George Taubman-Goldie.*) But that would still make it necessary to take steps, in view of the eventuality of the States joining hands?—I thought so.

15072. The only other point I would like to raise on the preparations for the war—a quite different subject—is that you mentioned that the Cabinet decided to send to India for a force of 5,500 men, which was the only organised body of troops they could put in the field at the moment without dislocating the whole of our mobilisation arrangements. During the five years previous to the war, was that the normal position of things, that we could not send 5,000 or 10,000 men out of the country without dislocating the arrangements?—The arrangements there referred to were our arrangements for mobilisation of the Army Corps, and they were complete; the regiments were told off, and I think at that time actually they were warned, at any rate if they were not warned, the warnings were all ready, and everything was settled. The arrangements connected with the Army Corps were so far perfected that practically we had a good deal of work done which would have been upset by withdrawing men for a detached force.

15073. They must have been withdrawn from the same body?—They would have been portions of the same body.

15074. Under the system which then existed we could not have laid our hands on 5,000 men in this country outside the First Army Corps?—Under the system which then existed the very most we hoped ever to put in the field, and the very most the Government had ever allowed the Military to consider that they should put in the field, was two Army Corps, and the First Army Corps was at that time, so to speak, under orders, and the Second Army Corps was nominally waiting in reserve. The Second Army Corps would have been largely formed of Militia, and, therefore, practically taking these men out would have taken the cream off the milk.

15075. I only ask you, with your experience of military organisation, whether that is quite a sound state of things for an Empire with an enormous number of dependencies scattered all over the world?—Well, you must have some limit and you must have some organisation, and I think as we had that force available and as the Government had gone so far as to have these troops in India told off, and as they were a complete force, and as they could come more rapidly, that it was the proper thing to do, and I think it is sound for the Empire to make such arrangements.

15076. Taking the other 5,000 away from our Colonies. Do you approve of that?—Which?

15077. In the Mediterranean?—The Mediterranean has always been considered under our system as holding the first troops available for war, and then you fill up the Mediterranean garrisons again; they are not left empty, but they are filled up with rather younger men.

15078. You do not feel that there is any danger of doing it in the case of a European war?—I do not think there was any danger whatever of doing it under the conditions existing when we went to war at the Cape, but there might be if we were having a war in the Mediterranean.

15079. Not if a war at the Cape had involved the intervention of a European Power?—I do not think so. The Cabinet which must decide that particular question must have some idea as to whether, if they sent a force to the Cape, it would immediately mean an attack upon Malta, for example, and if it would mean an attack upon Malta I do not think it would be right to take the troops out of the garrison. I think you must consider the circumstances of the case, and in that particular case I think it was a very good way; they were on the road, and all ready; they had all their equipment with them, and were ready to go. The

geographical conditions of our immense Empire offer advantages as well as disadvantages.

(*Sir George Taubman-Goldie.*) It has been a moot question, and I wished to elicit your opinion upon it.

15080. (*Sir John Hopkins.*) Lord Wolseley gave us to understand that if you wanted a force of, say, 10,000 men to proceed on any overseas expedition, for that force a portion of an Army Corps might be mobilised and utilised; do you agree with that?—Certainly it might. In this particular case we wanted an Army Corps also.

15081. (*Sir George Taubman-Goldie.*) Without calling out the Reserves?—Yes, you could mobilise 10,000 men certainly without calling out the Reserves.

15082. (*Chairman.*) But only by drawing on the other battalions?—Yes, by drawing on the other battalions.

15083. (*Sir George Taubman-Goldie.*) That is by dislocating your system of drafts and so forth?—Well, our system is fairly elastic; I do not think there is much to complain of in our system, considering the requirements of the Empire.

15084. We have so many small wars that I wished to see whether we could not supply the small wars without disturbing the general system?—Then you would probably leave your best troops at home, and that in a small war where you would most want them; if you were to leave your Army Corps at home and have your 10,000 men free, either those 10,000 men are your best men or your worst men.

15085. The best men?—Then you do not have your best men in your Army Corps when you have a big war.

15086. I quite understand you might have to throw them in in addition in a big war, but my suggestion only is that there should be 5,000 or 10,000 men or a few more ready to throw into all these small wars we have in different parts of the world, and I want to know whether things could not be so organised as to have a force of that kind always ready without having to go to Parliament?—Practically we have 10,000 men; we have always been able to do that.

15087. Without calling out the Reserves?—Certainly we could do that.

15088. (*Lord Strathcona and Mount Royal.*) When you took part in the former war with the Transvaal did you form the opinion that while the Government of the Free State professed neutrality, the sympathies of the people were with the Transvaal?—They were.

15089. And that they covertly rendered them all the assistance they could?—That is so; it was so to my knowledge.

15090. From that and from what has taken place since you reasoned that the sympathies of the Free State would still be with the Transvaal, and you thought it desirable that that position should be known, and that the route should be through the Free State rather than through Natal?—Yes, I considered that we were bound if we went to war to make war with the whole of the Free State and the whole of the Transvaal, and practically, whatever the Free State said, our difficulty would be equal to the sum of the two States. I did hope at the time that by dealing with the Free State first, the Boers being a very selfish people, it was a thousand chances to one almost against the whole forces of the Transvaal being sent to aid the Free State; and, therefore, they could have been got into order and made quiet before there was any necessity for invading the Transvaal. That was my idea.

15091. And when you were appointed to take command in South Africa, as the responsibility of the campaign would rest on you, you thought that you should have been taken more into the confidence of the Government here than you were?—I thought that it would have helped me a great deal if I had been asked to formulate my views, if I had been given an opportunity of formulating my views, and discussing with the Government the difficulties of the undertaking that I was required to commence.

15092. And you think that sufficient consideration was not given to your representations?—I do.

15093. During the former war were the Boers mounted generally? They were a body of mounted men then?—Yes, mounted men. See Q.

15094. As on the recent occasion?—Yes, they certainly would be mounted.

15095. Might it not be supposed then that it would be a very great advantage to have a very considerable number of mounted men to meet them, so that the force might to a certain extent be a mobile one also?—I think it was to be considered so.

15096. But that was not really the case in the first part of the war; just preparations were not made?—They were not.

15097. It was principally infantry which were sent out?—Yes, almost wholly infantry.

15098. It would have been preferable, would it not, had a larger number of mounted men been sent?—I think so.

15099. (*Chairman.*) We have come to your arrival at the Cape, and in the section of your statement headed "Arrival at Cape Town—the situation" you describe the situation very fully. Lord Esher asked you with regard to the question of general considerations; is there anything you wish to add to that?—I think not.

15100. The question arose whether you could carry out an advance through the Free State, which was your intention and wish, and you had under the circumstances to abandon it?—I never abandoned it.

15101. Well, you had to abandon it in the meantime, at all events?—Temporarily; the enemy had used their initiative and had got much nearer the sea than I thought they ought to be allowed to get, and to my mind the dominant factor in the consideration of any military situation in South Africa at that moment was the extreme importance of preventing the Boers from obtaining a seaport. I cannot say that my information was good, but that was my information, and that was also my feeling, and I felt that as they had deprived us of the garrison of Natal and had in hand besides a force that was amply sufficient to overrun South Natal, it was of the first importance to save South Natal, not from sentimental reasons, but as a military object of paramount importance.

15102. That caused you to go yourself, and to divert your force to Natal?—Yes. I have shown in the paragraph we are discussing that what was present in my mind was that my main objective would always be wherever the largest force of the enemy was, that the war would have to be ended by fighting; and, therefore, as there were more men to fight there that was the place to go to.

15103. Your intention was to resume, so soon as you were able, the advance through the Free State again?—My intention was to resume the original plan, and to commence the advance through the Free State as soon as I had a free hand to do so, as soon as, (having sufficiently secured my flank in Natal, I was able to come back and begin the advance of the war. The calculations on which my departure from England had been based had been upset by the enemy; they were not in Natal when I left England, and they had come into Natal, and that altered the situation temporarily.

15104. But at the same time you had to take Kimberley into account?—I had to take Kimberley into account because I knew of my own knowledge the immense importance that the natives attached to Kimberley. The following is a telegram from the De Beers Directors, Kimberley, to the High Commissioner, Cape Town, dated October 31st:—"We hope with the arrival of General Buller measures will be taken for the immediate relief of this place. Our information, which is reliable, gives not more than 2,000 to 3,000 Boers between this place and Orange River, and in our opinion we could already have been relieved without risk by the present force in Cape Colony. We have a very limited supply of coal, and when it is done we must close down the works, which will cause serious trouble amongst our 10,000 savages in our compounds, who are now kept quiet by being kept at work. If we discharge them, and send them home, they are sure to be driven back to the town by the Boers, which must lead to heavy loss of life. As to the question of food supply, though well provided with some things, we have only nine days' tinned meat in case cattle are taken by the Boers, which, of course, is probable. We do not know the reasons which have delayed our relief, but we think your Excellency ought to weigh the risks caused by delay to this place with its 30,000 inhabitants, 10,000 of whom are raw savages. Now that the General has arrived we respectfully request to be informed as to the policy to be adopted regarding our relief, so as to enable us to take our own steps in case relief is refused. We are sending this by special

messenger to Orange River, and will await your reply." *General Th. Right Hon. Sir Redvers Buller, V.C., G.C.B., G.C.M.G.*

15105. (*Sir George Taubman-Goldie.*) Were they ever more explicit as to what the steps might be?—I never asked them.

15106. (*Viscount Esher.*) What did you understand by that expression at the time?—I understood that to be a threat to surrender.

15107. Did you discuss it with Sir Alfred Milner?—I did.

15108. Was that the view he also took?—Well, he thought so. He felt very much the state of Kimberley, and he was most anxious that I should take immediate steps for its relief. I was rather unwilling to do so, and I telegraphed to the officer who was commanding at Kimberley, who sent me a more reassuring telegram, but he said in it that he was of opinion that it depended upon whether the Town Guard would stand the strain of trench work; and I gathered, reading between the lines, that that rather hinted at the same sort of condition of affairs that was expressed, as I understood, by this telegram which I have read, and I thought the two together sufficiently serious to make me take a much greater risk than I liked taking by sending a detached expedition to, at any rate, get near Kimberley.

15109. (*Chairman.*) You say that was from Colonel Kekewich?—Yes.

15110. Have you got his telegram?—His telegram was that he was fairly well off, and that he was not afraid of Kimberley being taken at all so long as the Town Guard did not get worn out by duty, or words to that effect.

15111. (*Sir George Taubman-Goldie.*) Was there any more definite suggestion of surrender made at that time?—Well, I was given the impression such a suggestion had been received, but I cannot say more than that; I did not see it.

15112. (*Chairman.*) What you proposed to do in the case of Kimberley, I understand, was not to establish yourself along the frontier up to Kimberley, but to send a force to the town to carry off the non-combatants, and leave it to make its defence by itself?—Yes, it had half a battalion there, a half battalion of the Loyal Lancashires, and I intended to put in a battalion, and the other half of that battalion, making two battalions, and the Admiral had given me some long range Naval guns, which could have met any guns the Boers could have brought against them, and I thought the place would be absolutely comfortable. We were to remove 8,000 or 9,000 natives, and to leave the place. Really, it would have been an advantage to me, from the military point of view, and they would have been quite comfortable.

15113. Was it not a difficult operation to remove a large number of non-combatants? It would have had to be done in the face of the enemy?—If you once got through into the town the enemy would have been gone on that side, and these men would all have walked out; they were all natives, and could walk 40 or 50 miles a day with great ease. I did not think many of the women would have cared to come away, and they would have been perfectly safe with the long range guns.

15114. You mean by the non-combatants, chiefly the natives?—The natives; the only possible danger was that there might have been some sort of native *émeute* which, owing to their numbers, might have been serious.

15115. Looking to the earlier evidence, supposing they had been dispersed sufficiently to allow an advance into the town, might they not have prevented a retreat?—I do not think so. The Boers are curious people; they fight well and are very mobile, but they are quicker at getting away than any soldiers the world has ever seen, and if they had been defeated sufficiently to be driven away from that side of the town I do not think they would have come back at all.

15116. And it was necessary to clear that southern side of the town of the Boers?—Yes, it was necessary to get into the town.

15117. Because you speak here, I think, of Lord Methuen having sufficient transport and supplies to enable him to leave the railway?—Yes.

15118. And that rather led me to suppose that it meant, to go round the flank of the enemy without dispersing them necessarily?—Well, I was quite con-

General Th. Right Hon. Sir Redvers Buller, V.C., G.C.B., G.C.M.G.

17 Feb. 1903.

General The
Right Hon.
Sir Redvers
Butler,
V.C., G.C.B.,
G.C.M.G.

17 Feb. 1903.

15118. I am confident, in my own mind, that no Boers would ever stand if we had our troops on each side of them, and the only position I knew of at all, or could hear of when I was at Cape Town, was a position there called the Spytfontein position, which, I fancy, was very much what they called afterwards Magersfontein; and I thought that if he got across the Modder and formed a bridge-head there while he was repairing the bridge and getting his railway forward, if he had moved to his right he would without much trouble have caught anybody who was opposing him between his two forces. I did not at that time believe for a moment that Cronje would have got south of Kimberley before he reached Kimberley, nor did he.

15119. You were not taking into consideration the circumstances as they actually developed?—No, I had from the people in Kimberley a definite statement that they knew it could be relied on that there were not more than 4,000 or 5,000 men at the most between us and them.

15120. I think it was less than that—2,000 or 3,000?—One of them said 4,000 to 5,000; they gave very small figures, and they were all Free Staters, who were not very keen on fighting until Cronje came down. Cronje came 220 miles while Methuen did not get 50, and I did not expect that.

15121. And that altered the conditions?—It made it much more difficult for Lord Methuen.

15122. Would that have altered your scheme of operations if you had foreseen that?—No, I think not. I did alter my scheme of operations because of it, and I at once—when I found he was, if I may use the expression, stuck up by the people in front of him—altered my scheme of operations, and proposed to get into the Free State from where he was, and to turn out the people who were stopping him at the same time; in fact, the plan of campaign which was eventually adopted by Lord Roberts.

15123. There was a proposal to make a railway?—It was accompanied by a proposal to make a railway; that was part of it.

15124. I meant to have asked one question about martial law: some difficulties arose in consequence of not being able to enforce commandeering in Cape Colony?—There were immense difficulties in carrying on military operations; it was not exactly a difficulty in not being able to enforce commandeering, but if you cut the fence of an ostrich enclosure and were moving troops across, if it happened to be a Dutchman he came and objected, and threatened an action at law; and everything connected with the initiation of military operations was harassed and rendered difficult by our not having at the time fighting rights. All along the northern frontier of Cape Colony they are mostly Dutch districts, and they managed to give us a good deal of trouble. With military law, and security from threats of police, and so forth, we should have been able to get on much more simply. Sir Alfred Milner did not see his way to do it, and I did not particularly press it, but I was very anxious to get out of Cape Town itself the immense number of Boer spies, Boer propagandists, and people who had been sent down there, partly as spies, and partly to try and promote disaffection. There was a very dangerous man in Cape Town whom I should have liked to get out, and the only way to get him out was either by military law or by the course I proposed. Lord Milner thought he was not justified in doing it by the situation of the moment, and it was not done.

15125. You found it very difficult to keep your plans secret, I suppose, under the circumstances?—Yes; I was fairly lucky, but I never told anybody anything; otherwise it was almost impossible. There were three languages there, and you never knew whom you were talking to.

15126. You have written here as to the general situation on the 22nd November?—A telegram of mine has been quoted as approving of General White staying at Ladysmith. I merely want to call the attention of the Commission to the fact that that telegram of mine was sent in reply to a telegram from him, in which he said he could not leave it. It is in my statement as follows: "A few hours later I received a further telegram from Sir George White, saying that he could not withdraw from Ladysmith, and that he sent a single battalion to guard the bridge at Colenso as the best step that he could take for the protection of Natal." When he sent

me that telegram I replied that he had better stay at Ladysmith; there was nothing else I could reply.

15127. Did he not send that battalion to guard the bridge at Colenso in consequence of representations to him that he should send some force there?—Not from me; I made no representation to him at all except that I wanted to get his cavalry out.

15128. If there was a telegram from the Commander-in-Chief drawing his attention to the necessity of guarding Colenso, that would account for his action in that matter, would it not?—I do not think it would at all. The Commander-in-Chief was seven thousand miles away, and could not possibly know what he ought to do. The Commander-in-Chief tried to help, but there was no idea of his suggestions being orders. He had a telegram from the Commander-in-Chief, I know, because I wrote it myself, suggesting that Glencoe was a very unfavourable position, but he left the troops there.

15129. You say it was not in answer to any telegram from you, but there was a telegram drawing his attention to the necessity or desirability of guarding the bridge at Colenso, and this was the step which he took in consequence?—There may have been a telegram, but I never heard of it until now, and, of course, I know nothing more about it, but what he did was absolutely impossible. Colenso was in a pit, and he put the Dublin Fusiliers there and some Volunteers, and General Murray immediately removed them, and very properly, I think, because they could not have defended themselves there.

15130. (Sir Henry Norman.) This was the telegram he received from Lord Wolseley: "I do not wish in any way to hamper your discretion, but personally I am anxious about the safety of Colenso Bridge." Upon which he sent the Dublin Fusiliers and a Natal Battery, apparently rather unwillingly?—He telegraphed home at the time that he had sent the Dublin Fusiliers to Colenso as all he could do to save Natal, or for the protection of Natal. Shall I read the telegram he sent home?

15131. (Chairman.) Yes, what is the date?—31st October. "No. 109a.—With reference to your 200 of to-day, hitherto I have considered that the interests of the Colony south of this required me to hit out. Yesterday's fight shows me that there is risk and limit to this. I wired Natal Governor yesterday that I would send the Royal Dublin Fusiliers to guard the bridge at Colenso as best step I could take for the protection of the Colony. I intend to contain as many Boers as I can round Ladysmith, and I believe they will not go south without making an attempt on Ladysmith. The Boers have established themselves in very strong positions in the hills west, north, and east of Ladysmith; each man has one or two ponies; they live on the country, and their mobility gives them great advantage. They resent intrusion so much that it is impossible to ascertain their numbers. They say themselves that they will attack. Ladysmith is strongly entrenched, but the lines are not continuous; the perimeter is so large that Boers could exercise their usual tactics. Our men want rest from fighting, but I have the greatest confidence in holding the Boers for as long as necessary. I could not now withdraw from it. I think it will be a good plan to send some of the Fleet to Durban to keep the public confident there." That is what he sent to me; he said he could not withdraw, and I then said he was right to stay there, but I did not approve of his staying there.

15132. But it is not the case that he represented that sending the one battalion to Colenso was all he was doing for the safety of the Colony, because he says, in his telegram just quoted, that by staying at Ladysmith he hoped to contain the Boers, and prevent them going further south?—I was reading what he said himself: "I wired Natal Governor yesterday that I would send the Royal Dublin Fusiliers to guard the bridge at Colenso as best step I could take for the protection of the colony." Those are his own words.

15133. Yes, but that has to be read in connection with the rest of the telegram?—Well, I knew, not at that time on the 31st, but three days later, that he had been driven into Ladysmith.

15134. Without going into that just now, I only say that you must not pick out one sentence from a telegram and represent it as the whole of what he was doing for the protection of the colony?—When he says that he would contain as many Boers as he could, and that they would not go south without attacking him?

15135. Yes?—I merely took the telegram as I read it, and I read it that he could not leave Ladysmith; he did not send out the cavalry I wanted, but he sent out one regiment. He should have sent out more. After all, a stationary force can contain no more of the enemy than those who choose to stay round it, and at that time, contrary to his belief, they were actually moving south and invading South Natal.

15136. You said you hoped you would have had all the cavalry out of Ladysmith?—Yes.

15137. Do you think that the force in Ladysmith would have been capable of defending the place without the cavalry?—Yes, I think they would have defended it must more easily. The cavalry really did nothing, except on the 6th of January, when they were brought into action.

15138. Do you think they were only brought into action on the 6th of January?—I learned that was the only day they had anything to do; they were used on the 1st or 2nd of November, but they went back again. I understood they were coming out, but they came to Onderbroek and went back again. Beyond that I do not think the cavalry did anything.

15139. Do you represent that they were not used for the general purposes of the siege?—As cavalry, no, they were not.

15140. As a cavalry force in the field, probably not, as they were inside of a perimeter; but if it is the case that the perimeter was so large that it could not be defended by the force without the cavalry, the cavalry were used probably inside?—I do not think that the cavalry held any portion of the perimeter. It is not a question I expected to be asked, and I do not know it, and I would rather not put down anything with regard to it. I understood you to ask me whether I was right in trying to get out the cavalry, and I think I was, but that is all I say.

15141. You do not want to argue it?—No, I do not know, I do not pretend to argue it. I have no doubt he did what he thought best; I accepted the position that he could not let the cavalry go.

15142. As to the arrival at Durban, have you anything to add there as to the preparations or plans?—No, I do not think so. With regard to Sir George White's telegram of the 30th November, it was sent in reply to my first attempt to send him a signal by flashlight on the clouds, and he only appeared to have seen a very small portion of that signal. Apart from the fact that the statement as to his food differed from any other statement he sent me at any other time, I attached great importance to the telegram, because I took it as a positive instruction to me that he could give me very little assistance in my advance, and, secondly, that he was in some way surrounded by spies from whose espionage he could not escape. I therefore took that as a lesson which ought to affect my future correspondence with him.

15143. Is that what you are referring to where he says: "The enemy learns every plan of operations I form, and I cannot discover source. I have locked up or banished every suspect, but still have undoubted evidence of betrayal"?—Yes, that is what he says.

15144. But surely it was his duty to let you know that, in order that the communications between you might be regulated accordingly?—It was his duty to let me know that, and it was my duty to make a note of it.

15145. Did you carry that so far as not to make any communications with him afterwards?—I think I told him every single movement that I was going to make, fully, but I never discussed movements with him afterwards. I gave him all the military information that it was necessary for him to have, fully and in good time, as my telegrams will show, but I took it as a hint that for some reason or another he did not consider his office was a safe one. I could read it in no other way. I gave him far more information about my plans than he gave me about his.

15146. You have just told us the state of matters you found in the Cape, and that you were surrounded by people by whom you could never tell that your words might not be made use of; was not he referring to very much the same set of circumstances?—Well, he went very much further than I found any necessity for; he said, "Every plan of operations I form"—it was not a question of his orders being known, but it was a question of the plans he formed himself apparently. I thought it a very important telegram, and that is all I can say;

it affected me very much. This is the telegram: "Hay or grazing is a difficulty; I have 35 days' supply of this at reduced ration . . . enemy learns every plan of operations I form, and I cannot discover source. I have locked up or banished every suspect, but still have undoubted evidence of betrayal. Native deserters from enemy and our native scouts report the enemy much disheartened," etc. It struck me as being a very important warning to me; I could see no other object of it.

15147. It affected your communications with him not so far as to prevent you from informing him of plans, but from discussing operations before you had made the plans?—Yes, it prevented me discussing anything with him; that is all. For instance, I will read my answer, in which I said to him on the 4th December: "I shall have concentrated four brigades of infantry, five batteries of artillery, one regiment of cavalry, 1,000 mounted Volunteers, by 6th December, and shall attack. I cannot yet say which route, but will communicate with you in several cipher messages before I advance."

15148. (Sir George Taubman-Goldie.) I do not quite understand how this question has arisen; what course did you actually take in dealing with Sir George White after that? What was your position in consequence of this telegram?—In consequence of that telegram I never concerted beforehand in any action with Sir George White. I told him that I was going to do a given thing, and I think in every case I did that, but as a rule I told him one day and I almost invariably altered it the day afterwards. In raising this question I am not alluding to anything connected with the statement that has been put about in the Press that I told Sir George White I was to attack on the 17th and attacked on the 15th; that is a quite separate question altogether, and has nothing to do with it. The whole of my correspondence and the whole of my arrangements with Sir George White were affected by my knowledge of this telegram, and in consequence of it I probably took him less into my confidence than I did any other General who served under me during the time I was in South Africa.

15149. You restricted yourself rather to telling him the conclusion at which you had arrived without concerting from day to day the steps by which you had arrived at that conclusion?—That is it exactly.

15150. (Chairman.) If he did not mean what you supposed it was rather unfortunate?—Yes, but what else could he mean? He sent that telegram in response to a portion of a telegram that he had seen flashed on the sky. On the 7th December I opened heliographic communication with him, and I then repeated that same telegram, of which he had seen a portion, thinking I might elicit a further or some other answer, and he simply acknowledged it; he did not make any other remark, and did not repeat his former telegram that had come out by messenger, and which I had acknowledged. As he merely acknowledged it without making any further remark, I thought he confirmed his former telegram.

15151. You also said just now, in commenting on this telegram, that it made a statement about provisions which was quite different to any other; what did you mean by that?—No other telegram gave the amount of hay or grazing, or the amount of provisions for his garrison at the same figure, or anything very near the figure, he gave in that telegram. I do not attach any importance to it; it is merely an incidental effect of the telegram; it was once read out in the House of Commons, or I should not have spoken about it at all, but it is the actual fact that no other telegram which he sent gave at that particular time the same period for which he had food.

15152. He did give you subsequently the full details of his provisions?—Yes, I think he did; I got a great many telegrams from him. Practically what happened was that as the siege went on and his relief was put off his powers of lasting extended.

15153. That means to say that instead of calculating full rations he was calculating at diminished rations?—He continued reducing the daily ration, I imagine.

15154. Would not that account for some difference, possibly, in the amounts?—I do not think in that telegram. I do not think the point is worth elaborating; I do not want to make the least attack on Sir George White, and I think he did his very best. I would not have referred to that at all only I wanted to emphasise the fact that his statement as to undoubted evidence of betrayal did to some extent make me adopt towards him

General The
Right Hon.
Sir Bede
Buller,

less openness of information than I should otherwise have done.

15155. I do not want to raise any point of controversy either, but you did not mention another point in connection with this telegram which I should like to put a question about. You said it also indicated that he would not be able to co-operate with you; how do you find that from the telegram?—He said he could only help me by Onderbrook or Colenso.

15156. Not in this telegram: "With regard to road of advance towards Ladysmith, I could give most help to a force coming via Onderbrook Hotel or Springfield, but enemy is making his positions on that side stronger daily"—That is what I mean.

15157. But he also went on to say: "If force south of Tugela can effect junction with me I believe effect will be immediate and decisive—at present cannot go large, as I am completely invested, and must reserve myself for one or two big efforts to co-operate with relief force." Does not that mean he was quite willing to make one or two big efforts to co-operate?—Quite so. I hoped he would make a big effort, but he rather restricted me. Onderbrook and Springfield, as far as he was concerned, meant the same road for an entrance into Ladysmith; the road coming up from Springfield through Acton Homes, and the road coming from Maritzburg join in the Onderbrook Flat, and therefore by whichever way I elected to come, I had to get into the Onderbrook Flat before he could help me much, and the big effort would be there. In fact, I was to be actually attacking the very lines of circumvallation by which he was contained before he was prepared to offer me any assistance. I could draw no other inference from the expression "cannot go large."

15158. He says, "I could give most help," but he does not shut out the idea surely in that telegram that if you had suggested any other way he would have been perfectly willing to assist you to the utmost of his power?—No, but the telegrams tended that way, and that was the impression left on my mind. One of the reasons that made me give up the first advance by Hlangwane was the fact that going that way he did not hold out any hope of giving me much assistance, nor do I think he could have.

15159. If you agree that he could not, that is another matter, but you think he was willing to do anything he could to strike out?—Yes, he was certainly willing to do anything he thought he could do.

15160. (Sir Henry Norman.) I fancy you are quite convinced that your policy in moving your headquarters from Cape Town to Natal was right and necessary under the circumstances?—I think it was. I do not think myself that I could possibly have done my duty if I had not moved.

15161. And do you think if you had not gone the whole territory would probably have been ravaged by the Boers, General White being shut up in Ladysmith?—Yes, I think we saved Maritzburg by only a very few hours.

15162. You made some observations about the cavalry not being very useful inside Ladysmith; did you hear that, considering the large perimeter of the defences, portions of it were very weakly held, and the cavalry were intended to be used as a sort of reserve, and could much more rapidly than infantry get to the support of the weakly held positions?—Yes; that opens the whole question of holding Ladysmith, which is a matter which I really do not wish to discuss. I was not there, and it was not my business to criticise Sir George White, and I would rather not discuss it; not that I have anything to say against him in any way; but unless you have definitely formed your own mind, and are able to say "I would put so many men into this place, and if they had been on the spot they could have defended such an area," I do not think you are justified in discussing a scheme of defence. Sir George White informed me when I got to Ladysmith that he thought he was right to keep the cavalry, as they formed his main reserve, for he had two sides practically on which he was exposed to attack, and the cavalry could go from one side to the other quicker than infantry, and there was a good deal in that.

15163. That was a consideration which might have made him unwilling to part with his cavalry?—I assented the moment he wished to keep the cavalry; I asked for them, but he said he wished to keep them, and I assented. I thought that as he had to keep the place he ought to decide it, and I did not take the least exception to his decision.

(After a short adjournment.)

15164. (Sir George Taubman-Goldie.) You mention the fact that on your arrival in Cape Colony the bridges had all been taken by the Boers, except the Orange River Bridge?—Yes, except one.

15165. I only want to ask you this one question. You had, of course, no responsibility for that; they had been taken before you arrived; but from a military point of view would it not have been advantageous to have taken precautions to have blown up those bridges before the Boers seized them?—I think not. I do not believe that anybody in England expected the war to begin with an invasion of Cape Colony; and as I have reason to know, when I got there, it was not anticipated by the Boer sympathisers themselves. In fact, Mr. Schreiner told me that he thought it unfair of them to invade the Colony. I do not think it would have been right or desirable in any case to have destroyed the bridges. We had to get over one of the bridges eventually, and it would have been a great deal of trouble to us to have to re-create it. And I do not think there was any moment in Cape Colony in which we had a chance of destroying a bridge before it was crossed. Part of the proposition of the 10,000 men contemplated, I think, at one time in England, that they should guard the bridges, but my idea was that if we did guard the bridges we merely put out a bait for the Boers, who would have been more likely to have come out and destroyed them. I think also that as a rule, if you want to make an advance you should be very careful what you destroy.

15166. As a matter of fact, in war if you allow the enemy to seize a bridge he takes good care, does he not, to destroy it before he goes away?—Yes, to prevent your being able to go over it.

15167. And as a matter of fact the Boers did destroy all the bridges before they retired?—I believe they did.

15168. And that being the case, might it not have been advantageous to have destroyed the bridges before they advanced?—But ours was not a case of retirement; we were not there. I doubt if we could have had a party at the bridge at that moment without danger to the party, and without danger of provoking war.

15169. I was not referring to a military party, but to arrangements which might have been made for destroying the bridge by other means?—Had I been out there I should have deprecated it.

15170. (Lord Strathcona and Mount Royal.) One word more about the bridges. Do you think that you had the means of rapidly repairing the bridges there?—The Boers, I believe, had.

15171. No, I mean our men?—I had tried in England beforehand to provide means for repairing both those bridges, and I believe the material was actually at the time in the Colony.

15172. Do you not think it would have been a great advantage to have had a gang of men accustomed to work with wooden structures like bridges, such as they have in America, in the United States, and Canada so as to be able rapidly to repair the communication across rivers?—I raised that question in England, and I remember very well what you have done yourself, and also what we did, as you will remember in the Red River Expedition. I found that for dealing with squared timber the men that we had were quite sufficient. You can make a trestle with squared timber, and specially made ironwork for gripping the cross pieces in a very short space of time. In point of fact, every bridge that we did repair during the war was always repaired first of all by means of wooden trestle bridges, made of the particular scantling provided for that purpose.

15173. But the workmen had not the same experience as those constantly occupied in that work. For instance, they have men for that express purpose on the different railways throughout the whole of America, so that in a very short time they are able to connect again?—We had a certain number of those men at the Cape, and I formed a corps of them almost immediately; they were mostly Americans and Canadians; people employed as engineers at some of the mines, and accustomed to put the different scantling stuff in the mines, and make the wood work of the mines; they were made into a repairing gang, and were used for that purpose. I think that on railway repairs—and I speak of my knowledge in Natal, certainly from Ladysmith to Newcastle—they did the work extraordinarily quickly, and no change of men could have done it quicker.

15174. On the whole you think there was no unnecessary loss of time?—None, I think, at all.

15175. None that could have been prevented?—No.

15176. (Chairman.) We have now got to page 6 of your statement—the situation in Cape Colony. That states succinctly the situation; and I think the only question I want to put about it is with regard to what you say at the bottom of the page, where you state that a message had been received from General Forestier-Walker to the effect that Mr. Rhodes had signified through the High Commissioner his objections to your design for clearing non-combatants out of Kimberley?—Shall I read the two telegrams?

15177. If you please?—The first is: "From the General, Cape Town. No. 564. 10th December. Kekewich puts numbers to leave Kimberley: Whites, 8,000; natives, 13,000. Numbers to remain: Garrison, 5,500; civilians, 5,000; natives, 3,000. I wired to Methuen numbers of civilians and natives to remain, especially the former were larger than can be conveniently rationed, and that I should endeavour to effect a reduction. Rhodes has since informed High Commissioner he considers proposals for defence inadequate, and asks sanction to enrol 2,000 volunteers in the Colony at the expense of De Beers. Unless this is done, and supplies of coal and dynamite forwarded, De Beers must be closed, and white men dismissed. Methuen will, in conjunction with Kekewich, deal with situation, and I have informed High Commissioner that the forwarding of coal and dynamite would unduly delay Methuen, and that the supply could not be maintained." I replied to that on the same day that I received the telegram as follows:—"Code No. 0184. 10th December. Your No. 564. In dealing with Kimberley we must put De Beers out of the question. Tell Methuen that he and Kekewich are to decide on the minimum garrison required to maintain defence on the assumption that we shall occupy Bloemfontein on the 30th January at latest. All we have to do is to keep the Union Jack flying over South Africa, and I trust Methuen and Kekewich to help me to do that without favour to any particular set of capitalists. If while doing that we can without inconvenience help De Beers let us do so, but I imagine the general situation in Cape Colony will immediately demand attention, and consequently the return of Methuen's troops, so do not be misled by sympathy for De Beers' directors, but get all non-combatants out that you can. We cannot keep the railway open, but will reopen it as soon as we can safely do so."

15178. I notice that in the first telegram the number of whites was put at 8,000?—Yes.

15179. I only mention that because I thought in your previous evidence you said that the chief people to come out were natives?—I thought so, and I did not intend to bring anything like that number out. But that is what it came to; we said we would re-open the railway, and there would be no trouble of getting them out. The railway got across the Modder directly the Modder Bridge was completed, very soon after Magersfontein, if not at the same moment.

15180. Then the operation which Lord Methuen had to conduct, as it turned out from those telegrams, would have involved not only taking out 13,000 natives but 8,000 whites?—Yes; it meant running a few more trains, but that was all. He had to keep the line open in any case.

15181. That was part of the operations that you had in view; that he should keep the line open to get these non-combatants out?—Yes, while he got out what he had to get out of Kimberley he was to keep the line open, and I did not anticipate that he would have any great difficulty in doing that.

15182. And that was on the assumption that in Kimberley they had only to deal with 2,000 or 3,000 Boers, as you told us before?—I do not want to belittle Lord Methuen's work. He had a very serious work to do, and he did it very well. At that time, as you will find, I say later it was a desperate situation, and I had to do the best I could.

15183. I am only bringing out exactly what your instructions to Lord Methuen were, and what the intention of those instructions was. That, I think, you have now fully explained?—Yes.

15184. As it turned out he had to fight Magersfontein in order to clear the railway?—Yes, and that I always expected he would have to do. I called it, before he went up, Spytfontein, but it is the same place

—Magersfontein. He had to fight there to clear the railway.

15185. That was a necessary part of his operations?—Yes.

15186. I do not know whether you desire to say anything about Delagoa Bay?—Nothing. I thought I ought not to leave it out, but I quite see that the Government must have had great difficulty.

15187. (Viscount Esher.) Did you discuss the question of Delagoa Bay with the Secretary of State for War before you left England?—So far as regards a base went I did, and he told me that Delagoa Bay was out of the question. There were several proposals that I discussed at the first meeting that I had with the Secretary of State in June. I discussed four routes with him—the route by Fort Salisbury, by Beira, the route by Delagoa Bay, the route by Kimberley, and the route by Natal. I discussed all those four routes with him.

15188. (Sir George Taubman-Goldie.) Did you also discuss with regard to Delagoa Bay the introduction of arms by Delagoa Bay?—Yes. I proposed at first that we should send a subsidiary expedition by that route; in fact, the expedition that eventually went by Beira.

15189. (Viscount Esher.) Did you discuss that question as to Delagoa Bay with Lord Lansdowne? You urged it in November, you say?—I urged it the moment I arrived in Cape Colony as the one card I had to play. The Boers having already invaded, and got their whole force, so far as I could understand, practically into the field as against Cape Colony and Natal, I thought that the closing of Delagoa Bay would probably prevent their putting more men into the field; but the moment I arrived in Cape Colony I learned the power of the Boers to put many more men in the field than I had reason to believe they could when I was in England.

15190. (Chairman.) We now come to the point at which you began your operations for the relief of Ladysmith. I do not know whether you wish to go through those in detail in any way?—I do not think so. I have tried to put them as shortly and clearly as I can, and if the Commission have any doubt on any point I shall be very glad if anybody will ask me any question.

15191. Subject to that, you do not wish to amplify the statement; the statement is full and complete?—With regard to that I should like perhaps to say one thing. I have been found fault with in the Press because I told Sir George White that I should attack probably on the 17th December, whereas I attacked on the 15th. I merely want to state that that was a mere ordinary precaution. I had to get across the Tugela, which was sure to take me a whole day, and I did not gather from the telegrams that passed between me and Sir George White, or from my knowledge of the country and the Boers, that there was the least advantage to be gained—whereas on the other hand there would have been immense risk to have been run—by ordering Sir George White out of Ladysmith into the field at a time when I could not possibly join hands with him. I thought that his situation in Ladysmith was one in which he had gone to Ladysmith for his own protection, and from the telegrams that he sent me I gathered that he was not prepared to come out of Ladysmith except to join hands with me, and therefore I should have been utterly wrong from any military point of view if I had ordered him out of Ladysmith, or had done anything to encourage him to come out of Ladysmith until I was across the Tugela, and in a position to make some sort of effort to meet him. Consequently my operation of crossing the Tugela was to be on the 15th, and the 17th was the day on which I told him I expected him to fight with me, and that was the day on which, in the ordinary course, if I had got across, I should have fought. I only want to make that point clear.

15192. I do not know whether you used the words advisedly, but you said that Sir George White went into Ladysmith, you thought, for his own protection?—Yes.

15193. He occupied Ladysmith as a part of the general policy, did he not?—I do not think so. I had no information to that effect at the time; in fact, that is contrary to my information; and I gathered from General French, with whom I discussed the point, that that was not so. I gathered from General French and from general information that I acquired that Sir George White had been driven into Ladysmith, and I read his letter to me of the 31st of October as rather meant

General The
Right Hon.
Sir Redvers
Buller,
V.C., G.C.B.,
G.C.M.G.,
17 Feb. 1902.

General The
Right Hon.
Sir Redvers
Buller,
V.C., G.C.B.,
G.C.M.G.

17 Feb. 1903.

to convey to me that impression. Perhaps he has given you that letter?

15194. What letter are you referring to?—I am referring to a letter of the 31st of October that was brought out of Ladysmith to me from Sir George White by General French.

15195. No, we have not had that?—It is a long letter, describing the action of the 30th. Shall I read the whole letter? I do not like reading extracts of anybody's letters.

15196. (Sir George Taubman-Goldie.) Are there not some paragraphs that refer to the particular point?

(Chairman) I do not think you need read a long narrative; we have had it in many forms?—He says: "The result of yesterday's fighting between the Helpmakaar and Newcastle roads was disappointing. I may commence by saying that many of my staff were opposed to my taking the field, and thought I ought to wait to strike until the enemy was close into us; but I had got all the troops in Natal Colony, and I did not consider myself justified in allowing myself to be shut in closer, and I determined to strike out." He goes on: "I planned an attack yesterday."

15197. And describes the attack?—He merely goes on to say that the attack did not come off as he intended, and that the position he intended to attack was evacuated. "As soon as I could realize the situation I saw that our force was being rather pressed. All the infantry were in action and French's cavalry; I reinforced French by two cavalry regiments." And he goes on, "But our men could not get forward, they were holding their own, but some of our regiments did not care to go on, and I became anxious as to how the affair was to end. The enemy, as usual, were creeping towards our flank, and I was constantly receiving accounts of the appearance of fresh bodies. Even if the Boers had been driven out they would probably have ridden back in groups to another further back, I felt that the longer this state of things lasted the greater the danger to us. I had to think of Ladysmith. I knew that I could drive them off then, but feared I might not be able to do so later, as the men were played out and short of water. I therefore made arrangements in the rear and withdrew. Considering all things, it was very well done, and our troops were not molested by the enemy." Then he goes on again, "I think we have taught him greater respect for our soldiers, but I cannot, I fear, go on striking out so frequently. They are making entrenchments at long distances and trying to keep us in—I hope they will stick to us and not press the Colony lower down." I gathered from that letter, of which I have only quoted parts, that Sir George White was driven in, and General French confirmed me in that opinion.

15198. The last passage that you have quoted surely shows that he intended to hold Ladysmith, and that that was his object; because he said: "I hope they will continue," I think the message was, "to stick to us"?—On the same day that he wrote that he telegraphed to me and said he could not get of Ladysmith. Of course he intended to hold it.

15199. But he deliberately took up the position that it was necessary to hold Ladysmith, even at the risk of being shut in?—He never told me so.

15200. Did he not include it in the whole course of operations?—Certainly at the time my impression was that he was driven into Ladysmith. That day, by the Ladysmith garrison, was known as Black Monday. They never expected it. He was driven into Ladysmith, and there he was able to make a stand. But I do not think for a moment that on the morning of that day, when he went out, he had any idea that the right thing was to hold a defensive position at Ladysmith. He must have been driven into Ladysmith, or he would never have been ignorant of the fate of his detachment at Nicholson's Nek.

15201-2. Not on the day when he fought the battle of Ladysmith?—No, because otherwise he would not have gone out. He had to get back to Ladysmith, on his own showing, to protect Ladysmith. Surely he would have protected it before he went out if he intended to hold it.

(Chairman.) It is not for me to criticise strategy or tactics; but I understand the letter that you yourself have read to say that he considered it his duty to strike out, but to hold Ladysmith—that that was the summary of the letter.

15203. (Sir Frederick Darley) In that letter you will find that he says "I have made Ladysmith very

strong"?—Yes, he says that. I was not talking—it would not be right for me to talk—about what Sir George White intended. I am merely talking about the plans I made according to what I understood.

15204. (Chairman.) It is suggested to me that it is, as you say, unsatisfactory to have merely extracts; perhaps you would put that letter in. We need not trouble you to read it all?—I think you have it already in the printed book. I only want to explain that with regard to making my plan of attack on Ladysmith I had to take certain matters into consideration, and one of the matters that I had to take into consideration was that I considered, and I thought on good grounds that Sir George White had been driven into Ladysmith, and that I had nothing from him at the time that gave me any reason to suspect the contrary.

15205. I only wanted to bring out exactly what your idea was at the time because that is essential for our forming a conclusion. I will simply put it to you that that was the position which you were under the impression prevailed—that Sir George White's forces had been driven into Ladysmith, and that you had to regulate your conduct of affairs in accordance with that situation?—I say that my impression was that he was driven into Ladysmith and therefore I should not be justified in ordering him into the field for new active operations unless I was prepared to join hands with him at the same time. Then the rest of this section I think, stands; unless there is any question that you wish to ask, I have nothing to add.

15206. Down to where, do you mean?—"Change of Plans," you were dealing with.

15207. You mention at the beginning of that section, "Change of Plans," that the action of Magersfontein influenced your plans?—It did. I wrote at once and telegraphed to the Secretary of State for War, and told him so, explaining how I considered that that action, coupled at the same moment with General Gatacre's want of success at Stormberg—for these two checks were almost at the same moment—made me feel that I should not be justified in taking so great risk as I was proposing to take if I marched round by Potgieter's Drift.

15208. Was that simply on the ground of the encouragement that those events gave to the Boers?—It was on the ground that my two other forces in the field had been brought to a standstill, both of them.

15209. The other two?—The other two, and therefore I was brought to a standstill, too, and my state was very parlous. All the time I had the responsibility of South Natal on my shoulders; I had to consider South Natal, and an expedition by Potgieter's Drift was a risk, it was in sight the whole way from the hills; we were moving under the hills the whole way and almost in shot. And with regard to what I have quoted in that first paragraph in "Change of Plans," I should like to say that my telegram to General Forestier-Walker was in the nature of a testamentary disposition. I telegraphed to him, and told him that the time had come to take up defensive positions. I was going into action the next day, and guns and rifle fire carry a long way. I might have been killed, and had I been killed, and the attack failed at Colenso, the proper thing for him to have done at that moment would certainly have been to have taken up a defensive position.

15210. But you put it to the Secretary of State that whether you succeeded or failed, that would have been the proper thing to do?—You are coming to that telegram presently. I should like to deal with that telegram when you come to it, if I may.

15211. Is it not at the same time?—No. I told the Secretary of State that it would be better to lose Ladysmith than throw up Natal.

15212. (Viscount Esher.) That is the 13th, the next day. According to your statement in this section "Change of Plans," you received the news of Magersfontein on the 12th?—Yes, and I changed my plans really almost directly.

15213. (Chairman.) And on the 13th you telegraphed to the Secretary of State that whether you succeeded or failed, the time had come, both in Natal and Cape Colony, to stand on the defensive until the winter?—Yes; those two telegrams were, as I say, in the nature of a testamentary disposition. I was going into action, and I thought it the right thing to say. If I was killed it covered General Forestier-Walker, and if I was not killed I could have made a new plan the next day and considered what I would do. But, practically, I had in Cape Colony, and I should, if I had succeeded in Natal also, have taken up defensive positions to organise the force

there. The men had been thrown out of their ships, in consequence of the great pressure, into the battle-field; they were not quite fully equipped. I had not nearly as many mounted men raised as I hoped for, and I fully intended to mount a great many more infantry, which I did afterwards. All those measures there had been no time for. I had only had just a month and a half really of almost continuous fighting in three theatres of war to keep back the Boers—in which we succeeded. Lord Methuen, after Magersfontein was, by the 16th, established in a position in which he could remain. General Gatacre and General French were both fairly comfortable, and I hoped to be in the same position in Natal; and then I should have had time to look round.

15214. You said, I think, that you wished to refer to a telegram to the Secretary of State?—No, I do not. I thought you were speaking of a later telegram at the moment when I said that. The telegram I referred to was my No. 79, of the 13th of December.

15215. (*Viscount Esher.*) To whom?—To the Secretary of State for War.

15216. (*Chairman.*) Yes, No. 79 cipher; we have that?—The last paragraph is the point to which I refer in my summary, where I said "The enemy had the initiative, and has used it well. We have staying power, and must now use that." At that moment I was doubtful whether Lord Methuen would have to withdraw or not, and it is qualified by me in my telegram, "If Methuen goes back to the Orange River the enemy probably will press their invasion of Cape Colony, and it will have to be our policy to delay the enemy, and wait till winter comes." I mean that I did not actually recommend the Secretary of State at that moment unconditionally that we should take up defensive positions, but my telegram to General Forestier-Walker, and my sort of advice was founded on a possibility. The possibility to General Forestier-Walker was that I might be killed, and the possibility to the Secretary of State was that Lord Methuen might not be able to remain at Modder.

15217. (*Viscount Esher.*) But on the 12th had your movement actually commenced to march to Potgieter's Drift before you received the news of Magersfontein?—General Barton had gone to Chieveley.

15218. That was in connection with your original movement?—Yes. I had not moved at all to the westward; nobody had moved to the west; General Barton had gone forward with my retaining force, but the other people were concentrated at Frere.

15219. Still, all your orders were issued for that movement?—Yes, and Sir George White was advised, and everything was settled.

15220. It was to have commenced actually on that day?—Yes.

15221. (*Chairman.*) In that telegram you did not say anything about losing Ladysmith?—It is in the letter I think, in the despatch written on the same day; the despatch of the 13th; in the middle of the letter you will see, "From my point of view it would be better."

15222. But when the telegram was received there was nothing before the Secretary of State to show, except from the context, that that meant losing Ladysmith?—No, I should never telegraph to the Secretary of State that I thought I was going to fail.

15223. But you had it distinctly before you, as your letter shows, at that time that if you failed you contemplated the loss of Ladysmith as the best way out of the situation?—I fully appreciated the enormous difficulties of the task in front of me. I do not believe there is a more difficult piece of ground in the world than the piece I had to force, and I was fully cognisant of the very great difficulty I had, and that I was taking a very considerable risk in which I might not be successful. I also had in my mind, as my letter shows, though I did not say it in my telegram (I never send that sort of thing in a telegram except for a very special reason) that I did think it was quite possible that if I failed I might not be able to get into Ladysmith in time to relieve it.

15224. (*Viscount Esher.*) Is that phrase which you quoted about its being better to lose Ladysmith in your despatch to the Secretary of State of the 13th of December?—Yes, just in the middle of it; and in that despatch I gave him what I believed at the moment was an absolutely truthful representation of my own mind. I was by no means quite confident, but I thought I was doing the best I could while fighting; and in the last paragraph of that letter, too, I say the same thing.

15225. (*Chairman.*) I understand that one of your reasons for not taking the direction which you eventually took, or perhaps your principal reason, was that your men were raw?—That was one of my reasons for not going by Hlangwane Hill.

15226. And yet that was the way you eventually went?—Yes. It meant four days' rather difficult bush fighting before we got to a position where we could do anything.

15227. And when you say that your men were raw, what do you mean by that?—That they were only just off ship, and had never had any fighting; most of them had never had a shot fired at them.

15228. But they were part of the Army Corps, were they not?—But the Army Corps had never been shot at.

15229. I suppose that would happen to an Army Corps in any case when it goes into action?—But if the general knows it he cannot take the same risk as he can with men who know all about being shot at.

15230. Is that the position in which you represent that we are: that the first Army Corps is to be regarded as raw troops, with which a general is not justified in taking an action of this kind?—You may have a very good hunter in your stable, but if he has never had a gallop you would not take him out for a long day's hunting. A horse may be a very good hunter, but if he is raw at his work he would not be fit to go a long day, and it is the same thing with a man. If he has never been shot at, and the company have never been accustomed to the stress of war, they are not the same valuable fighting machine that they become afterwards; undoubtedly they are not.

15231. That stands to reason, but I want to know whether in your opinion a General is not justified in taking the First Army Corps of the British Army into an action such as was contemplated in that case?—I do not think that any general is justified in taking any troops into a place where he does not think they will win. I did not think my troops were fit to go into bush-fighting. It is a most difficult thing, of course; it requires an immense amount of, individual resolution; the men are away from their officers and they require to have a certain amount of knowledge of combat before they are much good in the bush.

15232. The word "fit" covers the whole of my question. The troops were not "fit" then?—In my opinion my chances of winning with them were not great; that is not, "fit" from my point of view.

15233. Was that in consequence of their want of training?—In consequence of its having been impossible to train them.

15234. It would be impossible to train them, do you say?—I think so; you cannot simulate a bullet—nobody has ever been able to do so; I wish they could, but you cannot simulate the effect of bullets on a man. The only way to get your men in fighting order is to get them into action first of all if you can, where you can see what they are doing. Then you eventually encourage some and check others, and tell them what to do, and in that way they become warriors. But to take officers and men suddenly into the most difficult sort of fighting you can find anywhere, which is bush-fighting, I would not do it, I confess, at any time.

15235. (*Viscount Esher.*) Was your proposed march to Potgieter's Drift in the nature of a training gallop?—No, my march to Potgieter's Drift was through open country. It was in the nature to a certain degree of this—it taught the men to march at any rate. They had had no marching—they had been nearly a month on board ship.

15236. (*Chairman.*) Then we should be in this same position in any case in which we had to land an army to carry on operations in the bush?—There is hardly a conceivable condition where you would make war in which it would be necessary for the General to force bush-fighting on the day after landing; there are very few places at any rate.

15237. Is it only with regard to bush-fighting that you make that observation?—Yes. In bush-fighting you cannot see your men.

15238. And is it a want of individual initiative that you complain of?—No, I do not want to say it is any fault of anybody. Bush-fighting is the most difficult thing; I have had a good deal of it to do, and I know how difficult it is. The men get away; you lose them, they lose their direction, they go the wrong way, and there is very great difficulty. I have always heard, and

General The Right Hon. Sir Redvers Buller,

17 Feb. 1903

I believe it, that the battle of Königgrätz would have been over very much sooner than it was if it had not been that such a very large portion of the German Army was engulfed in the wood on the Austrian right.

15239. But is it not part of the condition of modern warfare that the private soldier, the non-commissioned officer, and the subaltern all require to have greater individuality than they used to have?—Certainly it is, most decidedly so; we do not get enough training to give our men much individuality; that unfortunately is true. But I can hardly conceive any amount of training that would make me anxious as a commander to land my troops off ship and take them suddenly into bush-fighting. I should like to know a little more of them first.

15240. (*Sir George Taubman-Goldie.*) When you ultimately moved by Monte Cristo and Hlangwane Hill, did they do well then?—They did very well; the West Surrey and the Rifle Brigade were the whole day in the bush, and they really did very well.

15241. (*Sir John Edge.*) I suppose that, even with the best troops, if they were inexperienced in bush-fighting, you would prefer to keep them out of it; it has nothing to do with the courage of the men?—Yes, I have always found that it makes the greatest demand upon officers, non-commissioned officers, and men of any sort of fighting you can conceive of, whatever the training and character of the troops.

15242. They do not quite know where they are going, and you do not know where they are gone?—No, you do not know where they are, and you cannot communicate with or control them.

15243. (*Viscount Esher.*) Your criticism would not apply only to British troops; you would say the same of any troops?—Yes.

15244. All untried troops?—Yes.

15245. (*Sir John Edge.*) The difficulty is that they do not know where they are going, and you do not know where they are?—That is it. All the drill control disappears by reason of the bush. The men are turned loose, that is what it comes to, and unless they are exceedingly handy and accustomed to fight by themselves, they are liable to get in the wrong direction, and fire in a panic, and all sorts of things.

15246. (*Viscount Esher.*) On that question of the Chairman's, you came to the conclusion, then, at that time, that the line of advance which you ultimately took was the most difficult of the four, did you not?—Yes, I came to the conclusion that the line of advance I first tried was a very much easier one than the line of advance by Hlangwane Hill. The line of advance by Potgieter's Drift was recommended to me by those whom I was bound to trust, as being easier; but it was not, and if I had then known the line of advance by Potgieter's Drift as well as I did after I had been fighting there, I should never have gone there.

15247. (*Lord Strathcona and Mount Royal.*) In such a case as that which you speak of, would you say that the former mode of life, the intelligence and experience of Colonial troops come into play, and that they are the more useful?—Yes, Colonial troops in the sense of backwoodsmen.

15248. Yes, those who have been accustomed to the bush?—Yes. I do not think that Colonial troops taken out of Colonial towns would be any better than our backwoodsmen have been in the bush; but, of course, backwoodsmen and men accustomed to fight for their own hand would have been better.

15249. (*Sir John Jackson.*) And in a case where a man has to rely more upon his own resources you would expect to get a better result if you had your troops from a slightly higher level than they are recruited from at present, would you not?—But really our troops are very good. I do not think we have any right to fall foul of them.

15250. Not as regards their courage, of course?—You only want to give them a little shooting. I have been in fights with both the Army and the Navy, and I have nothing to complain of in the men. They want practice in being shot at. When they have had that they are very good.

15251. Yes; but in that particular kind of bush-fighting that you are speaking of, the intelligence of the man comes in a little more, does it not, when he is left all to himself?—Yes, it does.

15252. I am not suggesting that the British soldier is not a plucky man; but my suggestion is whether in a case

of that kind you do not think that the material might be got from a rather better class of man than the recruits mostly come from now, and whether that might not be an advantage?—Yes, it might. But you sometimes find in the most uneducated men a real genius for war—a "hunter's instinct," in fact.

15253. (*Viscount Esher.*) You say that you found the advance by Potgieter's Drift more difficult than you expected?—Yes.

15254. And ultimately, did you find the advance by Hlangwane Hill easier than you expected?—No, I think not. It was very difficult. The men really fought very well indeed for fourteen days and almost fourteen nights without stopping. They never let go anything that we had got, but we only got it almost by inches at one time. The Boers themselves and the German officers who were with the Boers at the top of Spion Kop told my officers that it was absolutely impossible to get into Ladysmith. It was not impossible, because we did it; but I assure you the difficulties were very, very great—the sheer fighting. We were under the hill the whole way. As they fell back every position they occupied commanded the one we had just taken.

15255. When you ultimately advanced by Hlangwane Hill do you consider that the Boer force was weaker than it would have been at the time you would have attacked it before?—I consider that at Spion Kop and Vaal Krantz I disposed of their very best educated men.

15256. Had not the advance also through the Orange Free State weakened the force?—No, I think not. I think it had very little effect.

15257. (*Sir George Taubman-Goldie.*) As regards the maps that you had for that chain of mountains, were they sufficient for your purposes?—The only map I had I had created. This (*producing the same*) is the map we had. There was no map of that country.

15258. I mean, for forming your ideas was it sufficient?—Yes, it is not a bad map; it is an inch to a mile. I had it made in Maritzburg.

15259. Before you got up there?—Yes. Before I got to Frere.

15260. Did it prove sufficient?—Yes, I think it did.

15261. It was fairly accurate?—I got it compiled from all the different farm surveys and made into a map of a scale of one inch to a mile. That was the map we used until we got on to what is called Grant's map.

15262. So that we cannot say that any misfortune occurred from want of maps?—No, I think not. There were no minor surveys. Spion Kop, for instance, in this map is in the wrong place; but I think it was good enough to fight by.

15263. On the whole, you did not suffer seriously for want of a better map?—No, I do not think so. But with a better map we should have got our ranges more quickly.

15264. (*Sir Frederick Darley.*) At the time you attacked Hlangwane Hill do you not think that the Boers were very much shaken by your three previous attacks?—I attacked practically new commandoes. Nearly all the fighting at Spion Kop was against Free Staters, with a certain number of what might be called the permanent army of the Transvaal, namely, Johannesburg and Pretoria Police; but there were very few Transvaalers who came into action against us beyond the police. At Hlangwane Hill the people who were opposed to us were entirely Transvaalers.

15265. Who were not opposed to you before?—They had not been. They had no doubt been in support.

15266. But in point of fact, so far as the opposition was concerned, they were fresh divisions?—Yes, quite fresh.

15267. Reserves for the former divisions?—They were the men who were holding the positions that we had not attacked. They were told off all round Ladysmith. I sent home a Boer map which I found, and every position had a different commando attached to it. The Free State commandos were on the west, so that as the men we attacked on Spion Kop came from the west; our fighting there was principally against Free Staters.

15268. Do you not think that their morale must have been somewhat shaken by the previous attacks and the losses?—I think it must very much. At the same time they stood very well at Pieter's Hill—extremely well.

15269. But still, you think their morale was affected?

—Yes, I think so. They could not stand constant fighting, and we could. If we had not gone on fighting we never should have got in.

15270. Even though your men had been as well trained and accustomed to fighting as when they did attack at Hlangwane Hill, and in the supposition there had been no previous attacks, do you not think that your

task would have been a much more difficult one than it was?—Yes, I think it would have been very much more difficult for that reason, and also for the reason that on the 15th of December I had not force enough really to justify me in going by Hlangwane Hill. I had an extra division when I tried it, but at that time I had not that extra division.

General The Right Hon. Sir Redvers Buller, V.C., G.C.B., G.C.M.G.

17 Feb. 1903.

THIRTY-SEVENTH DAY.

Wednesday, 18th February 1903.

PRESENT :

The Right Hon. The Earl of ELGIN AND KINCARDINE, K.G., G.C.S.I., G.C.I.E. (*Chairman*).

The Right Honourable The Viscount ESHER, K.C.B., K.C.V.O.

The Right Honourable The Lord STRATHCONA AND MOUNT ROYAL, G.C.M.G.

The Right Honourable Sir GEORGE DASHWOOD TAUBMAN-GOLDIE, K.C.M.G.

Field-Marshal Sir HENRY WYLIE NORMAN, G.C.B., G.C.M.G., C.I.E.

The Hon. Sir FREDERICK MATTHEW DARLEY, G.C.M.G.

Admiral Sir JOHN OMMANNEY HOPKINS, G.C.B.

Sir JOHN EDGE.

Sir JOHN JACKSON.

BERNARD H. HOLLAND, Esq. (*Secretary*).

General The Right Hon. Sir REDVERS BULLER, V.C., G.C.B., G.C.M.G., recalled and further examined.

Colonel The Hon. Sir F. W. STOPFORD, K.C.M.G., C.B., Military Secretary to the General Officer Commanding-in-Chief, South Africa (Sir Redvers Buller), was also in attendance.

General The Right Hon. Sir Redvers Buller, V.C., G.C.B., G.C.M.G.

18 Feb. 1903.

15271. (*Chairman*.) When we left off yesterday we had just finished the section of your statement headed "Change of Plans"?—I want, if I might be allowed, to make three points in my evidence yesterday a little clearer than I think I did, if there was any doubt about them.

15272. Certainly!—The first two, perhaps, are small points, and they relate more to attacks made upon me than to anything that actually affects the Commission, but it might be said against me that in my narrative I have slurred over an accusation that was made against me, which was that I had not, when I arrived at the Cape, advised the Government to send reinforcements quickly enough. I do not know whether any member of the Commission has heard that said; but when I arrived at the Cape it was not very easy at first to ascertain the exact military situation. It was very evident to me that the authorities at the Cape had been taken by surprise by the suddenness and the severity of the enemy's attack. In the files of newspapers that were given to me on arrival I found that Mr. Rhodes the day before he left Cape Town had expressed his certainty that the Boers would not fight; and in the interview that I had on the second day with Mr. Schreiner, who impressed me as a very loyal, honest man, he gave me to understand that he could not help thinking that there was some error altogether in anticipating any invasion of Cape Colony. He wrote, as I have said, to Mr. Steyn protesting against it; and I did not think I was justified in asking for a further Division until I saw what result that letter had. On the day, which I think was the 10th November, when I received Mr. Steyn's answer from Mr. Schreiner, I at once telegraphed direct to the Government for the next Division. That is the point with regard to reinforcements.

15273. (*Sir George Taubman-Goldie*.) On that might I ask a question which I intended to have asked you yesterday. The point, to my mind, that wants explaining more clearly is this: You told us yesterday that when you went to Natal it was with a view of saving Natal, but that your scheme of advancing from Cape Colony up through Bloemfontein remained unchanged; you intended to take it up at a later date?—Yes.

15274. To do that would have involved reinforcements, surely. If you diverted a large portion of your force to Natal would it not have required reinforcements from England to carry out the ultimate scheme of advancing up through Bloemfontein. That struck me yesterday in hearing your evidence on that point?

—I will read the telegram I sent when I did ask for reinforcements.

15275. (*Chairman*.) What is the date of it?—The 10th of November. I had asked on the 4th of November that a Division might be prepared, but I said, "Do not take up shipping until you hear from me again." On the 10th the Secretary of State telegraphed to me: "Division is being prepared, but we cannot venture to take up shipping without knowing for certain whether it will be wanted. This can be left open as long as you please, but provision of ships, particularly horse transport, takes time. Can you now say by what date you will want the troops?" I telegraphed the same day (my No. 27), "Your No. 12 (that was the telegram that I was answering), The defence of Ladysmith seems to have so thoroughly checked the advance of enemy that I have some grounds for hoping that successful relief of Kimberley and Ladysmith may end opposition; on the other hand, reliable Dutch here predict guerilla warfare for certainty. I think, therefore, I ought to have another Division as soon as possible. My great want at present is mounted men. I am raising as many as I can, and should like as soon as possible a few good special-service officers, not above the rank of captain, for service with them—Infantry men for choice." That was on the 10th. As soon as I really had time to look round I asked for a Division; I think I did that as quickly as I could.

15276. (*Chairman*.) What is the next point?—The next point is a point that hangs on to an answer that I gave to a question which Lord Strathcona asked me yesterday. He asked me whether I did not think mounted men were specially necessary, and I said Yes, and, as that telegram shows, I did think so. But I had forgotten at the moment that there has been several times public discussion on a telegram I have never seen, which was supposed to have told the Colonies that Infantry were preferred. Very indirectly, I was mixed up with that telegram, and I should like to explain the circumstances.

See Q. 15093-8.

15277. If you please?—I was sitting one day on a Committee at the War Office when I was told that the Secretary of State wanted to see me. I went into his room, and he had in his hands a paper (I think it was about the end of the first week in October; I am almost sure it was in October), and he told me that he had received from the Colonial Office an offer to send Colonial troops. A conversation ensued as to them. I was not shown the paper, and was not given any accurate figures, and it was rather a casual conversation, but I gathered that the point in his mind at that moment

General The
Right Hon.
Sir Redvers
Butler,
V.C., G.C.B.,
G.C.M.G.

18 Feb. 1903.

was what he should pay them. I further gathered that his intention was to accept men from the Colonies, but to say that the English Government would only pay them at the rate they paid their own soldiers. At that time I was looking forward to arriving at the Cape and finding myself in a hornets' nest, and the only card I had in any sense up my sleeve was my conviction that the action of the Boers, if they did go to war, would drive out of the Transvaal, out of Johannesburg especially, and also partly out of the Free State, a very large number of very useful fighting Englishmen, who would probably be rather bitter, and most likely be immediately anxious to take up arms against the Boers. I had always calculated that they would give me a force of from 8,000 to 10,000 men, which would be a very effective mounted force. I had at the time also in my own mind calculated that I should have enough saddlery, and I did not want to mention this idea to Lord Lansdowne. The price in South Africa for mounted men had formerly always been, 5s. a day, and I did not believe myself that I should get these men under 5s. I wanted to pay them 5s. a day, and, to avoid being tied to a less sum for the Colonial mounted men, I told Lord Lansdowne that so far as I was concerned I should be quite satisfied if he would take all the Infantry that the Colonies would send, but that I did not think there was any necessity for taking a very small detached force of Cavalry. My idea was that all the Colonists could ride, and that I could mount them and turn them into Mounted Infantry and pay them all alike, 5s. a day. I have only gone into that explanation because it meets the point that has been raised.

15278. (*Sir Frederick Darley.*) Do you remember which of the Colonies it was that came under your notice then?—I do not think Lord Lansdowne mentioned them at all.

15279. Because, as regards the Australian Colonies, as perhaps you are aware, the first contingents that went out, certainly from New South Wales, and I think from the other Australian Colonies, went at the expense of the Colonial Government; there was no question of Imperial pay?—Unluckily for me the Australians did not come under my command at all, and I do not know the conditions under which they went. I only wanted rather not to pretend that I had not cognisance of that telegram. I wanted to be open in fact.

15280. (*Lord Strathcona and Mount Royal.*) It was not that you considered that mounted men would not be useful or required, but that you thought you could get a sufficient body of men in South Africa?—As a matter of fact the composition of the expedition was not mine, but I did expect that on my arrival at the Cape I should want mounted men immediately, and that my need might be urgent; and I thought therefore that it was better for me to take what I could get in the Colony at the moment (these other Colonies' troops were only at that time being thought of), and that later on if the War assumed greater proportions I should be able to make more at leisure arrangements for troops from those Colonies.

15281. Could you have foreseen the turn that things took you would certainly have desired more mounted men sent out at once?—I should certainly.

15282. And so soon as you had an opportunity of forming mounted corps you did so. You did ask for them afterwards?—The day I landed I began to create mounted men.

15283. Only you were deficient in mounted men to begin with?—Yes.

15284. Greatly deficient?—Yes.

15285. (*Chairman.*) Is there any other point?—The third point that I rather wanted to explain was the question (I do not know what impression I left upon the Commission) as to my views of the position of Ladysmith, because it is rather of importance to me. I have this morning put together the telegrams, references to telegrams, and the extracts from them, from which I formed my opinion, and in looking over the book I found that I had quite forgotten that Lord Wolseley had formed at home exactly the same opinion that I had, that is to say that if Sir George White went into Ladysmith it would not definitely tend to the protection of Natal. May I just read those selections?

15286. Certainly?—On the 28th of October Sir George

White telegraphed to me, "Natal requires earliest reinforcements possible; will do all my means admit of to conquer enemy." I can give you, if you like, the numbers of his telegrams I am quoting from.

15287. (*Sir Frederick Darley.*) The dates, I think, will be useful?—That is 'No. 122, 28th of October.

15288. (*Chairman.*) Are these telegrams to you?—Yes. From Sir George White.

15289. To you?—To me.

15290. I do not think we have them?—I understood that they were all printed. I can read it all, I have it here.

15291. We have the telegrams that begin on the 26th of November, but I do not think we have the earlier ones?—Then perhaps I had better read the whole of it. "No. 122, 28th October, from Sir George White. Have a very strong force in front of me with many guns. Natal Colony requires earliest reinforcements possible. Troops here very heavy work, especially cavalry. I will do all my means admit of to conquer enemy. Very short of staff and officers. Hunter indispensable." On the 30th October he telegraphed to me an account of what has since been known as Nicholson's Nek, and he wound up that telegram by saying, "After being in action several hours I withdrew the troops and returned unmolested to cantonments. The enemy are in great numbers." On the 1st November I telegraphed to him and said, "Please telegraph me accurate description of your view of the situation. I doubt if the Boers will ever attack you if entrenched. Hitherto you have gone out to attack them. Can you not entrench and wait events? No reinforcements can reach you for at least 14 days." On the same date I had also asked General Hunter for a report, and he reported on the 1st of November, "Boers are superior to General White in numbers, mobility, and long range artillery. I think they will shortly interrupt railway and telegraph; that General White can defend himself against capture; that you should, if possible, guard intact the bridges at Colenso and Estcourt, and defend the passages of the Tugela River till you can relieve White." Then on the 31st October Sir George White telegraphed to me, "I wired Natal Governor yesterday that I would send the Royal Dublin Fusiliers to guard the bridge at Colenso as the best step I could take for protection of Colony. I intend to contain as many Boers as I can round Ladysmith, and I believe they will not go south without making an attempt on Ladysmith." Then he went on to reply to my telegram. He said, "Ladysmith is strongly entrenched, but the lines are not continuous. The perimeter is so large that Boers could exercise their usual tactics. Our men want rest from fighting, but I have the greatest confidence in holding the Boers as long as is necessary. I could not now withdraw from it." And on the same day, the 31st October, I received from London a telegram from Lord Wolseley, in which he said (that will be in the London telegrams), "Issue whatever order you deem best to White, who is now one of your Generals. Telegram from White leads me to fancy he means to hold on and allow himself to be besieged in Ladysmith. Is he wise to do this, which would place all Natal at the mercy of the enemy?" Then Sir George White wrote me the letter which I referred to yesterday, of the 31st October, of which I think you have a copy, and in that letter there is one reference that I did not read yesterday that I saw afterwards. He said when he retired, "I had to think of Ladysmith, and I knew I could drive them off, but feared I might not be able to do so later, as the men were played out and short of water. I therefore made arrangements in the rear and withdrew." And at the end of his letter he said, "Yesterday when I recognised that I could not break up the enemy around us in the field, I sent the Dublin Fusiliers and 6 Natal Guns to Colenso to try and close that road south to the Boers in case they ignored Ladysmith. I think they would stick to us." And then he sent out a message by pigeon, which we got on the 9th of November, in which he said, "Enemy have long range guns all round us, but it is impossible to ascertain the strength in which he holds his different positions. We calculate his circle must be over 20 miles. Our position is also very extended, about 11 miles to enable us to retain Artillery position, which if lost would make Ladysmith untenable. This curtails our force for offensive operations without great risk to Ladysmith." I do not want

to labour that point any more. I only want rather to let the Commission understand that, though I do not in the least deny that Sir George White may have had strategical ideas in going into Ladysmith, the impression which those telegrams gave me (and equally gave Lord Wolseley) was that he was driven into Ladysmith, and practically as an Army in the field his power was gone, and that the only advantage he was to me was that as he defended Ladysmith he did automatically, undoubtedly, contain a certain number of Boers.

15292. (*Sir Frederick Darley.*) You answered the Commander-in-Chief's telegram to you on the 31st October, in which he says, "Telegram from White leads me to fancy that he wants to hold on and allow himself to be besieged in Ladysmith," on the 1st November?—I answered it the same day, I think.

15293. On the 1st November?—Yes, "I suggested to White that Colenso and line Tugela offered promising position, but he has selected Ladysmith, which he says is strongly entrenched, and whence he could not now withdraw. I suspect he is right in this. His supplies are there; if he sent them back in advance he might be isolated without them; and *vice versa* he might lose them. His men also must want rest badly. I have arranged with Admiralty to protect Durban; Maritzburg is at present indefensible."

15294. (*Sir George Taubman-Goldie.*) On that point there is one matter that I think you ought to have an opportunity of explaining. We have not the notes of yesterday's evidence before us yet, but if my memory serves me right (you will correct me if I am wrong) you told us that you had instructed or advised, either before you started from England or from Madeira, that stores should be poured into Ladysmith as rapidly as possible. Do you remember saying that yesterday?—I think you rather misunderstood me. I did that in England at the time that General Symons moved the force to Glencoe. I went up to London and opposed it by every possible means in my power. I pointed out to Lord Lansdowne that it was like stretching out your arm to have your hand cut off; that a small force like that could do no good. I then went to Lord Wolseley and said that at any rate Glencoe ought to be fortified, and should have at least 60 days' provisions, as I was perfectly certain that in the event of the Boers ever invading, Glencoe would be isolated; and a telegram, which I daresay I could turn up in the War Office Book (but I have no reference to it here) was then sent, asking what provisions were at Glencoe. The answer was rather a peculiar one; that there were only six days' and no need for more, because it could be supplied by the railway. My conviction that the railway would be cut was the very thing that made me wish for more supplies than the six days'. And then, I think at my instance, Lord Wolseley sent a telegram out in which he said that every isolated post was to have at least 60 days'. That order affected Ladysmith, and therefore Ladysmith had the 60 days'. That is what I mean.

15295. That is as far as you went?—Yes.

15296. I thought I understood you yesterday to say (you can always correct it on the notes if you went too far, or I may be wrong) that a telegram was sent instructing them to pour stores into Ladysmith as fast as possible?—Oh, no.

15297. (*Chairman.*) You do not want to pursue that point further than you have stated it?—No.

15298. Because, as you are aware, we have had an opportunity of hearing the views on the strategical positions from Lord Wolseley and from Lord Roberts, but we accept them as views expressed by those authorities on the strategical position, and we accept yours in the same way?—I do not want really to give any views on the strategical position. I only wanted to make it clear that I had grounds upon which to base my opinion (which I thought you rather questioned yesterday) that I was justified in thinking that I could not count much on the Ladysmith garrison.

15299. I understand your views; do not take it as accepting them?—I do not want you to do more.

15300. Then now shall we go on?—If you please.

15301. We come now to the point of your summary, which is headed, "Events of the 15th December,"

and I take it that this is the account that you wish us to accept from you of those events, and I do not know that I have any question which I wish to put to you with regard to them; do you want to amplify them?—There are only two matters which I want to be sure that I have made clear. I hope I have practically made it clear that I never attacked on the 15th at all. I have been accused of having done so, and it has been said that every military man condemned the execution of that attack. But I made no attack. I stopped at the very earliest moment in the morning every General from moving, and no attack was made on Colenso at all on the 15th of December. I have tried to make that clear here.

15302. You stopped the movements as soon as you discovered the position?—My left Brigade moved too soon, contrary to my orders, I did not succeed in stopping it, but withdrew it at once. But no other troops, except some artillery that got into the wrong place, moved forward at all for any purpose of any attack. And if I have not made that clear I should like to read General Hildyard's view, who commanded the 2nd Brigade, the attacking column; three or four words from his own account of what happened.

15303. Very well?—I have here the autograph report of General Hildyard, of the action of his Brigade on the 15th of December, and these are the very few lines that I want to read: "The orders received were to seize the kopjes north of Colenso when the bombardment had made itself sufficiently felt. Before this moment arrived the Commander-in-Chief informed me that owing to the loss of the guns the attack could not be carried out to-day and that the retirement of the Artillery was to be covered by the 2nd Brigade. The 2nd Queen's and 2nd Devons were informed accordingly, and directed to cover its retirement, the former west of the railway, the latter east of it, taking care not to be involved more than could be helped in an engagement with the enemy." I only wanted just to read that to show that there was no attack at all, (The word retirement in General Hildyard's letter should have been "withdrawal") and that the only military action that I directed that day was a series of attempts to recover some guns which had been taken into a position into which, in my opinion they ought never to have been taken.

15304. (*Viscount Esher.*) Had you intended to attack?—Fully. I had given all my orders the day before.

15305. (*Sir George Taubman-Goldie.*) I think you ought to have an opportunity of giving your reasons with regard to those guns, why you say it was equally impossible to prevent their withdrawal by the enemy, and which you say you would be glad to give?—I offer myself rather more to be cross-examined. It is difficult to fight against a man of straw; that is my position really. I state it as a fact, and I have seen a certain amount of fighting. The guns went down into a place where they were within 300 yards of cover, which was in the occupation of the enemy, and within 1,200 yards of a fortified hill which was held by the enemy. The fire from that hill, principally from the hill, as I was given to understand at the time, but also from the bushes, the cover, disabled the guns by either killing or wounding the whole of their men, and I was not informed of it by the officer in charge until he had abandoned his guns. I got down to the nearest place I could, with anything like safety, approach behind the guns, which was a large donga, and from there I directed certain endeavours to retrieve the guns. But they were absolutely in the open. The first two we got away; I do not think the Boers realised what we were doing; the men while under fire managed to hook two on to the limbers I sent out, and brought them back; but the horses and men of the other two limbers I sent forward were shot down and either killed or wounded. At any rate, they did not come back, and when a further attempt was made later in the day the limbers only got half way; there was nobody with the guns to hook on; they were entirely abandoned. I was about 800 yards behind them, I suppose, and the bushes in front of them at the edge of the river were less than 300 yards from them. Those bushes later on were occupied, but at that time they were in possession of the enemy, and though, of course, I could have pushed forward and got to the river, and having got to the river I might possibly have managed

*General The

G.C.M.G.

18 Feb. 1903.

to get live horses or men up to the guns to draw them back, yet the whole of the time the guns would be under fire from the entrenchments on the top of Fort Wylie, which commanded the plateau we were on by about 150 feet, and looked down upon everything. I believe myself that it was absolutely impossible.

15306. I wished rather to direct your attention to the last few lines of the last paragraph in your statement. You are aware that it has been said that if it was impossible for us to get the guns away, it might have been made equally impossible for the Boers to take them away?—Yes; but I do not think that it has been said by anybody who has seen the place. Of course, anybody here may say it. I do not think that anybody who had seen the place could have said it. I know some German wrote an article in a magazine and said that we could have held the donga. But from the donga you could not see the guns. My men were very much exhausted that day by want of water; there was no water at all on the ground they were fighting on, and I was very much impressed, I admit, afterwards by their exhaustion. They were very ready to fight, but they went to sleep, and anybody who witnessed the trouble that I had to get men out of the donga to make the efforts which they did make to get the guns back would have, I think, entirely agreed with me, as did all the officers who were present. General Clery agreed with me, and at the time he was there with me, that it was impossible by any means that we had, without a very heavy loss of life, to have kept near enough to the guns—that is to say, in sight of the guns, within range, without unduly exposing the men—in order to get the guns back. And if I had left it to the night I should have left a very considerable portion of my force (and my force at the time was none too great to defend Natal, which was my principal object) exposed the whole of that afternoon under fire from Fort Wylie and the hills on the other side of Colenso, which looked down upon the plains we were on; they would have had to remain there the whole of the day under fire from Boers concealed in very safe positions. What would they have done in the night? There were more Boers there than I had men, and they would have come across the river—there was nothing to prevent them—and we should have had a rough and tumble on the banks of the Tugela, in which I fully believe we should have been worsted. I do not think it was possible. I do not believe any living man could have got those guns away. I do not think so. Of course I could have kept the guns under our fire, but there was no use in that if I could not withdraw them and I could not.

15307. (*Sir Frederick Darley.*) At any rate, you were of opinion they could only have been regained at such a loss of life as would have been unpardonable?—I think so; they had been deserted. Let it be understood, it was not as if they had men with them. If I could have sent limbers up and had one live man to hook in, there might possibly have been a chance; but if you send limbers up the men dismounting to hook in are such a mark—and there must have been at least 300 rifles firing at them, and firing at them with a plunging bullet at about 1,200 yards range.

15308. (*Lord Strathcona and Mount Royal.*) You say here in your Statement that shortly after the return of the officer you had sent to Long's Brigade Division the guns ceased firing?—Yes.

15309. Was the account that he gave to you on his return of the actual position of the batteries at that time correct?—It was not correct; he told me that the guns were comfortable. I went to the only place whence I could see the whole of the ground from which I intended to have directed the attack, and the guns went beyond the position that I allotted to them; they were out of my sight, so that I merely saw them go down, and when I saw them go down I sent out after them, thinking that they had gone much too close, and the officer came back and said the guns were all right; but they were not all right.

15310. Then you do not consider that he carried out your orders correctly?—As I told him the following day, he failed to carry out my orders. But I do not wish to discuss this. He was a good man and served me well; anyone may make mistakes.

15311. (*Chairman.*) Then the next head is, "Con-

siderations as to future policy," and there you have given us a statement of the telegrams which you sent expressing the views which you then entertained as to policy?—Yes.

15312. You say that you hoped thereby to elicit from the Government a definite opinion as to the course which they judged it expedient for you to pursue?—Yes.

15313. You thought it was for the Government, then, to express an opinion upon that matter?—The Government had elected that it should be; they had interfered with me.

15314. By expressing a preference for Kimberley?—By sending orders who was to command in the sphere of my operations. I considered that that was a very strong step for them to take, especially as it was in direct opposition to my definitely-expressed opinion. The question of the relative importance of Kimberley and Natal was a question which had been discussed very much between me and Sir Alfred Milner before I left the Cape, and I was well aware that our views were not entirely in accordance. I thought then, and I think now, that the Government were acting upon advice which was not mine, and that in the action which they were taking with regard to officers under my command, they were influenced by considerations for Kimberley which were different from those which I myself entertained at the time. I thought, therefore, that it was really a political question more than a military question. It was perfectly immaterial to me whether I fought at Kimberley or at Ladysmith. For reasons which were not very easy to be expressed, but which had considerable weight with me, I considered it was more important from a military point of view to fight at Ladysmith. But I did not then, and I do not now, consider that those considerations were strong enough to have over-ridden strong political considerations.

15315. But the result of the fighting on the 15th, so far as your policy was concerned, was to bring you to the position which you were describing to us yesterday, and which you put forward on the 13th, that you must let Ladysmith go and take up a defensible position?—The expression "let Ladysmith go" is a military expression; it does not mean "let Ladysmith fall."

15316. What does it mean exactly?—It means removing yourself from immediate touch with the place. Oddly enough, exactly the same expression was used to me a short time before by General Clery. When I first sent him to Natal he said, "Let Estcourt go." I did not wish to do so, and he did not; but "let go" does not mean "let fall." There were 12,000 men in Ladysmith.

15317. But it meant to stop the operations for it relief?—To suspend the operations for its relief—just so.

15318. That is the meaning of the expression?—That is the meaning of the expression. It is a well understood expression. I think every soldier really understands it. I am sure Sir Henry Norman would say the same thing—that "let go" does not at all mean "let fall."

(*Sir Henry Norman.*) Certainly.

15319. (*Chairman.*) Then you were to take up a definite position until you got further reinforcements?—Until I got further reinforcements, or until (which I confess I did not anticipate), it might have been possible to have gone round by Kimberley and come across very much by the same line by which Lord Roberts afterwards thought he would be able to do it. I want you to notice that just below what you have read I say, "I therefore laid before them my opinion from a military standpoint as to the measures best fitted to meet the situation." The situation there was the situation, of course, that they had created. I had not a single available man in hand at the moment except the Fifth Division, and they had, I thought, ordered the Fifth Division up to the Modder.

15320. (*Viscount Esher.*) What exactly prompted your telegram of the 15th December to the Government? I thought I understood you to say that the Government had decided not to reinforce you but to send a force to Kimberley, to send the Fifth Division there?

See Colonel
Long's State-
ment in
Appendix,
Vol., p. 341.

*General The
Right Hon.
Sir Redvers
Buller,
V.C., G.C.B.,
G.C.M.G.*

18 Feb. 1903.

Is that so?—Yes. Before I attacked at Ladysmith the Government had committed my only reserves to the relief of Kimberley.

15321. Can you refer to the telegrams in which you suggested that the Fifth Division should come to you?—I did not suggest that the Fifth Division should come to me. I suggested that Lord Methuen should be left in command on the Modder.

15322. But I really want to understand it. I want to get really the broad issue. It was not, you say, your failure at Colenso which solely induced you to send that telegram of the 15th of December, No. 87, to the Secretary of State?—Not at all.

15323. Then it was something else. I want to get exactly at what it was?—As I said yesterday, my proposal to take up defensible positions was to a certain degree in the nature of a testamentary disposition, in case anything happened to me.

15324. I quite understand that?—At the time I had only one free Division; they were the only reinforcements I had. There were no other troops on the sea at that time, nor at that time had the Sixth Division embarked; so that there was, at any rate, the whole journey from England between me and any further reinforcements at that moment. Accordingly, I had to consider what I had better do, should I attack Ladysmith again, or should I do what I thought would be a rather easy way of getting a certain amount of advantage against the Boers—should I attack Kimberley.

15325. Should you leave Natal and go round to the Cape?—I myself?

15326. Yes, you yourself?—I did not like to leave Natal. The reason I have given influenced me. I thought—and I honestly believe now from the after events that I thought rightly—that had I left Natal it would have encouraged the Boers to attack Ladysmith, and Ladysmith might have been taken, and, therefore, although I believe that from an abstract military point of view it would have been the right thing for me to have jumped at once into the train and gone to Kimberley, made a diversion, relieved Kimberley, and come back again, I did not like to do it because I did not like to leave Natal. Therefore, if I stayed in Natal, I wanted, and I wanted immediately, a Division. I had, I thought, to overcome a preconceived opinion on the part of the Government, namely, that they attached more importance to the relief of Kimberley than they did to the relief of Ladysmith.

15327. But you see, in your telegram of the 15th, you do not suggest to the Government, or tell the Government that you wanted to go to Kimberley?—I do not; and I purposely did not.

15328. But if I had received that telegram, I do not think I should have gathered from it that your wish was to go to Kimberley, unless you sent some other communication to Lord Wolsley, or some one else, which would throw light upon the situation?—I perfectly admit that; for I did not want to go to Kimberley, and I have told you why. But I ask you to consider my position. I was in the position of a man who had never been consulted at all, whose advice had never been taken, and whose advice had usually been rather curtly, not very politely, refused. I have shown you that it was only by the accident of my friendship with the Prime Minister's Private Secretary that Sir G. White obtained in time nearly half the force that he had in Natal. I have shown you that the Secretary of State so little realised the value of time in war, that he deferred mobilisation, against my advice, for a whole week at a most critical moment. The only difference in my treatment by the Government in England and in South Africa was that in South Africa instead of ignoring me they interfered with me. I had to intervene, as I have told you, to protect my Officers from being superseded, immediately upon any miscarriage, against my wishes and without knowledge or examination of the circumstances. And now, the Government had interfered by committing the Fifth Division to the relief of Kimberley without so much as a reference to me. (See *Lord Lansdowne's explanation*, Q. 21259). The principal adviser of the Government during all previous operations had been the High Commissioner at Cape Town, whom I knew to be committed to the very policy with which I disagreed.

Time was too precious to be wasted in argument or discussion. My telegram, as I have said, laid before the Government my opinion as to the measures best fitted to meet the situation they had created by their interference. They might have reasons of paramount importance for that interference or they might not; they had not vouchsafed me information. They might have realised the consequences that would flow from that interference if I failed at Colenso and be prepared to accept them, or they might not. Experience had shown me that it was useless for me to tender advice to the Secretary of State for War, for I had already for six weeks been suffering from his neglect of my advice. My only alternative was to present to him strongly the situation created by his interference. If that interference was based upon paramount considerations of policy, it might be right that he should prevail; if it were not, I was pretty confident that he would abandon it very speedily, as in fact he did.

15329. Then what reply did you expect to get?—I expected the exact reply that I got, "Use the troops," and I immediately acknowledged it, "Thank you very much, exactly what I wanted."

15330. It did not occur to you, of course, at that time that that telegram might very well give to Lord Lansdowne and the Government, and subsequently give to the public, a wrong impression of what your state of mind was at the time?—It did not occur to me at the time, and it did not occur to me that there ever would be people who would endeavour to interpret a telegram addressed to the Secretary of State for War, under one set of conditions, by the light of telegrams addressed to an officer in command of a fortress in the field under a totally different set of conditions.

15331. (*Sir George Taubman-Goldie*.) Then the Royal Commission may be of some value?—I am very glad that there is a Royal Commission; it may be of great value.

15332. (*Viscount Esher*.) It has given you, at any rate, the opportunity of interpreting that telegram, which, to a certain extent, has misled people, as you are aware?—I do not think it has misled people except in cases where it has been designedly misrepresented. You must remember that that telegram has been published by people who, when they published it, absolutely refused to publish the fact that it was consequent upon an order that they had sent, and who refused to publish the acknowledgment that I sent of it.

15333. (*Sir George Taubman-Goldie*.) With reference to the maps of which you spoke yesterday, did your map show a Drift over the Tugela where General Hart advanced to?—Yes, it did.

15334. Did you find it to be correct?—I think it was approximately correct. He went the wrong way, he advanced towards the wrong place, but the Drift was there. I never went down to it myself, but I had very good information at that time from a member of the Natal Government who was the head of my Intelligence Department, Mr. T. K. Murray, who had been living most of his life south of Ladysmith, and knew every drift and almost everything.

15335. You are aware that people on the spot who live there declare that there is no Drift there?—I go further to prove that there was a Drift, because I advanced General Lyttelton's Brigade on seeing what I thought was a hostile movement being made; and I have since that seen in the *Times* a statement made by Commandant Edwards, and have had from a friend of mine in Natal a statement that Commandant Edwards made to him, who assured him that if it had not been for the advance of General Lyttelton's Brigade, 2,000 Boers were going to have attacked General Hart's Brigade in flank by that Drift, and Commandant Edwards' expression was "by the Drift that the British had missed." It was what is called a bridle drift, you know.

15336. (*Chairman*.) Then shall we pass on to "Events of the 16th to 18th December," in which you go in detail through the communications which passed at that time between yourself and the Secretary of State, and also between yourself and Sir George White in Ladysmith. I might just say that we have before us a copy from

General The Right Hon. Sir Redvers Buller
V.C., G.C.B.,
G.C.M.G.

the War Office of the Siege Correspondence, (*Vide Appendix, page 631, post.*), which I believe includes all the communications that passed between yourself and Sir George White?—I do not know whether that correspondence is placed in series.

18 Feb. 1903. 15337. Yes, it is by dates?—Does it give the numbers of the telegrams?

15338. Yes. Would you like to look at it (*handing the same to the Witness*)?—I only want to point out that I was given some extracts by the War Office which I was directed, if I dealt with them at all, to publish as a whole, and from those telegrams as given to me the numbers had all been eliminated. I am always particular in telegraphing to number my telegrams, and if the numbers are left out and the order of telegrams is inverted what can happen is, and what really did happen to me was, that a very false impression may be given to the public by later telegrams being put in front of earlier ones.

15339. I mentioned that we have the telegrams before us because it might save you going through them in detail. We have all these telegrams?—The only point with regard to those telegrams to which I attach the slightest importance really is the fact that one telegram which I was ordered to publish is not in the shape in which I sent it, and that the following telegram, which conveyed a very different impression from what was sought to be conveyed by the publication that was made, was not published. My No. 92 was followed by my No. 93, and my No. 92, of which rather a strong point was made, was not published as I sent it, but published as it was said to have been deciphered. I have given it in the narrative as I sent it.

15340. (*Sir John Edge.*) What is the date of that?—The 16th of December.

15341. (*Sir George Taubman-Goldie.*) It is quoted in a series before us?—Exactly, but those are wrong—that is the point. In all the telegrams that I was ordered to publish (and I protested against publishing them wrongly) I was told to publish them textually as they were given to me, and to some of mine were given the dates on which I sent them and to others were given the dates on which Sir George White received them. As regards that particular telegram, No. 92, the date of the receipt by Sir George White, the 17th, is given, but I sent it on the 16th. My original telegram gave its own date, as I think all my telegrams did, but the War Office left the dates out. I have given the reference to it at the bottom of my Statement.

15342. (*Chairman.*) We do not seem to have that?—That is what I am afraid of.

15343. Would you like to look at this document again (*handing the paper to the Witness*)?—That is it, you see; that is what was done, No. 88 was published and hung on to No. 92, but as a matter of fact No. 88 was answered by Sir George White long before he received No. 92. This was not fair—that is all.

15344. Will you read your No. 92?—Yes.

15345. (*Sir George Taubman-Goldie.*) Are you confident of the date being the 16th, because in their correction note they say it was the 17th again?—I am absolutely confident. A clerk brought me No. 88, which I thought was an important telegram. I had had it repeated by the signaller and sent back to me, and he brought me the signaller's returned telegram. I wanted to alter it. You will see in that series of telegrams that in no two telegrams did Sir George White ever give me the same period for which his supplies could last. I said in the original telegram "How long"; I wanted to alter it to "how many days." I was on my horse at the time, and I gave the clerk instructions to strike out the words "how long" and put in "how many days." By mistake too many groups seem to have been struck out. I may say I never saw the telegram until after I got to England.

15346. Which, No. 92?—Yes, my No. 92. I did not pay any attention to it. It was meant to be a verbal correction. I put into the end of it the remark about the ciphers because at that very moment I had received a letter from the person who sent me my best information telling me that they were satisfied that the Boers had got a certain number of cipher or code telegrams, over which the deciphering had been written,

and, therefore, those groups they would have been able to read in future.

15347. (*Chairman.*) I think it would be better that you should give us the actual text of No. 92?—The actual text of No. 92 is at the bottom of page 9, the last two lines of page 9—my No. 92 cipher of the 16th December.

15348. It is all there?—Yes, that is the telegram: "My message, No. 88 cipher. Groups 31 to 43 were correctly sent, but in place of them and of first number of 44 Group read as follows, 'How many days can you hold out?' Also add to end of message, 'Whatever happens recollect to burn your cipher and decipher and code books and any deciphered messages.'" It is a stupid telegram; it is not a telegram that I ought to have sent, but it was sent in the hurry, and I never knew anything about it until I got to England, as no acknowledgment of it was ever received. Sir George White never acknowledged it. He acknowledged No. 88, but when I was given the chance of publishing his acknowledgment, and did so, I was not allowed to complete it by showing that he acknowledged No. 88 only. He said, "Your No. 88 of to-day received;" he did not refer to No. 92.

15349. I think that appears in the telegrams?—Yes, but it did not appear in what the War Office gave me to publish.

15350. But it appears now?—Yes, confidentially to you, but it has not appeared in public.

15351. (*Viscount Esher.*) It is No. 92 which you speak of when you say it is a stupid telegram?—Yes, I followed it by No. 93.

15352. (*Chairman.*) No. 93 is the one on the next page?—Yes; No. 92 in the way it was published was published rather to give colour to the fact that in No. 88 I had suggested to Sir George White he ought to surrender, and it was published, no doubt, for that reason, but if they had also published No. 93 I do not think it would have been possible for anybody to have given it that meaning.

15353. (*Sir George Taubman-Goldie.*) Would you explain that?—My No. 93 was, "I find I cannot take Colenso, and I cannot stay in force near there as there is no water, but I am leaving there as large a force as I can to help you; but recollect that in this weather my infantry cannot be depended on to march more than ten miles a day. Can you suggest anything for me to do? I think in about three weeks from now I could take Colenso, but I can never get to Onderbroek." No man would have sent that who had the moment before ordered the man to consider the possibilities of surrender. I ask too is it common sense to suppose that a General ordering an Officer to surrender would do so covertly by elimination of words from a previous order? No Officer would think of obeying without question such an order so conveyed. That telegram, No. 93, as you have it, is not my original telegram; it is one of those which have been altered.

15354. Do you mean that if your second telegram had been published as you sent it, it would have explained No. 88?—Yes, if No. 93 had been published.

15355. And that it would have explained it in such a way that it would have been clear that you did not mean Sir George White to surrender?—What I mean is that by putting my No. 92 in this paper as a note to No. 88, it is fairer than it was; but what was published before by the War Office was my No. 92 given in extenso, as it was assumed to have altered No. 88, the original telegram in the words in which I sent it not being given.

15356. Of course we only want to give you an opportunity of making any explanation which you wish, but the question which will always arise is this: what is the meaning of those words. After which I suggest your firing away as much ammunition as you can and making best terms you can?—The meaning of those words was this: I was face to face with a man who had a better force theoretically, a more experienced force, and a larger available force to help himself than I had to help him. In his telegrams he had thrown the whole onus of his relief upon me; he could not come out, he could not go large and could only help me in a particular hole, the most difficult place to get to. As I say, the onus of his relief was thrown upon me, and practi-

General The Right Hon. Sir Redvers Buller,
V.C., G.C.B.,
G.C.M.G.

18 Feb. 1903.

cally he had got into Ladysmith and was directing me, as he did then and afterwards, to bring the whole forces of the Empire to get him out. I am satisfied in my own mind that if I had been in Ladysmith with that force I could have come out any morning or evening that I wished to from Wagon Hill and along the line of the watershed; there is a very interesting watershed there. I happen to know Ladysmith very well myself. In 1881 I selected Ladysmith as a defensible position against the Boers, who had at that time no guns; and therefore I knew the country. From Wagon Hill it comes round, you turn at the end of Besters Spruit and come on to the next high hill and then you go down a little at the top of Onderbroek and come out at Groblers on the top of the hill, so that the whole way out of Ladysmith he would have had strong artillery positions to take up and help his attack as he came along. There could have been no difficulty whatever in getting out of Ladysmith provided he could be received at the bottom of the hill, where I hoped to be able to receive him. And that is what I expected to be able to do for him. I did consider that Sir George White was a man who would never give up Ladysmith if he could possibly keep it, but I did not consider that he had much initiative for active fighting, and I thought that the most effective lever I could employ to move him would be the warning that unless he could offer me active assistance he might possibly have to surrender. At any rate I think I may claim that he felt it so because in his reply to my No. 88 you notice he introduced a subject that I never mentioned. He says, "I cannot cut my way out to you." It is put in the paper you have given me "I fear could not cut my way to you." He brings that in. I do not wish to say anything against Sir George White, but if I have to defend myself I have to tell the truth. It will be found later on that when Sir George White came to the conclusion that I should not be able to help him he did then offer to try and cut his way out, but not till then (that was about the 28th of January, as I have mentioned further on), although at that time he had only 7,000 men whom he could put in the field. At the time when I asked him to suggest how he could do something to help me he had over 12,000 men, and he suggested nothing.

15357. Just one question about that suggested movement. Would he not, in the earlier part of his march, have been under a flanking fire from Bulwana?—I thought myself that he could have formed his troops in that large sort of pan after you come through Ladysmith beside Middle Hill, just at the extreme west end of Wagon Hill. He would then have been on the Nek, and then if he had kept round he would have been out of shot practically from Lancers Kop, and I think it would have been a very long range from Bulwana. And he had two Naval guns against the one on Bulwana, and could have, as he did afterwards, put one on the top of Caesar's Camp, where it remained to the end of the siege.

15358. (*Chairman.*) But in your telegram of the 1st November, which you quoted a little time ago, you said that you admitted that he could not withdraw from Ladysmith?—At that time; there were only 1,000 men in Natal on that day. I was there with 20,000 men at this time; that is a very great difference. He could not withdraw from Ladysmith alone, but he could have come out of Ladysmith to meet me. And at that time he was hampered with sick and wounded, whereas at this time they were all made neutral in the Intombi Camp.

15359. Still that means that he could have made a movement out with his troops to meet you, but could not have taken either his non-combatants or his stores out?—But his non-combatants would have been perfectly safe; the Boers did not kill the non-combatants, and if he had joined me we should have defeated the Boers the next day. There is an enormous difference between a man withdrawing from a place without any assistance whatever and a man retiring from a difficult position in the field. I wanted him to retire from Ladysmith. I would not have cared what happened to Ladysmith if I got him out. He might have left all his guns behind and it would not have mattered. I did suggest to him the point that he might fire away all his ammunition; that was all part of the original idea. The truth is that I did not want to order him

out as long as he said he could not come; but if he had given me the slightest chance—there were at that moment two or three, I think, perhaps risky operations, that I would willingly have undertaken to help him out. But he gave me no chance of helping him out; he met everything with a *non-possumus*.

15360. Please understand that I am not arguing the point; I am only trying to make clear what you meant?—I also do not want to argue it. I only want to make it quite clear; that was my point, that short of positively ordering him I did everything I could to induce him to do something.

15361. But the movement which you suggested was a movement for his troops which were fit to take the field to join you, but to abandon for a time at any rate the position of Ladysmith, to be occupied by the Boers if they chose to walk into it?—Nothing would have pleased me more than to have got the Boers into Ladysmith. The possession of Ladysmith was of no use to anybody. It was of use to Sir George White to protect himself, but it was of no strategical value as long as there were no troops to bar us. It did not close the passages of the Tugela in any way; it was 16 miles from the Tugela.

15362. I am not going into the question of strategy, but the Boers would then have walked in and taken possession of the place and you would have had to make operations which might not have taken place in Ladysmith itself but you would have had to make operations afterwards to drive them back?—I had to make those operations in any case in order to get to Sir George White.

15363. But if he had made the movement which you suggested?—If he had made the movement which I suggest he would have helped me to get to him, and that was the very thing he did not seem inclined to do.

15364. But still it would have been capable of being represented as a fall of Ladysmith in the first place?—No, I do not think so. When two forces are in the field and are separated by the enemy, and those two forces succeed, after a battle, in effecting a junction, they most decidedly are not supposed to have contributed to the fall of anything; they have gained a great success.

15365. But still if one of the forces is in a town and has abandoned the town, and that town is occupied by the enemy, you speak of it as an abandonment of that place to the enemy?—A few tin houses—a village; but I deny that if we had met, Ladysmith would have been occupied by the Boers. We should then have been on the hills, and they could not have got in.

15366. (*Sir George Taubman-Goldie.*) But if Sir George White had been successful in such a movement as you suggested, that would have cleared the Boer trenches at Colenso, and you would have had no difficulty whatever in advancing?—No, certainly not. I should have had 32,000 men to command instead of 20,000, and if I had succeeded in gaining such an enormous success over the Boers there is no doubt whatever in my mind that in a very few days we should have had them out of Natal.

15367. (*Viscount Esher.*) But, having that very strong opinion, and knowing all the ground, as you did there, you do not seem ever to have directly telegraphed to Sir George White to come out of Ladysmith, as you say he should have done?—I never did because, as I say, I fully intended to do so the moment I was over the Tugela within reach of Ladysmith. If I could have made on the 15th the lodgment that I expected to make in the corner of the river there, I had my telegram absolutely composed in my head in every single detail to send to him. But I have never ordered, except under great stress, any officer under my command to take a military step which he considered beyond his powers.

15368. But then, in this case, you did not ask Sir George White directly, in so many words, "Can you or can you not come out of Ladysmith?" There is no telegram which shows that; there is only your obscure telegram, if I may say so, which has been so misinterpreted according to you?—I admit the criticism, but I can only say that I should do it again with the same man. He told me he could not come out of Ladysmith; he told me so definitely from the beginning. The very day I arrived in Natal he met me by a telegram practi-

*General The
Right Hon.
Sir Redvers
Butler,
V.C., G.C.B.,
G.C.M.G.*

18 Feb. 1903.

cally to that effect, that he could help me only very little and only when I got close to Ladysmith.

15369. (*Sir Frederick Darley.*) I see that in his telegram of the 18th December, in answer to yours of the 17th, Sir George White stated distinctly, "Your messages were previously confident, and I had made preparations to fight towards Onderbroek, and could still do so if you had Colenso"—Yes, he could have done so. I thought he could, and I meant to have ordered him to do so. But he had never told me of his preparations.

15370-1. And further on in the same telegram he says, "Meantime I will do all I can to maintain an active defence, and will co-operate with you to the extent of my power if you advance again"—Yes, that he was able to co-operate later, and if I had Colenso—that is the whole thing. Colenso, as Sir George White and I understood it, was always the north bank of the river, and not the south bank. If I could have got across the river, I am perfectly certain he could have come out. But what I have rather got at the bottom of my mind at the present moment is, that I have been attacked because I told him I should want him on the 17th and did not ask him to fight on the 15th. I gather that he rather made a point of that himself. But that very telegram to which you have called my attention proves that I was right. I had to get to Colenso—the north side of the river—before he could do anything.

15372. You see that telegram is in answer to one of yours of the 17th, in which you say, "I think in about three weeks from now I could take Colenso, but I can never get to Onderbroek," and he says, "Your messages were previously confident, and I had made preparations to fight towards Onderbroek, and could still do so if you had Colenso"—Yes, I always thought he could. No doubt throughout my mind Colenso was the key of the position. If I could have got across and established myself on the 15th, I have no doubt that I should have had Sir George White out on the 17th—none whatever.

15373. (*Viscount Esher.*) I suppose you see now that your telegram of the 15th December, which you sent to the Secretary of State, was misunderstood from your point of view. If it had not been, you never would have received the telegram of the 18th of December in reply?—I do not think it was misunderstood. I think it was thoroughly well understood. It was differently interpreted when many months afterwards they received my telegram to Sir George White which they at the time had no knowledge of.

15374. No, but it led directly to the telegram of the 18th December, which was the telegram in which they announced to you the appointment of Lord Roberts?—Did it? That I do not know anything about. That I do not profess to know. But if you read through the telegram of the 17th (I have not got it here in this series) you will see that I got directly what I wanted. I certainly at that time should have been very glad to give up any command for the sake of the Empire to get what I then wanted. Pray do not think I have the slightest grievance at being superseded by Lord Roberts. I had as much as any one man could do in Natal, and more than was enough for me. I have nothing to complain of.

15375. (*Chairman.*) Have you brought out the points that you wish to bring out now about that telegram?—I have nothing to add.

15376. (*Sir John Edge.*) Read in any way that it is possible to read your heliogram No. 88 of the 16th of December, could it be read to mean that Sir George White should surrender before the very last moment, before everything was done?—I do not think it could.

15377. I do not think so either?—I do not honestly think it could; I know I wrote it with extreme care; it was not a very easy telegram to write. I did feel at the time that it was of enormous importance to me to get rid of the incubus of Ladysmith, and that if I could have got Sir George White out at any price, at any sacrifice, I should have done so. I did think I was using words that would spur him on to give me some idea of what he could do. He said in his later telegram that he was making arrangements to fight towards Onderbroek, but he had never told me so, and he had full information from me of the force I was coming with and what I was going to do.

15378. But even without your explanation, which I think fully explains why you worded the heliogram in that way, I cannot see how it could be read as a suggestion that he should make any surrender before the very last moment—until after the last moment?—I am very much obliged to you for saying that. I can truly say that that is my impression also.

15379. (*Sir John Jackson.*) You referred to a telegram in the print that we have before us, which you say is not a correct rendering of the telegram as you sent it; will you be good enough to read the telegram as sent by you? What is the number in the print of the telegram?—It is No. 28 in the print. As sent by me it was as follows: "No. 93 Cypher, 17th December.—I find I cannot take Colenso, and I cannot stay in force near it, as there is no water, but I am leaving there as large a force as I can supply with water. I will do anything I can to help you; but recollect that in this weather my Infantry cannot be depended on," and then the rest is as it is in the print. That is the difference. I may say that at that time I was supplying the force I had at Colenso with water by train from Estcourt, and I had to make all those arrangements for that water supply on this very 16th. I may also mention that although, for some reason of which I am quite unaware, the War Office asked Sir George White for all his correspondence with me, they did not do me the honour of asking me for my correspondence with Sir George White, so that that print is only a one-sided document. I have never had a single question or inquiry of any sort, kind, or description addressed to me by the War Office with regard to my operations in Natal or anything connected with them.

15380. (*Sir George Taubman-Goldie.*) From the time you came home?—From the time I left England, practically—not one single question has been addressed to me on any one of these matters which have been talked about and spoken about in the House, where statements have been made that were quite untrue, I hope from ignorance, because if they had asked me I could have told them at once that they were untrue.

15381. (*Sir John Edge.*) Was No. 28 a heliogram or a telegram?—Every one of these is a heliogram.

15382. Then No. 28, which is before us and which purports to give your No. 93, was their reading of the heliogram?—I take it that it is their deciphering. Those errors do happen.

15383. And before it was published it was not corrected by reading your original, which was kept?—No reference has ever been made to me for the original document.

15384. May I ask you just one more question? Have you gone through this part of the correspondence that we are referring to, between the 26th of November, 1899, and the 28th February, 1900, and compared it with your own copies?—I have never seen it until this moment.

15385. Then, as a matter of fact, you cannot say whether it correctly represents your copies?—I cannot.

15386. Nor, I suppose, can you say whether it correctly represents heliograms that ever reached you?—No, I cannot.

15387. You cannot say whether the heliograms which are put down here as from Sir George White ever reached you?—No, I cannot.

15388. (*Chairman.*) I thought you said that they were all repeated?—To me?

15389. Yours were repeated to you, and I suppose Sir George White's were repeated to him?—I am not sure. I rather doubt it; but that would not have been within my knowledge.

15390. When a heliogram is repeated, that is pretty clear evidence, is it not, that it has been received?—It is absolute proof that it has been received. I do not think they were all repeated. I have in original here everything as I received it, or as I deciphered it. I do rather hope (because I feel it is not quite fair to me) that the Commission will take notice of the fact that I have never had a reference of any sort or kind addressed to me for copies of my telegrams, or with regard to any action that I took, or for an explanation of any telegrams that I sent.

15391. If we ask you for them you have no objection to putting in your telegrams for our information?—None whatever, if I can get somebody to copy them.

15392. We can get them copied?—I ought to say that I had scarcely looked at my books of telegrams until a fortnight ago.

15393. Then if we have finished with that head, the next one is "Policy projected for Cape Colony." Is there anything that you want to add with regard to that?—I want to call attention to the second paragraph beginning "On the 24th December I received a telegram from Lord Roberts." I should like to read the telegram because, no doubt Lord Roberts had forgotten that telegram at the time when he gave his evidence, of which you referred a portion to me. In that evidence which you sent to me he said that from the very first, in fact I think he said from 1897, he had always considered that an advance through Kimberley was the proper line to follow. But in this telegram, which was his only instruction to me, he distinctly gave me instructions that he was intending to advance by the central line, according to the original plan of campaign.

15394. Are you referring to his telegram of the 23rd of December?—Yes.

15395. Which you received on the 24th?—Yes, that is the one.

15396. And what is the point in it on which you rely—it is a long telegram?—It is the first sentence of all. "So far as I can see at present, the best way I can co-operate with you on my arrival in South Africa will be by carrying out the original plan of campaign, an advance in force through the Orange Free State." That was his instruction to me, and later on his instructions with regard to Lord Methuen were to the same effect. I only mention the point because it was on that telegram that I based the arrangements I made to have everything ready for his reception; and when on his arrival he complained of the disposition of transport, and so forth, I do not think we could have been blamed at all because the transport was arranged with a view to the plan of campaign which he had given me, and which was a different plan of campaign from that which he has given you.

15397. What did you interpret "the original plan of campaign" to be?—An advance through Bloemfontein by Bethulie: that was the plan of campaign when I left England. He says here "An advance in force through the Orange Free State," and that was the only way he could have got by that railway.

15398. But did you have a distinct plan of campaign presented to you before you left England?—I presented one to the Government, which I understood was accepted, that I was to go through the Orange Free State and march through Bloemfontein. Bloemfontein was taken as an indication of the direction.

15399. That was not consistent with an advance such as that which Lord Roberts made afterwards. Could you not bring it under the original plan of campaign?—No, distinctly not. He advanced by a different line of railway.

15400. But it was an advance through the Orange Free State?—Quite so, but then you must remember that directly after he had sent this telegram he received my telegram in which I proposed to the Government, and asked to have referred to him, the plan of campaign which he afterwards adopted, which was an advance to the Modder and thence to Bloemfontein. Now in acknowledging that he did not accept it; he queried it on a minor point, and followed that by a telegram from Madeira in which he said he thought the *status quo* the proper thing, which I took to be a quiet way of telling me that he did not agree with my plan, although that plan was the one which he afterwards adopted.

15401. But you did not have any instructions from the Government regarding your line of advance, did you?—It was well understood between Lord Lansdowne, Lord Wolseley, and myself, that the intentions with which I left England were to land the three Divisions, one Division at East London, one Division at Port Elizabeth, and one Division at Cape Town, and to concentrate them upon the two bridges at Norval's Pont and Bethulie with a view to advance through

the Orange Free State. That was the original plan of campaign.

15402. My impression was that Lord Wolseley said that there were no instructions given to you; that you went out with a free hand?—There were no instructions, and I went out with a free hand on the understanding that I was going to do a definite thing. I kept my hand as free as possible, but during the fortnight before I embarked, I was pressed very much by both Lord Wolseley and Lord Lansdowne to give the ports of debarkation for the different Divisions of the Army Corps, and I declined to do so until the day I left England. On the 14th of October I went in the morning to the War Office and proposed that Gatacre's Division should be landed at East London, Clery's at Port Elizabeth, and Methuen's at Cape Town; but I distinctly qualified that by saying that every ship was to call at Cape Town for orders, because I did not know what the condition of affairs might be when I arrived at the Cape.

15403. The point for which you particularly wished to mention that telegram from Lord Roberts was with regard to the transport?—Yes, with regard to the general arrangements that I made for his arrival. I thought it my duty to do the best I could, and we were working at cross purposes on account of the instructions he had given me, which were not in accordance with the policy he afterwards adopted. I make no complaint.

15404. You are not referring to the difference between regimental transport and the transport afterwards adopted? You are more referring to the position in which you placed the transport?—Yes, to the distribution of the transport.

15405. A certain amount of transport was placed at a certain point to facilitate the advance?—So far as possible, the transport was placed along all the three lines of advance to the bridges at Norval's Pont and Bethulie; and when Lord Roberts arrived it had to be brought in large quantities westward to be concentrated on the western line. That could all have been done before his arrival if we had known it. I am not raising this point to make any complaint or to say anything for myself; but certain officers who were carrying out my orders rather want it to be pointed out that they were doing the best they could according to their lights.

15406. The question of regimental transport or the other system you are going to raise later on?—If you wish me to do so.

15407. (*Sir George Taubman-Goldie.*) Before leaving that telegram, I think it is only fair to point out to you that a little lower down in it Lord Roberts appears to have taken something of the same view as you did, at any rate as to the unimportance of holding Ladysmith in case you and Sir George White succeeded in joining hands?—Yes, as he said in that telegram.

15408. He thought it was advisable that you should evacuate the place, and hold the line of the Tugela, which is very much the line of policy that you mentioned to us just now, in case you and Sir George White could have joined hands and given the Boers a doing?—Yes, in all those things I find Lord Roberts in accord with my views practically, and in the same way he also approved of what had been also my original idea, that Kimberley, if made safe, could be left alone.

15409. (*Chairman.*) That is the only point you wish to amplify in that section?—That is all.

15410. (*Sir Frederick Darley.*) Had not the state of affairs altered very much after you left London and before Lord Roberts arrived, I mean with respect to the invasion of the Cape Colony by the Boers?—No, I think at the moment that Lord Roberts arrived—accompanying that statement with the fact that he arrived and brought reinforcements at the same moment—we had practically got back almost to the position in which we rather hoped to have found matters at the time when I originally arrived. When I arrived, I was short of troops, and Kimberley was attacked and Ladysmith was attacked and Cape Colony was invaded; and at the time Lord Roberts arrived the relieving force was close enough to Kimberley to support it, and the relieving force was close enough to Ladysmith to support it, and in both cases the forces were able to prevent

any further Boer advance by those roads, and in Cape Colony itself the invasion was decidedly checked and was being, to some extent, forced backwards.

15411. At that time the bridges on the central line were cut by the Boers. Would Lord Roberts not have found the same difficulty in advancing by the central line, from the nature of the country, as you found advancing on Ladysmith?—I think he was perfectly right in what he did, and it was the very same policy, I may say, that I myself had suggested, without any communication with him, that he should adopt. But I did not understand that you were raising that question. I entirely agree. My only point in raising the question was that I did not know it was his intention to advance in the way I proposed, and that I understood from his telegram that, with the facts telegraphically before him, his intention was to advance by the original route.

15412. That was your point, I understand. As Lord Roberts says to you, "To carry out the original plan of campaign and advance through the Orange Free State in force appears to me to be the best way of co-operating with you"?—Yes.

15413. When he arrived in South Africa, of course, he found it would not be the best way of co-operating with you?—I quite agree, but the only reason why I raised the question was this:—I understood from the portion of the evidence he gave before the Commission that has been sent to me, that the fact that he told me that he anticipated advancing by the central route had been forgotten by him, and that he left the Commission under the impression that he sailed from England with the intention of advancing by the other route. I was ignorant of that intention.

15414. And you agree with him that the advance he made was, under the circumstances existing when he arrived, the proper course to pursue?—I do entirely, subject to the fact that personally had I been directing it I should certainly have made a railway.

15415. (*Chairman.*) The next heading is the "Movement to Springfield." Have you anything to say with regard to that?—No, nothing at all, I think.

15416. Then the next is, "Events of 17th to 27th January, 1900"?—I have only to say with regard to that that I had considerable doubt whether I should put anything in about that at all; but I was advised by the one man I consulted that he did not think I ought to leave out a reference to Spion Kop; and, further, that should it be the intention of the Commission to examine Sir Charles Warren, I should like him to see what I have said. That is all. It is with some diffidence that I put anything in, but I was advised by one I trusted that I ought to do so, and I have done so.

15417. This you put in as your statement of those events?—Yes.

15418. I see you say that you were not altogether dissatisfied with the results of Spion Kop?—I was not. I believe at this moment that those six days' operations at Spion Kop really relieved Ladysmith. They were really the actual cause of the relief of Ladysmith. With out them I should never have got in by Hlangwane.

15419. Because of the effect on the enemy?—Yes; we did inflict very great loss upon the enemy; we knocked the heart out of them there—there and at Vaal Krantz.

15420. We wish you to understand that we desire to give you every opportunity of making any statement that you may think it advisable to make with regard to any of the events connected with Spion Kop?—If I thought there was anything that the public could gain by a discussion of the events of Spion Kop, even though it would drag me through the deepest mud, I should be the first man to wish to be examined on the subject. I am ready here to answer any questions that I may be asked, in the fullest possible manner. But I do not myself think that there is anything I wish to volunteer beyond the bald statement that I have already placed in my narrative.

15421. And you do not think it is in the public interest necessary to go beyond that statement?—I do not believe it would be to the public interest to say more than that. As I am on this subject I should like to add that I have always considered the first publication of the Spion Kop despatches as a piece of stupidity but not

a malignant one. It was a question upon which it was my duty, as an officer partly concerned, to present the Government with the facts of the case in the fullest possible detail, and I therefore sent home every document of any importance bearing upon the case; but it never occurred to me that any of them would be published, and I was fortified in that belief by a knowledge of the attitude that was taken before the House of Commons by Lord Hartington and Mr. W. H. Smith in the matter of McNeill's zarefa, where this very question was very fully discussed in the House. That is my opinion, and I am very much obliged to you for giving me the opportunity of putting it down.

15422. We are very much obliged to you for making it. Then the next heading is, "Movement to Vaal Krantz." Is there anything in that section to which you wish to refer?—Nothing. This section and the following one bring out a question which has been a good deal discussed in the Press. That is all. I have rather gone into diffuseness with regard to this section and the next one, "Events of 6th to 8th February," because they bring out a question which has been a good deal commented upon in the Press. I have nothing to add to what I have stated there.

15423. Which particular question do you refer to?—Well the question as to whether or not I was afraid to fight.

15424. (*Viscount Esher.*) I do not think anyone has ever suggested that?—It has been suggested.

15425. (*Sir Henry Norman.*) Was it not rather a suggestion that you advocated surrender?—It was after that. This is the question of a telegram of which Lord Roberts published a part in his despatch, and I think it would have been fairer to me if he had published the whole of it. It raised a point that I have personally a little resented, and which was not met officially, as I think it ought to have been. However, it was not. I have given the full particulars. I refer to the telegram of Lord Roberts in which he told me to appeal to the patriotism of my troops.

15426. That the honour of the Empire was in their hands?—Yes.

15427. Do you think that implies a want of courage on your part?—It has been so interpreted.

15428. Because people often have appeals to the honour of their troops, and so forth?—I am not speaking of the honour of the troops at all, but of the way in which Lord Roberts in his despatch, I think of the 7th of February, quoted that telegram of mine. That has been interpreted very adversely to me, and as I think I have shown here, my correspondence with Lord Roberts does not bear out that interpretation.

15429. Lord Roberts could never have intended it?—I do not say that he did. I am only saying what happened.

15430. (*Viscount Esher.*) It shows how easily telegrams can be misinterpreted and how unfortunate it is?—Well, the tail end was left out, and it is a pity.

15431. (*Chairman.*) What was left out?—The sentence at the end of the telegram, "The question is, how would such a loss affect your plans, and do you think the chance of the relief of Ladysmith worth the risk," is left out in Lord Roberts' despatch. The part he published of my telegram made it appear as if I was only deterred from fighting by the chance of losing 2,000 men. It is in his covering despatch, I think of the 7th of February. I would show you the point in a moment if you have the Blue Book, Volume I. C. 457, 1901, of Despatches. (*The Book was handed to the witness.*)

15431*. (*Viscount Esher.*) Here you say, "At this time Lord Roberts telegraphed on behalf of the War Office asking whether there was any position in Natal that could be made virtually impregnable by a force of 10,000 men, and suggesting that the line of the Tugela might be such a position." What were they driving at then; what does that mean; how would you answer that question?—I should read the telegram as involving a proposal from the War Office that I should let Ladysmith go. There were two propositions at that moment made to me. I had better quote them both. One was that Sir George White should abandon his hospitals and break out, and the other was, could I occupy an impregnable position in Natal.

15432. That meant "Could you occupy an impregnable position in Natal if you only manned it with a force of 10,000 men"?—Yes.

15433. (*Sir Henry Norman.*) Have you identified that telegram in the Blue Book?—Yes.

15434. What was the point?—The point that I raised was this. Lord Roberts in his despatch said: "On the 6th February I received a telegram from Sir Redvers Buller reporting that he had pierced the enemy's line and could hold the hill which divided their position, but that to drive back the enemy on either flank and thus give his own artillery access to the Ladysmith plain, ten miles from Sir George White's position, would cost him from 2,000 to 3,000 men, and success was doubtful. General Buller enquired if I thought that the chance of relieving Ladysmith was worth such a risk." That was not my enquiry. My enquiry was whether in the face of the instructions he knew he had given me,—that I was not to attack unless I was confident—how would such a loss affect his plans. I had no idea at the time what he was doing; he had not informed me how he was going into the Free State, or anything.

15435. What were the exact words that Lord Roberts used?—The words that Lord Roberts quoted, do you mean?

15436. Yes?—The exact words he left out were these, "I am not confident, though hopeful I can do it. The question is how would such a loss affect your plans, and do you think the chance of the relief of Ladysmith worth the risk." He left out the point of my being hopeful that I could do it, and left out the whole of my question which was based upon the condition that I had his plans to consider. I do not impute the slightest desire to mislead, but as a matter of fact that telegram has been quoted very adversely to my interests.

15437. (*Chairman.*) Then your next heading is "Necessity for continuing active operations. Correspondence with Lord Roberts." That also we may take as expressing your views?—I think that explains the situation unless you wish to ask me anything.

15438. The next heading is "Movement to Hussar Hill. Events of 14th to 28th February." That gives your account of the series of actions?—Yes.

15439. (*Chairman.*) We have now got to the point of the correspondence with Lord Roberts as to future policy?—Yes. I may summarise that correspondence very shortly by saying that in it I think it is clear that periodically Lord Roberts rather wished to get me off the railway, and at other times he wished something done to lift me on the railway, and that personally my own view was that until I got out of Natal I ought not to go very much off the railway.

15440. You wished to adhere to the railway during your progress through Natal?—I wished to get the railway through Natal repaired almost before anything else.

15441. There was a considerable interval during which I suppose Lord Roberts and you were agreed that you should not move?—I was never agreed; I wished to move within a week after arriving in Ladysmith, and I proposed to do so in my first telegram.

15442. Which telegram do you refer to?—I sent the telegram on the 3rd March, and it is printed on page 20 of my summary of evidence (*see ante* p. 183): "My own view would be that we should send three brigades to occupy Northern Natal." I thought I ought to have gone on at once then, and if I had got to Laing's Nek, as I hoped to have done before the end of the month of March, I thought it would have been of enormous assistance to Lord Roberts and a great impediment to the enemy.

15443. But as a matter of fact you did not move until when?—I did not move until the 7th of May.

15444. (*Sir George Taubman-Goldie.*) Was that in consequence of Lord Roberts discouraging you?—From my point of view entirely. I have quoted the telegrams at some length because they are a little confusing, but I think if you will read them through you will see that Lord Roberts' policy changed, and while at one time he would not let me attack the Drakensberg, because he expected to clear the passes by operations

of his own, at another time I was to attack the Drakensberg Pass at any cost.

15445. (*Chairman.*) He of course was unable to move on from Bloemfontein for a considerable time?—He did not arrive at Bloemfontein until 14 days after I relieved Ladysmith, and when he got to Bloemfontein he was in such a position that he was unable to advance; but I did not know at the time, and I did not in the least anticipate that he would be unable to clear his flanks and his communications.

15446. But as a matter of fact he was not able to do that, or to advance for a considerable time?—He practically did not move for two months, and during those two months he practically kept me doing nothing too.

15447. Until he did advance he could not very well co-operate with you through the passes, could he?—No, I did not myself think he could ever have helped me at the passes within any reasonable time.

15448. Or drawn off the enemy from you by any operations?—No, he could not have done so. But I could have drawn the enemy off him.

15449. And the time he did ask you to co-operate was at the time when he was making his advance on Johannesburg?—As soon as he was ready to advance he told me to occupy the enemy, and I at once moved to Newcastle and thence to Laing's Nek.

15450. I think I ought to say that in Lord Roberts' examination, when he came again on the 10th of February, we had from him his statement of the communications between himself and you, and the objects for which he made the propositions he did?—The propositions he made on what date?

15451. From the 2nd of May?—That comes later; practically that was the time he told me to move. I thought you were referring to the former period.

15452. No; as soon as he began to move he did enter into communication with you with regard to operations which had the object of your moving into the Free State?—He proposed to me a series of operations then, and they were a series of differing operations; at one time I was to go to the Free State, and at another time I was to go somewhere else. At one time he proposed I should go to Belfast.

15453. (*Sir George Taubman-Goldie.*) There is an earlier period on the 5th April?—But I thought we had disposed of that.

15454. On the 5th of April it appears that Lord Roberts had directed you to send him a Division of Infantry?—Yes, he had. May I make myself clear? I understood from the Chairman that he had passed that period and was then coming to the period after the 4th May, and my last answer only related to that.

15455. There is a period between the relief of Ladysmith and 2nd of May which has to be accounted for?—There is; I have endeavoured to deal with it in this memorandum, but of course if you wish to ask any questions, I will answer them.

15456. I rather gather from the telegram of Lord Roberts that he would have wished you to operate through Van Reenen's Pass, but you hesitated?—I did; that was early in April.

15457. Yes, 5th April. He says this: "I might have hesitated to order this had he been preparing to operate towards Van Reenen's Pass. The presence of a portion of his force in this direction would assuredly have had the effect of drawing off some of the enemy from this part of the country. Buller was most pressing that the Biggersberg should be his first object." I raise this point because a question has been frequently raised in this country as to why there was no movement between the relief of Ladysmith and the beginning of May?—With regard to that period I should like to take you back as far as Lord Roberts' telegram to me, No. 613, of the 23rd March (*see ante* p. 184), which I have referred to on page 21 of my Statement. He sent me that telegram and he said, "I shall be delayed here for some time yet, we have run short of supplies, large numbers of remounts are required for Cavalry and Artillery drafts have to be sent up and men must be given either tents or blankets: many of them have only greatcoats." Then he went on and he said, "I shall be sur-

18 Feb. 1903.

prised if Passes are not practically cleared as we near Kroonstad." But the point I had to answer was when he said, "I shall be delayed here for some time yet," and I answered that at once on the following day in my No. 226 of the 24th March, referring to his telegram 613, and I said, "Do you think I could be of any use to help you with supply? I think that within five days from the start I might possibly get up Oliver's Hoek Pass, now held only by the Harrismith Town Guard, all Englishmen, who will not fight unless there is a large force of Boers to make them. By four days later I shall have turned Van Reenen's and if my information with regard to the railway is correct in eight days more it should be open to Harrismith, say 17 days or perhaps three weeks from the start. When the line is opened I should be able to put up each day 400 tons, say two days' supply for 70,000 men and 10,000 horses. Of course I cannot promise this would come off, but I can try." That was a proposal of mine intended to deal with his not being able to move because he was short of supplies. In his telegram he gave me no hint of any intention of coming down towards me, and I rather wanted to draw him towards me because I thought, although I did not like to say so in so many words, that it would be better for him to clear all that difficult country about Ladybrand before he left Bloemfontein rather than to leave that behind him. In that telegram the only idea he gave me was an advance on Kroonstad which was due north of him. He apparently did not receive my No. 226 before on the same day he had sent me a telegram crossing mine, and not based upon mine, in which he said, "C642, 24th March. Secret. Will you have sufficient transport to enable two divisions of Infantry with proportion of Artillery and 1,000 Cavalry to move into the Orange Free State in about three weeks time should it be necessary for me to call upon you for assistance to that extent, and supposing that the enemy's hold on Passes is so far weakened as to admit of your forcing your way through them." As he had previously told me that I was not to attempt the Passes until he had weakened them, I gathered from that telegram that he had given up his idea of going on to Kroonstad and that he intended to move towards me, and I replied at once by my No. 227 of the 25th March, quoting his telegram No. 642, and said, "To enable me to reply as to sufficient transport will you tell me how many days' supply I should have to take with me, the direction in which I should have to operate and whether I should have to continue to supply myself from Natal or could I, when in the Free State, draw on some advanced post there." I was 45 miles from the top of Van Reenen's Pass and from Van Reenen's Pass to Kroonstad would have been about 120 miles. I could not have supplied myself from Ladysmith unless I was given time to re-open the railway to Harrismith, and then I should have had to have a new base, and I should have required a certain force to protect my railway to Harrismith. That telegram again crossed a telegram from Lord Roberts in reply to my number 226, which I first read, in which I offered to put supplies into Harrismith, and he said, "C654, 25th March. Yours 226 of yesterday. If information about Drakensberg Passes is correct you could not do better than act as you suggest." (That was merely to occupy Harrismith.) "The presence of one or two divisions of your force at Harrismith three weeks hence, especially if provided with equipment for onward movement, would be of material assistance to me. It would be a great advantage also to be helped with supplies from Natal."

15458. That is the point I wanted to elicit?—I never undertook to put two divisions into Harrismith and to open the railway and keep it open; I offered to supply Harrismith, and he had asked me if I could send divisions to Kroonstad, a totally different operation.

15459. You had about the equivalent of four divisions?—Yes, and I was holding about 95 miles of front, and I had repaired the railway up to the face of the Boers.

15460. What did you take to be the total of the enemy?—At that time there were about 14,000 men in the Biggarsberg.

15461. What was the next step after that?—I answered Lord Roberts at once, on the 26th, and I answered his last one about the two divisions, and I said, "No. 229, 26th March, your No. 654, I will try what I

can do. I shall not be able to assist for a week as Warren, who will have to hold Ladysmith, thinks he ought to have 2,000 mounted men left with him. I cannot say that demand is excessive, as he would only have six good battalions and the shaky eight battalions of the old garrison, and there is a strong force of the enemy in front, but I must wait for remounts to enable me to give them." At that time I should say I had allowed, after the relief of Ladysmith, the whole of the Natal Volunteers, who had been shut up in Ladysmith, and the whole of the Imperial Light Horse, who were the best irregulars of Natal people we had, to go back to their homes in South Natal to get new horses and refit after the siege, and I was awaiting their return; they were like Volunteers, not quite up to date, and they ought to have been back. They had promised to come back in three weeks but they did not come back so quickly. My telegram went on, "The latest information is that Kruger has told the Transvaalers that they have done so much harm in Natal that the English will never forgive them and that they must fight now not for their independence but for their lives. I do not know if this is true, but it is certain that they have done immense wilful damage, and also certain that for the last few days Kaffir rumour points not to a retirement but rather that they will advance if we do not. I will, however, do the best I can to carry out your wishes." Then the next telegram—

15462. The only question I want to get at clearly is, could not you have spared two divisions and yet have left yourself with 14,000 or 15,000 men in hand?—If Lord Roberts had asked me to spare two divisions, yes I could.

15463. Did he not ask you that?—No, I was just going to read a telegram on the point; he answered my 227 by his number 669 on the 26th March, and he said, "Any force coming from Natal will have to make its own arrangements about supplies as far as Kroonstad should it go West, or the Vaal River if it has to go North. After that has been reached it will have to be reconsidered, but it seems probable that we shall have to depend upon Natal for a portion of our supplies while we are in the Transvaal"; then he goes on, "As the feeding of a large force presents such great difficulty you will better arrange for only one division being despatched to operate with me in the first instance, and that I should wish to be Hunter's. If a second division can be sent later on it should be Lyttelton's, but I doubt if you will be able to spare more than one division as Natal must be occupied and the line of railway leading direct to the Transvaal will have to be repaired and guarded." So that he then threw upon me the sending of one division which I was to keep supplied the whole way to the Vaal River, and which I was to be responsible for, though it was to co-operate with him, but was not to be under his supervision at all; and besides that I was to clear Natal and to open and complete the line to Laing's Nek. I could not do it, at least I did not think I ought to be asked to do it. That is the real point.

15464. (Chairman.) The question I was asking was on the subsequent point, the correspondence in which began on the 2nd of May with regard to the passing through the passes and going up to Vrede and Standerton. That was Lord Roberts' plan at that time?—Lord Roberts appeared to think at that time that I could get up the Drakensberg anywhere, but there were really only two practical passes up which any column could have gone up the Drakensberg, one Van Reenen's Pass from Ladysmith, and the other Botha's Pass, about half-way between Newcastle and Laing's Nek; and if you went up through Botha's Pass it was infinitely easier and simpler to keep on the high ground above the gorge of which Laing's Nek is a portion, clear Laing's Nek and bring the railway through, than it would have been to have gone loose into one of the most difficult parts of the Free State. That Vrede country is not steep, but it is a very contorted, difficult country; the sources of the Klip River are very boggy, it is extremely difficult for soldiering, and there are also some rather difficult hills. I could see no possible reason for going to Vrede. I should not have been in touch with Lord Roberts; I should have been 40 or 50 miles from any of the troops he advanced with, whereas if I got to Standerton by the railway,

which was very much the easier operation, I covered Vrede entirely, and cut any of the communications the Boers would have had for supporting it. Therefore it was in my opinion very much better for me to clear Laing's Nek and to make the railroad through it instead of moving up a most difficult hill and then trying to supply the column at Vrede by that hill with the enemy all the time on my flank and rear.

15465. I only mentioned it in connection with Lord Roberts' evidence to say that he had given us the correspondence which passed between you and him with regard to those propositions. You have alluded to it also in your statement; so that I presume we have the full situation before us?—The correspondence really began on the 15th May, I think.

15466. The correspondence with regard to that particular point?—Yes, the principal correspondence began on the 15th May.

15467. Have you anything else to say with regard to the advance that you did make in the passage through the Drakensberg and the advance on Standerton?—Nothing, I think, except with regard to my conversation with Botha. I knew I had a good deal of influence in the Wakkerstroom district with the resident Boers. All the principal Boers or their fathers had served under me 20 years before. I knew a great many of them personally, and I was of opinion that if I could have been allowed to do what I suggested to Lord Roberts, that is to say, to allow them to keep their arms to protect themselves, the whole of that district would have surrendered at once. It did entirely surrender to me as a going concern; the Landrost handed over the place, every official remained at his post, and the whole district surrendered to me, but I could not accept their surrender unless I offered them protection, and the only means I had of protecting them was by letting them keep their rifles to protect themselves. When they surrendered the Landrost handed over to me for punishment, and I tried him by Courtmartial, a principal Boer who had shot in cold blood a messenger who was carrying proposals for peace. That shows how much they did surrender, but Lord Roberts told me that the only terms he could give were unconditional surrender, which was to be accompanied by disarmament. Chris. Botha was there at the time with the whole of the Swaziland Police, which was one of the mercenary regiments of the Boers, and the moment I withdrew General Hildyard from Wakkerstroom those police arrested the Landrost and the whole of the lot who had surrendered, took them away, and the district went back to a state of antagonism again.

15468. (*Sir George Taubman-Goldie*.) There has been a great deal of discussion in the last three years not only in official circles but elsewhere, as to what "unconditional surrender" means. Is any surrender otherwise than conditional?—I never before heard of unconditional surrender, and personally I should never think of offering it to anybody, because if you put a man's back against the wall and give him no means of escape, he is generally a very awkward customer.

15469. Surrenders are generally conditional?—Yes, but I had always from the very earliest inception of the War conceived that the real way to end it would be by getting, if possible, some portion of the Boers to revolt from the tyranny of the others, and as I knew I had a very considerable personal influence in that district I thought this was a good opportunity, and therefore I had the conversation with Botha that has been recorded in the papers. I wish to deny that there is the slightest truth in the assertion that he took advantage of it to remove any guns; he did not move anything.

15470. That concludes the statement you have submitted?—That concludes everything, except that I think it fair that I should say with regard to the correspondence you have mentioned, and which Lord Roberts alluded to in his evidence, that I do not know what deduction he drew from it. But I would like to call attention to this—that the moment I had got through Laing's Nek the very first telegram I got from him was that he wanted supplies from Natal, and that I was to come on to Standerton at once, which, if I had been at Vrede at that time, I could not have done.

15471. (*Sir John Hopkins*.) I should like to ask

from your experience of the range and power of your guns in the field, whether you consider that the field artillery was equal to what the Boers brought against you as field artillery?—No, the field artillery was not equal to some of the guns the Boers brought into the field as field artillery; but it must be recollected that our field artillery was very much more mobile than those guns the Boers brought, and that we were able to get our field artillery into places and to use it within periods of time which would, I think, have been impossible with the Boers; and we must also recollect that the young Boers are past-masters in the art of driving oxen; their guns were mostly drawn by oxen, and they were able to do things with teams of oxen that we had nobody in our Army capable of doing; and no other beasts than oxen would have done what they did. Therefore I think you have to discount the general question a good deal by those considerations.

15472. It was rather with a view to leading up to another question. Were you satisfied with the naval guns, which, of course, had a greater range as field guns?—I was exceedingly well satisfied with the naval guns, and especially with the naval gunners. I thought the naval gunning, their system of gunnery, very far in advance of our artillery system; but I was not satisfied with our cordite. I think the foreign system of intercepting the recoil which was adopted by the Boers was far superior to ours, that is to say a big Boer gun would fire at its extreme range (I saw it happen myself) a shell, and that shell fell and made a great hole in the ground; a native got into the hole to see how deep it was, and the next shell that came went into the same hole and killed him. I do not think we had a gun that would put two shells running into the same hole.

15473. With regard to the cordite, are you alluding now to the changes of range in the individual charges of the cordite, or to the erosion of the gun through it?—I am not alluding to erosion; I did not find that the erosion was very serious. Captain Jones would give you better information about that than I can; but I think we had a new tube put in one of the guns in the field without any trouble. I allude to the cordite itself; our cordite was not smokeless, and it was not in my opinion so certain, so even (that is the word), as it ought to have been.

15474. I think that comes out in some of the Naval evidence. With regard to the shooting of the Naval guns, were you satisfied with them?—Yes I was; I thought the fire discipline of the Naval gunners, the independence of their different guns crews, and the rapidity with which the different captains changed their targets as occasion offered was very much superior to our Artillery system.

15475. And as far as the shooting went, do you think it was as good as you could expect?—I thought quite as good; some of it was admirable. As to the two 12-pounder quick-firing guns of the "Terrible," that were under the charge of Mr. Ogilvie, as he was then, I do not think we should ever have got into Ladysmith if we had not had those guns. They were firing on a Boer sangar, and I was looking through my telescope, about 2,800 yards off, and the last two shells went into the sangar, I do not think three feet in front of the leading men who were taking it.

15476. You had no experience of the 4.7 guns with your force, had you?—Yes, I had four.

15477. That was afterwards, in your advance?—All the time, we horsed them and took them on.

15478. Had that gun practised at the enemy while it was with you?—Yes, an immense deal of practice.

15479. Did you see anything to remark on in the accuracy of fire of the 4.7? Was it as good as it should be?—I thought it was; occasionally they fired extremely well. Towards the end, when perhaps there was rather more demand for very accurate firing, one of the guns had got rather eroded, and Captain Scott, under a certain amount of pressure, I am afraid from me, had departed from his original design of carriage and made a lighter one, and undoubtedly the lighter one was less successful, and the gun did not shoot quite so well. With the old carriages, the first ones he made, the shooting was better.

*General The
Right Hon.

General The
Right Hon.
Sir Redvers
Butler,
V.C., G.C.B.,
G.C.M.G.

18 Feb. 1903.

15480. Taking the 47 as one of the heavy guns accompanying you in the field, do you consider that on the whole the shooting was as satisfactory as you would expect it to be, taking carriages and everything else into account?—I thought it very good indeed; I considered it was excellent.

15481. (*Chairman.*) You are also prepared to answer questions on any points in the Memorandum which was sent to you? (*Vide Appendix, page 575 post.*) I do not know that it is necessary to go into the first point about the adequacy in point of strength of the force in the field at different dates, and what they had to do. I presume that has come out in the summary of your evidence which we have dealt with?—I think so.

15482. Then with regard to the quality of the men?—I think with regard to the quality of the men that we were all of us very favourably impressed; there were some officers who had doubts as to whether some of the Reservists would prove of equal value with the men who had remained in the ranks, but I think those doubts were removed, and that the quality of the men was quite as good as we hoped for. They certainly shot, on the whole, extremely well; the fault in their shooting was that it was difficult to keep them attentive. An old Boer whom I knew well once expressed it to me in this way, "For two hours your men would hit our little finger, but after that they go to sleep and then we sometimes shoot them."

15483. How do you think their shooting compared with the Boers'?—On the whole it was better. I think our gun was better than the Mauser, and that on the whole as long as our men were really shooting they shot rather better than the Boers when they were in a place where they knew their range, but the conditions of light and atmosphere in South Africa are so very different from the conditions in England that it took the men a good long time before they could easily, quickly and accurately pick up the range.

15484. Are you speaking now of the Regulars?—Yes.

15485. Do you make the same remarks about the Irregulars?—The Colonials who shot well, shot well, but the Colonials who did not shoot well shot remarkably badly.

15486. They most of them shot well?—A proportion of them.

15487. Had you many Colonials with you?—I had at first about 3,000 from Natal of regiments I raised at the Cape, mostly composed of men who came from Johannesburg.

15488. All South Africans?—Well, they were all sorts; as good men as any in the lot were a small detachment of five men of the Kent Yeomanry who came out for a lark. These were right good men to shoot and everything else.

15489. You had not to do with corps raised in the overseas Colonies?—No, except with Strathcona's Horse; they were with me, and they were excellent.

15490. (*Sir Henry Norman.*) At what time did they join you?—They joined me the day I started for Standerton; I think they joined me on the 18th June. They were originally intended for an expedition that Lord Roberts devised, but it did not come off, and I caught them at Durban and told Lord Roberts I would bring them up the shortest way to meet him, and they stayed with me until I left the country, and were a most excellent regiment. They shot very well, rode well, and fought well, and were under a most admirable commander; they were much more like a disciplined corps than most of the other Irregular Corps I saw.

15491. (*Chairman.*) Had you the Yeomanry also?—None.

15492. Had you any Militia?—None; I had a certain number of Volunteer Companies who came out to join their regiments, and they did very well indeed.

15493. As to marching, were you satisfied with the marching of the troops?—Yes, the men after I once got them into condition never gave us the least trouble, and they marched very well.

15494. And horsemanship or horsemastership?—The horsemastership was bad and the horsemanship was not too good on the part of the Cavalry, and not nearly good enough on the part of the Mounted Infantry.

15495. Were you satisfied with the troops—the Regulars, in general physique, morale, and intelligence?—Yes, I thought they were quite up to the standard of any English soldier I have seen during my service, and better in fact than any I have had during the 45 years I have been in the Army. I think there has been general improvement in the soldier as a soldier, and I think these men were quite up to the best standard.

15496. The conditions of modern warfare call for more intelligence from the individual soldier, do they not?—I did not consider that my men were soldiers until they came down from Spion Kop; they went up recruits, I think, and they came down soldiers; they learned a great deal in those four days at Spion Kop; they got into the habit of fighting, and got to understand what they had to do themselves, and were quite different men when they came down.

15497. You could rely upon their intelligence better after that?—Yes, they had begun to learn fighting.

15498. Is there any way in which you think the training of the men ought to be modified in future in order to make a better fighting machine under modern conditions?—I think that as regards drill we went into the war very fairly equipped; I saw nothing to make me think that our drill book was wrong. We have learned some lessons, of course, from this War, because our drill book was written for a rifle and for artillery of a shorter range than those we met and used, and therefore there are certain small changes of detail necessary in the drill book, but I thought, as a whole, our drill was very good. I found in war exactly the same fault that I found at Aldershot on every field day, I always made the same remark—that the men knew how to do it, but they did not know what to do. That is the real gist of the criticism I should like to make. There is nothing you tell them to do that they do not know how to do if they are fairly well taught, but they do not know what to do when the moment comes because they are never allowed to have an opportunity—either officers or men—of exercising the slightest amount of independent judgment before they get on the field of battle.

15499. And in that respect you would wish to see the training altered?—Very much.

15500. (*Sir George Taubman-Goldie.*) How would you alter the training?—The way I should begin to alter the training would be to abolish the War Office as it stands, and there really to my mind lies the true crux of the question. As long as the War Office exists as it is the Army is tied up in red tape, and the principles of the War Office are nothing but red tape. That instruction is forced down through every rank in the Army.

15501. (*Chairman.*) You speak with considerable experience of the War Office?—Yes, I know the War Office well; I have been 25 years there, and I have sat at the desk of every clerk in the War Office and gone through his year's work with him.

15502. Would you explain what that means?—Upon this matter I wrote down a few words, as I thought I could make it shorter if I wrote it beforehand, and I think it will fully explain my meaning:—

"In the interests of the education of officers the reorganisation of the War Office is an urgent necessity.

"It is essential there should be a standard organisation of staff work and a standard pattern of staff duty, which officers should look to and learn from. Those standards ought to be found in the War Office. They are not to be found there now, nor ever have been in the past.

"The work in the War Office is, of its very nature, divisible into two distinct but inter-dependent sections: 'The Military Policy of the Country' and the 'Military Government of the Army.' Under the first head are found the duties of the Secretary of State; under the second those of the Commander-in-Chief. This is the division which Lord Cardwell evidently intended but did not live to create. This also is the reform which was advocated by Lord Hartington's Committee, though, unfortunately, owing to the adoption of a misleading nomenclature, the excellence of that Committee's recommendations was never properly appreciated.

"What they recommended was the appointment of

General The
Right Hon.
Sir Redvers
Butler,
V.C., G.C.B.,
G.C.M.G.

18 Feb. 1903

a Chief of the Staff; what they meant to recommend has found happier definition in the phrase 'intellectual equipment.'

"No one who studies the inception of the late War can fail to see how seriously the situation was affected by the want of some sort of intellectual equipment for the Secretary of State.

"On the other hand the Army suffers seriously from the interference of the civilian officials with the authority of the Commander-in-Chief.

"For the Military Government of the Army the system adopted should be the same Staff system as that which directs an army in the field. This is essential. The present regulations which impose two different systems in peace and war are absurd.

"To unite the two sections of the reformed War Office the Commander-in-Chief and some of his Staff should be members of the Board of Intellectual Equipment on one side, and the Accountant-General should audit the expenditure of the Military Staff on the other. But I need not go into details. Suffice it that I feel confident that a workable proposal could be put forward which if adopted would train the whole Staff of the Army in time of peace to the duties which must fall to them in war. This is not now the case.

"It would be difficult to over-estimate the advantage of this training. The great defect at present throughout all ranks of the Army is the want of a sense of the paramount importance of co-operation. I believe this defect to have its origin in the natural resentment of officers against the stringent and inelastic system of red tape and regulations within which they are pent and against which they chafe.

"Such restrictions necessarily promote rebellion rather than co-operation. All ranks are possessed by the notion that authority is stupid and exists mainly to be outwitted. Officers acquire the idea that it is meritorious to exceed, outstep or evade orders. This works infinite harm. Every mess-table has its stories of how so-and-so snubbed, confuted, or ridiculed the War Office with success.

"There is scarcely one officer in a hundred who has been taught any rule which would guide him in deciding how to act when confronted by the problem so frequent in war: 'I have my orders, but what ought I to do?' If he does not evade the problem by inaction, it is a chance if he acts aright; because, owing to his defective training, he acts on the wrong impulse. He does not ask himself how he can best further the operations as a whole, but how he may most plausibly excuse himself, if taken to task.

"Our officers and men as we recruit them are deficient in 'hunter's instinct'—too highly civilised, if you will. Some special training to make good that deficiency is now needed. The fundamental principle of this training should be that everyone must understand that he has to fight for the main chance, and not for his own hand. The system of the War Office teaches exactly the reverse. The root of reform must be found there. The War Office should hand over to the Army the funds voted by Parliament and allocated by the Secretary of State, and the Officer Commanding the District should be responsible for those funds and should be accountable for those funds; he should watch their expenditure and account for that expenditure through his staff, and in that way it would be brought down to every man in every rank in the Army that the expenditure of military funds is a matter in which they ought to have a vital interest. At the present moment they are entirely removed from that interest. I have heard a Commander-in-Chief himself say that he did not consider he had the slightest responsibility for expenditure, and it is the same with most of the officers in the Army. The only way in which I think you can get the training for war is through, in the commencement, a financial training; if you make officers responsible first of all for their finance they will gradually become responsible for other things, and they will gradually learn to think."

15503. (*Viscount Esher*.) A considerable step has been made in that direction lately?—I should say that every step taken lately has been going backwards.

15504. But in the direction of finance?—I beg your pardon; I think the most retrograde step that has ever been made has been made lately.

15505. I mean in the allocating to the Officers Com-

manding these new Army Corps a certain sum for which they are to account?—£200 a year, I believe.

15506. They are to have a special confidential branch of the War Office attached to them?—Exactly, that is where the retrograde step is that is; the whole sin and error of the thing in my opinion. Take Aldershot, there is an Army Corps at Aldershot; the First Army Corps; they have nominally thrown dust in the eyes of the public by saying, "Oh, yes, we have handed over to General French the control of the expenditure we have allocated to that Army Corps." But they have put a Principal War Office Clerk and 16 War Office clerks into an office at Aldershot, and now what is going on at Aldershot? Sir Frederick Stopford can tell you more about that than I can, but according to my belief what is going on at Aldershot is that instead of a man having even to consider (which he had before, and which was some check upon him), "Is this worth writing to the War Office about or shall I do it myself?" he merely runs across the road into the War Office at Aldershot and says, "Is this all right; will you pass this?" and the clerk says, "I will pass it." And the whole need for thought is taken off his shoulders.

15507. We understood that this War Office official who was sent down to Aldershot with his staff of clerks was to be subordinate to General French; that was the impression left on us by the evidence given here, but you understand that is not the case?—You will find that he will be a War Office clerk and will not be subordinate because he goes to a higher power; he does not correspond with French and French alone—if he did so then he would be subordinate, but he corresponds with the War Office who are above French, and therefore he cannot be subordinate to French.

15508. You understand that he would be either in correspondence with the Accountant-General at the War Office or the Financial Secretary, over the head of General French?—Yes.

15509. (*Sir Henry Norman*.) He must be, under any circumstances?—He is; but he need not be, because General French ought to do any correspondence.

15510. Then General French would come under the head of a clerk of the War Office?—Yes; but he would get his money, and would deal with it as he liked; he would come under them for review, but he would have spent it.

15511. It would never be contemplated that General French or any other General should have power to spend money according to his own will?—Not according to his own will, but as allocated by the War Office.

15512. (*Sir George Taubman-Goldie*.) Would you go so far as to say that the General of a District or an Army Corps should contract with the Government to maintain so many thousand men for a certain sum?—Not at all; the Secretary of State for War in his office would fix the rate of pay for the various branches, and he would tell the man in the district the number of people of each of those branches he would have, and that officer would pay them. All the main channels of expenditure are fixed by numbers and by rates of pay; but when it comes to the flotsam and jetsam of expenditure, I think that the whole of that responsibility should be thrown on the General of the Army Corps. It is in war; he has then to do everything, and why should he not be trained for it? Where you can stop him you do not allow him to do it, but where you cannot stop him you allow him to do it.

15513. I only raise difficulties for you to upset them; but, for instance, as to drafts going to India and men being taken from one district to another, would there not be a difficulty as to which General the expenditure was to be taken by?—The expenditure for drafts is really no expenditure; it is merely putting the men into a ship.

15514. Still, there is expenditure connected with it?—The expenditure is voted for all those drafts, and it is merely a question of putting it in one column or another when it gets to the War Office; say that you have to send out a thousand drafts, and those thousand are coming from ten places, there will be expenditure as each of those ten places for 100 men, we will say if the War Office takes the money for the 1,000 men, each of these men in the ten different districts will know

General The Right Hon. Sir Redvers Buller,
V.C., G.C.B.,
G.C.M.G.

that he is able to send his 100 men, and it will be put together when the accounts are put together.

15515. My point is that if a fixed sum is allotted to each General, the man who had sent most men away with drafts would undoubtedly have a heavier expenditure thrown upon him than the other men would have? —So he would, but his fixed sum would be an average sum per head of the draft.

15516. You go into detail?—That is how it is done now.

15517. That is the way you object to?—I object to its being done at the War Office, and I do not see why it should be.

15518. Supposing there are six army corps created, would you allocate a fixed sum based on the number of men who are paid, and who belong to the army corps, for each corps?—Yes, I would give the average according to the average expenditure of each of those corps; but if a man reports, "I have exceeded my Vote for movement of troops by so much because you threw upon me the movement of more drafts than I anticipated, or that you anticipated when you made your average," that would be set right by the War Office; it would be legitimate expenditure, and would come out of the main Vote.

15519. Could they recover from the other army corps the balance they had unexpended by having less drafts taken from them?—All that is done now by the War Office, and could be done, under the conditions I propose, by the Accountant General.

15520. But under your system I want to see where it would come in?—It would come in under what I call the Intellectual Equipment Branch; the Accountant-General would do that; the Accountant-General does it for the Navy, and what I propose is very nearly what is the Naval arrangement, that is to say, they give a captain a ship, and they allow an average expenditure for that ship, and then haul him over the coals, not doing him much harm in the process, if in any particular thing he spends too much. He gets an average amount of rope, for instance; he is not tied down to a rope, but on the whole an average is taken by the Accountant-General, and they see that the individual commander does not exceed his proper average according to the work he has to do.

15521. When manœuvres take place that involves large expenditure of various sorts?—Yes; for that they always have a sort of special grant. When I was Quartermaster-General I devised a system which is still in existence for manœuvres. You allow the General a lump sum. Before manœuvres now they telegraph to Aldershot, for example, saying, "We want manœuvres, and so many men will go from Aldershot." The General sends up an estimate of £2,000, and he is authorised to spend £2,000. That is the principle upon which the manœuvres are done now, and I may say that it is a principle which has always been in my head as capable of great expansion.

15522. (*Viscount Esher.*) Supposing you take the Inspector General Fortification's work, for instance, and take, for example, the Second Army Corps, a certain special sum is allotted for barracks and fortifications in the lump; would you propose that Sir Evelyn Wood should have the discretion as to whether he should spend that money on fortifications or barracks, as the case might be?—Oh, no; there again you bring in your Intellectual equipment, and the great benefit the Intellectual equipment would be is that you would get what is very much wanted—a military policy for the Army. We have no office of military policy at the moment, but policy should decide entirely what was to be built and where, and the Second Army Corps would, as now, have its expenditure in works divided into the three heads: all important works, quasi-permanent and smaller works, and maintenance, and the only freedom Sir Evelyn Wood would have would be a certain margin out of maintenance with regard to which somebody would go round and see if he really did keep up the different things he ought to keep up.

15523. (*Sir George Taubman-Goldie.*) Would you define what you mean by "military policy"?—By "military policy" I mean first a certain amount of looking ahead beyond the idea of the moment.

15524. As regards organisation?—As regards organisation, as regards numbers, as regards defence, as regards offence, as regards buildings, as regards comfort of soldiers, as regards recruiting, and the conditions under which soldiers live; all those things require a policy, and they are constantly changing. Somebody comes into the War Office, and one man says, "If you want recruits you must have warm baths for all the men." Another says, "If you want recruits you must have dining-rooms, you cannot get on without dining-rooms." Another man says, "That is no use; dining-rooms only give the men more fatigues to clean them; you must have cubicles." Another says something else, and you will see all round barracks these different ideas begun, and then they stop, and then another one begins, and so you go on, and there is nothing to bring those ideas into a policy. There is no permanent office to say, "Look here, that is all very well; you are all agreed that recreation-rooms are the most important thing at present; do let us finish the recreation-rooms before you go into anything else; we cannot afford more than a certain sum of money every year, nothing else can be done but the recreation-rooms." That is what I call a policy.

15525. Would you include in it mobilisation schemes, strategy, and intelligence, and all that together, or would that be separate?—"Intelligence" is a word used in a funny way.

15526. Then I will use the word information, which I think is better?—The intellectual equipment would deal with military policy only and have nothing to do with the Army; nothing to do with the Commander-in-Chief; it is a question of the Secretary of State for War. When we go to War the Secretary of State for War becomes the most important official in the country, and he ought to have an office which knows all about that, but he has nothing now.

15527. Quite irrespective of the Commander-in-Chief?—Yes, the Commander-in-Chief has more than any man can do in looking after his Army.

15528. (*Sir Henry Norman.*) Would the evils which exist in any degree be decreased by giving discretion to Officers Commanding Army Corps, because one might be in favour of cubicles and one in favour of something else?—I specially said that all these questions which involve any principle of expenditure would be a matter for the Secretary of State through his Intellectual Equipment.

15529. And that would give no discretion to these Officers Commanding Army Corps?—Not in a question of high policy, and I think they have plenty to do without it. My idea is to introduce a training in independence of thought by a training in financial independence.

15530. (*Viscount Esher.*) What you mean is that if a man has to pay some ridiculously small sum for some fault, a case which in these days would probably involve no end of correspondence with the War Office, you would allow that to be settled absolutely by the Officer Commanding the Home District?—Yes, I would.

15531. (*Sir Henry Norman.*) At what point would you bring in the control, because it might not be a very small sum, or it might be larger than anticipated?—The control would come in by the audit and there is this point. It should come in through the General's own sense; he should think and decide whether he could deal with the question or should refer it. The accounts would be the control and the General who authorised the expenditure would be responsible for all the expenditure he authorised. He is not now; he is responsible for nothing practically in England. He is tied up very much. When he goes to war he is given the national purse to draw on and he has not had the slightest training whatever to enable him to do it properly.

15532. (*Sir Frederick Darley.*) Therefore you would make the General Commanding the Army Corps, an Accounting Officer?—He would have an accounting officer under him who would keep the accounts.

15533. But he would be responsible for the accounts?—Yes, not for their accuracy, that would be the Accountant, but for the expenditure.

15534. Would not that take up a good deal of his time which ought to be devoted to the training of his

corps?—I do not think so. There are very few questions; there are regulations and the number of questions which arise is very small.

15535. (*Sir John Hopkins.*) Do the different Generals now of the different Divisions make their own contracts for beef, and coal, and all that kind of thing?—I think not, except at Aldershot, but I could not be certain. I introduced a system at Aldershot when I was Quartermaster-General, under which they were authorised to purchase direct as a training for war.

15536. In fact, your contracts then are all local?—Mostly.

15537. And really carried out by the General Commanding?—Yes, to a greater extent than elsewhere; a good many contracts are made locally for the War Office by the local authorities.

15538. (*Viscount Esher.*) But over a certain amount I think they have to be referred to the Director of Contracts?—Yes, but they have changed lately, and I will not be certain about the contract question.

15539. (*Sir George Taubman-Goldie.*) Are these questions of devolution to generals and the institution of a bureau of military policy the only two points on which you insist as to reform?—That is the basis on which I should like reform to commence; if you smother reform by small details it is bad. By giving a certain period every year to the training of troops on strange ground you could teach them a good deal, but I believe myself that round all our stations, if a good deal of the money now spent on moving about troops were allowed to the officer commanding to train the troops where he lived you would get a great deal of very good instruction, provided you had a staff which had studied the subject, and which could go about and show people how to start the training. He has just been reappointed, I understand, but one of the so called reforms that was made lately was the abolition of the Director of Military Education.

15540. (*Chairman.*) Have you made any conclusions from the experience of the War about the question of training on the duties of regimental and staff officers?—Yes. At the beginning of a war our staff officers do not know their duties, and the true reason is that they are called upon in what I might call their sedentary duties to administer regulations with which they are absolutely unacquainted, if they have not been previously at war, because the whole regulations of the Army practically change on going to war; the General supercedes the Secretary of State, and the powers of the staff officers under him are very much greater than they are in peace time. Consequently the training they receive in peace time does not fit them for the duties they have to perform in war.

15541. (*Sir George Taubman-Goldie.*) You are speaking of the Adjutant-General ("A" Department)?—Of all Departments. A good many of the contracts have perhaps formerly been under the Director of Contracts, but when we go to war the officer has to do them himself, and he has not had the opportunity previously of making mistakes, and finding out really what he ought to know.

15542. (*Chairman.*) How would you rectify that?—I would allow more freedom in peace time; I do not care how strict you keep the supervision, and it could be kept strict in peace time, but it seems to me reasonable to train a man under supervision for the position you know he will have to take up without supervision when he goes to war.

15543. What about regimental officers?—The objection I have to staff officers is the same throughout the Army; independence is not sufficiently studied, and the red tape in fact that is used to tie up the higher officers is also felt by the junior officers for this reason, that the moment you deprive a man in authority of any power of doing individual work he has somehow or another to make his authority felt, and he immediately begins interfering with those below him, and that pressure that comes on at the top is felt throughout the whole Army. It begins in the War Office and as long as the War Office goes on as it is and as long as its duty is always to interfere with and not to encourage any individual action, I am afraid we shall not improve our training.

15544. The company officers did well in the War, did they not?—Yes, as I say, the drill book and teaching of our Army is good, and I think the soldiers have gone as far as they have been allowed to go. In all our garrisons the instruction given within the limits of the instruction possible is good.

15545. As to supplies, were you satisfied?—Yes, I thought on the whole the ration was good and the supplies were good.

15546. And the method of supplying?—The method of supply rather opens the question of the transport, whether you ought to separate the supply from transport, which I believe is advocated now, but personally I always object to separating the responsibility for the wagon from the responsibility for the load it carries.

15547. That means you are in favour of regimental transport?—No, that means I am in favour of making supply and transport one service.

15548. (*Sir Henry Norman.*) One department?—Yes.

15549. With one head?—Yes.

15550. (*Chairman.*) You have certain definite views about land transport, but have you anything you wish to say about supply?—With regard to supply, I should like to say this, that I do think it is quite right to have only a fixed ration, it is quite right to have as liberal a ration as you can, but the British soldier is very fairly well paid when he is at war, and he generally has more money than he wants, and he usually gambles. If it can possibly be done, it is an enormous advantage to the Army generally to provide the soldier with a certain number of simple luxuries in the way of eatables. According to my experience, the scourge of the Army in the field is either enteric (sometimes called typhoid fever, or dysentery, and the origin of both those diseases is in ninety-nine cases out of one hundred found to be in digestion, and indigestion is provoked and promoted by hungry men getting unsuitable food. Therefore you can save an immense waste of the Army and you can to a great extent lessen your loss by sickness by a certain amount of judicious expenditure, which really need be very small, because it will nearly all be recouped to you out of the men's pockets. I am convinced myself that I had much less enteric during the two months I was waiting at Ladysmith—which was just the sort of time after very hard work when men do get enteric—because I was able to make arrangements to give my men things like Quaker Oats, jam, sweets, and different things, especially butter; we were short of vegetables in Natal. The doctors agreed with me, and I had the whole time I was in the field a very effective canteen that we always managed to get up as part of our supply. It was a great boon also for the company officers.

15551. Have you anything to say about the horses?—I did not like the Argentines as a rule; some of them were good, but the best horse we had out there, if he was given a chance to get right, was the English.

15552. (*Sir Henry Norman.*) Better than the Cape horse?—As a rule, yes; the Cape horse when it came into our Cavalry was not so good as the English horse.

15553. You mean the English horse when acclimatised?—When the English horse was acclimatised and taken care of he did extremely well. I took out two horses, and I used them very hard and brought them home, they are both going on now, and they are as good as the day I took them out to the Cape.

15554. (*Lord Strathcona and Mount Royal.*) Did you find the Canadian horses good?—They were not a great success, I think; some of them were very good, but the proportion of very good ones was small.

15555. Of course, this corps you spoke of lost a great many of their own horses, some two hundred, I think, so that they had to get Argentine horses to replace them, I believe?—Yes, I understood that corps was exceptionally well mounted; I know Colonel Steele told me so, and the men were very partial to their own Canadian horses, and, as you say, they did lose a great number in that expedition. They agreed never to think any of the remounts they got as good as their original horses.

15556. (*Chairman.*) We now come to Land Transport.—Broadly speaking, what I want to say to the Commission about Land Transport is this, that I am in favour of regimental transport, and the reason why I am in favour of regimental transport is, that we have in our Army a regimental system for good or for bad. At the present moment it is one we have no chance of getting rid of, and therefore it forms a sort of permanent line of organisation, that it is easier to follow than to depart from. For that reason, I think that in the case of the transport which is directly wrapped up with the comfort of the individual men it is better to make the great divisions of any system suit the divisions that affect the men, and therefore it should be based upon the regimental system. I would like to put in a Paper (*the Paper was handed in at Question 15561*)—I am afraid you will think it too long to read—which I have written on the transport, and the point on which I have argued is this: we have a system that is the growth of years; we have three times to my knowledge, at any rate, tried the system of a corps of transport, and it has each time broken down in War, and eventually we have evolved the system of regimental transport, with a corps divisible into separate companies, aiding its organisation—that is to say, the Army Service Corps. I maintained that system throughout the time I was in Natal with great success. I had no trouble with my transport at all, and I may say that my men were as well fed as any troops have ever been, chiefly due, if to anything, to the excellence of the transport. But it was broken up on the other side, and they tried a new system; no doubt that was done under great stress, and was not properly thought out beforehand, and could not be, and it broke down; and the different commanders, it appeared to me as I watched, reverted automatically to the nearest approach to the old regimental system that they could get to, and that I think was a proof that the old regimental system had something in it. Now, we are in this position, that the regimental system has been condemned by the highest authority, but no real system has been offered in lieu of it. The only books of Regulations we have got affecting transport, and all our books as to mobilisation, and all our military literature affecting transport are based on the regimental system. If the system is a bad one, there should be new books at once, and if the system is not a bad one we should use those books, but it cannot be right to keep those books and to allow even the temporary arrangements that have been made now for Volunteers and Militia in England; those books, are all based on the regimental system, and that cannot be right if the system itself is bad. At the large stations they are commencing to attack the system at the top because they are dividing the supply and transport, and they are appointing two Staff officers to do the work where formerly there was only one; Directors of Supply and Directors of Transport are being appointed to all these Army Corps, but to my mind they are not wanted.

15557. Did you maintain the regimental system throughout with your troops?—Entirely; curiously enough (I think I am justified in quoting it), when I was in Pretoria in October, Lord Kitchener told me there were only two columns that had proper transport, mine and Lord Methuen's, and I could not help replying, "Yes, and do you know why? Because they are the only two that kept regimental transport."

15558. (*Sir Frederick Darley.*) What system of transport did you adopt in the large engagements you had on the Tugela, for instance the Spion Kop engagement?—I had hardly anything but oxen at that time; I left all the mules at the Cape for the advance through the Orange Free State, and I requisitioned ox transport in Natal for my operations in Natal.

15559. Was that a regimental transport or a combined transport?—Regimental transport; the wagons were issued upon the system in our text books upon the regimental system.

15560. For instance, you had a number of regiments engaged there; did each regiment take its own transport to the front, or were they all combined together?—A portion was combined and a portion remained with the regiments. In the paper which I have already referred to (*Vide Question 15561*) and which will appear as part of my evidence, I have sketched what regimental transport is, and perhaps you would like me to read that, but practically it comes to this, that regimental transport, properly so called, is

divided into two. There is a first line transport, and I believe nobody has ever proposed that that should not be regimental; that is what I call the fighting transport. It carries the ammunition, the entrenching tools, the medical stores belonging to the regiment, the signalling equipment, and the machine gun or guns, and that is all. That is the first line of transport, and wherever the regiment goes that must go with it; the medical things are wanted for immediate treatment in the field, and the signalling apparatus, machine guns and ammunition are also wanted. Then there is the second line of transport, which is also regimental, and that is a certain number of wagons according to what you are going to carry. It contains always one day's and sometimes more days' rations for the men of the regiment, and in the regiment it is subdivided for the men according to companies, and also carries their tents, their blankets, and their cooking things. So that the regiment, as a regiment, has always with it its transport for its immediately-required fighting things, and sufficient to keep it going in health for the number of days that the general officer in chief command thinks it will be required to be self-supporting. Behind that there is what we call the Army Service Corps Supply Column, and that belongs not to the regiment but to the brigade, and that, again, is filled up from what is called the Supply Park, and that belongs not to a brigade but to a division. If you have any more you have the auxiliary transport formed by the Army Service Corps.

15561. (*Chairman.*) Will you now put in the paper which you have prepared?—Yes, it is as follows:—

"It is impossible to offer any remarks on the transport system of our Army in the late South African War without reference to the criticisms passed by Lord Roberts upon the system which existed by regulations at the commencement of that War. They are to be found in his despatch dated, Cape Town, 6th February, 1900 (*see Appendix, Vol. p. 234*), and in the long report on Transport attached to his despatch dated, War Office, 24th January, 1901.

"In the former document Lord Roberts, speaking of the existing system as the 'Regimental System,' complained (1) that no organised Transport Corps existed when he arrived in South Africa; (2) that some thousands of mules had been collected and a number of ox and mule wagons purchased, but that the system upon which they had been distributed, though it might answer for peace manoeuvres, was quite unsuitable for extensive operations in a country where all necessities required by the Army have to be carried for a considerable distance; (3) that the system was extravagant.

"In the later document there are signs that the Commander-in-Chief's judgment had undergone considerable modification, and that his forcible condemnation of the system which he found in existence had given place to an argumentative defence of the alternative system which he introduced.

"It was unfortunate that neither Lord Roberts nor Lord Kitchener nor Colonel Sir W. Nicholson, who soon after landing was appointed Major-General Director of Transport, had any previous knowledge of the conditions affecting South African wheeled transport. The War Office system which they overthrew had been built on the experience of a century's campaigns, and was especially designed to meet South African difficulties; and the criticism that 'There was no organised Transport Corps in existence,' disregards all the lessons of that experience. During the last hundred years the British Army has tried at least three Corps of Transport, and has abandoned each of them in disgust. To students of transport matters these expensive failures of the past, the 'Royal Wagon Train,' the 'Land Transport Corps,' and the 'Military Train,' are now merely milestones on the road to progress. Guided by past failures the Mobilisation Branch at the War Office had devised a system on lines suited to the idiosyncracies of our Army. Anyone who has ever studied Army reform well knows how greatly reform could be facilitated if our Regimental System could be disregarded or abolished. But that system has grown up with the growth of the Army; it permeates and affects every detail of military organisation; it cannot be disregarded nor abolished; and if the system of transport at all deserves the designation of a 'Regimental System,' it is mainly because it was adjusted to our regimental organisation. In many respects, however, it was not in any sense regimental.

Let us first examine what the War Office system was. It was sub-divided as follows:—

“(A) *Regimental Transport*.—This was transport allocated to regimental units, but by regulation available for general transport purposes, whenever military requirements demanded it. Regimental transport was divided into two divisions—(1) First Line Transport or, as I think it should be called, Fighting Transport. This was for the carriage of ammunition, entrenching tools, first-aid medical stores, signalling equipment, and machine gun or guns. (2) Second Line Transport or, as I think it should be called, Subsistence Transport. This was for the carriage of one or more days' rations for men and forage for animals, blankets, regimental equipment, baggage, tents, etc. The wagons of the Second Line Transport were so arranged that the number of days' rations carried per company or minor unit could be increased at will by diminishing the stores and equipment. Thus, e.g., if tents or blankets were left behind their equivalent weight in rations could be carried.

“(B) *The Army Service Corps Supply Column*.—This was of varying strength, but carried at least one day's ordinary and one day's emergency rations for every man, and at least one day's forage for every animal in the unit (N.B.—Unit in this case means divisional troops, a brigade, corps troops, etc.) The Supply Column thus formed the first reserve, and was the connecting link with the Supply Park (C).

“(C) *The Supply Park*.—I prefer the German word, 'Rolling Magazines.' This carried at least three days' rations and forage in rear of the force, but might be increased, in accordance with circumstances, to carry any number of days' food that the exigencies of the situation, the nature of the operations, or the state of the country, might require.

“(D) *An Auxiliary Transport* formed into companies under Army Service Corps Supply and Transport officers. In South Africa these companies were to consist, for ox-transport, of about 100 ox-wagons with a maximum carrying power of about 600,000 lbs. divided into sections of 10 and sub-sections of five wagons, each under mounted European conductors and sub-conductors, and, for mule transport, of 40 mule wagons with about 400 mules. Each mule company was under a military company—staff with a proportion of wheelers, saddlers, and shoeing-smiths for each section, and was divided into four sections of 10 wagons each under European conductors.

“*Note*.—It is necessary to note that in addition to the above classes of transport there was another large and important one in South Africa. This was the 'Technical Transport,' that is to say the vast transport (chiefly mule, but in part ox) for the Royal Artillery ammunition columns, for Royal Engineer telegraph, bridging and pontoons, balloons, etc.; for the medical units for their ambulances, field hospitals and equipment, and for the Naval Brigade for their heavy guns. All of this had been supplied on the full scale to the different units concerned before Lord Roberts landed. In an European war this transport, the medical excepted, would not be supplied by any Transport Department nor by the Army Service Corps, being already a part of the organisation of the unit and provided for in the war establishments, or in other words 'regimentally.' (The Naval Brigade, of course, is excepted.)

“It is claimed that the guiding principles of this carefully elaborated system were (1) Decentralisation of administration by the formation of handy transport units under the immediate command of those directly interested in their efficiency. (2) Establishment of a chain of responsibility. Every commander of a unit, i.e., of a company, battalion, brigade, or division had direct charge of a portion of that unit's food supply. (3) Interdependence of supply and transport. Nothing is more fatal than to hold one man responsible for a wagon and another for its load. (4) Elasticity, or almost automatic expansion or contraction into units of any size, equipped with each class of transport. The addition or deduction of any unit to or from a brigade, equipped as it would be with its own regimental transport, merely necessitated the corresponding addition or deduction of a proportionate carrying power to or from the supply column and supply park respectively by the senior Army Service Corps officer. His responsibility

for both services, supply as well as transport, was thoroughly established and understood.

“Such in briefest outline was the 'War Office system' arrived at through countless changes, the result of the experience of many campaigns, carefully worked out by the Mobilisation branch, understood by every staff officer who had studied his profession and the A.B.C. of the Army Service Corps Officer. It was in working order, and had received universal approval from the Army in South Africa until Lord Roberts's arrival.

“On the other hand what was the system that replaced it? All transport animals, vehicles, and *personnel* (except the regimental small-arm-ammunition-carts and machine guns), including even the Technical Transport with Royal Artillery, Royal Engineer and Medical units, were withdrawn and formed into transport companies of 520 mules and 1,600 oxen respectively, under Army Service Corps officers and others.

“As the commissioned and subordinate *personnel* of the Army Service Corps were insufficient to find the staff for these companies it became necessary to add to each Army Service Corps transport-company thus formed another of equal strength, and to divide between them the subordinate military *personnel*. These newly-formed companies were handed over to the command of any officer who could be found, Regular, Militia, Volunteer, or Colonial, while the accountability for both was to remain with the Army Service Corps Captain. As demand for more transport kept increasing, attempts were made again and again to divide and subdivide the *personnel*. These efforts at sub-division continued until the staff to be divided fell to unity or zero. Originally it was intended that these companies, of one uniform strength, should lend to the several units of all branches the vehicles and animals required for the day, withdrawing them into one camp for the personal supervision of the company-officer after each march. The impracticability of such a system became at once apparent. It was abandoned perforce, and the idea of an uniform establishment became a stumbling block. In the result brigades, columns, etc., had to be supplied with transport wholly or in part from one or more transport-companies. Odds and ends of transport were left without a home. Headquarter Staffs of transport-companies found themselves with a few odd wagons—possibly part mule, part ox—with no transport to look after and no troops to serve, because all their vehicles, animals, and drivers had been distributed elsewhere. Various expedients were tried, though with indifferent success, to remedy these defects, and moving Transport Depot Companies were formed from any odd *personnel* that could be discovered, to sweep up the floating fragments and form them into new companies.

“The sudden abolition of the existing tables caused considerable inconvenience. True, some new tables were published, but they were incomplete and were furnished too late. The result was that every Commander took what he could get and generally a great deal more than he was entitled to. Supply Columns having been omitted as an integral part of the new transport-system, Commanders knowing that they had no reserve behind them, took with them, whenever they could, huge trains of transport which seriously compromised their mobility and military efficiency. Moreover, since under the War Office system the Supply Column was really the Supply and Transport Company of the units to which it belonged, its abolition involved the separation of the whole *personnel* and equipment of supply from the unit.

“It is not an unfair criticism of the new system to say that it failed to attain the centralised responsibility at which it aimed.

“It divided supply and transport, and dislocated both services.

“It swept away all basis of calculation of transport requirements and destroyed the elasticity that was inherent in the existing system.

“It substituted for the direct responsibility of the regimental transport officer and his commanding officer the uncertain responsibility of a transport-officer, who might or might not be an expert. Usually he was not, and frequently he was not even present with his charge. As soon as the force took the field, the theory of close or constant supervision of the transport by the Transport Company-Commander failed, except in rare cases, to pass into practice. His vehicles, animals, etc.,

18 Feb. 1903

were parcelled out to various units, and he often had no idea where to look for the transport for the efficiency of which he was supposed to be responsible.

"Army orders themselves proved the defects of the new system. First, the Bearer Companies were completed to their original 10 ambulances, according to the War Office system. Then the Field Hospitals were reconstructed according to the War Office system. Ammunition Columns were re-created distinct and separate units according to the War Office system. Finally, on the 19th and 21st May, 1900, Army Orders re-appointed Regimental Transport officers and sergeants according to the War Office system. In fact attempts were made to restore as far as possible the framework of the carefully devised scheme of transport which had been so hastily destroyed.

"When Lord Roberts landed at Cape Town every unit in the country was complete with its full scale of transport, and ox transport sufficient for the supply park of an army was ready to be placed wherever it might be required. In fact early in January not fewer than 15,000 draught and pack mules were actually with the troops, and in addition to them about 1,000 ox wagons with 16,000 oxen were echeloned on the three lines of advance. It must not be forgotten that until Lord Roberts landed, the original plan of campaign, namely, an advance along the western, midland, and eastern lines on Norvals Pont and Bethulie Bridges had never been cancelled, and that the only telegram from Lord Roberts which gave any indication of his intentions seemed expressly to confirm these lines of advance. The transport was laid out to conform with this scheme. Roughly speaking, half of it was on the western line, and the other half divided as equally as possible between the midland and eastern lines. The all important considerations of veldt, water, and immunity from infected beasts and disaffected men naturally governed the choice of positions for these concentrations. Unfortunately a large number of the six or seven thousand mules (not included in the 15,000 with the troops) in the various remount depôts were sick (some 3,000 stallion mules having very unfortunately been sent from Italy), and the provision of vehicles and harness had not kept pace with that of mules. Notwithstanding all these difficulties sufficient transport was ready for the advance on Bloemfontein, before the troops were ready for the transport. That advance was apparently accompanied by only 11,362 mules and 9,778 oxen, numbers considerably less in mules than those previously actually in possession of the troops, and leaving a large number of reserve oxen.

"The début of the new transport system was marked by the total loss of a convoy of 200 wagons, the whole of which fell into the hands of a small force of Boers at De Kiel's Drift. The result was well nigh disastrous to the army in front. Orders for a retirement are said to have been actually written; and there can be little doubt that the expedition would have had to halt, if not to retreat, but for the fact that the Cavalry division had not adopted the new transport system. Consequently the Cavalry supply column was able to save the situation, though the men suffered great hardships and were only kept alive by the offer of £1 reward for every beast they could seize. I do not want to press the argument unfairly, but it is my conviction that a loss of this extent could not have occurred under the old system. Centralisation of responsibility had destroyed individual responsibility. Subordinate generals were not answerable for supplies beyond those with their immediate unit.

"The whole question is one of immense importance. If the regimental—or War Office—transport system be so wrong and unworkable that it has to be upset at the most critical moment of a campaign, then the work of mobilisation that has been carried on in the British Army for many years, and is still being carried on, is obviously wrong and vicious. There is hardly a pamphlet or book of regulations connected with mobilisation that should not be torn up, and the whole care and labour for many years of the mobilisation branch should be thrown into the waste paper basket."

15562. The only other point you were to speak to was the medical and engineer services?—I wanted to emphasise the fact with regard to the medical service that I thought a very grave mistake was made during

the debates that took place in the House of Commons upon the medical service. In giving the number of beds in the field the War Office always included what are called the field hospitals. That is really the mobile equipment that follows the Army in the field for the immediate treatment of men after they are received from the Dressing Station. They are called a hundred beds each, but they have only a limited number of stretchers, and the essence of them is that they should be empty; so that when speaking in the House of Commons of accommodation which has been made for the sick, and the Army is fighting in the field, it is wrong to include the number of nominal beds belonging to these field hospitals, because they ought only to be full the day after an engagement or for as many days as it may be found impossible to evacuate them. Practically speaking in a well-organised campaign they should never be full more than a day, and most days of the week they should be empty. I think that the mistake made is that as a rule we have sent out too little hospital equipment at the beginning; they have counted these field hospitals as beds when they were really not beds. Secondly, it is very much overlooked by our medical officers that you cannot depend upon making a hospital anywhere, and saying, "I have got a general hospital of 200 beds, and 200 beds are sufficient for a force of, say, 2,000 men"; because the men are being reinforced by drafts and although the force is kept up at the same numbers, there are many more men coming through the ranks, and therefore through the hospitals than those hospitals are made to carry. In our overseas wars we should provide very much more transport for evacuating our base hospitals than has been the custom. I should have been smothered in Natal had I not at my own instance provided five hospital ships; and they were hardly enough. I got hold of the best ships I could find amongst the transports, and had them converted at Durban into hospital ships, and consequently I kept my hospitals always fairly free and most of the time, except immediately after the relief of Ladysmith, I had my men very comfortable. It was done by getting the men away, and it is far better for a sick man, no matter what the journey is, to get him put on board ship, and sent home than to have him at a convalescent depôt pining his heart out and doing nothing in some small place in the country which he ought to be fighting in. The two points I want to emphasise are that there should be enough beds, irrespective of field hospitals provided in any future campaign, and that the provision for moving men should be much more liberal.

15563. Were you satisfied with the medical service?—Yes, I thought the medical service was good. I thought our nursing service was indifferent. Our nurses I thought badly trained and poor. They are not regular nurses.

15564. Are you speaking of the women?—Yes. I thought on the whole—and I really think I exercised as much supervision as it was possible for any general to have exercised—the medical service was good, some of the hospitals were splendid, and some of the hospitals were of course not quite so good, but they were all good. We got rid of our wounded and sick very well, and I think with comparative comfort. There were the usual complaints, but nothing much, and there was really no very bad discipline case that occurred at all in connection with the hospital. On the whole I thought the men were well taught.

15565. (Sir Henry Norman.) These nurses of whom you speak as not being well trained were not regular Army Nurses?—Yes, they were Army nurses; I thought the Army nurses were indifferent. You examined Sir Frederick Treves the other day, did you not not?

15566. (Chairman.) Yes?—Did he not say that?

15567. No, I think he spoke very highly of the nurses?—I should like you to examine Miss McCaul on that point. She was one of the two nurses that Sir Frederick Treves brought out with him, the other died. I do not think our female nursing system is as good as it should be, because I think our nurses are above their work. Their training is more to do small odd jobs for the comfort of this or that patient than to nurse. That is my general impression.

General The Right Hon. Sir Redvers Buller, V.C., G.C.E., G.C.M.G.

18 Feb. 1903.

15568. (*Sir Henry Norman.*) To carry out your view would involve an immense increase of the establishment?—I think in war you can always get lots of nurses.

15569. But these nurses under the Army Rules have to be three years in a civil hospital before they can be taken on probation and then they have to be tried on probation for some time and accepted, and after that they are employed on general duties?—Yes, but all those nurses should be quite capable of superintending a hospital equipped with what I might call journeywoman-nurses. I do not for a moment suppose we ought to keep up in peace time an establishment of nurses that would be required in war, but I do not think we insist on the nurses we do keep performing duties which would make them able to take the position I think they ought to take in war.

15570. Is not your idea rather that they should perform what I may call a lower kind of duties than are allotted to them now; for instance, the Army Hospital Corps men are supposed to do all things for the men connected with washing and personal attention?—Yes, and they do, and do it on the whole very fairly well.

15571. You would not give that to the nurses?—No, but I would give the superintendence of it to the nurses; the nurses should know how to do it as they have been taught, and how to teach the men to do it if the men had not been taught before; she should be more of a nurse.

15572. They have gone through that in the civil hospitals during the three years when they perform very menial duties?—I do not say they do not know, but I say I do not think they do it. I was not satisfied, I confess, with our military nurses, and I thought that the hospitals where the civil nurses were taking the lead were more comfortable.

15573. (*Chairman.*) Had you Army nurses?—A certain number. But I am also speaking of our hospitals at home.

15574. This is what Sir Frederick Treves said: "(Q.) Was there not in that force a regular establishment of nurses. (A.) No. (Q.) And was your opinion of the nurses satisfactory? (A.) All that I came across were excellent; I could not speak too highly of all the nurses I came across all down the line."?—That is nurses not of the regular establishment.

15575. (*Lord Strathcona and Mount Royal.*) There were two classes of nurses, I gathered, sisters and nurses, the sisters being of a superior grade, and more of the class of superintendents than the others?—I believe that is so, but I did not understand myself the distinction between the two. I think they were all sisters.

15576. Not only Sir Frederick Treves, but Professor Ogston who saw much of them spoke in very high terms of them?—I do not want to say anything against any individual nurse as I thought they were very good, but as regards our female system, I say that in Natal, and also at home, I thought it left a good deal of room for improvement, and I do not think our military nursing-sisters took, in Natal, a position which was of the same advantage to the sick men as in some cases was done alongside them by the civil nurses. I should like to add that I see it is proposed to divide the Royal Army Medical Corps into sections, each section of which is to have its particular mission. I should be sorry myself to see that done, except upon an understanding that all the sections would begin with the same ground work. I think it is essential that all men who are connected with hospital attendance should be taught the duties of hospital attendance as a distinct duty. It is a great advantage that some of them should cook, and it is a great advantage that some of them should do other things, but I think that after their first-aid training the next important thing is the training in hospital attendance. You never know when you may have to use men for that, and it is a duty that is of the first importance.

15577. (*Sir Henry Norman.*) I think there is some mistake as to some of the evidence given a day or two ago; the Army Nursing Department, besides the Matron in-Chief, consists of a certain number of superintendent nurses, and all the others are nursing sisters?—Yes.

15578. There is nobody under them; they are the ones who have been taken in as trained in civil hospitals for three years, and then on probation, but the whole number of nursing sisters for the whole Army is about 75 or 80, so that it is quite obvious that it is inadequate to furnish nurses in war time; for instance, Natal had eight or nine nursing sisters, and it had during the war very often 1,000 patients?—I think those nursing sisters are not made to take the position they ought to take in a military hospital. They would be at the top of any defined establishment created during a war, and they did not seem to me to be able to fill the position as well as I thought they should have been able to. I do not want to say anything against them, and many of them worked extremely well, but I was disappointed with the way in which, being called to a rather high position, they undertook it. As I am on hospitals, may I tell one story, a very short one, which shows the defect of our military arrangements and the defect of our military education. It happened to me at Ladysmith. I was endeavouring at the moment to provide for the evacuation of the Intombi Hospital, which had 2,500 patients in it, and I had created a temporary hospital out of the old barracks at the other end of the town. There was very great difficulty about bedding, there was much of the bedding they did not like to bring out of the old hospital; everything in Ladysmith had been taken to Intombi, and I went round the new hospital one morning and found that a good many of the fever patients had no beds, nothing but one blanket to lie on. I swept Natal with telegrams, and got a train up by the end of the week with as many mattresses as I could possibly get—bought, begged, or borrowed. As I was going to Church on Sunday morning, I saw the wagons coming from the station with these mattresses, and I sent and found out that they were the mattresses for the hospital. I did not go to the hospital again until the next Monday week, eight days afterwards, and there was exactly the same situation that I had seen 10 days before, the men were all lying there without beds, and I said to the doctor in charge, "How is this? Where are those beds?"; his answer was "We have not got any, sir"; I said, "I saw them come last Sunday week, why have you not got them?" He said, "I have not got them." I then said, "You have your own transport, why do you not send for them?" "I sent for them, sir." "Why have you not got them?" "They would not issue them." And the fact was this, that according to the War Office Regulations in a garrison, hospital-bedding is a barrack-supply, and is accounted for by the barrack-master, but in the field it is supplied by the Ordnance Department, and for the whole of those 8 days the head of the Ordnance Department and the head of the Barrack Department in Ladysmith, had been fighting over which of the two should take these beds on their books and issue them to the hospital, and during that time the patients had been kept on the ground. That is War Office training!

15579. (*Lord Strathcona and Mount Royal.*) I might have a little diffidence in asking you the question I am about to put, except that I know my object in doing so will not be misunderstood. You have said, I think, that as to Strathcona's Horse, a body of about 600 men, they did good service; they were with you during the whole of your command after Ladysmith?—After the 18th June.

15580. They did good service and they were fortunate in having a good officer in command, Colonel Steele?—Yes.

15581. And I think you said also that their discipline was excellent?—Yes, I did say so.

15582. The reason for my asking you is that Colonel Steele and all the officers, 20 or 25 of them, were Canadians—colonists?—Yes.

15583. It has been said here that the officers in the Colonial Corps, or the chief officers, should without exception be from the British Army, but these were all Canadians, and you were satisfied with them in every way?—Yes, Lord Strathcona, and as you have brought that point up in that manner, I must say I was perfectly satisfied, and no officer ever had a better corps under his command than I had in Strathcona's Horse, but on the general question that you referred to

*General The
Right Hon.
Sir Redvers
Butler,
V.C., G.C.B.,
G.C.M.G.*

18 Feb. 1903.

you must recollect that Colonel Steele was himself an officer of a sort of regular corps.

15584. Of the North-West Mounted Police?—Yes, and had been trained as an officer of police, and therefore he was very superior as an officer to the ordinary run of chance Colonial whom one picked up and put in.

15585. I merely put the question from its having been said that the officers of the Colonial Corps should be from the British Army. I gave that as one instance, at any rate, where the officers did their duty well, and to your entire satisfaction, all being Colonials?—Yes, I met several Colonial officers who were trained as officers in the Colonies, who were excellent officers; but I think what must have been meant by the evidence you referred to were the Colonial officers of irregular corps who had never been trained as officers.

15586. The training the officer I refer to had was all in Canada, in the Militia or Police there?—Yes.

15587. (*Sir George Taubman-Goldie.*) I have only one further question to ask you. One witness after another who comes here says it is essential to get more independence of action and individuality among officers and men. The only step you have suggested towards that end is devolution to Generals in districts; how do you propose to get more initiative and more independence? What steps can you take?—By giving it.

15588. In what way?—If you occupy the General with thinking about what he himself has to do, he is to a certain degree relieved of thinking how he can find fault with what the man underneath him is doing. I admit it is a gradual thing, and you can only do it by gradual training.

15589. How would you give initiative to the field officers, commanders of companies, and subalterns?—Our present training is a training of interference, and that has to be amended, and the only means I can think of for amending it is by removing interference at the top, not the bottom. It is all very well to say that the subaltern does not interfere with the sergeant, but he has nothing else to do, as the captain is always interfering with him, and I would take it off at the top.

15590. It does not seem to me to follow that a certain amount of devolution from the War Office to districts, would be a cure?—I did not say anything about devolution from the War Office; I wanted to let the War Office manage its own affairs. It was to be a devolution, as I want the Army to manage its own affairs. I want every man to be responsible for his own work, and I think they will gradually fix their own spheres and do their own work; at present they create a sphere by interfering with the men below them.

15591. There seems little use to recommend that there should be more initiative among junior officers, unless one can put forward suggestions as to how that is to be arrived at; it is difficult to see any practical way of doing it?—I will send you a document on the subject.*

15592. (*Sir John Hopkins.*) I should like to ask one simple question on the subject of training: Do you think the training grounds that are established at Aldershot and Salisbury will give a fair chance of training the men in what you would like to see them trained to, field work and the irregularities of the country? Is the extent of the country sufficient, and are the surroundings sufficient to enable the men to be trained as you would like to see them trained in individual action, scouting, and so on?—Unfortunately a policy has gradually been adopted of filling up the training grounds at Aldershot and Salisbury, with barracks, and I must say myself, I regret it. I think any strange ground, except it is quite flat, would give the opportunity for training, but if a regiment lives in a place they learn at once each tactical point, and the whole thing is a race for a point, and therefore the training on any ground, however good, is very much lessened by the troops having the opportunity of really knowing it well. I should like to see much more outdoor work done, and much less attention paid to the actual dinner-hour in barracks, wherever barracks are. I am sure you could train men very well at a very small expense in their own barracks, and we have of late years by small manoeuvres in the different

stations done a great deal to perfect the lower class training of the men, and then let the regiment go—supposing it only went once in three years it is a training for the officers—to some large place like Salisbury Plain.

15593. It has been suggested here that the only way to get a really good sound training with a large number of soldiers is to send a large Division to South Africa or to Canada?—I do not believe it. I at one time had the honour of belonging to what was then said to be the best trained regiment in the British Army, and they were trained by the colonel almost entirely in their own barrack rooms.

15594. At any rate you may hope for really efficient training if attention is given to the training in the places where they are now quartered?—I believe so; I believe if you were to start a really efficient system of training, and to follow it up by a really efficient system of inspection to see that the idea of the training was thoroughly appreciated and thoroughly understood throughout the different districts, you would in a very few years have as good a system of training as you require, given a certain quantity of open ground; but piling a large number of troops for four days at a time in the most uncomfortable positions upon open ground and asking them to manoeuvre under impossible conditions is not training, neither do you give them the time; they ought to go over the whole thing and be taught how to do it. It is teaching, a time for teaching, and insistence on teaching that we want.

15595. (*Sir George Taubman-Goldie.*) Does that involve more money?—I really do not think so; I do not think it would involve quite so much. It is the old story we want a system—systematic teaching.

15596. (*Sir John Hopkins.*) Have you any fault to find with the plan by which the officers of companies get a very few of their men for drilling at a time as we have heard that the troops have duties of all sorts which so occupy the men that they never can get half a company together?—That is quite true, but it can be met; it was met at Aldershot, and for many years long before I went there, by a system of keeping certain units off duty, and then those units have to keep certain companies off duty, and so you can get them up to full strength, but I think myself that the weak point of our present training is that we try to train off the barrack square too small units—each company is too small.

15597. Have you any views as to the Commanding Officers of Companies paying money, and having general charge of the accounts in the field?—Yes, I have written a long paper on the subject which, I believe, is in print in the War Office, but, speaking generally, I wanted to give every officer commanding a company a small book in the field so that he could pay his men, and each man would sign for what he got, the whole of the accounts being kept behind at the base, which could easily be done.

15598. I daresay you know there have been many complaints of the breakdown of the system?—The system has always broken down for the very reason that it is no system. We pay in peace time on an enormous sheet that it is impossible to take in the field, and if you do you cannot keep it up because the whole thing is paid in one account. I suppose at the Cape we had very nearly as many camp attendants and camp followers, such as drivers and people of that kind, as we had soldiers; every man had his own book, and he was paid without trouble at all.

15599. (*Sir Frederick Darley.*) What time in each year is allotted to the soldiers' field work?—From about the middle of January to the middle of October generally.

15600. I thought there was only a short portion of that time allotted to each unit for field work?—That depends on where the unit is; if the unit is in a single barrack they have all that time, but if the unit is at Aldershot—

15601. Of course, in barrack, but I mean in the field; in training they entrench and so forth?—They are taught at their barracks; we cannot dig up ground unless it is ground of our own which we have to dig up.

* The document was subsequently sent in. Vide Appendix page 641 post.

15602. Have they no ground in barracks to dig up?—They cannot go into another man's garden and dig it; you have to come to your own ground to dig upon.

15603. You must go to your training ground for that?—Not necessarily, because you teach them how to dig in one place, and you teach them where to dig in another. You would always have to do that.

15604. How would you train the officers to entrench?—They are taught first of all the profile of the entrenchment they have to create, and they know the shape of the thing they have to dig, and then they are taken out on the ground, and are taught the conditions which regulate the position in which they would put that entrenchment if they had to dig in that particular spot.

15605. Are the officers actually taken out with the men, and then the men under their supervision throw up entrenchments?—Yes, the men dig.

15606. That is what I want to know. What time is allotted for such purpose?—The actual training in the year for digging is about a week.

15607. Do you consider that sufficient?—Yes, I think so.

15608. To train the officer and the men?—The officer is not trained at that time; the officer is usually taught at Sandhurst, but at any rate if he is a young officer he is with the men at that time, and having been once taught to dig he is not taught again.

15609. But in training the men he trains himself?—When he first joins he is trained with the men; after that he is supposed to know, and he then is a trainer.

15610. Have you seen a German Regiment at that sort of work?—I have seen them; I was never with them.

15611. Have you noticed that there the young officer goes out constantly with different units of men—the same young officer—for the purpose not only of training himself under certain circumstances but of training the men under those circumstances to entrench?—Our officers train different units of men. I do not think our training is bad. I do not know that I quite follow the point you want me to answer.

15612. The point is whether there is sufficient time devoted to the purpose of enabling the officer to train the men and enabling the officer himself to learn by teaching his men?—Yes, I think so. I think looking to the number of things we have to teach in the year there is enough time allotted to digging, because there is an enormous difference between learning to dig a trench and learning to know where a trench should be dug, and that is a thing you have to teach the officer, and you have not to teach the men at all.

15613. There is no difficulty, perhaps, in teaching a man how to dig a trench, but the thing is to know how to place that trench?—That he does not want the men for.

15614. If he has not the men to dig the trench he cannot do it?—You need not dig the trench to teach that.

15615. However, you think a week in the year enough for that purpose?—For digging, yes.

15616. With regard to shooting, what time in the year is allotted for training the men in shooting?—A good deal now; it practically goes on throughout the year. We do not, to my mind, allot enough, but we allot as much as we have range accommodation for.

15617. Take Company A in a certain regiment, what time is allotted to teach that company shooting in the year?—I think the recruits of that company take rather more than a month, practically the best part of six weeks; I cannot say off hand, but it is rather more than a month in the case of the recruits, because they do a double course.

15618. What about the men who are not recruits?—The course lasts about a fortnight, but they shoot besides that, that is the teaching course, and they then have practices which go on throughout the year as occasion offers.

15619. Then it is not the case that men are given a certain amount of ammunition, say, for about a fort-

night, and they fire away that ammunition in the fortnight and never fire another shot during the whole year?—No, I do not think that is at all a fair way to put it: the amount of ammunition that is allowed to a regiment regulates the amount of firing that is done, and that firing is spread over the year according as the officers think they can best expend it for the training of the men. If a man is a bad shot he fires more ammunition than a man who is a good one.

15620. Do you think the time allotted for training the men in shooting is sufficient?—I was satisfied in South Africa with the result.

15621. (*Viscount Esher.*) Did you select your own staff when you went out to South Africa?—No, I did not, they were selected for me.

15622. Do you think that a desirable thing, that the General Officer Commanding, or the Commander-in-Chief, should not be allowed to select his own General as well as his personal staff? I know the system, but I want to know what you think about it?—Personally I have got a grievance about it, and I do not want to air a grievance.

15623. Take it as a general principle?—I think an officer who is going to command should be made to submit a list of his own staff, and if they cannot be appointed he should go on submitting names until one has been found that suits the authorities, because he may select men that it is impossible to spare from other duties, but I do not think he should be handed over a staff and told to take that lot.

15624. Is the General Officer in command of the First Army Corps under existing circumstances allowed to choose his general staff? He is not in point of fact, is he?—I should say he is consulted.

15625. Do you think that is sufficient?—Well, I think it is very difficult to avoid it. I think in peace time you might want, for example, to train a particular man under a particular General; it is all very well for the General to say, "I want somebody else," but it is for the advantage of the Army that the man should go to that particular place, and therefore you cannot lay down hard and fast rules that a man should choose his own staff, but when it comes to war and the General has to go alone and stand on his own feet these conditions should be over-ruled and he should be allowed to select his own staff.

15626. Do you think the number of trained Staff Officers is sufficient under normal conditions—this South African War was abnormal?—My complaint is that there are so very few trained Staff Officers; they are not trained.

15627. When you say they are not trained what do you consider the best training for a Staff Officer in time of peace?—The best training in time of peace for a Staff Officer is to be a regimental Adjutant, to go to the Staff College, and to be employed on various Staff appointments.

15628. Of course, the Staff College takes a very limited number of officers under existing conditions?—Yes, I think it has been increased, but I think they are longer in now than they need be.

15629. You think the course might be reduced by perhaps a year?—I think so; my own idea is that I would require from all officers to whom I meant seriously to think of giving Staff appointments a knowledge equal to that which is required by the entrance examination of the Staff College.

15630. Do you approve of the system of examining officers on going into the Staff College?—Yes, I approve of the system of examinations altogether.

15631. You think it is the only way of selecting officers for the Staff College, by examination?—Yes, but I do not approve of the system of selecting officers by competition for the Staff College, I would have every officer who goes to the Staff College nominated, and I would not allow the nomination of any officer to go to the Staff College unless he had been an Adjutant or Acting Adjutant, or had held some sort of Staff appointment somewhere, and had acquired an elementary knowledge of military subjects.

15632. You would not allow him to qualify by ex-

amination for the Staff College?—No, I would make him qualify by some sort of service.

15633. Do you not think that all the theoretical training, as apart from practical, could be easily obtained at the Staff College within one year?—I do most distinctly.

15634. If he is an intelligent man whom you would think of employing as either a Quartermaster General or Adjutant General?—Yes, we want a staff Officer with a certain amount of all-round knowledge, but we do not want him to be an expert in all things.

15635. In that way of course you double the capacity of the Staff College?—Yes, and I think you might do so; but, above all things, you want an Inspection Staff for military education in the ranks and everywhere. You want to see that you have a system of instruction, and that it is being properly carried out in the different garrisons. All generals are not equal, and they ought all to have help; it is extraordinary what you can do in our Army by inspection if you can once get the generals and officers to understand that you do not mean to interfere with them but to help them.

15636. There is only one other question I want to ask. Supposing that you were to hold the office of Secretary of State for War, what would be the very first administrative act which you would do in the War Office to commence your series of reforms? Have you ever thought of that?—Yes, I have often.

15637. Not in general terms; what would be your first specific act?—I should send for the Commander-in-Chief, and I should say, "Look here, your business is to command the Army and to see that the sums I allot you under the Estimates are not wasted; that is your business, and I will support you as far as ever I can. I shall expect you, if any question of criticism arises, to be able to explain it to my satisfaction, and as long as you can do that you may rely on my most cordial support. With regard to the policy of the Army I shall consult you in every way. You will be a member of my Advisory Board, but your main duties will be to keep the Army, that I tell you I want, efficient." That would be the first thing I would do.

15638. You used the expression "Advisory Board." Would you, as Secretary of State, think you were in a stronger position at the War Office if you had an Advisory Board on the lines of the Board of Admiralty?—Not exactly on the lines of the Board of Admiralty. What I should like to see would be a small Board in the office of the Secretary of State, and it should have somebody, preferably a military officer, as its permanent head, and a clerk or two to keep records. That board should consist of about six people, three of whom would have to be Parliamentary men and three would be soldiers, the Commander-in-Chief being one of them, and they should study any proposals put forward, and should endeavour to arrive at two things. One the lines along which what I may call the social expenditure of the Army should go,—because an enormous amount of the Army expenditure is fixed entirely by the question of numbers,—the lines along which the social expenditure and expenditure for comforts and that sort of thing should go. The other to tell the Commander-in-Chief what really is the Army that he is to maintain, and for what purposes that Army is required. I was 25 years in the War Office, and every year we asked that last question and we never succeeded in getting it answered, except once, and then it was answered wrong.

15639. You would not propose that the Secretary of State himself should preside over that Board?—Not at all. He could come there and have the right to be there whenever he liked; it would be his office; he would have the right to join in the discussion if he liked, he would expect the Board to give him an opinion, and he would be perfectly justified, in fact it would be his duty, to ask anybody else he liked in the Cabinet or elsewhere as to their opinion, but he would always have a record of all the different proposals that were made. That would be the duty of his secretary, the man who in Lord Hartington's Commission was called the Chief of the Staff; it was a very unfortunate name, but the principle, in my opinion, is perfectly sound.

15640. Why I asked you whether it would be an

advantage to the Secretary of State to have his Board round him was that you must recollect that one of the drawbacks to which the Secretary of State is subjected is that he is constantly in the position of having one of his principal officers coming and telling him in his private room one thing and another coming and telling him exactly the opposite?—Latterly that has been more so than ever.

15641. It has always been the practice at the War Office. Has it not occurred to you that if he met his Board, and publicly discussed these questions with them, as is the practice at the Admiralty, it would be an advantage?—It has not always been the practice at the War Office, but we need not discuss that. I quite think that if there is a big question, and probably every year before he compiled his annual estimates, he would discuss the matter not as he does now with individual men, but with his Advisory Board, and he would then call in his Commander-in-Chief or whoever the great official was whose estimates they were discussing, and cross-examine him, and he would be in a position to do it, but at the present moment the Secretary of State has no information whatever. The late Secretary of State, if I may say so, tried to meet this difficulty, in my opinion, in entirely the wrong way. He reduced the power of the Commander-in-Chief, and divided all the great officials into separate heads, so that he never had a chance of getting at a military opinion that was the combined opinion of them all. He formed the Army Board to do that, but as long as I was in the War Office, the Army Board was not allowed to consider any question except a question submitted to them by the Secretary of State.

15642. And in that way it ceased to be of practical use?—It was no use, and I fear I might go further. This Committee that has just been indicated by Mr. Balfour, will have exactly the same end, because it is the wrong thing. What is wanted is not a Committee of the Cabinet to control or to inspire the Secretary of State, but an office in the War Office to assist him. Except the one telegram to me, of which I do not impute to them the slightest knowledge, where in all your enquiry have you found the least proof of the work of the so-called Committee of Public Defence. Are they wanted? No! If the Cabinet does its duty, they have no occupation. If the Cabinet neglects its duty, they have no power. What is the use of giving them an office?

15643. (Chairman.) You want the collective opinion of the military officials at the War Office?—Yes, I want the collective opinion of the Army officials to be given in and to be reconsidered by an authority that will sift it properly, but that is not the case at present.

15644. Are you aware that throughout the War the Army Board did meet and did give a collective opinion?—I am aware of that but it was a scratch pack; it was not a Board that was according to the Regulations of the War Office at the time.

15645. It was an institution of the War Office, only it seems to have had a spasmodic existence. It used occasionally to come into operation, but throughout the War, from June, 1899, onwards, it was in active existence?—I do not know whether you would like to put it down, but I should rather like to contradict that statement. What really happened was this: I came up from Aldershot early in July, and I told the Under Secretary of State for War that, if the War Office telegrams were published hereafter, he would be hanged. I said, "Every head of every Department of the War Office is sending out telegrams on the same subject, but in a different sense, to that poor unfortunate General at the Cape, and you will drive him mad"; he asked me, "What would you do to remedy it?" and I said, "The remedy is to assemble the old Adjutant-General's meeting, which is now called the Commander-in-Chief's meeting, and which was originally dispersed by Lord Lansdowne's order." He agreed with me, and it was done, and the Commander-in-Chief's meeting which really was the meeting of the military chiefs, was recreated, and began to do very good work; and all these different military Departments were thrown into line through meeting at the Commander-in-Chief's meeting. I think the one mistake they made—

they did not want it to be known at the time that they were meeting, because it was rather contrary to the Regulations of the War Office—is that I should have attended as Commander-in-Chief designate, but that is a detail. After the Permanent Under Secretary of the War Office returned from leave he found out that this was going on, and he then added to that Commander-in-Chief's meeting either himself or his Deputy and the Accountant-General, and that was afterwards called the Army Board; but it was in a false position, and if you will turn to an old Army List you will see that an Army Board has always been provided for War up till now, but its constitution has been different. It has been called the Mobilisation Committee, and the Mobilisation Committee is really the sort of Committee that ought to be assembled in every war, as it brings together the Departments of the Army as well as the Military Chiefs. A Mobilisation Committee, to the best of my belief, was never assembled. If it had been I do not think there would have been half the trouble that there was.

15646. We have seen the Minutes of the Army Board, and that was in full work from June or July, 1899, through the War?—Yes, it did a great deal of good. Sir Frederick Stopford was the Secretary, I think, and he will agree that my history of it is correct. I think it was started somewhere about the 10th July. When it was started it omitted some officers who are usually summoned to the Mobilisation Committee, and the expedition suffered through that. The doctor was not called; he never joined the Army Board, and he ought to have been on it because the only way in which you can know numbers and details in a big office like the War Office is by a meeting at which every head attends and knows what is going on.

15647. I was not putting forward the idea that the Army Board as then constituted was perfect, but I say there was an institution like that, and an institution like that possibly with the additions you propose would

give a collective military opinion, and that is what you would desire to see?—Yes, that is exactly it. I was only saying what happened to the Army Board to show that it was not as complete as I would have liked it to be.

15648. (*Viscount Esher.*) Yes, but we must not get a confusion here; there is a great distinction between the Mobilisation Committee in time of war and what you were talking about just now as an Advisory Board in time of peace?—Yes, a great distinction. I propose the Advisory Board for the assistance of the Secretary of State. The Mobilisation Committee is merely a wheel in the machinery of the Commander-in-Chief.

15649. I am afraid that someone reading the evidence might get confused between the two, whereas the two things are absolutely distinct?—I would like to draw this distinction particularly, that the Advisory Board is the Secretary of State's office and the Mobilisation Committee is in the Commander-in-Chief's office.

15650. It was to an Army Board consisting of six members such as you have described just now, that you would specially look to give advice upon all important questions to the Secretary of State?—Yes. an Advisory Committee—an intellectual equipment. To put it as shortly as I can it would be this:—I do not think the Secretary of State in case of a war has fair play, and the reason he has not fair play is because he has no assistance. The final decision must rest with the Cabinet. If the Secretary of State does not agree with the Commander-in-Chief he is now alone in opposition, but if the matter has been thrashed out by the Advisory Board, of which the Commander-in-Chief is a member, and that Board supports the Secretary of State, he will be powerfully assisted in the formation of the views which he has to present to the Cabinet.

15651. (*Chairman.*) Is there anything else you would like to add?—No.

General The Right Hon. Sir Redvers Buller,
V.C., G.C.B.,
G.C.M.G.

18 Feb. 1903.

THIRTY-EIGHTH DAY.

Thursday, 19th February 1903.

PRESENT:

The Right Hon. The Earl of ELGIN AND KINCARDINE, K.G., G.C.S.I., G.C.I.E. (*Chairman.*)

The Right Honourable The Viscount ESHER, K.C.B.,
K.C.V.O.

The Right Honourable The Lord STRATHCONA AND
MOUNT ROYAL, G.C.M.G.

The Right Honourable Sir GEORGE DASHWOOD
TAUBMAN-GOLDIE, K.C.M.G.

Field-Marshal Sir HENRY WYLIE NORMAN, G.C.B.,
G.C.M.G., C.I.E.

The Hon. Sir FREDERICK MATTHEW DARLEY, G.C.M.G.

Admiral Sir JOHN OMMANNEY HOPKINS, G.C.B.

Sir JOHN EDGE.

Sir JOHN JACKSON.

BERNARD H. HOLLAND, Esq. (*Secretary.*)

Lieutenant-General Sir CHARLES WARREN, G.C.M.G., K.C.B., called and examined.

15652. (*Chairman.*) You went to South Africa at what date?—I left England on the 26th November, and I arrived at the Cape on the 13th December, 1899.

15653. You were in command of the 5th Division?—Yes.

15654. And you expected at that time to be employed in Cape Colony, I think?—Until arrival I did not know what the proposal would be, and on arrival at Cape Town they were uncertain what would be done with the Division. I was first ordered up to De Aar. I left Cape Town for De Aar on the 16th December, and when I arrived at De Aar I received orders to return at once, leaving part of my Division at De Aar, the 2nd Battalion of the Warwickshire Regiment. I arrived at Cape Town on the 21st, and then the question arose whether I should be sent to the east of the Cape Colony. A telegram arrived from Sir Redvers Buller stating that my Division was to start at once for Natal, and I left on the 21st December in the "Mohawk," and arrived at Durban on the 25th December.

15655. And you served through all the operations in Natal?—Until 15th April, 1900.

15656. At the request of Sir Redvers Buller we sent you yesterday, on the first opportunity we had of doing it, the statement which he had submitted to us with regard to the events of the 17th to 27th January, 1900; that you have had before you?—I received that last night. I had scarcely more than time to look through it, and I have written the following letter to the Secretary to the Commission, if I may submit it:—"Sir,—I have the honour to acknowledge the receipt of your letter of 18th containing a statement made yesterday by General Sir Redvers Buller. I have read over this statement; it appears to me to be very incorrect and very misleading, and I ask that I may have facilities and opportunities of refuting it. I beg to call attention to the correspondence between Field-Marshal Lord Roberts and the Secretary of State for War and myself on the subject of General Sir Redvers Buller's charges. I would also ask for the telegrams to be produced which

Lieut.-General Sir Charles Warren,
G.C.M.G.
K.C.B.

19 Feb. 1903.

Lieut.-
General Sir
Charles
Warren,
G.C.M.G.,
K.C.B.

19 Feb. 1903.

passed to and from Spion Kop on 24th January, 1900, and the staff reports of 15th January to 28th February, 1900, of 5th Division. I point out the following as salient mistakes in Sir Redvers Buller's statement:—(1) All baggage was left behind at Springfield. The contents of wagons I passed over Trichard's Drift consisted of artillery and ammunition, machine guns and ammunition, warlike stores, ambulances, great coats, cooking utensils. (2) Of the two days which Sir Redvers Buller states I wasted in passing over baggage, he was with me all one day, viz., 17th January, and wrote me a letter in the evening altering his orders somewhat" (I have a copy of that letter here). (3) There is a statement of the waters to be met with" (a copy of which I have here), "which clearly indicates the route Sir Redvers Buller wished me to take. (4) Sir Redvers Buller has never yet stated definitely what his orders were intended to convey to me. I have to ask that he may be called on definitely to state the line of action he intended should be taken according to his present views. All the facts, I maintain, go to show that I carried out my instructions so far as they were then understood. (5) I beg to state unhesitatingly that the system I adopted of demoralising the enemy with artillery fire was the only one that could be carried out with our small force, that it effected its object, and would have been entirely successful in relieving Ladysmith had not Sir Redvers Buller interfered constantly with my operations, and finally withdrawn the force in the hour of success, i.e., when the Boers were absolutely demoralised after Spion Kop."

15657. I am sure, Sir Charles, we quite recognise you could not, in the time you have had, prepare any statement such as you would wish to submit, and we are quite willing that you should prepare and submit to us any statement as to your conduct on that occasion; that is an opportunity which we should wish to give to any officer whose conduct is impugned, while at the same time we cannot pass judgment with regard to strategy and tactics if those are involved, but if you will prepare and submit to us a statement on that subject that will be the best way of dealing with it?—Would it be opportune at the present moment to put in copies of these two letters, or to read them—one with regard to the waters showing the line to be taken, and the other the letter Sir Redvers Buller wrote me on the eve of the 17th?

15658. I should think it would be better to keep it all in one statement?—Very well.*

15659. You have been good enough to give us a *précis* of the evidence which you have prepared on the memorandum which we sent out to you?—Yes.

15660. The first point was as to the adequacy, in point of strength, of the forces in the field at different dates to the work they had to do?—This question hinges in a great measure on the efficiency of the troops on either side, on their power of concentration, on their handling, on the strategy adopted, and on the freedom of action of the General in chief command, and, to a certain extent, on the comparative freedom of action of the Generals in independent command. I am quite satisfied that if adequate methods had been adopted the large number of 250,000 men would never have been required. Inadequate arrangements, however, existed from the very beginning, and accumulated so rapidly from the defective organisation of our Army, that it was very soon apparent that a far larger force was required than had been originally anticipated. With an effective organisation of our Army, with efficient troops, and with adequate handling of them (strategically as well as tactically), 150,000 ought to have been more than sufficient (including burghers) for all purposes, and the raid into the Cape Colony would never have been practicable. It is useless to discuss the question whether an advance should have been made only from the western side. The British troops were not in South Africa to do it, and the Boers had invaded Natal before we had sufficient troops ready to resist them. The question as to why we had no troops ready for all emergencies is outside military considerations, it is a State question. The subject, from the military point of view, commences with the Boer invasion of Natal on 12th October, 1899.

Natal.

With the small force in Natal in October, 1899, it was impracticable to occupy Newcastle (or even Ladysmith efficiently) without first securing the mountain passes by which vehicles could enter Natal along the western

and north-western borders, viz., Besuidenhout's, Tintway, Van Reenen's, De Beers, Sunday's River, Muller's and Botha's passes. Ladysmith had been condemned as a military station from its unhealthy condition some two years before, and was quite unfit, on that account, to stand a siege, but if our cavalry had been fit for their work and properly armed Ladysmith could not have been thoroughly invested at the very beginning, and some of the principal hills in the neighbourhood should have been held by our troops. The following points were either ignored or unknown at the beginning of the war: (1) The comparative immobility of our infantry as compared with mounted Boers, and the impracticability of working them efficiently except in long lines of about 20 miles in open country and 10 miles in hilly country. (2) The great mobility of the Boers as compared with our cavalry and mounted troops. (3) The power of the Boers to bring long range guns of heavy calibre into the field, and our own inability to do so at first. (4) The clearness of the atmosphere, enabling artillery to engage at 10,000 yards range in hilly country. (5) The accuracy and long range rifle shooting of the Boers. (6) The change in system of attack caused by the introduction of smokeless powder. (7) The inexperience of officers and soldiers in action against troops (Boers) who were individual marksmen. (8) The general inefficiency of both officers and men for the kind of warfare forced on them by the Boers. (9) The defects of the Drill Book, which led regimental officers into great error, resulting in considerable loss of life. (10) The ignorance of all as to the necessity for long lines of attack (necessitated by long range and accurate fire) to avoid enfilade fire. Had all these points been recognised and provided for by the Army at large, I am satisfied that at the beginning 10,000 efficient infantry would have been equal to 20,000 to 30,000 of the infantry we commenced with, and 1,000 efficient cavalry would have been equal to 5,000 of those we had with us. It required hard fighting and severe losses before the necessary lessons were learnt. On landing in Natal at the end of December, 1899, I calculated that it would take four divisions, or about 45,000 of our inexperienced men, to relieve Ladysmith with a moderate loss, and that the three divisions we had with us could only advance with success by means of a considerable artillery preparation, as the Boers had entrenchments all along the north bank of the Tugela. With four divisions we would have had a sufficiently long line to prevent great loss from enfilade fire. Three divisions, however, would have been sufficient had our troops been experienced and efficient, i.e., our three divisions as they arrived at Newcastle in May or June, 1900, would have been equal to quite twice the number they were equal to in January, 1900, on the Tugela, on account of the experience gained by both officers and men. I lay stress that they *all* were wanting in efficiency in the beginning. In January, 1900, I considered that with our Army, as it was then, it would have taken 90,000 men to have swept out Natal of Boers with little loss, but with such a force no troops would have been required north of the Orange River on the west, as in securing the passes of Natal and the Majuba heights we possessed the key to Pretoria. Had our troops (officers and men) been efficient from the beginning, I consider that 45,000 men could have swept out Natal with very little loss.

Western Side.

It is impossible for anyone to say whether our advance should have been by the West or by Natal. I was originally entirely in favour of the western route, but then I thought of effecting it in my own way. Circumstances forced our hands. To my mind, the question hinges upon whether the Boers could have occupied Durban. If they could have done so, I think that the Commander-in-Chief in South Africa was bound to transfer the bulk of the troops to Natal to prevent such a disaster. The occupation of one of our seaports and harbours by the Boers would have complicated matters, and would have been a real disaster. I leave this question alone. When I landed at Cape Town in December, 1899, I was requested by Sir A. Milner to suggest how I would occupy the Cape Colony, and I proposed that districts of command should be established in rear of the advancing fighting line—that the three railway lines from Cape Town, Port Elizabeth, and East London, should be the central lines of each district, commanded by general officers, who should be distinct from the officer commanding the line of communications. I proposed that the burgher forces should be called out, and

* Sir Charles Warren subsequently sent a statement to the Commission. Vide Appendix page 643, post.

hat, in addition, a homestead force should be established to defend the homesteads, and not for work in the field. Had this been done then, and had the suspected burghers been disarmed and sent to their homes, the raids on Cape Colony could never have taken place. These burghers would have been equal to 50,000 men in the Cape Colony, and would have greatly relieved our Imperial troops. On the whole, I consider that the troops we had in the field were enormously in excess of what we should have required had they been really efficient. I consider that 90,000 efficient troops would have been sufficient; but the number of cavalry would have had to be increased far beyond that laid down in our regulations for an army in the field; and an entirely different system of warfare to that adopted would have been necessary.

15661. I understand that you are satisfied that if the methods had been adequate, 250,000 men would not have been required at all?—Quite so.

15662. And that that arises from the defective organisation of the Army itself?—Yes.

15663. What exactly do you mean by that? What do you point at as the defective organisation in the Army?—The officers and men were absolutely untrained for that kind of warfare; they were unable to use their eyes, they did not know how to use their rifles, they did not know how to take cover; in every possible way they were unfitted for that kind of work, but they very rapidly acquired the powers.

15664. Is that a defect which is inseparable from the training of an Army in peace time?—Not in the least.

15665. How would you meet the difficulties?—It arises because our soldiers are drilled too much on the barrack square, they are not taught to use their eyes, when they go route marching as a rule there is no fictitious enemy, and there is nothing for them to look for. The training is extremely defective in that respect, or was.

15666. But you think it could be rectified?—Entirely.

15667. And as to numbers at the time of the outbreak of the war, there were not sufficient troops in Natal to resist the Boers?—No.

15668. Have you formed any estimate of the number of troops that would have been required to resist the Boers at that time?—It all depended whether we could have taken possession of the heads of the passes; if we had had possession of the heads of the passes it would have required a much smaller number than if we could not do so, because the passes into Natal are the keys of the position. I should think about 40,000 of efficient troops would have been required at the time the Boers put the whole of their force into Natal.

15669. To defend the passes against an invasion?—And to keep them out.

15670. For defence alone?—Yes.

15671. You are not speaking of any question of an advance?—I consider that 90,000 troops in South Africa would have been sufficient to have got up to Pretoria if the burghers in addition had been called out early in the Cape Colony, and that the greater number of those troops might have been placed in Natal. I should have preferred the advance by the western route, but owing to the Boers having invaded Natal, the necessity arose for an advance through Natal.

15672. (*Sir George Taubman-Goldie.*) By the western route, do you mean through the Orange Free State or through Bechuanaland?—Through the Orange Free State.

15673. (*Sir Henry Norman.*) What do you mean exactly by calling out the burghers?—Under the Burgher Law in the Cape Colony every man has to turn out and fight for the defence of the Colony, and if Cape Colony had called out the burghers they could have disarmed those who were suspected, and the remainder would have been an efficient corps; and if they had been kept under control by districts, the centre of each district being along each line of railway (that is to say, if there had been three districts), the whole of the Cape Colony would have been entirely under control and kept in order by the burghers.

15674. I think we had evidence that there was great difficulty in keeping spies and disloyal people out of our local levies which were raised?—Yes, of course there were a certain number of men who were uncertain, but most of the men were known absolutely as being loyal

or disloyal; there were very marked lines between the loyal and disloyals in the Cape Colony. Of course it would be very difficult at any time to prevent spies.

15675. (*Chairman.*) But the burghers could not have been called out without the co-operation of the local Government?—No, they could not.

15676. And the local Government I think at that time objected?—I am under the impression that that was the case, but I do not know.

15677. But with the force actually in Natal, you think it was impracticable to occupy even Ladysmith efficiently?—Yes, inefficient as they were; if they had been efficient it would have been different—if the cavalry could have worked as mounted infantry it would have been quite a different matter.

15678. How would that have affected the occupation of Ladysmith?—Because instead of Ladysmith being occupied as a very small centre, we might have had our troops occupying a very large area.

15679. Around Ladysmith?—Around Ladysmith, yes.

15680. You said that "Ladysmith had been condemned as a military station from its unhealthy condition;" where did you get that?—I have always heard that; I have got no documents to show it, but I have been told that it had been condemned.

15681. Ladysmith had been selected as one post for the defence under the local schemes; were you aware of that?—I was told that batteries had been sent away from Ladysmith previously on account of the unhealthy condition, but I have no more ground for saying it than what I heard on all sides on the subject.

15682. You have stated ten different points which you think were either ignored or unknown at the beginning of the war; a good many of those arose out of the characteristics of South African warfare, I think?—Yes.

15683. Were they matters which you think had been brought to the knowledge of military men sufficiently to have been taken into account?—Oh, yes, many of them; for instance, in the Bechuanaland Expedition I had arranged with the War Office before I went out that the officers were to be dressed like the men, with distinctions, so that they could not be seen at a distance, and that the officers were to be armed with rifles. That was in 1884. I always looked upon our difficulties at Majuba as arising from our officers not being instructed to use their rifles, and not being able to instruct the men to put down their sights; that is only an impression, but I was so impressed with it that when I had command of the Bechuanaland Expedition I requested the War Office to allow the officers to be armed with the rifle.

15684. And were those reports submitted by you at that time to the Government?—Oh, yes; they were allowed by the Mobilisation Committee.

15685. Are they on record in the War Office?—Oh, yes, they are on record. They will be found under the head of the proceedings of the Mobilisation Committee during October, 1884, I think, but, at any rate, during the time arrangements were made for the Bechuanaland Expedition.

15686. But there was no evidence that they had been taken into account in the preparations made for this war?—No, I do not think they were; they seemed to have been quite lost sight of.

15687. Also the Drill Book, as it then existed, was inefficient?—Yes, the Drill Book advocates an attack from one particular point, and now an advance along the whole line, and that creates a great difficulty, because a small body of men, a small line attacking, is thus subject (with the long rifle fire) to enfilade, whereas if the whole line attacks, the Boers (I may say the Boers because this is really pertinent to the Boer warfare) are obliged to retire as the whole line advances, and the troops are not subject in the same way to enfilade fire.

15688. That defect in the Drill Book applies chiefly to Boer warfare, and might not apply to European warfare?—It would apply to European warfare if the European troops are taught to fire at long ranges. Prince Kraft, in his "Letter on Infantry," speaks upon that very subject after the Franco-Prussian War, so that there is no doubt it was looked into.

15689. So that the lessons which you say were learnt after hard fighting would, you think, not be thrown away in the case of European wars hereafter?—No, the

Lieut.-General Sir Charles Warren, G.C.M.G., K.C.B.

Lieut.-
General Sir
Charles
Warren,
G.C.M.G.
K.C.B.

19 Feb. 1903.

lessons learnt in South Africa are of the utmost use for European warfare. They ought to make our troops the best troops in the world for fighting provided they are made use of, but if they are thrown on one side, as so many lessons have been thrown on one side, they would be useless.

15690. You say that your calculation at the end of December was that you ought to have had four Divisions in Natal to properly relieve Ladysmith?—Yes.

15691. With three Divisions you could not get a long enough line?—Yes.

15692. But still you insist that they must have been efficient troops?—Yes. I think four Divisions could have advanced to the relief of Ladysmith; with their divisions as they were we were just short, and I mentioned that to Lord Roberts in my telegram of the 12th February, that we required more guns to assist us, that we were just not strong enough to be able to advance unless we had more guns of position, which were sent up, and enabled us to advance after 12th February.

15693. (Sir Henry Norman.) They greatly improved in efficiency after a few months?—The troops?

15694. Yes?—The troops changed almost completely after they had been under fire. It was a most remarkable thing that they could not at first be persuaded to take cover, but when they lost very heavily, then they took cover at once individually. Of course, as to the use of their eyesight it took a considerable time before they acquired practice and could see the Boers.

15695. (Sir John Jackson.) You stated that the cavalry were not fit for their work—in what particular way was that?—They had not been accustomed to work as mounted infantry at all, and they did not understand the scouting or reconnoitring for that class of work, and their shooting weapons were many of them supposed to be good weapons, but as far as I could make out, they could not shoot well beyond 1,200 yards; they shot fairly well up to 1,200 yards; but the Boers fought at long ranges, very often at 2,000 yards, and the result was that when the cavalry went (in a mountainous country) up a valley—they could not go along the sides—the Boers had only to get round them at a distance, and they enclosed them.

15696. So that it was mainly due to the special nature of the Boers' fighting and the nature of the country there?—And to the nature of the country, but they were not accustomed to use their eyes.

15697. (Chairman.) Then the second head is the quality of the men of the Regular and Auxiliary Forces?—Shooting Capacity: Infantry—Collective firing very good. Individual firing, fair. Judging distances, very defective for want of practice and experience. Eyesight good enough, but nearly useless for want of practice in looking for an enemy. Cavalry—Almost useless at first for want of practice, for want of a good weapon, for want of training as mounted infantry. Auxiliaries—Some very good, some very bad; on the whole, fair.

Marching: Infantry—Excellent. Volunteers—Uncertain, for want of practice. Marching on Horseback—Bad, for want of both horsemanship and horsemaster-ship.

Horsemanship: Cavalry—Good for real cavalry work, but very indifferent for mounted infantry work. Horses quite untrained for such work. Mounted infantry—Very indifferent. Auxiliaries—Some excellent, some bad.

Horsemastership: Bad generally, amongst officers and men, except in the Royal Artillery. The artillery horsemastership, though not always adapted to the country, was characterised by good judgment and discretion. They saved their horses in a wonderful manner by their care of them.

Intrenchments and Cover: Most defective at first in all branches, except the Royal Navy. It was impossible to convince either officers or men of the necessity of taking cover until they learned it by sad experience in severe losses. The whole traditions of the Army are against taking cover. It is a very honourable view, but it does not suit modern warfare, unless there is a preponderating force; then it can afford to neglect cover. As soon as experience was gained the soldiers commenced taking cover of their own accord, and learned to do it very well, but it was done by the men from the lessons they learnt. Most of our severe losses were due to the want of practice in this respect of the individual.

General Physique: General physique and morale very good. Endurance most pronounced. Good spirits of the troops, under the most trying circumstances, most remarkable. Intelligence only defective because it has not been developed in peace; it is there. The improvement in officers and men after they had once been in action was most remarkable. A soldier after six months' fighting was equal to ten of what he had been at first, and a battalion was at least double its value.

15698. You have already amplified your statement with regard to the shooting; as a whole do you think our shooting compared well with that of the Boers?—I have often tested the shooting of our men with Boer standards of shooting when I have inspected regiments. I put up six bottles together at 100 yards and got men from companies to pick them off, and I generally found six men per company could pick off the six bottles in six shots, and the Boers used to consider that really good shooting; so that you may consider that 6 per cent. of our men (as far as I can judge, probably in every battalion) were equal to first class Boers in shooting. I should consider that the shooting of our men in that way was good, but the eyesight, the picking out of the Boer, was very inferior, as they had not acquired any power of picking up objects. With the exception of the Navy we had no people who could use their eyes at first.

15699. The class from which the recruits come would probably never be practised in anything of the kind?—Quite so; my opinion is that they ought to be taught to use their eyes a good deal more than they do, and when they join the Service they ought to be taught to use their eyes. Only last year I saw a Volunteer regiment marching through Scotland simply in column; they went, I think, a three days' march, and they never looked about them; there was nothing for them to observe, they simply marched through the country. To my mind, except for testing their marching qualities, the march was absolutely useless, and yet it could have been made of the greatest use if an enemy had been placed on the hills and they had been taught to observe them, how they looked under different circumstances in the heather or among rocks, but nothing of that kind was done, and that, to my mind, is the great defect in our Army.

15700. How would you have made them observe the enemy? How would you have got at the private soldier in a matter of that kind marching through the country?—I have always found them most keen directly we put an enemy out. It is a matter I have done constantly. I have had a fictitious enemy out, and the men were always most keen to spot them.

15701. Did you question the men?—Oh, yes, and if necessary I would give them prizes for the best observers; it all comes into judging of distances. What I have frequently done is to have ambuscades, and I told the men they were to be surprised somewhere, and they are all on the *qui vive*, and they are as smart as possible using their eyesight and looking in every direction.

15702. You say among the auxiliaries some were very good and some very bad?—Yes, it is impossible to give any average account of them, because some of them were most excellent, both from Canada and Australia and from our own country; men like gamekeepers and that class of men were most excellent, but some of them from all countries were useless.

15703. What auxiliaries did you have practical knowledge of?—Canadians and South Africans.

15704. Not Australians?—No. I came across some Australians.

15705. The Canadians were good?—The Canadians were very good when they came from the country, but I do not think the town men from Australia or Canada were better than our own men.

15706. (Sir Frederick Duxley.) There were very few town men from Australia?—Yes; I cannot say about the Australians.

15707. (Chairman.) And do you say the same of the South Africans?—Yes, very much so; some of the South Africans were absolutely useless, although most of them were very expert. It depended on how they were brought up.

15708. (Sir John Edge.) On the question of picking up objects, a good deal depends on the knowledge of the man with the rifle in his hands of the nature of the

object he wants to pick up and how it looks in different situations?—Yes.

15709. Does not a great deal also depend even almost more than that on his knowledge of what appearance other objects will present on the field, or in the deer forest, or wherever it may be?—Yes, of course, it requires a certain time spent in the country.

15710. That is what I am coming to: you might be able to pick up objects very well on a moor or in a deer forest in Scotland, and be unable for some time to pick them up in South Africa?—Yes, but if you could once pick them up under one set of circumstances you would very soon acquire the habit of picking them up under another.

15711. I do not see exactly how you could train a man at home to be immediately efficient in picking up objects in South Africa?—I think that if our men had been trained on the waste lands in Scotland, Ireland, and parts of England they would not have found any very great difficulty in picking up objects.

15712. In acquiring the knowledge of what objects were like at a distance?—Yes, and then under different circumstances they would be able to acquire it quickly in South Africa; but at the same time one must acknowledge that with smokeless powder, even with trained men, it is most difficult to pick out a body of men, especially considering the wiles the Boers resorted to of throwing the earth from the trenches in front or behind, or in different places, so as to give the semblance of earthworks thrown up in a different direction, and matters of that kind.

15713. My reason for asking this is that a man I know, who was capable of picking up objects at home in the Highlands very quickly, found very great difficulty in the Himalayas for some time owing to his not knowing how small shrubs and rocks and all that kind of thing would look at a distance in the land he was in?—Quite so, but I think he probably acquired it much more quickly than a man who had had no education at all.

(*Sir John Edge.*) I grant that.

15714. (*Sir John Jackson.*) Did you find the air much clearer?—Very much clearer—quite different; you could see easily at 10,000 yards.

15715. Certainly much clearer than in Scotland?—Yes.

15716. (*Sir John Edge.*) There again there would be the difficulty of judging distances?—Yes, that was the very great difficulty.

15717. May I ask you another question: I suppose you have had a good deal of practical experience in matters of judging distance?—Yes.

15718. Do you find that there is a greater difficulty in judging distance across valleys than there is on the flat?—Oh, yes; each feature of the ground presents a different difficulty, but then men must acquire power of differentiating whether they are looking over a hill or across a valley or down a valley.

15719. At any rate on that point you say our troops at home ought to be practised in judging distances not only on the flat but on undulating ground and the hill-sides?—I think so, most decidedly.

15720. (*Sir Henry Norman.*) You say the marching of the infantry was excellent; had they long marches to make?—In Natal they had no long marches, but on the western side they had long marches.

15721. And from the first were they excellent in marching, or was it after practice?—They were very superior to what they were in 1878—quite different men.

15722. From the first?—From the first; they were absolutely different to what they were in former days, since the recent orders for continuous route marching had come in.

15723. The volunteers were uncertain for want of practice?—Yes, a good number of volunteers fell out; some were very good men at marching, and others fell out more than the infantry did, because they had not had route marching.

15724. And it was very difficult to get the men and officers to take up cover?—They could not be persuaded to do so at all.

15725. Until they were shot at?—That is so; it was the only thing that would drive it into them. I have

spoken to a brigade, and I have told the officers and men that if they did not take cover they would lose half their force, and yet it was impossible to get them to do it. I made them go through the same manoeuvres two or three times in order to try to get them to take cover, but I could not get them to take it up intelligently, and yet the moment they were subject to severe losses the men immediately learnt individually how to take cover.

15726. It is very satisfactory that you are able to say that the general physique and morale were very good, and the endurance most pronounced?—It was perfectly marvellous.

15727. They had also good spirits under trying circumstances?—Some of it is due to the climate of South Africa, but, in spite of that, to me it was the most marvellous thing to see how our men were able to get through the work they did, wet night after night. When they first crossed the Tugela we had no blankets, and the men were in their wet khaki night after night, and yet they did not suffer.

15728. (*Sir John Jackson.*) What season of the year was that?—The beginning of summer; at the same time it was very cold up in the hills.

15729. (*Sir Henry Norman.*) Those are some excellent qualities which they possessed as soldiers?—Oh, yes.

15730. In fact, they only wanted instruction?—It appears to me that what they wanted was instruction.

15731. (*Lord Strathcona and Mount Royal.*) I did not notice at the moment what you said about the Canadians you had seen. I think you said that those from the country were good, but that those from the towns were not equally serviceable?—Yes.

15732. What particular contingent of Canadians had you?—I had with me a battery of artillery.

15733. Canadian artillery?—Yes.

15734. Mounted men?—Yes, mounted men.

15735. Did you consider them good serviceable men?—Yes. I should say they were very good; some of them were very rough men, but I consider them very good. Now and again difficulties occurred, and I generally found the men who got into difficulties were the townmen. I used to inquire about it.

15736. The discipline was not very good, then, was it?—Well, I heard that the battery with me had got into difficulties at Prieska, but while with me they behaved exceedingly well. I spoke to them when they first came, and they behaved very well indeed; but I had heard a bad account of them down at Prieska.

15737. It happened, I think, that most of the Canadians were from the country, and a great many of them from the north-west of Canada?—Yes.

15738. That portion of it which more nearly resembles South Africa—at least the Free State portion—than any other. Had you the opportunity of seeing many of the men from the north-west of Canada?—No I met some lumberers who had been doing lumbering work, and I do not know whether those are from the north-west or not.

15739. Of course, they are from the country altogether?—Yes, those were all excellent men.

15740. (*Chairman.*) Then the next head is deductions from the experience of the war in connection with the training and duties of regimental and staff officers?—This is too big a subject to make a summary of, for a total reorganisation is necessary for efficiency. I make one or two suggestions: (1) The regulations of Home, India, and the Colonies require to be on one basis. At present officers spend half their service in learning and unlearning regulations which ought to be second nature to them, and require no thought. It is impossible that the Army can never be efficient with such an element of disintegration. (2) Staff officers require a great deal to learn. If on every fourth or fifth field day regimental officers were called on to criticise the staff it would do some good. The staff are constantly doing executive duties and omitting their staff duties. The headquarters staff nurse the generals of division, the divisional staff nurse the brigadiers, the brigade staff nurse the battalion commanders, and the adjutants nurse the captains. The whole system is most defective. (3) The captains of companies require more authority. If there is to be selection for promotion, the whole of each rank in the Army (for each branch) must be on one roster. The seconds in command should be assured

of promotion if they do not fail in their duty, otherwise for four years they do nothing.

15741. You do not profess in the remarks you have submitted to us to deal comprehensively with so big a subject?—I think it is an extremely large subject, and I found it very difficult to summarise, because I do not like the present system.

15742. Of course, what you have given us is just one or two suggestions; I do not know if you wish in any way to amplify the first one, in which you say that the regulations of Home, India, and the Colonies require to be on one basis?—I think that is a very important matter, because I have had battalions coming to me from India who not only did not know any of our regulations, but seemed to think that the Indian regulations were far the best, and that they should stick to them. I had great difficulty in bringing them round to take up our regulations.

15743. Are you speaking of regimental or staff officers?—I am talking of regiments—battalions.

15744. Do the regulations in India with regard to a British regiment differ distinctly from the regulations at home?—The internal regulations are quite different.

15745. (*Sir Henry Norman.*) Is not that almost necessary considering the conditions of climate and so on?—I think they ought to be differentiated for the different climates. It is absolutely necessary, but I think the groundwork, the basis, should be the same. In India I believe they have an excellent code, but we have nothing laid down; we have so much that is matter of custom, and it is most difficult for a commanding officer to get hold of these customs after having been away from England a great number of years; there is nothing to refer to, and then the tradition is lost. They come back, and they do not know how to get hold of the system we have at home. We want a code of regulations for all the internal barrack work, because there is so much of the time of officers and men taken up with the learning the ordinary work in barracks when they arrive.

15746. "The captains of companies require more authority," you said. In what direction do you think they ought to have more authority?—I think they should have more responsibility with regard to the men of their companies; in fact, a great deal of the work that the general has been doing hitherto in supervising the regiment I think should be delegated to the colonel of the regiment, and the captain should have a good deal of the work that the colonel has occupied himself in. To give you an instance, when I was commanding the Thames District I had all the reports of the captains of companies of every battalion to look through, and it was impossible that I could carefully look through the whole of these company reports. Each colonel should be qualified to look through the reports of the companies, and give a report to the general officer, and the general officer should supervise generally to see how the colonel of the regiment is doing his work. The company training that we have at the present time is a most excellent improvement on what it was in former days; it has made our young officers.

15747. You mean the companies being taken off all duty?—Yes, and given a certain training. It is most excellent.

15748. I do not quite understand what is meant by "If there is to be selection for promotion, the whole of each rank in the Army for each branch must be on one roster"?—I mean this, that supposing promotion were to go in regiments as it does at the present time, by an officer being selected for promotion (as was recommended by the Committee on Military Education), and if he is promoted in that regiment the position would be unbearable, he could not get on with the rest of the officers, and it is necessary that he should move. I have spoken upon that subject often to German officers, and they say it is quite impossible that we should work it in battalions; they say that we must have it on one roster as they have. I do not mean but one roster for the whole kingdom; it might be worked by Army Corps, or if that is too bulky it might be arranged in divisions of some kind. What I mean is that if an officer is selected for promotion in a battalion he should not remain in that battalion or in that regiment.

15749. (*Sir Frederick Darley.*) You mean he should not be promoted in his own regiment?—That is so.

15750. (*Sir Henry Norman.*) Over the heads of

others I presume you mean?—I mean over the heads of others.

15751. But as to ordinary promotion in which a man is not specially selected, would you not have that in the regiment, or do you assume that all men should be selected?—I assumed that the Military Education Committee proposed that it should be as in the Navy, entirely by selection.

15752. It is rather different in the Navy, is it not; a man remains three years or so in a ship, and then goes to another one, while a man remains in a regiment for life practically?—I am not advocating promotion by selection; I am only saying that if it is by selection then they should be on one roster. I do not advocate promotion by selection at all, and I think there are very great difficulties connected with it.

15753. You really only mean that when a man is selected for promotion he should go to another regiment?—That is so.

15754. And not go over the heads of his brother officers?—Yes.

15755. (*Sir Frederick Darley.*) Is not that generally the case, that when a man is selected for promotion he is passed into another regiment?—Yes, but selection is not the rule at present; I meant if it was to be made the rule according to the proposal of the Military Education Committee. It is the exception now.

15756. (*Sir Henry Norman.*) You said "The seconds in command should be assured of promotion if they do not fail in their duty, otherwise for four years they do nothing." Is it your experience they have nothing to do?—My experience is they do comparatively nothing. I have known an officer when he has served his time as second in command ask that he might be transferred to the other battalion on promotion (when two seconds in command have come at the same time). The answer of the War Office has been that there is no certainty whatever that he will have any promotion at all, as he may be passed over. That is most deterring to them; they are in the condition that they do not know in the least what will happen to them.

15757. (*Sir Frederick Darley.*) I thought perhaps you meant by "The captains of companies require more authority," the training of captains of companies to take the initiative; in other words, to be capable of taking command of a unit under certain circumstances?—They ought to be able to do it because in an advance a captain is obliged to take the initiative, and they ought to be accustomed to that. That I look upon as a necessity with regard to the drill. I meant that they required more authority in the internal discipline.

15758. Do you not think our captains ought to be trained to take the initiative?—Yes, I think it is part of the ordinary training.

15759. Are they now trained?—Not sufficiently. There are no grounds to train them in.

15760. And sometimes not sufficient men to train?—That is the very great difficulty, we cannot get our men.

15761. Are you aware that in the German Army it is part of the training of a captain to take the initiative?—Yes, but the training in the German Army is so very different, because they get them altogether by divisions and by Army Corps, whereas a great deal of our training goes on at isolated stations where there is a regiment by itself—take Hong Kong, for instance, or Singapore, or Bermuda.

15762. (*Sir John Edge.*) In the German Army are the Army Corps arranged territorially?—I believe so.

15763. That is not the rule followed in this country?—No.

15764. How would you apply the general roster for officers?—I was not proposing it; I was only saying that if selection is made the rule then a general roster would be necessary.

15765. I quite understand that, but how would you apply it?—You could not apply it by Army Corps, because the Army Corps this year may be composed of absolutely different regiments from what the Army Corps may be composed of next year?—It could be arranged by a certain number of regiments being grouped together just as the artillery do.

15766. That would be a limited roster, of course?—Yes.

15767. And the limited roster would not carry out the principle of selection really because the men could only

be promoted on the limited roster when there were vacancies?—Yes.

15768. If there were one general roster for the Army a man would go up to a vacancy as it occurred, but if you had limited rosters you would come back to the regimental system extended?—You have that in Germany, because each State has its own Army, I suppose, so that you come to the same thing.

15769. I do not see how it is to be done here. I do not know, and I merely ask you to give me the information. Another result of having a roster of that kind appears to me to follow, and that is that you might have regiments officered by men who had little or no experience of the regiment?—Yes.

15770. Would that be an advantage or a disadvantage?—I think there would be both advantages and disadvantages; there would be new ideas coming into the regiment.

15771. (Chairman.) Taking the next head of your *précis*, will you state your views on the supplies of ammunition, equipment, food and forage?—(a) Ammunition.—No observation. (b) Equipment.—The knapsack and ("and" was altered to "or"; see Question 15791) valise of the soldier on service in South Africa is an absurdity. The pouch belts shed their ammunition. (c) Food.—The food was, on the whole, excellent. In January, 1900, in Natal there was a defect. Troops were not allowed to have fresh meat when they could get it; they were ordered to eat tinned meat. Tinned meat is very heating, and upsets the stomach of most men after a few days, and coming on top of a long sea voyage it induced intolerable thirst. It was this artificial thirst, and not thirst for want of water that was principally felt on Spion Kop. The 2lb. tins gave out early in January, 1900, and troops were served out with 7lb. or 8lb. tins, which had to be carried by the men, as the soft meat could not be carried in the haversack. The result was that the men threw tins away. On one occasion, on the march I ordered these tins of meat to be put in a wagon, as they were found in the road, and a large number were collected. Horses.—Many of the horses sent out from Austria, England, Argentina were not worth their salt. They were sent up to the front too soon after landing, and worked before they were fit, and with defective horsemanship they gave out in a few days. The waste of horse flesh was quite appalling. The Cape horses were out and out the best for riding, but too light for draught.

15772. As to supplies, I think your general view is that they were well done?—As far as I came across them I think the food was very good indeed; some of the best meat I have ever tasted was some of the frozen meat that came up to Orange River.

15773. What about the tinned meat?—It was as good as it could be, but tinned meat is very bad for a soldier to work upon. Many of our men threw it away; they could not eat it, as it affected their stomachs.

15774. We had some statements about the large tins which were sent at a certain time; you say you saw a good many of them thrown away?—The men would not carry them; the only way I got over it was that I gave them two days' meat in one day, and then one day they had none. That was the only way we could manage it, so that they should be able to eat their full ration.

15775. Where did that take place, in Natal?—In Natal.

15776. Did you see any large accumulations of half-used tins anywhere?—No, but I have seen men in the railway trains throwing the tins out of the windows, and the kaffirs running and picking up the tins, and salaaming to them, thanking them, so that there was evidently food in the tins. I have seen that all the way up on the railway trains, where troops have been moving.

15777. Statements have been made that there were vast accumulations of putrid meat from tins in Natal; you did not see anything of that kind?—No, I saw nothing of that kind. I do not think there was anything more than the men could eat, but the tinned meat became so repulsive to the stomach after a time that they threw it away.

15778. As to horses, I think you agree with what we have had a good deal of evidence about, namely, that they were sent too soon to the front?—Oh, yes.

15779. That was a cause, or one of the chief causes, of the waste of horse flesh?—Yes, and the want of knowledge of horsemanship. I think the officers of all ranks are not sufficiently taught about horses, and I think if

every officer could shoe a horse, and know something about the ways of a horse, things would be much better.

15780. (Lord Strathcona and Mount Royal.) You say that many of the horses sent out from Austria, England, and the Argentina were not worth their salt?—When they arrived.

15781. Do you consider that the condition of the camp at Green Point, where a great number of the horses were sent, was satisfactory? I did not see sufficient of that to say, but I think there was a great want of care generally in looking after horses. It was not realised in the least that horses are so delicate; I do not think it has ever been brought before officers that horses in their habits are quite as delicate as human beings, and require the greatest care. On one occasion when I had special tanks with water for the horses in Natal several officers came to me and said it was utterly unnecessary. The horses had been brought into the dams, and they churned up the mud with their feet, and then drank that stuff, and, of course, they were all sick. Horses require pure water as much as human beings, but that is not brought before the minds of officers, and they do not realise the importance in a campaign of horses having good water. Directly you give them good water the horses begin to mend. On several occasions I have been told the horses are off their feed, and I have said, "Well, we must see about their water"; and when we have arranged about the water, and given them good, clean water, they have picked up at once. It was not the fault of the food.

15782. After the Cape horse which do you consider were the best of the others?—I should think the Irish horse, but I am not at all certain, as it is so difficult to know where the horses came from.

15783. By the Irish horse I suppose you mean horses from England or the United Kingdom generally?—Yes. The great difficulty about the horses from this country is that they lose their feet upon the slippery soil; the Cape soil is often hard and slippery, and they have not got accustomed to it, and lose their legs, and come down so frequently. They are not certain like the Cape horse; the Cape horses from habit know exactly when they put their feet down what they are to meet with, but the English horses do not, and may not acquire that knowledge for a year.

15784. As to the South American horses, do you consider them fairly good?—The South American horses we had in 1884 were excellent, but those we had on this occasion that I came across were not good. They had no staying power, they were very fat, and we could not get them into condition for a long time.

15785. Then as to those from the outside Colonies, such as Australia and Canada, what do you say of them?—The only Canadian horses I saw were those in the gun carriages, and they were very fairly good, but they very soon ran down with the food; they could not at first eat the food of the Cape Colony, and that was one great difficulty. It took them a long time to get accustomed to a great deal of the food we had for rations.

15786. It is your experience that tinned meat causes greater thirst than the ordinary fresh meat?—Oh, yes.

15787. You speak of an artificial thirst; is that experienced to any very great extent?—I will give you an instance. When I arrived in Cape Colony in 1884, and went up to Orange River, I had to march a certain distance with some troops in order to secure the position of Langford, and when we arrived there we were all dead thirsty—we did not know what to do for thirst; we went down to the Orange River and filled ourselves. I drank myself quite full, and all through the night I was intolerably thirsty, although I was full of water. I went and drank more water, but I was full of water and intolerably thirsty the whole time. Two days after that I was quite fit, and I had nothing more to bother myself about with regard to thirst, and never thought of thirst in the least; it was simply travelling from England, and going straight up in that different atmosphere under the different sun on this march. In Natal our troops for the first fortnight after landing were intolerably thirsty, and it just happened that the troops engaged across the Tugela at Spion Kop had only recently landed, and had this intolerable thirst, whereas the troops on the next ridge to Spion Kop, the Rifle Brigade and another regiment, got up to the same height; they had more climbing, and they were just the same time occupied, but did not feel thirsty at all, as they had been in the country three or four months.

Lieut.
General Sir
Charles
Warren,
G.C.M.G.,
K.C.B.

19 Feb. 1903.

Lieut -
General Sir
Charles
Warren.
G.C.M.G.,
K.C.B.

19 Feb. 1903.

15788. You therefore from that consider that it is always a very great advantage to have fresh meat where it is possible to obtain it?—Absolutely necessary, I think. I wrote upon the subject before I crossed the Tugela, but my butchering instruments were taken from me and sent to Potgeiter's Drift; I was told not to kill, and I had no means of killing, and we were obliged to eat the tinned meat. It was some Army Service Corps question; they thought that the wood required for kindling fires would be heavier than the tinned meat, and it was a question of a quarter of a pound per man, or something of that sort.

15789. (Sir Henry Norman.) I see you say that the pouch belts shed thier ammunition. We have seen a great deal in the newspapers about the immense quantities of ammunition which were lost all over the country, and I suppose that accounts for the immense expenditure upon ammunition: was it not known beforehand that the pouch belts were not suitable?—Yes, every field day we had, the pouch belts shed thier ammunition, whenever a man doubled, and it was constantly being reported upon.

15790. And nothing was done?—I do not know; the reports went forward. It is a very difficult thing for the pouches to be made so that they will not shed their ammunition when they get a little slack, when they cave in. It is a very difficult matter to make a pouch that will hold its ammunition, because you may have it half full or nearly empty, and if the sides cave in the ends will probably bulge out, and the cover does not cover it properly, and the ammunition jumps out through the ends. I suppose some way could be devised, but nothing has been devised yet, apparently.

15791. You said "The knapsack and valise of the soldier on service in South Africa is an absurdity;" did they carry knapsacks?—No, I had intended to put "knapsack or valise;" I used the word "knapsack," which was the old article.

15792. They carried a valise?—Yes.

15793. Would there be any other means of carrying it without a considerable addition to the transport?—What I allude to is the shape of the valise, and the pressure it puts upon the man; for the sake of carrying about 7 lbs. there are about 40 lbs. put on the man with the tightness of the belts. On one occasion I was asked about it, and I said, "It is much better to have the men simply with what they have got in their breeches pockets than to put such a valise on their backs, because for the sake of carrying this very small number of pounds you have the man all tied up when he is marching, and most uncomfortable." It was a badly-made valise. I marched with the valise in the New Forest manoeuvres, and I know what it is.

15794. You think that the valise is badly constructed?—Entirely.

15795. Has anything been done?—I have seen something about a valise with a hook on each shoulder, so that the weight comes on the shoulder with no pressure, and anything of that kind would be of very great advantage. I think it very important that the men should take something with them, and the officers, too; the officers should carry their clothes with them when they march.

15796. (Sir Frederick Darley.) As to the pouch belts, if the ammunition was in clips of five, as the the Boers had it, would that save the ammunition?—Yes, that would prevent it jumping out.

15797. Would that prevent the loss you speak of?—It would prevent the very great loss; of course, when the clip is broken a little might jump out, but the bulk would be saved, and it would be a very great advantage.

15798. Would you suggest that—the ammunition should be in clips?—I think it would be a very good suggestion.

15799. (Chairman.) Will you now give your views on the next head of your *précis*, which is land transport?

—(a) Railways: I have no special observations to make, except to say that if the military had had the repair of the railway in Natal instead of the Colony, the work, in my opinion, would have been carried through in less than half the time, and at little more cost. (b) Ox and Mule Transport: In Natal there were two sets of conductors, one on the part of the War Office and one on the part of the contractors. On the western side there were only conductors on the part of the contractors. This was, in my opinion a great mistake, though a small saving was effected, very small compared with the

expensive method of contract. For example, wagons were secured at 25s. to 30s. per diem, and handed over to the contractor, who charged 60s. per diem. I looked upon this system as most extravagant. The contractor must have made millions over it. The mule transport was only useful within certain limits, on account of feeding the mules with grain. There should have been mule transport for infantry, say one battalion per division, for work with mounted troops. (c) The traction engines did very well on macadamised roads, or on very hard even ground, but in the latter case were useless where there was wet weather, or where the ground was cut up by sluits.

15800. I do not quite understand your observations on the ox and mule transport; you say that in Natal there were two sets of conductors, and on the western side only one; do you mean that the western side was the best way?—No, the eastern side was the best way, because we had our own conductors, and we could look to them for the condition of the animals, and so forth, whereas the contractor had not at all the same views as we had.

15801. Then you go on to speak of the expensive method of contract; I suppose you do not mean by your example that the increase was simply caused by the extra set of conductors?—Oh, no. It is simply this: that there was a contract with Weil and some other contractor to pay them £3 each per diem for the wagons, so I understand, but we could get the wagons for 25s. a day, and we were forced to hand them over to the contractors at the 25s. or 30s., or somewhere about that, and the contractor supplied an extra wheel and something else and the conductor, and he took the difference. It seemed to me that there was a very great waste in that respect.

15802. When you say "we could get the wagons at 25s. or 30s.," what do you mean by that?—The officers on the spot; for instance, when I arrived at the Orange River, when I was made Governor of Griqualand West and Bechuanaland, there was no transport, and I was told to impress any transport I could find, and I sent round and found out all the wagons; instead of pressing them I asked them what they would be content to take, and their terms were all from 25s. to 30s.

15803. But you had your powers of impressment behind you?—Yes. Then I proposed that there should be a certain percentage put on, and I was told no, that the £3 must be charged, and the wagons must be handed over to the contractors. Of course, it simplified matters very much in the general accounts, but the difference was enormous.

15804. You do not know the details of the contract with Weil, I suppose?—No, I knew nothing more than that—that there was the difference I have mentioned between the price at which we obtained them from the people and the price the contractors charged.

15805. But the contract with Weil was a standing contract made before the war? I do not know.

15806. (Lord Strathcona and Mount Royal.) You had no efficient means of conducting the transport without handing it over to the contractors?—We could have done it through the Army Service Corps, but we were not allowed to do it.

15807. Could you have done it efficiently?—Certainly. I do not know whether it was considered advisable to do it or not, but we have done it.

15808. (Sir John Hopkins.) In your experience of transport, had you the transport that was organised on the Cape side, which was a general transport, or the regimental transport?—On the Natal side at first we had the regimental transport system, and it was also on the eastern side to a certain date, when it was changed to general.

15809. What is your opinion of the change to general?—The change for the general officers was most disastrous, whereas before we had everybody most keen to do their work, we suddenly found everybody listless and nobody taking any interest in the transport. On the other hand, they were able to make use of many wagons which were otherwise idle, and I think on the west certainly there might have been advantages. On the east I could not see any advantage whatever. On the west there were advantages, because I suppose there were wagons lying idle. On the east we had an arrangement that supposing regimental wagons were not employed for two or three days, the regimental officer sent in to say "Our wagons are available," and then they were used with the general transport service until the time came when the

regiments were engaged to march, and then they reverted again to the regiments.

15810. If you were a general officer commanding a division, for instance, in a future war, which system would you prefer—a mixture of the two?—I should prefer the regimental system tempered with discretion—that is to say, that whenever wagons are not required regimentally, they are not to be kept idle, but are to be put at the disposal of the Army Service Corps. At the same time an arrangement ought to be made that the Army Service Corps are not to work them up to the moment the regiment has to march, because on several occasions the wagons were sent to us to march with when they had been used the same day by the transport service, and, of course, the oxen were unfit for the work, but if used with discretion I think the regimental system is by far the best, because everybody is so keen and anxious to do the work. I have known men working all through the night, night and day, under the regimental system.

15811. (*Lord Strathcona and Mount Royal.*) There is just one point about the railways. I presume the railways really belonged to the Colonies in both cases—Natal and Cape Colony?—Yes.

15812. And it was on that account that they undertook the repairs?—Yes.

15813. (*Chairman.*) Will you now state your views as to the adequacy of the Medical and Engineer Services?—Medical Services.—(a) From the purely medical point of view, the skill, zeal, and devotion to duty of our medical officers during the war is beyond all praise. (b) From the sanitation point of view there is much to be desired. It never seems to be clear whether a camp is located according to strategic requirements or not, or to what extent the question of sanitation is to be considered. The result is there were grave defects in the position of many of our camps. The duties of medical officers ought to be more clearly defined and their responsibilities laid down. It is possible that sanitation is not yet clearly understood, and that scientific and medical opinions are not in unison. On the following points, however, there can be little doubt:—(1) Sufficient attention was not paid to the necessity for preventing men washing so close to drinking water as to allow of the dirty water running back into reservoir or stream. (2) This is particularly the case with regard to wells. In all cases wells ought to have their mouths raised, so that it is impossible that dirty water can run back into them. (3) Water should be drawn off by taps and cocks, and not by dipping buckets, whose bottoms are often very dirty. (4) The camps require sweeping up constantly. Dirty straw and refuse should not be allowed to lie about, or be thrown into corners, but ought to be burnt. (5) Men should not be camped or bivouacked where horses have been picketed. There was an entire absence of regard to such considerations in camps hastily formed. In the open plains the mounted troops frequently occupied the best ground before the infantry came up, and the infantry were bivouacked where horses had been. I have always found that in such cases there is sickness. I am convinced that typhoid fever does not belong of necessity to an army in the field; its presence is usually a sign of neglect of some kind. Wherever real sanitary precautions are taken typhoid fever is at once reduced to a minimum. If there had been efficient sanitary regulations in our Army, and if they had been attended to, I think that three-fourths or four-fifths of our losses from typhoid fever would have been avoided. I consider that our regulations have been retrograde in late years. It is impossible that a Provost-Marshal can look after such matters. His duty ought to be to look after others, and see that they do their duty, and not do the duty himself. The whole sanitary service requires recasting. It ought to be automatic, so that on starting a camp or bivouac anywhere things should go straight. Wherever troops halt on a march the temporary latrine should be pointed out, instead of allowing men to go anywhere. The only safe expedient is to establish a rule that whenever a case of typhoid fever occurs the medical officer and Royal Engineer officer will be liable to be tried by court-martial unless they can show that they have adopted all precautions. This will force the general staff to attend to the matter.

Engineer Services.—(a) All the services at which the Royal Engineers had had due practice before the war were admirably carried out. Nothing can exceed the efficiency of the telegraph service and the pontoon train. (b) On the other hand, the field companies Royal Engi-

neers were not efficient, for want of practice and experience. They have no regulations as to their duties, and no drill. I brought this matter to the notice of the War Office in 1895-6, in the Thames District, and was told that a Committee would consider the subject. It is essential that field companies should work and manoeuvre with troops in peace and do real work, so as to get experience. (c) The sanitation of camps and bivouacs should be jointly in the hands of the medical officers and Royal Engineers, and their responsibility should be clearly defined. This is a matter of life and death, and the officers concerned should be liable to be tried by court-martial if they cannot show that they have taken efficient precautions, whether in peace time or in war. Of course, this means additional expenditure by the State. The usual defect is that the State will not spend the necessary money on the services required. But if responsibility were thrown on the medical and Engineer officers, and a court-martial brought out where the responsibility lay, it would force the War Office into spending the necessary money where it is required. (d) One of the most retrograde steps taken in recent times was to remove the Commanding Royal Engineer of a division from his position on the staff of the Divisional General. The result has been chaos in many directions. How is it possible for a general officer to have his arrangements made in advance for crossing rivers, telegraph services, engineer services generally, if his Commanding Royal Engineer is cut off from him and reduced to the position of the officer commanding a battalion? I do not hesitate to say that much of the early confusion during the war is likely to have resulted from all responsibility being taken from the Royal Engineer in looking into the future. There is exactly the same reason for the Commanding Royal Engineer being on the General Staff as there is for the Assistant Adjutant-General or the Assistant Quartermaster General or the staff officer for transport and supplies. It is impossible that a Division can ever work in a satisfactory manner if the Commanding Royal Engineer and the Officer Commanding Royal Artillery communicate with the General Officer through the Assistant Adjutant-General instead of directly as the General's staff officers.

15814. With regard to the Medical Service, you have no criticisms upon it as a medical service, but from the sanitation point of view you think there is much to be desired?—Yes.

15815. You think it ought to be under a distinct sanitary officer?—Or Sanitary Committee. The great difficulty in our service is that so many of our Staff officers are doing executive business instead of supervising and seeing that the work is done, and if we had a Sanitary Committee that was looked after by somebody else, then I think the Sanitary Committee would be the proper persons to carry out that kind of work, and to point out what is required. The first point to consider is—is a camp placed in a certain position for strategical purposes or for ordinary purposes? If for strategical purposes, then those considerations must be considered more important than anything else, but, as a rule, there is a little latitude, and the position where troops can be placed may be in a healthy place, or it may be in an unhealthy place, and I think that the sanitary officers ought always to have a voice in the matter, and to point out that such and such a place is unhealthy.

15816. Who selects the site of the camp now?—A medical officer goes forward and reports, but he is not in any way responsible; he goes forward with the staff officers. There is no general rule about that; some staff officers are sent forward to select the site, and generally the medical officer goes with them, but there is no defined responsibility.

15817. But is there no officer on the staff whose business it is to select the site of a camp?—Not that I know of. I wrote in the very strongest terms of the position we were placed in after the relief of Ladysmith near Ladysmith. I pointed out that it was a place which was supposed to be a typhoid fever ground, and our men in a fortnight were down with typhoid fever. Of course they might have had it just the same whether they had been placed there or not, but there are my reports upon the subject, and of the medical officer of my Division, saying most strongly that we should not be encamped upon that particular spot of ground.

15818. Still you were encamped there?—Yes, we were,

Lieut.-
General Sir
Charles
Warren,

Lieut.-
General Sir
Charles
Warren,
G.C.M.G.,
K.C.B.

19 Feb. 1903.

and very shortly afterwards the whole of my Division was subject to typhoid fever.

15819. Was it for strategical reasons that you were placed there?—I do not know; I was not told.

15820. If you were advancing, and had to select a camp for the next night, what staff officer would you, as a rule, send on to do that duty?—I should send a Quartermaster-General, an Engineer, and a medical officer.

15821. That would be your practice?—Yes.

15822. Is that what you mean by a Committee?—That is the class of committee I should propose.

15823. You propose that it should be a recognised rule that from the staff of the General there should be a committee in whose hands the selection of the site of a camp should be placed?—Yes.

15824. Of course that would leave it to the General in any case for strategical reasons to inform his committee?—Certainly.

15825. But you do not advocate the distinct appointment of a sanitary officer in charge of all the sanitary conditions?—No; I do not know what class of officer should be appointed.

15826. I think what was suggested here was that instead of its being the duty of the Principal Medical Officer there should be a sanitary branch of the medical service?—If the medical officers are trained to the work then no doubt they could do it, but at present they are not trained to the work.

15827. If there was a branch of the medical service which was trained in sanitary work, and an officer from that branch set aside for that service, would that be an improvement?—I think it would, but what I want to lay stress upon is that somebody should be held responsible, there is nobody responsible at the present time, and the result is that these cases of typhoid fever seem, to my mind, to be allowed to occur when they should not. In my opinion if the sanitary regulations had been attended to properly three-fourths or four-fifths of our losses from typhoid fever would have been avoided.

15828. You put it rather drastically, that "the only safe expedient is to establish a rule that whenever a case of typhoid fever occurs the medical officer and Royal Engineer officer will be liable to be tried by court martial unless they can show that they have adopted all precautions"?—Yes; I was taking the home and active service together there, and I was thinking at that moment more of the home service, where the Engineer officer and the medical officer are the two officers nominally responsible. I should add in the Quartermaster-General also for active service.

15829. In home service those two officers are responsible?—Yes.

15830. But not when it comes to active service?—No. At the present time the Engineer builds the barracks and keeps them in repair, and the medical officer goes round to see that things are in a sanitary condition, so that they are the responsible officers in peace, but there is no real responsibility attached to them, and the result is that they may year after year make proposals, and in the Estimates proposals may be made for alterations which may be cut out by the War Office, and nothing may be done, whereas if real responsibility was fixed to them it could then appear before a court that they had done what they could, and the responsibility would then lie where it should.

15831. You would not make them responsible for its being cut out of the Estimates?—No, but somebody else would be responsible then.

15832. (Lord Strathcona and Mount Royal.) Is it not competent for the General in Command to give such instructions with regard to sanitary matters as may appear to him necessary, and to insist that they shall be attended to?—You mean on active service?

15833. Yes?—Certainly; but how is every officer all over the country to know of an order brought out by a General Officer when he first goes out on active service? All those things ought to be cut and dried, and a matter of habit.

15834. But you consider that in many cases sufficient precautions were not taken from the sanitary point of view—such as were possible under the circumstances of the moment?—That is my opinion.

15835. Such as could readily have been carried out

at the time?—Yes. I have mentioned that wherever I had the opportunity I used to have the mouths of the wells bricked up or turfed up till they were 2ft. or 3ft. above the surrounding ground, so that it was quite impossible that water would go back. That was one of the first things I did whenever I went to a place, and that ought to be a rule of the Service.

15836. And that was not done?—That was not done.

15837. (Sir Henry Norman.) I notice that you say that the Commanding Royal Engineer of a division has been removed from his position on the staff of the Divisional General; when was that done?—I do not know when it was done. The first intimation I had of it, although I had just been commanding a district (so that it must have been done about 1898) was when I was going out to South Africa, and I was told that the Commanding Engineer was to go with his company in another ship. I said: "I want to talk to the Commanding Engineer and the officer commanding artillery about our work on the way; I want to have war games, and I want to have the whole of my staff"; and then the intimation came down to say that the Commander of Royal Artillery and the Commanding Royal Engineer were not staff officers, but only regimental officers. Eventually the Commanding Engineer was allowed to come in my ship, but the officer commanding the Artillery Division was not allowed, and went with the artillery.

15838. This Engineer officer was commanding a company of Engineers?—No, he was to go with the company; there was one company with the division, and he was to go with that company. There was a Major commanding the company, so that there was no necessity for him to go.

15839. There was no arrangement like that which prevailed in India, that there should be a Field Engineer on the staff of the General Commanding a Division?—The change is quite new.

15840. But it is a very old custom in India to have a Field Engineer, usually a Captain, attached to every General Officer and Assistant Field Engineers to Brigades, and so on?—Yes, it always has been in the British Service until 1898; in fact, it was down in the Regulations that the senior Engineer was the Staff Officer to the General Officer.

15841. And you think that alteration having been made is a mistake?—I think most terrible blunders resulted from it, because it then ceased to be the duty of the Commanding Engineer to look forward at all and find out whether bridges were wanted, and all those innumerable services required for troops on the advance.

15842. (Sir Frederick Darley.) It has been suggested by witnesses here that there ought to be appointed to the staff of each General Officer a skilled sanitary officer, probably a medical man, so as to advise him with respect to the site of a camp?—I think I have replied to that question.

15843. Would you advise that there should be such an officer?—I do not think the medical officers at the present moment are qualified, but if they were trained they would be.

15844. I am speaking of a new departure—a trained sanitary officer, probably a medical officer?—I think there would be a very great advantage in it.

15845. Have you found anything of this sort? It is a description given by a gentleman who was a witness here, himself a medical man; speaking of the principal medical officers, he said: "All the senior officers, from the principal medical officer downwards, are impressed with a sort of feeling, first of all, that their service is looked at askance, that their branch is secondary; and, next, that they must not approach any General Commanding Officer, and certainly not if he has got a title, without their knees chattering together with alarm and fright: they must not think of advising him that it really would be for the good of the Army if a camp was not pitched on a certain proposed site, because it is covered by stinking horses in various degrees of decomposition"?—I could not agree with that at all.

15846. You think that the medical officers could approach the generals?—I look upon that as an impossible set of circumstances. The medical officer is on the staff of the general and is always with the general.

15847. And you think he would not be looked at askance if he gave advice of that description?—I think

it depends very much on the general officer; some generals may consider that they know these matters with regard to sanitation better than the medical officer, and others may take their advice; but as to looking at them askance, I do not know—I think it depends on the individual general officer. The medical officer has every opportunity of going to the general officer and speaking to him, and I cannot imagine any medical officer who knew what was wanted not doing so. I am sure they are so filled with a sense of their duty that they would do so.

15848. It was also suggested by the same witness that combatant officers should be taught the general principles of sanitation?—I think that is absolutely necessary. I think every officer should understand sanitation because a great deal of the work is done in advance, and a great deal of our difficulties arose from the mounted troops in advance spoiling our camping ground, not knowing anything about sanitation and putting horses in all the best places.

15849. So that you think every combatant officer should understand sanitation?—I do. It is a very simple matter—only common sense.

15850. (Chairman.) Would you next state your views about the effective range of the guns, rifles, and other armament used?—Artillery.—A distinction must always be made between the use of guns in an open country with isolated hills, like that of Western South Africa, and the mountain country of Natal. Bearing that difference in mind, I have observations to make on the following points: (a) The 15-pounder field gun was exceedingly defective in 1900 in Natal, because the limit of effective burst of its shrapnel shell was only about 3,500 yards, very little above the limit of Boer long range rifle fire; the result was that there was no space available for manoeuvre for the guns, and they could not be properly covered by infantry without the latter getting too near the Boer fire. This will account for some of the casualties among the infantry, which would have been avoided had there been a longer range for the burst of shell. This limit has, I hear, been increased to 5,500 yards, and if this is so the guns would now be quite effective. The absence of common shell when the gun was brought against earthworks and gun emplacements was sometimes felt. (b) The range of the 5-inch howitzer at 5,000 yards was quite insufficient. If it could be increased to 6,000 yards without increasing the weight of the gun, its effectiveness would be enormously increased; but the projectile cannot be diminished in size without diminishing the quantity of lyddite too much. Possibly this gun has sufficient range for European warfare, and its defect was due to the clear atmosphere of the Cape and the abnormally long range fire of the Boers. I considered that the effect of the lyddite shells on the Boers was most pronounced, and I look upon their statements that they did not mind them to be mere fiction. (c) The semi-mobile 4.7-in. and 5-in. position guns were at the last moment brought into the field at the beginning of the war to meet the heavy long range Boer guns. On account of their flat trajectory they cannot effectively be used under 5,000 to 6,000 yards, and they may be said to be very useful guns from 6,000 to 9,000 yards. They were more than a match for the long range Boer guns. They should form part of the equipment of the service manned by the garrison artillery. They can readily be drawn by oxen, can march as fast as the troops, and there is no difficulty in bringing them into action. There was a marked difference between the working of these guns by Royal Navy and Royal Artillery. The Royal Navy were superior in use of their perceptive faculties in practice and experience. The Royal Navy were expert in taking cover, both for themselves and their guns, and devised expedients readily. The Artillery manned their guns in the open, as with field artillery, until ordered to take cover, and were not very ready at first in doing so. On the other hand, the fire discipline of the Royal Artillery was greatly superior to that of the Royal Navy, and when they did see their objective their shooting was better. In fact, where intelligence was the first requisite, the artillery fire discipline was superior, because its responsibility rests with the officers, but where the use of the perceptive faculties was the first requisite the Royal Naval system was superior. As a case in point, on 24th January, 1900, the naval guns were called on to assist the troops on Spion Kop at about 10,000 yards range by firing at the Boers advancing from the north-east. This was a case where the hill top of Spion Kop could be plainly seen, and

intelligence was chiefly required in discriminating between friend and foe. It is possible that the naval officers sighted the guns on this occasion. I only give it as an example in the abstract, and not to point a moral. The following is a summary of general observations on the artillery:—The whole system of artillery tactics has been revolutionised by our recent experience in South Africa owing to our meeting with a foe untrammelled by time-honoured tradition, as well as by our first experience of smokeless powder. There are, however, no lessons derived from artillery duels or coming into action under fire, because the Boers were always playing for safety with their guns, and seldom engaged our artillery unless they had an advantage of range. The Boers were skilful and shrewd in placing their guns in good defensive positions, but they were not skilful artillerists, their shooting was defective, and their projectiles untrustworthy. The small percentage of artillery killed and wounded, as compared with infantry, points to the defects of the Boer guns, projectiles, and skill. Concealment of guns both on attack and defence is now a matter of primary importance, and in defence can be brought to such perfection that it is almost impossible to locate them. Shelter for the gun detachment of position guns is an absolute necessity. Artillery preparation before an infantry attack is quite as necessary as ever, but is required at a different epoch. The trenches require to be searched with howitzers, and a continuous bombardment goes far to shake the nerves of the occupants of trenches when they have been enclosed there day after day, as the Boers were without relief. The principal use of the artillery in action in the advance was found to consist in sealing the trenches at the time of an advance in order to keep down the rifle fire of the enemy. This had to be done in such thorough unison with the commander of the attacking infantry that the firing continues until the troops are close up to the trenches, and must go on with increased range when the troops take the trenches. If this is cleverly done the enemy will be caught in the trenches or subject to shrapnel fire in the open when retreating. To carry this out well the infantry must have great confidence in the artillery; but well-trained infantry will prefer the risk of a chance shell from friends to the unchecked rifle fire of the foe. The advance on Pieters with the 11th Brigade is a case in point. In this advance 50 Boers were captured in one trench, our artillery fire preventing their escape. Common shell are of little use against trenches, but may be of the greatest service in knocking to pieces gun emplacements. If common shell had been available in the attack on the Rangworthy hills, 19th to 25th January, 1900, the pom-poms might have been knocked to pieces. The great artillery controversy—concentration of guns versus dispersion—still rages fiercely, but it seems to be generally admitted that in the advance it is impossible to conceal guns if a large number are massed together. There is much more to be said in favour of dispersion than in former days, but each case must be settled on its own merits. Rifles, etc.—The infantry rifle (Lee-Metford) was found to be a fairly good weapon, but requires improving up to date. The cavalry rifle or carbine, though supposed to be equal to that of the infantry, was very inefficient at long ranges. Up to 1,200 yards it was probably equal to the infantry rifle, but beyond that it rapidly tails off, and consequently the cavalry when armed with it were at a great disadvantage in meeting Boers. The Boers had only to keep at 2,000 yards from our cavalry in the hills, and they could shoot them down with impunity or surround them. Practically it may be said that no advance could be made through a hilly country by cavalry armed with this weapon. After the relief of Ladysmith I believe that all the cavalry were served out with infantry rifles, and this made an enormous difference in their efficiency. Before that they were practically useless in hilly country, and could not do the duties of cavalry or mounted infantry. When the history of the war is written it will be found that the cavalry were unable to exercise their real functions in the hilly country of Natal until after they had been served out with the infantry rifle.

15851. I do not know that I have any further questions to ask upon that point; have you anything to add to your statement?—No, I have no further observations.

15852. You have made certain suggestions as to the future of our Army; will you state them?—This is far too extensive a subject for a summary. It would require a volume, for I consider that the Army requires

Lieut.
General Sir
Charles
Warren,

K.C.B.

19 Feb. 1903

Lieut.-
General Sir
Charles
Warren,
G.C.M.G.,
K.C.B.

19 Feb. 1903

reorganisation throughout. I give, however, here some of the most important points:—(a) The education of the youth of the country (boys and girls), from the earliest age, requires to be put on a different footing, so as to call out their individuality, their perceptive faculties, and their intelligence. Everything at present is tending to make them as stupid and inane as a flock of sheep. The recent changes in inspection of schools, under which the inspectors are not permitted to examine the children, is most disastrous. (b) The recent report of the Committee on Education and Training of the Army contains most excellent suggestions, but it stops short at the most important age in the life of the officer or soldier; it does not consider the schooling of the lad. It could not well do so, as there were schoolmasters on the Committee. A further report is now required from a committee appointed to consider the early training of youth from infancy. (c) Officers should be taught their duties as soldiers before they learn their duties as officers. Every officer ought to know what it is to march in the ranks, to do sentry duty on guard at night, to live upon soldier's rations, etc., so that he may realise what the soldier has to go through. (d) All regulations should be on one basis, differentiated for different climates, peoples, etc. The present difference between British and Indian regulations should be abolished, as officers are engaged in learning and unlearning regulations through their service. Acting to regulations should be a matter of habit. (e) There should be fixed regulations for guards and sentries on service duties or active service; without it there must be constant confusion and loss of stores, prisoners, etc. (f) Responsibility should be decentralised. Captains should have more power, and battalion commanders should exercise more supervision, and, at the same time, give a freer hand to their subordinates. Everything at present is done in such a way as to cause as little expenditure of thought as possible, whereas officers and soldiers should devote a great deal of thought to their profession. At present most of the time of officers and men is frittered away in little questions of regulation, because the regulations are so ill-defined and vary so greatly and unreasonably in different commands. (g) Officers should be treated as gentlemen, and the regulations as to confidential reports should be adhered to. The opening of officers' letters on active service by the censor has introduced a feeling of distrust into the Army which it will be difficult to eradicate. The secret reports made against officers in the field, without acquainting them of it, are contrary to the King's Regulations, and most injurious to the welfare of the Army at large. (h) If officers are to be selected for promotion, they will all have to be placed on one or more rosters by rank, as is done in the Navy. It would be impracticable to promote an officer of a regiment over the heads of his comrades, and leave him in the same battalion. (i) The second in command of a battalion should be assured of his promotion if he does well. At present every second in command "lies low," and in four years becomes nearly unfit for promotion. (j) Commands in the field should be territorial as well as personal, i.e., an officer in command should be given a distinct front for which he is responsible, and his duties should be defined. The absence of any rules on this subject has led to disaster on several occasions. (k) The duties of lieutenant-generals commanding divisions in the field should be defined. It is an urgent necessity. (l) The bulk of our troops should not be placed in unhealthy places as they are at present; they should live more under canvas. The recent changes of the Governor of Malta in keeping troops away from the towns and under canvas during manoeuvres have resulted in much good. Troops must be occupied and interested wherever they are. (m) Troops should reach India in a fit condition to stand the climate. With this in view, they should be marched via South Africa, landing at Cape Town and marching to East London or Durban. The latter march they could easily do in six months, manoeuvring on the way. They would then arrive in India as real soldiers, instead of unhealthy boys. (n) Troops leaving India should march back from Durban to Cape Town, manoeuvring with the troops marching to India. In six months they would be fit to return to England, but might have the option of settling in South Africa. (o) The battalions, batteries, etc., on foreign service should remain there permanently, the officers and men changing after so many years. (p) At Hong Kong, for example, the battalions and batteries should never change, but their officers and men should be drafted on to other stations as required. This would reduce Army work to about one-quarter of what it is at present, as tradition would not be lost, as it is now every day. (q) Reconnaissance work requires entire

revival and reorganisation. I do not think it has ever been at so low an ebb as it is at present. As a surveyor and instructor in reconnaissance, I must give my opinion that the present condition of the Army in this respect is deplorable. (r) The chaos and confusion in the Army in the field in South Africa at the beginning was most remarkable, and was due to want of adequate regulations defining duties and responsibilities when troops were massed in large numbers. It never seems to have struck anybody that for large bodies special regulations are required, and that the organisation for 10,000 men was not sufficient for 100,000 men. (s) I must lay stress upon one point. The discipline of the Army of 1900 as compared with that of 1878 was most splendid. In 1878 I considered it to be bad. I think that the gymnastic course, the precision in the gymnasium under the new regulations, has had much to do with this. I must emphasise this by giving my opinion that as the individual intelligence of the soldier is developed, as he acts more by himself, he requires more careful training also in drill in the gymnasium. I strongly deprecate the new orders permitting soldiers to remain out of barracks at night without leave; it will end in confusion.

15853. The matter you have just dealt with is one which I understand you cannot go into completely, but you begin pretty early; you begin with the education of the youth of the country?—Yes, I think it is on a very imperfect footing at the present time, and insufficient to draw out their intelligence, and make them use their eyesight, etc.

15854. Of course we are not inquiring into primary education here, but as to the training of the Army. You have stated under these heads the general way in which you think that the officers should be selected and should be trained?—I have said, "If officers are to be selected for promotion"; I have not given an opinion upon that, because I think it is a very difficult matter to select junior officers. It can be done in the Navy, of course, because you have means in the Navy of finding the qualifications of an officer from the constant warring with the elements; but in the Army it is a very much more difficult matter to find out what is in an officer. A man may be an excellent barrack-service man, but he may not be a good man out in the field, so that it is a very difficult matter to be able to say whether they should be selected or not. I think there should be only a certain amount of selection.

15855. Would you not select the senior officers of a regiment, for instance, for promotion?—I think that the system of always keeping to the senior is far better than anything else we have brought out as yet; under the old system, where the officers had almost a vested right in their positions, they kept their individuality in a way they do not now, and the change has made a vast difference in our Army. The insecurity has made officers afraid of giving their opinions when they think that if they give opinions it might affect their future promotion.

15856. On the other hand, would it not encourage an energetic officer to give his opinion?—Yes, but it encourages a great many unsoldierlike qualities; it encourages one officer putting himself before another, and it has done away very much with the old good comradeship there used to be in the Service. I think it has done incalculable harm. It may have done good in certain ways, but if you compare the condition of regiments now with what they used to be in former days: to my mind an immense amount of harm is done to the feeling of good comradeship that used to exist among the officers.

15857. Was it not the experience of the war that it was necessary to make a selection of officers for commands—for regimental commands, I was thinking of particularly?—I am only saying that the effect of the change has been very bad in a certain direction. I do not know that on the whole it may not be better, but it has destroyed, I think, the good feeling that used to exist in the regiment.

15858. (Sir John Jackson.) Do you consider there is as good feeling between the officers and men now as there was in the old times?—Well, it is very difficult to say, because as the men have short service there has not been time for them to grow together, so that there could not be the same good feeling.

15859. (Sir George Taubman-Goldie.) Would you be satisfied with a system of rejection of the unfit officers?—Yes, I think that is an excellent system, and that is quite a different matter.

15860. And, subject to that, maintain the system of seniority?—Yes, I think so. I think that you must preserve individuality: what you want is men who have sufficient nerve when they go on service to be able to carry out what they think they ought to do, but I think the present system takes away the nerves of officers at a very early age.

15861. (*Chairman.*) When you speak of good feeling in the Service, is that what is alluded to in Sub-section G of your statement?—No, I was not thinking of that at all. I was, in Sub-section G., thinking of the way in which officers have been treated in recent years with regard to confidential reports made against them, and their not having been told, and the opening of their letters on service.

15862. Will you explain what you mean with regard to that, as I do not quite understand it?—Under the King's Regulations an officer who is reported upon adversely by a general officer has to be told by the general officer of what has occurred, and he has read out everything that has been said against him, but in recent years many cases have occurred where officers on active service have been reported on without their being told. I know of one or two cases that have occurred in Natal where officers have been reported on adversely, and have not been told about it, and have only found it out subsequently. Officers have written to me upon the subject.

15863. Do you represent that what was done was contrary to the Regulations?—Yes, and they have written to the War Office upon the subject.

15864. (*Lord Strathcona and Mount Royal.*) Are there instances of officers' letters having been opened by the censor?—I suppose so; I have known of several, and every letter that I wrote from Natal was subject to being opened, so far as I knew.

15865. (*Sir Frederick Darley.*) You mean your private letters?—Yes.

15866. (*Lord Strathcona and Mount Royal.*) It was habitual?—I have seen officers' letters after they have arrived home with the mark "Opened by the Censor" on them.

15867. Showing a want of confidence in them?—Yes, I think it has a most disastrous effect upon officers, and I have seen letters from officers saying, "I cannot mention anything on this subject as my letters are opened."

15868. (*Sir Frederick Darley.*) Would those be letters to their own families?—Yes.

15869. (*Sir John Edge.*) But I suppose there are great varieties of officers in the Service, and men even unintentionally might disclose matters in their private letters which would be better not disclosed?—They could not disclose more matters than a war correspondent.

15870. I do not argue that point, but what I have said might happen that unintentionally an officer writing to his family might disclose matters which would be very awkward if disclosed at the time, and the family, not seeing the importance of the disclosure, might send it to the papers for information. How would you deal with that risk?—They cannot open every letter that goes through.

15871-2. How would you deal with that risk? As general officer, if you were in command in South Africa, or in any war, would not one of your objects be to prevent information getting round to the enemy anyhow? In these days of telegraphic communication some information might come home in a private letter, the family might show the letter to somebody, or send it to a paper (and I have seen such letters printed in the papers) for general information, and that information might be telegraphed out to the other side within six hours of its arrival in England. How would you propose to deal with that risk?—I think it would be better to let the matter alone, and not open the letters, and run the risk, rather than affect the feeling right through the Army. It has had a very serious effect.

15873. Do you think there is a general feeling in the Army on that subject? Do you not think that officers, if they think of the subject at all, must see that there is some necessity for controlling the information that comes home?—No, I do not think so.

15874. (*Sir Henry Norman.*) You would run the risk?—I would certainly run the risk. I think the great point is to breed up officers with a certain manliness of mind, and I think some of those changes that

have taken place lately are most injurious to the mental condition of the officer.

15875. I am not imputing anything to the officer who sends home the information. Say he is writing to his wife, his sister, his father, or mother, and he gives them a piece of information it does not strike him what may happen to it, nor does it strike him that there is any impropriety in sending it home; how would you deal with that case?—I should prefer to run the risk, and to let it be known that officers are trusted not to write anything that may be made use of.

15876. (*Chairman.*) That might be a very serious risk, might it not?—It took at least a month for a letter to get home from South Africa, and it seems to me a very small risk to run. It might be a greater risk on other occasions.

15877. Letters would not always have so far to come, and if you laid it down as a principle you might have a case where the letters might go to the recipient in a week or a few days?—Yes, but it has only happened lately. I do not think it has ever been done before. It is a new regulation.

15878. But has it not naturally grown up, as Sir John Edge says, from the growth of the telegraphic system all over the world?—That has made it a very much more serious risk than in the old days, when it took a long time for a letter to reach its destination.

15879. (*Sir Henry Norman.*) Perhaps you would stop the telegrams if the censor thought they were objectionable?—Telegrams must be under the censor, there is no question about that.

15880. (*Chairman.*) The telegram is a telegram coming back; the letter may go out, and, as Sir John Edge described, the contents might be divulged in this country, and then telegraphed back to the enemy?—Of course the telegrams could be stopped going back, but I think the papers could be relied upon if they were asked not to publish such things.

15881. (*Sir John Jackson.*) What would be done with an officer's letter if there were found in it anything that should not be published? Is it deleted?—I do not know. I do not know any case.

15882. (*Chairman.*) You do not know any case in which a letter was either stopped or altered?—No, I do not think one would know if it was stopped.

15883. (*Sir Frederick Darley.*) Perhaps they might return the letter to the officer?—I do not know at all.

15884. (*Sir John Jackson.*) In Russia, if you get a letter with anything in it the censor does not approve of, you receive the letter with the particular portion of it blacked out?—I do not know what system is adopted.

15885. (*Sir Henry Norman.*) I suppose, in your experience the ordinary officer in a regiment has not generally any very important secrets to reveal; what is important not to be revealed is some plan of campaign, or something of that kind?—I should say, as a rule, the junior officer comparatively knows nothing of what is going on, and could give no information of any value. The signalling officer might, and a few officers might, but those are all officers of special intelligence, and specially selected, and not likely to give information.

15886. (*Sir Frederick Darley.*) Information which they might give would be as to the state of the Army; if the Army were in a very bad state at the time, or in a deficient state, they might know that, and give that information?—Yes, but a general statement has very little effect; it is where details are mentioned that they have any effect.

15887. (*Sir George Taubman-Goldie.*) As a matter of fact, the war correspondents always did manage to get their letters home one way or another?—Yes, they managed it.

—So that the information given by officers could not possibly exceed that?—Just so.

15888. (*Chairman.*) At any rate you have said you do not know of any case in which a letter was never returned or not forwarded?—That is so.

15889. So that the grievance surely must be a restricted one.

15890. (*Lord Strathcona and Mount Royal.*) Do you think it is only the letters of those officers who have been reported against in any way that are opened, or is it general as to all letters?—I have not thought about that. I would not like to give a thought upon such a thing as that happening.

Lieut.-
General Sir
Charles
Warren,
G.C.M.G.,
K.C.B.

19 Feb. 1908.

Lieut.
General Sir
Charles
Warren,
G.C.M.G.,
K.C.B.

19 Feb. 1903.

15891. You would not say that all letters from officers comes under the supervision of the censor?—Yes, that is what I mean—all letters. I would not think of any difference being made among officers.

15892. (Sir John Jackson.) The censor would not know from whom the letter came?—I simply mean that the letters from officers are opened by the censor, or are subject to being opened by the censor.

15893. (Chairman.) Then you put forward the proposition that all troops going to India should go *via* South Africa?—Yes.

15894. With the object, as I understand it, of marching them from Cape Town to Durban?—To get them fit, so that by the time they arrived in India they would be fit for their duties. You could send boys who wanted six months or nine months of being fit for India to South Africa to be marched through, and by the time they had marched through they would have arrived at a fit age for India, and at the same time they would have rendered themselves fit in their marching, they would have got hard, and would be able to stand the climate very much better than if they went straight from England.

15895. How would you deal with drafts going out to regiments?—The drafts would have to be made up into provisional battalions and marched through.

15896. It would be a little complicated, would it not?—It would be complicated, but I do not see any difficulty about it. They have to be commanded by somebody on board ship, and it is only carrying out the same system.

15897. Do you think the advantage would compensate for the additional trouble and expense also?—It would not be a very great difference in expense, and for a great many years to come it would solve one of the difficulties we will have in South Africa, because we should always have a large force there, and we could withdraw a great many of the battalions we otherwise keep in South Africa.

15898. You would rely upon these immature soldiers in South Africa?—Yes, but then what I propose is that the men coming back from India should also march back, and get toughened up for our cold climate, because we lose a great many men who come back from India who are unfit for work for a year or two on suddenly being brought back into our cold barracks.

15899. (Sir Henry Norman.) Could this be done at all times of the year in South Africa?—I think so, at all times.

15900. (Sir John Edge.) How long would you propose to take for the march across from Cape Town to Durban.

15901. Take a relief going out to India, how long would you keep it in South Africa on its way?—About six months.

15902. And the troops coming home?—About six months.

15903. Then you would permanently increase the number of our troops on foreign service?—Yes, but then we could withdraw an equivalent number of battalions doing duty at the Cape.

15904. Your system would really increase the number of men on foreign service, unless you counted them as part of the garrison of the Cape?—I mean them to be part of the garrison at the Cape.

15905. Would that be a wise military system, to treat as part of the garrison of the Cape a portion of the garrison required in India?—I think we require the garrison of the Cape more from its moral effect than from its physical effect from day to day.

15906. I will put it in this way: they would not know in India for instance, when they were to get the reliefs; anything might happen at the Cape, and these men might be detained there?—Then we should send out the troops required for the Cape.

15907. To relieve these men at the Cape, and send them on to India?—Yes.

15908. The garrison of India is established on what they consider just sufficient and no more.

15909. (Sir George Taubman-Goldie.) I understand you do not propose to diminish the garrison of India at all?—No.

15910. The only thing is that a certain number of men would be marching through the Cape forming part of the garrison of the Cape, corresponding to the number of

men who would probably be sitting down at the Cape?—Yes.

15911. (Sir John Edge.) It would increase the expense to India, would it not?—No.

15912. Why not? Say that a man goes out to serve six or seven years in India, instead of serving six he would only serve five under your system?—These immature boys are kept in England at the present time until they are old enough to go to India.

15913. The individual man in India serves six years under the present system, but under your system that individual man would only serve five years in India?—No, I should not consider the Cape as foreign service in that respect.

15914. But he would only serve five years; the individual man is sent out at the beginning of his service, and instead of going direct to India he is kept at the Cape for six months, and at the end of his service in India he is kept six months at the Cape. Would it not come to this, that he had only served five years in India?—But if he is kept six months in England until he becomes mature?

15915-6. But they do not send out immature men?—No, but they are kept at home until they become mature.

(Sir John Edge.) But I am speaking of the Army of occupation in India.

(Chairman.) I understand Sir Charles to mean that the period of the Cape at the beginning of his service at any rate would be a period which he otherwise would serve in England and not in India, and therefore it is not a deduction from the period of service in India.

(Sir John Edge.) Then there would be a deduction of six months at the end of his service in India when he was a time-expired man coming home?

(Witness.) That would be as an addition.

15917. But when he is a time-expired man coming home you would surely send him home six months before the time?—I think it would be very easily adjusted, because it is obviously for the welfare of the men that they should get hard before coming to our cold climate, and also there are the chances of their settling in the country, which many men look forward to very much. Many men who have been in India for a period of service are quite unfit to do work in our country, but they might at the Cape be able to take to it.

15918. (Sir Henry Norman.) That is your view?—That is my view.

15919. (Sir George Taubman-Goldie.) And your view does not contemplate any diminution of the time in India?—Not in the least.

15920. Whether it means a longer enlistment by six months or not, it does not mean any diminution of their time in India?—It does not affect India in the least, except that they get a better class of men there.

15921. (Chairman.) What do you mean by "the battalions, batteries, etc., on foreign service should remain there permanently, the officers and men changing after so many years" (that is sub-section O)?—There is very great difficulty at present about adjusting the amount of foreign service of officers. Take a battery of artillery for instance; officers go out to a battery of artillery, and they remain so many years with the battery, but the time comes when they are brought home—on promotion, for instance—they are brought out of that battery, and others are sent to replace them; then these officers who have been in India for five or six years or more arrive in England, and possibly immediately they come home their battery may be ordered out to India, the result being that a very large number of artillery officers spend most of their time on foreign service, and on the other hand a great many spend most of their time at home, whereas if the batteries were permanently kept in these different countries the men and officers could be drafted out, and a regular system could be followed out.
